**Spheres of Influence:** Major Access to All, Charm, Elemental. Minor Access to Healing, Protection.

**Powers:** *Soothing Word* (as per the Designing Faiths chapter). *Incite Berserker Rage* (as per the Designing Faiths chapter). *At 8th level: Inspire Fear* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 9th level, and consist of one fifth-level priest, one third-level priest, and two first-level priests of the same order, plus three third-level fighters and six first-level fighters to act as guards; each fighter must have one of the following Nonweapon Proficiencies: etiquette or heraldry. The priest may take the following on adventures: Two priests and three fighters (only one of whom may be third-level) of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Crown, Sceptre.

### Seasons

This god celebrates the changing seasons, and so is related to the gods of agriculture

and time. His priests maintain the calendar and are often find astronomers.

Lesser gods of this attribute would be gods of individual seasons: the god of spring, the god of summer, the god of winter, and (where applicable) the god of autumn (not all regions recognize an autumn season).

The gods of seasons are usually female.

The priests of this god are on good terms with Druids and the priests of Agriculture, Earth, Elemental Forces, Fertility, Life-Death-Rebirth Cycle, Nature, Sky/Weather, Time, and Vegetation.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10. Wisdom 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Weather Sense. Nonweapon Proficiencies Recommended: Astrology, Agriculture, Navigation, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, quarterstaff, maul, polearms, scythe, sickle. Armor Permitted: All non-metal armor; no shields. Oriental Campaigns: Also bo stick, nunchaku. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Creation, Elemental, Protection, Weather. Minor Access to Animal, Divination, Healing, Plant.

**Powers:** *Immunity* (as per the Designing Faiths chapter, automatically successful saving throws) vs. all priest spells of the elemental sphere, and all wizard spells with coldness and heat (not fire!) as one of their components or effects.

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and eleven first-level priests of the same order, plus ten first-level fighters who act as guards. The priest may take the following on adventures: Three priests (only one of whom may be third-level) and four fighters. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols**: (Spring) Sapling, (Summer) Sheaf of Wheat, (Autumn) Leaf, (Winter) Leafless Tree, (Entire Year) All of the Above.

### Sites

These gods are much like gods of communities, but the sites they represent don't have to be occupied. A site-god could be the deity of a mountain, a cave, a plain, or a valley. These are usually minor gods, one god to a site. Generally, the sites are famous *because* they are the dwellings of gods; however, the gods seldom let themselves be seen.

Priests of these gods are protectors of the sites, and all living things which dwell there. Because of this, the priests seldom leave those sites, and so this is not usually a good choice for a player-character. Only when the site is threatened by distant powers is the priest allowed to leave the site for adventures.

Site gods are as likely to be male as female.

The priests of this god are on good terms with the priests of Ancestors and

Community.

**Alignment:** A deity who is the patron of a single site will probably be true neutral; his interest is in the survival and veneration of the site, with little interest in the doings of men. Their priests may be of any neutral alignment, but neutral evil priests gather in one cult, while true neutral and neutral good priests gather in a second; they won't be friendly to one another. The flock may be of any alignment. The DM can decide that a particular site deity is neutral good, in which case there will be no evil priests or flock; or that he is neutral evil, in which case there will be no good priests or flock.

**Minimum Ability Scores:** Wisdom 12, Strength 10. Wisdom or Strength 16 means +5% experience; Wisdom *and* Strength 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Local History. Nonweapon Proficiencies Recommended: Religion, Reading/Writing. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Marriage. Missions: If the site is threatened, the priest will be dispatched to help straighten out the situation.

**Weapon and Armor Restrictions:** Weapons Permitted: One lesser weapon from the following list (Club, dagger/dirk, hand/throwing axe, javelin, light crossbow, mace, short bow, warhammer) and one greater weapon from the following list (Battle axe, heavy crossbow, long bow, morning star, polearm, quarterstaff, spear, sword/long). (The DM makes this choice based on the history and attributes of the holy site; often, the choices will be paired, such as dagger and long sword or throwing axe and battle axe.) Armor Permitted: All non-magical armor and shields. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Healing, Protection. Minor Access to Animal, Plant.

**Powers:** *Inspire Fear* (as per the Designing Faiths chapter); this power is granted by the god to help the priest keep the site clear of those who would harm or despoil it.

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same order, plus one fifth-level fighter, two third-level fighters and four first-level fighters who act as guards for the site and the chief priest. The priest may take the following on adventures: Three priests (only two of whom can be third-level) and one fighter of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** A silhouette representing the site; if it's a mountain, it would be the silhouette of the mountain, for instance.

### Sky, Weather

This is a god of the atmosphere in all its manifestations, from the most clear and still to the most stormy and tumultuous. It is this god that determines how much rain will reach the soil; it is this god that occasionally goes a little crazy and storms until all the living things in the area are terrified. He is a wild and powerful god, and a very necessary one.

His priests primarily work to ensure that he receives the worship that he is due. Beyond that, they may do much as they please, serving individual communities or adventuring as

they choose.

Lesser gods of the sky attribute simply embody one aspect of the sky or weather. The gods of Lightning, Thunder, and Wind described in this section can be considered lesser sky- and weather-gods.

The sky-god is almost always male.

The priests of this god are on good terms with Druids and the priests of Agriculture, Earth, Elemental Forces, Fertility, Life-Death-Rebirth Cycle, Lightning, Nature, Oceans/Rivers, Seasons, Thunder, Vegetation, and Wind.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10, Constitution 12. Wisdom or Constitution 16 means +5% experience; Wisdom *and* Constitution 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Weather Sense. Nonweapon Proficiencies Recommended: Religion, Reading/Writing. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Battle axe, bows (all), club, hand/throwing axe, javelin, spear, warhammer. Armor Permitted: All non-metal armor, all shields. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Astral, Elemental (the priest can only use spells with the words Water, Air, and Wind in their names, and the spell *chariot of Sustarre* ), Protection, Weather. Minor Access to Combat, Divination, Plant, Sun.

**Powers:** Inspire Fear (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and sixteen first-level priests of the same order. The priest may take the following on adventures: Any three priests of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Dome, Cloud, Raincloud.

### Strength

This god celebrates physical strength, and nothing but strength.

His priests promote physical fitness, contests of strength (such as weight-throws and wrestling, in association with priests of the god of competition) and war.

The strength-god is male.

The priests of this god are on good terms with the priests of Competition, Divinity of Mankind, Guardianship, Lightning, Metalwork, Thunder, and War. The priests of this god dislike the priests of Death, Disease, and Mischief/Trickery.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment. don't like priests of the god of disease, which is a god of weakness.

**Minimum Ability Scores:** Wisdom 9, Strength 15. Wisdom or Strength 16 means +5% experience; Wisdom *and* Strength 16 means +10% experience.

**Races Allowed:** Dwarves, elves, half-elves, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Endurance. Nonweapon Proficiencies Recommended: Reading/Writing, Religion, Charioteering. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Missions: The priest is not required to, but is almost always allowed to go on adventures where he will be able to display his personal strength and demonstrate the attributes of his god.

**Weapon and Armor Restrictions:** Weapons Permitted: Battle axe, cestus, club, mace, maul, morning star, picks (all), polearm, sword/two-handed, warhammer. Armor Permitted: All armor and shields. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Combat, Healing. Minor Access to Elemental, Necromantic.

**Powers:** *Immunity* (as per the Designing Faiths chapter); the priest is immune to undead life-draining and paralysis, and to the spells *chill touch, energy drain, enervation, ray of enfeeblement,* and *vampiric touch*. *Turn Undead* (same as the Cleric ability). *At 5th level: Incite Berserker Rage* (as per the Designing Faiths chapter). *At 8th level: Inspire Fear* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same order, plus one fifth-level fighter, two third-level fighters, and four first-level fighters, all with a Strength score of 16. The priest may take the following on adventures: Three priests (only one of whom may be third-level) and four fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Human Silhouette Holding Up Mountain or Temple.

### Sun

This god is a god of magic, healing, inspiration, and life, sometimes of madness and heatstroke. He is an enemy of dark creatures, especially the undead.

The priesthood of this god exists to promote all those traits among the flock, and to celebrate the daily blessing that the sun-god shines down upon the world.

The sun-god is usually male.

The priests of this god are on good terms with the priests of Arts, Crafts, Darkness/Night, Dawn, Elemental Forces, Fire, Healing, Hunting, Light, Literature/Poetry, Magic, Metalwork, Moon, Music/Dance, and Oracles/Prophecy.

Alignment: The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but tends to be neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 12, Intelligence 12. Wisdom or Intelligence 16 means +5% experience; Wisdom *and* Intelligence 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Healing. Non-weapon Proficiencies Recommended: Herbalism, Navigation, Reading/Writing, Religion, Spellcraft. Weapon Proficiencies Required: None.

Nonweapon Proficiency Group Crossovers: Priest, General, Wizard.

**Duties of the Priest**: Guidance, Marriage. Education: Priests of this sect promote the study of magic. Vigilance: The sun-god is a god of observation, of keen eyesight, of vigilance in general. Therefore, all his priests are commanded to keep their eyes open and learn as much as possible about what is going around them at all times. What they do with that knowledge, outside the context of helping their temple and preserving the worship of the god, is up to them.

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), crossbow, dagger/dirk, dart, javelin, knife, spear. Armor Permitted: All metal armor and all shields. Oriental Campaigns: Also daikyu, shuriken. All together, these constitute Medium combat abilities.

**Other Limitations**: None.

**Spheres of Influence:** Major Access to All, Divination, Healing, Necromantic, Sun. Minor Access to Charm, Elemental (the priest can only use spells with the words fire, flame, heat, and pyrotechnics in the names), Plant, Protection.

**Powers:** *Detect Secret Doors* (same as Elf ability: Success on roll of 1 on 1d6 when passing within 10', 1-2 on 1d6 to find secret doors and 1-3 on 1d6 to find concealed portals when actively searching; elven priests of this order have success on a roll of 1-2 when passing within 10', 1-3 to find secret doors and 1-4 to find concealed portals when actively searching). *Infravision* (same as the elf ability; an elven or half-elven priest of this faith has Infravision of doubled range, to 120'). *Turn Undead* (same as the Cleric ability). *At 5th level: Laying On of Hands* (same as the Paladin ability). *At 8th level: Prophecy* (Designing Faiths chapter). *At 10th level, chariot of Sustarre*; the priest can use this spell once per day in addition to his other spells.

**Followers and Strongholds:** The followers are received at 9th level, and consist of three third-level priests and six first-level priests of the same order, plus one third-level fighter and two first-level fighters to act as guards, one third-level mage and two first-level mages to act as consultants, one third-level bard and two first-level bards to act as personal bards. The priest may take the following on adventures: Three priests (only one of whom may be third-level), plus one fighter, one mage, and one bard of his choice. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Sun (With or Without Rays); Chariot.

**Notes:** The weapons permitted for this order are those which strike from afar, like the inspiration (or heatstroke) of the sun.

## Thunder

The thunder-god is very similar to the lightning-god; in campaigns where they both exist, they will probably be related, even brothers. He represents the fearsomeness of nature, natural forces at their most frightening, and so is a god of terror and fear as well. Like the lightning-god, he is also a god of storms.

Also as with the lightning-god, the thunder-god is not very concerned with the affairs of mortals; he lets them worship him and grants power to his priests, but otherwise doesn't interfere much in mortal affairs. His priests promote worship of his power and fearsomeness, especially as traits which the followers wish to use against their enemies.

The thunder-god is male.

The priests of this god are on good terms with the priests of Elemental Forces,

Lightning (especially), Nature, Race (Dwarven), Sky/Weather, and Strength.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 10, Strength 12. Wisdom or Strength 16 mean +5% experience; Wisdom *and* Strength 16 mean +10% experience.

**Races Allowed: Dwarves**, elves, gnomes, half-elves, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Weather Sense. Nonweapon Proficiencies Recommended: Reading/Writing, Religion. Weapon Proficiencies Required: Warhammer. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest**: Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, mace, maul, morning star, warhammer. Armor Permitted: All armor and shields. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Combat, Weather. Minor Access to Divination, Protection.

**Powers:** *Incite Berserker Rage* (as per the Designing Faiths chapter). *At 5th level: Inspire Fear* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same order, plus three third-level fighters and six first-level fighters to act as guards. The priest may take the following on adventures: Two priests and two fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Warhammer; Warhammer Across Mountain.

### Time

This god is the deity of the march of time. He represents inevitability -- not destiny based on the will of individual gods, but the inevitability of change brought on by time.

His priests preach the philosophy of patience to the flock, and help all the members of the flock adapt themselves to their changing bodies, lifestyles, and needs as they go through life.

The time-god is male.

The priests of this god are on good terms with the priests of Death, Elemental Forces, Fate/Destiny, Seasons, and Wisdom.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Ancient History. Nonweapon Proficiencies Recommended: Local History, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Scythe, sickle. Armor

Permitted: All non-magical armor; no shields. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Astral, Divination, Healing, Necromantic. Minor Access to Plant, Protection, Sun, and Weather.

**Powers:** *Identification* (as per the Designing Faiths chapter) of the current time and day; regardless of how long the priest has been underground, unconscious, or otherwise unable to observe the passage of time, he'll know roughly what time it is (within the hour) and exactly what day of the year it is. *At 3rd level: Laying On of Hands* (same as the Paladin ability). *At 5th level: Turn Undead* (same as the Cleric ability).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, five third-level priests, and ten first-level priests of the same order. The priest may take the following on adventures: Two priests of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Hourglass, Scythe.

### Trade

This god loves bargaining, and loves characters who bargain well. He also promotes the exchange of ideas between cultures through trade. And these, too, are the traits of his priests, who try to keep trade routes between nations open, free from excessive taxes, and mutually profitable.

The god of trade also likes the god of mischief and trickery, and he is a suitable deity for the worship of thieves and bards.

The trade-god is male.

The priests of this god are on good terms with the priests of Community, Crafts, Culture, Fortune/Luck, Messengers, Mischief/Trickery, and Prosperity.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 12, Charisma 13. Wisdom or Charisma 16 means +5% experience; Wisdom *and* Charisma 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, hafllings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Appraising. Nonweapon Proficiencies Recommended: Etiquette, Modern Languages, Riding Land-Based, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Bill, dagger/dirk, dart, hand/throwing axe, javelin, knife, main-gauche, stiletto, sword/rapier, sword/sabre, sword/short. Armor Permitted: All non-metal armor; no shields. Oriental Campaigns: Also shuriken, wakizashi. All together, these constitute Medium combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Divination, Guardian, Protection. Minor Access to Combat, Healing, Sun, Weather.

**Powers:** *Immunity* (automatically successful saving throw, as per the Designing Faiths chapter) vs. all spells with the word charm in the name. *Language/Communication* (as

per the Designing Faiths chapter); from 1st level to 4th, the priest receives one extra language per level (or one extra nonweapon proficiency slot which can only be used for languages); the languages chosen must be those of sentient humanoids. *Soothing Word* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of three third-level priests and six first-level priests of the same order, plus three second-level bards and two second-level thieves to act as agents (eyes and ears) and one fifth-level fighter (to act as guard). The priest may take the following on adventures: Two priests, one bard, and one thief of his choice, and the fighter. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Ships, Coins.

## Vegetation

This is a god of nature who is devoted specifically to plant-life. He is an admirer of vast forests and plains and all sorts of plant growth, especially that which is wild and not fettered or trimmed or tamed by mankind.

Priests of the god try to make sure that there are always tracts of wilderness in abundance for the god to admire. They work hard to keep civilization from making inroads too deep into wilderness. They do this by spreading tales of the forest as a deep and dangerous place. They often sneak around in the wilderness using their spells on travelling city-folk, or stock the forest with dangerous animals, in order to reinforce this impression. They do not impede those who know the forest (elves, gnomes, rangers, hunters, trappers, woodsmen), but will terrorize innocents and city-soft travellers.

Vegetation-gods are as likely to be male as female.

The priests of this god are on good terms with Druids and the priests of Agriculture, Earth, Fertility, Life-Death-Rebirth Cycle, Nature, Seasons, and Sky/Weather.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 9. Wisdom 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Herbalism. Non-weapon Proficiencies Recommended: Agriculture, Reading/Writing, Religion, Mountaineering, Survival, Tracking. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Club, quarterstaff, scythe, sickle. Armor Permitted: No armor; all wooden shields (no metal or leather). Oriental Campaigns: Also nunchaku. All together, these constitute Poor combat abilities.

**Other Limitations:** Priests of this sect may not wear leathers or furs in their clothing.

**Spheres of Influence:** Major Access to All, Divination, Healing, Plant, Protection, Summoning, Weather. Minor Access to Animal, Combat, Creation, Guardian, Necromantic, Sun.

**Powers:** *Analysis*, *Identification* (as per the Designing Faiths chapter); the priest can identify plants of any sort with perfect accuracy. *Defiance of Obstacle* (as per the Designing Faiths chapter); the priest can pass through overgrown areas like the druid, but can do so at 1st level.

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and sixteen first-level priests of the same order. The priest may take the following on adventures: Two priests of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Single plant of any sort (except domestic grains).

### War

This god is the deity of combat and warfare. He exists only to promote and participate in bloody battle.

Each nation has priests of this god, and in each nation the priests constitute a separate cult; they do not cooperate with one another in times of war, especially when their armies are opposed. They help train new warriors, teach battlefield tactics, and make records of the most valiant fights of any war or battle.

In painful times of peace, these individual sects may cooperate with one another. However, they usually only do so to conspire and start up another war.

Lesser gods of war will be gods of some secondary aspect. One might be the god of Berserker Rages, another the god of Battlefield Terror, another the god of Confusion, another the god of Tactics, another the god of Cavalry... and so on.

The chief war-god is male, but lesser war-gods are as likely to be female as male.

The priests of this god are on good terms with the priests of Community, Culture, Guardianship, Justice/Revenge, Messengers, Metalwork, Mischief/Trickery, and Rulership/Kingship. The priests of this god dislike the priests of Peace.

**Alignment:** The deity is true neutral. The priests may be neutral evil, true neutral, or neutral good; evil priests have their own sect and the other priests don't have to tolerate them. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 9, Strength 13. Wisdom or Strength 16 means +5% experience; Wisdom *and* Strength 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Blind-fighting. Nonweapon Proficiencies Recommended: Animal Training, Heraldry, Riding Land-Based, Healing, Reading/Writing, Religion, Armorer, Bowyer/Fletcher, Charioteering, Hunting, Running, Tracking. Weapon Proficiencies Required: No specific weapon required, but priest must choose one weapon from the list of weapons available (below) and *specialize in that weapon according to normal weapon specialization rules.* He is the only priest who can take any weapon specialization. Nonweapon Proficiency Group Crossovers: Priest, General, Warrior.

**Duties of the Priest:** Guidance, Marriage. Missions: The priests want to and are required to accompany armies on the march of war. At every war, priests of this sect will be in attendance on the officers and rulers of both sides. Vigilance: The priests of this sect must keep their eyes open against complacency and the tide of philosophies of peacefulness; if a land is too peaceful for too long, they must shake things up and get a war, even a small one, going.

**Weapon and Armor Restrictions:** Weapons Permitted: Battle axe, bows (all), dagger/dirk, knife, lance, mace, maul, polearm, spear, swords (all), warhammer. Armor Permitted: All armor and shields. Oriental Campaigns: Also katana, wakizashi. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to Combat, Healing. Minor Access to Necromantic, Protection.

**Powers:** *Incite Berserker Rage* (as per the Designing Faiths chapter). *At 5th level: Inspire Fear* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests and six first-level priests of the same order, plus two fifth-level fighters who act as guards. The priest may take the following on adventures: Three priests of his choice, and one fighter. The priesthood will pay for half of the cost of stronghold construction at 8th level. The stronghold must include a large armory chamber.

**Possible Symbols:** Sword Across Banner; Polearms In Formation.

### Wind

This god is related to the god of sky and weather, but he is devoted only to winds. Sailors, especially, pray to these gods, praying for good winds to take them in the direction they wish to go. Wind-gods are playful and sometimes malicious, and may choose to blow ships wildly off-course.

The priesthood of the god of winds makes these prayers for friendly winds, and tries to make sure that the wind-god gets his due of worship; but these priests otherwise are left much to their own devices, and many are adventurers and hero-sailors.

Lesser wind-gods will be gods representing specific types of winds: The cold north wind, the balmy southern wind, the terrifying typhoon or hurricane, the incredibly destructive tornado.

Wind-gods are male.

The priests of this god are on good terms with the priests of Sky/Weather.

**Alignment:** The deity is true neutral. The priests may be true neutral or neutral good; most are true neutral. The flock may be of any alignment.

**Minimum Ability Scores:** Wisdom 9, Dexterity 12. Wisdom or Dexterity 16 means +5% experience; Wisdom *and* Dexterity 16 means +10% experience.

**Races Allowed:** Elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Weather Sense. Nonweapon Proficiencies Recommended: Riding Airborne, Reading/Writing, Religion. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage.

**Weapon and Armor Restrictions:** Weapons Permitted: Blowgun, bows (all), crossbow, dagger/dirk, dart, hand/throwing axe, javelin, knife, lasso, mace, net, scourge, sling, spear, staff sling, whip. Armor Permitted: All armor; no shields. Oriental Campaigns: Also chain, daikyu, shuriken. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Elemental (the priest can only use the spells *dust devil, air walk, chariot of Sustarre,* and *wind walk* ), Protection, Weather. Minor Access to Divination, Guardian. The priest gets an extra major access to make up for the severe limitation imposed on his Elemental sphere access.

**Powers:** *At 3rd level: Shapechanging* (as per the Designing Faiths chapter), into one bird form of the DM's choice (the DM may allow the player to choose the bird form, if the DM so wishes). *At 8th level:* The priest can cast one *aerial servant* spell per day, in addition to all his other spells.

**Followers and Strongholds:** The followers are received at 8th level, and consist of one fifth-level priest, three third-level priests, and six first-level priests of the same order, plus ten first-level fighters to serve as guards. The priest may take the following on adventures: Any three priests and four fighters of his choice. The priesthood will pay for half of the cost of stronghold construction at 8th level.

**Possible Symbols:** Birds; Sails Filled With Wind.

### Wisdom

This is a god of common sense. Wisdom is distinct from, though normally compatible with, formal education and conventional learning; but it is not the same. It consists merely of having sense enough to know what it otherwise takes experience or an education to learn. The learned man knows from experience when his words will provoke a fight; the wise man knows it intuitively, instinctively.

The priests of this god promote sensible solutions and actions on the part of the flock. They suggest compromises and alternatives. They plan future events. The look for trouble in upcoming events and try to head it off. But this isn't a god of peace, and so the priests of wisdom will often be advisors to military officers, helping them plan effective strategies.

The god of wisdom will be female.

The priests of this god are on good terms with the priests of Divinity of Mankind, Good, Literature/Poetry, Mischief/Trickery, Oracles/Prophecy, and Time. The priests of this god dislike the priests of Evil, whom they do not consider sensible.

**Alignment**: The deity is good; at the DM's discretion, he may be chaotic good, neutral good, or lawful good, but is probably neutral good. Regardless of his alignment, his priests may be of any good alignment. The flock may be of any neutral or good alignment.

**Minimum Ability Scores:** Wisdom 13. Wisdom 16 means +10% experience.

**Races Allowed:** Dwarves, elves, gnomes, half-elves, halflings, humans.

**Nonweapon and Weapon Proficiencies:** Nonweapon Proficiencies Required: Religion. Nonweapon Proficiencies Recommended: Modern Languages, Ancient History, Ancient Languages, Local History, Reading/Writing. Weapon Proficiencies Required: None. Nonweapon Proficiency Group Crossovers: Priest, General.

**Duties of the Priest:** Guidance, Marriage. Education: Priests of this sect believe in education for its own sake, and work to provide teaching to all the flock and even the general population (when possible). Vigilance: These priests try to act as advisors to rulers, in order to keep them from making decisions in a too-hasty or foolish fashion. Local rulers often *do* give them posts as advisors.

**Weapon and Armor Restrictions:** Weapons Permitted: Bows (all), dagger/dirk, javelin, knife, picks (all), quarterstaff, spear, sword/long, sword/short. Armor Permitted: All armor and shields. Oriental Campaigns: Also bo stick, daikyu, katana, nunchaku, sai, wakizashi. All together, these constitute Good combat abilities.

**Other Limitations:** None.

**Spheres of Influence:** Major Access to All, Charm, Divination. Minor Access to Healing, Sun.

**Powers:** *Immunity* (as per the Designing Faiths chapter) to *confusion* and *feeblemind* spells. *Soothing Word* (as per the Designing Faiths chapter). *At 5th level: Inspire Fear* (as per the Designing Faiths chapter). *At 8th level: Prophecy* (as per the Designing Faiths chapter).

**Followers and Strongholds:** The followers are received at 9th level, and consist of two third-level priests and four first-level priests of the same order, plus one fifth-level fighter, one third-level fighter, and two second-level fighters to act as guards, and one third-level mage, one third-level bard, one second-level thief, and one second-level illusionist to act as consultants. The priest may take the following on adventures: Two priests (only one of whom may be third-level, plus two fighters of his choice, and two from the following list: mage, bard, thief, and illusionist. The priesthood will pay for half of the cost of stronghold construction at 9th level.

**Possible Symbols:** Owl, Raven, Vulture.

## Combining Traits in One Priesthood

It may be that one god has several different attributes. In real-world mythologies, many, many gods possessed many different traits all at the same time.

Which leads to the question: When one god possesses several attributes, which priest class do you use for his priests?

There are two ways to answer that.

### Multiple Priest Classes

One way to do this is to let the god simultaneously have several appropriate priesthoods. They would actually constitute a single "priesthood" with several different "orders" in it, each order dedicated primarily to one of the god's attributes.

That way, if a specific god (let's call him Kyros the Storm-Shaker) is a god of both War and Sky, two characters becoming his priests could do so in different ways. One character can become a priest of the war-god; another is a priest of the sky-god. But they belong to the priesthood of Kyros, each serving the god in a different way.

Let's take an example from real-world mythology. In Greek myth, the god Zeus was a deity of many, many different attributes. These were some of those attributes:

Fertility
Lightning
Oracles/Prophecy
Rulership/Kingship
Sky/Weather
Strength
Wisdom

Therefore, in a campaign where Zeus is a god, a character created to be a priest of Zeus could be any one of those seven types of priests.

In your own campaign, you can define any god as having two or more attributes, and therefore two or more different classes of priests can serve that god.

That's the simple way to do this.

## Revised Priest Classes

The hard way to do this is to create an entirely new priest-class. Use the Faith Design Sheet from the previous chapter to work such a thing up.

First, look over the priest class rules for all the classes related to the attributes you want the god to contain. Then, choose the elements from each you like. Remember to balance your choices of the priest's combat abilities with those of his available spheres of influence so that he will not end up significantly stronger or weaker than any other priest class.

Let's create such a class as an example. Let's say the goddess Melebeth is the goddess of Love, but in the city of Askarth she is also the civic deity and is known as "The Girder-On" because she is said to arm the city's warriors for combat; she is therefore a goddess of Love, Community, and War. What does her priesthood look like?

### Alignment

The goddess of Community is probably true neutral, but may be of any alignment. The goddess of Love is any sort of good alignment, and the goddess of War is any sort of Neutral alignment. Therefore, our combined Community/Love/War goddess averages out to be neutral good. Her priests should also be neutral good.

### Minimum Ability Scores

The goddess of Community requires W10, Ch12. The goddess of Love requires W10, Ch13. The goddess of War requires W9, S13. Wisdom and Charisma are obviously the leaders here; the priests of this goddess must have Wisdom 10, Charisma 13, and receive +5% experience if either ability is 16 or better, or +10% if both abilities are 16 or better.

### Races Allowed

None of the three priest classes (Community, Love, War) excludes any race. Therefore, this combined class allows priests who are dwarves, elves, gnomes, half-elves, halflings, and humans.

### Nonweapon and Weapon Proficiencies

Community requires Local History. Love requires Herbalism. War requires Blind-Fighting. None of these seems to apply especially appropriately to this combined goddess; since she was originally a goddess of Love, with the other attributes added in this one city, the default should be Herbalism.

Taking the most appropriate Nonweapon Proficiencies Recommended, we get Heraldry, Reading/Writing, Religion, Riding Land-Based, Healing, Blind-Fighting, and Local History.

Most of the three original classes require no specific Weapon Proficiencies, so we'll follow that pattern here.

Nonweapon Proficiency Group Crossovers are obviously Priest, General, and Warrior.

## Duties of the Priest

Taking the duties from the three types of priesthoods which are most appropriate to this combined class, we get:

Guidance, Marriage.

Education in the history of the city.

Vigilance: Trying to preserve the opportunities for romantic love-matches and marriages in the community, but also recommending marriages which will ally strong families and benefit the city.

Missions of defense when the city is threatened by attackers.

## Weapon and Armor Restrictions

The Community goddess' priests can use dagger and knife, and two weapons representing the city. The Love goddess' priests can use bow (small), club, lasso, mancatcher, and net. The War goddess' priests can use battle axe, dagger/dirk, knife, lance, mace, maul, polearm, spear, swords (all), warhammer.

These are three pretty incompatible sets of permitted weapons. But since this combined-attribute goddess will be using weapons mainly to defend her city, we can eliminate the comparatively weak weapons of the pure love-goddess; let us settle on the weapons of the Community goddess' priesthood. This will include dagger and knife, and (for the city of Ashkarth) bows (any) and long sword.

As for armor: The Community goddess' priests could use all armor and shields, the Love Goddess' priests could use no armor or shields, and the War Goddess' priests could use all armor and shields. It sounds, by weight of numbers, as though the priests should be able to use all armor and shields. Between the superior armor and the two good weapons they can use, these priests have Good combat abilities. This means they will have very limited magic.

## Other Limitations

Priests of the civic goddess must always wear priestly garments in public; priests of the love goddess get four-sided hit dice and must be wed by the time they reach 8th level; priests of the war-goddess have no other limitations.

The combined-goddess' priests should retain the limitation of wearing priestly garments whenever they're in public; these priests are still priests of a civic deity, after all.

And since the goddess is still a deity of love, the marriage restriction should remain.

But since this goddess is a fighter, let's drop the four-sided hit dice limitation; priests of this priesthood receive eight-sided hit dice like most fighting priests.

## Spheres of Influence

The priests of the community-goddess get: Major Access to All, Creation, Healing. Minor Access to Combat, Protection.

The priests of the love-goddess get: Major Access to All, Animal, Charm, Healing, Necromantic, Protection, Summoning. Minor Access to Creation, Divination, Guardian, Plant, Sun, and Weather.

The priests of the war-goddess get: Major Access to Combat, Healing. Minor Access to Necromantic, Protection.

Since this priesthood, as we decided above, has Good Combat Abilities, the priesthood will have Major Access to the All sphere and two other spheres, and Minor Access to two spheres. Let's choose the most appropriate ones.

Therefore, the priests of this combined-trait goddess get: Major Access to All, Charm, Healing. Minor Access to Combat, Protection.

### Powers

Priests of the community-goddess get *Incite Berserker Rage*, *Soothing Word*, and *Turn Undead*.

Priests of the love-goddess get *Charm/Fascination*, *Incite Berserker Rage*, *Inspire Fear*, *Soothing Word*, and *Turn Undead*; these priests received extra powers partly because they had only four-sided hit dice, a condition that the priests of this combined goddess do not share.

Priests of the war-goddess get *Incite Berserker Rage*; *At 5th level: Inspire Fear*.

Taking the common threads from these three goddesses, we decide that priests of the combined-attribute goddess receive:

*Incite Berserker Rage*, *Turn Undead*, and, at *5th level*, *Inspire Fear*.

### Followers and Strongholds

The goddesses of Community and Love both get their followers at 7th level, the goddess of War at 8th, so we'll settle on 7th level, and also at 7th level the priesthood will pay for half of the stronghold constructions.

The goddess of community gets 15 levels of priests and 15 levels of fighters.

The goddess of love gets 15 levels of priests, five levels of mage/consultants, five levels of fighter/guards, and five levels of Normal Men and Women with appropriate Nonweapon Proficiencies.

The goddess of war gets 20 levels of priests and 10 levels of fighter/guards.

Averaging this out somewhat, the priest of our combined-aspect goddess should get 15 levels of priests (three third-level priests and six first-level priests), 10 levels of fighters (two third-level fighters and four first-level fighters to act as guards), and five levels of mage/consultants (one third-level mage and two first-level mages). On adventures, he can take three priests (as usual, only one can be third-level; the remaining two third-level priests run the temple in the character's absence), three fighters (ditto), and one mage of his choice.

## Multi-Class Characters

It's possible for demihumans to be multi-class combinations including the priest character classes above.

On the chart of the *Player's Handbook*, page 44, showing the possible multi-class combinations, substitute the word "priest" wherever you see "cleric." Those are the possible combinations.

The only limit the character possesses on which type of priest he may be is the racial limitation posed for each priest-class above. If a priest-class says that elves can't belong to it, then obviously an elf can't be a multi-class fighter/priest of that type of priesthood.

Multi-class priest characters follow all the rules for multi-class characters, from pages 44 and 45 of the *Player's Handbook*.

# Priest Kits

In the last chapter, you were confronted with over sixty different priest character classes to choose from. Certainly, that range of choices will make it easy for your to individualize your priest character -- to make him different from the rest of the campaign's clerics.

In this chapter, we'll make that even easier.

You can further customize your priest by taking a *priest kit* for him. A *kit* is a collection of skills, proficiencies, restrictions, benefits and hindrances which give the priest more background and personality, further define his role in the campaign and in the campaign's cultures, and give him advantages and disadvantages to make him more colorful.

## Kits and the Priest Classes

A kit is more of a cultural description than anything else. Therefore, *most* kits are allowed to priests of *most* faiths. There are exceptions, of course; for example, a priest of the god of Peace may not take the Fighting-Monk kit. Wherever such an exception occurs, it will be mentioned in the text.

## Kits and Character Creation

No priest character *has* to take any priest-kit. It's not necessary, it's not required: It's just a way of adding detail to the character.

A priest character may only take one priest-kit. He should take it when he is first created. In campaigns which began before you got *The Complete Priest Handbook*, the DM should allow characters to take priest-kits, but only ones which are appropriate to the characters' actions and deeds so far. (For example, if a character has been a perfectly ordinary priest until now, he should not take the Outlaw Priest kit; it's not appropriate.)

Once a character has taken a Priest Kit, he cannot change it to another Priest Kit. He can, however, eventually *abandon* it (see "Abandoning Kits" later in this chapter); having abandoned a kit, he will not be able to take another one.

If you want to inject the choice of the Priest Kit into the character creation process, you'll first want to determine your character's Ability Scores ( *Player's Handbook*

Chapter 1), Race (Chapter 2), Class (Cleric or Druid from Chapter 3 of the *Player's Handbook*, or one of the priest classes from the previous chapter of this book), and Alignment (Chapter 4).

It's at this point that you choose your priest kit.

After that's done, and the information recorded on your character sheet, you can proceed to Proficiencies (Chapter 5), Money and Equipment (Chapter 6), etc.

## The Priest Kits

Each priest kit consists of the following elements:

**Description:** This paragraph talks about what this type of priest is to the culture. It also lists any requirements necessary for the character to take the kit; for instance, to be a Savage Priest, the character must have been born among or adopted by a savage tribe.

**Barred:** This paragraph details which priest classes (plus cleric and druid) may *not* take this priest kit.

**Role:** This kit describes the role of this priest in his society and campaign. For example, an Outlaw Priest of the God of Love would have a very different campaign role than the Amazon Priestess of the same god.

**Secondary Skills:** If you're using the Secondary Skills rules from the AD&D® 2nd Edition game rule books, then your kit may require your priest to take a specific skill instead of choosing or random-rolling his Secondary Skill. However, even more so than *in The Complete Fighter's Handbook*, we're recommending that you use the Weapon and Nonweapon Proficiency rules instead of the Secondary Skill rules.

**Weapon Proficiencies:** The priest-kit could require the priest to take a specific weapon proficiency. This is one of the factors that makes it impossible for some priest classes to take some priest kits; obviously, no priest class which cannot use a weapon required by a kit could take that kit.

**Nonweapon Proficiencies:** A given priest kit may require the priest to have a specific nonweapon proficiencies; however, unlike the situation above with Weapon Proficiencies, these are *bonuses*. If a kit requires that the character know Riding (Horse), then the character gets that proficiency free, above and beyond the slots he is normally granted. Some proficiencies might be granted from other than the Priest or General groups, but this doesn't matter; if a proficiency is given free, then it is free.

If the Priest Kit grants a proficiency that the priest has already had granted to him because of his specific priesthood, the character, instead of receiving that proficiency again, receives one extra free nonweapon proficiency slot which he may spend as he pleases.

Some proficiencies will merely be recommended, not required. When this is the case, the proficiency is *not* given to the character, and the character doesn't have to take it if he doesn't want to. If the character decides to take this nonweapon proficiency, he uses up the appropriate number of his available nonweapon proficiency slots.

**Equipment:** Some priest kits limit the way their priests acquire or use certain types of equipment; when there is such a limitation, this paragraph will deal with it.

**Special Benefits:** Most priest kits include special benefits that the priest-character receives. Often, they're defined as special reaction bonuses among certain classes of

society, special rights in certain cultures, etc.

**Special Hindrances:** Likewise, each priest kit carries certain disadvantages which hinder the priest. Outlaw priests are sought by their own orders and perhaps the authorities, for example.

**Wealth Options:** Some priest kits have special rules regarding their wealth. Generally, these rules don't affect the amount of gold he'll have when he is created (with all clerics and priests, this amounts to 3d6x10gp). However, different priest-kits have variations on the way the money is to be spent. Some insist that it all be spent at the beginning, and the remainder of starting gold returned to the priest's superiors. Others let the priest "keep the change;" still others have limits on the amount that can be spent initially.

**Races:** If a particular priest-kit discriminates among the demihuman races (for example, if an elf can't take a specific kit), that will be noted here.

## DM Choices

Before allowing his players to choose kits for their priests, the DM should look over the priest-kits and make some decisions.

For each Priest Kit, the DM has to choose:

(1) If he will even allow this Kit in his campaign. (It could be that the kit is inappropriate. If there are no Amazons in his world, he shouldn't allow the Amazon priest-kit.)

(2) What additional information he needs to give the players about each Kit. (DMs will probably want to elaborate on the priest-kits to fit them better into his campaign.)

(3) What changes he might wish to make to each Kit. (If, for example, our conception of the Barbarian doesn't match the DM's, he might wish to change the benefits, hindrances, or other factors to match his conception.)

## An Important Note

Several Priest Kits get reaction bonuses and penalties as part of their Special Benefits and Special Hindrances.

In the AD&D®game, when a character has a very high or low charisma, he gets what is called a "reaction adjustment." (See the *Player's Handbook*, page 18.) When the character has a high charisma and receives a bonus, it's expressed as a plus: For example, +2. When he has a low charisma and receives a penalty, it's expressed as a minus: For instance, -3.

But here's a special warning: When you roll the 2d10 for Encounter Reactions (see the *Dungeon Master's Guide*, page 103, *don't add the bonus* (+) *or subtract the penalty* (-) from the die roll. Do it the other way around: Subtract the bonus (+) and add the penalty (-). If the character has a Charisma of 16, and thus gets a +5 reaction adjustment, you *subtract* that number from the 2d10 die roll. Otherwise the more charismatic or appealing a PC is, the more vigorously all the NPCs and monsters would dislike him!

## Amazon Priestess

**Description:** Amazons are women warriors in a world where most cultures are male-dominated or ruled more or less equally by men and women. The Amazon civilization is

different from the cultures of the rest of the world in that women occupy all the most important occupations and positions in their society; men are either second-class citizens, or are all kept as slaves, or are exiled from the culture altogether. Amazons continually have to defend themselves from the efforts of surrounding civilizations to "return them to normal," and therefore they are very good at war.

Such civilizations often have one or two specific patron gods. (The deity does not have to be female; in classical mythology, for instance, the Amazons' patron was Ares, the very male god of war.)

The priestesses of this god interpret the god's will for the Amazons, fight alongside them in times of combat, perform the usual service of guidance (and even marriage, if this is still a function of this specific Amazon society); and sometimes travel through the outer world in an effort to learn what they can of the world of men--in order to protect themselves from it, or to educate themselves and the outer-worlders to reduce misunderstandings between the cultures.

There are no special ability-score requirements to be an Amazon.

To abandon this kit, the character would have to renounce her Amazon citizenship... meaning that she would have to identify herself more strongly with another culture.

**Barred:** The DM will decide which gods act as patrons for the Amazon civilization; most Amazon priestesses will serve those specific gods. However, not all Amazon priestesses *have* to serve those specific gods. An Amazon culture could have as its patron the gods of War and Moon, for instance, but a specific Amazon priestess could serve another god. (Since each attribute has its own role to play in any civilization, few gods are really inappropriate.) Note, though, that no Amazon priestess can serve the gods of Disease or Peace. Also, since Amazon warriors must know the use of the spear and long bow, an Amazon priestess who cannot use those weapons will be looked down upon, and won't command the respect of priestesses who can. Therefore, an Amazon will command less respect *unless she is a priestess of one of the following gods*: Community, Competition, Elemental Forces, Good, Hunting, Light, Mischief/Trickery, Moon, Oracles/Prophecy, Race (Human), Sky/Weather, Sun, War, Wind, Wisdom.

**Role:** Among the Amazons, the priestess-types listed immediately above are as highly-regarded as the warrior, and the warrior is the most-admired type of Amazon. Outside the Amazon lands, among male-dominated civilizations, the priestess is looked on as an even more unnatural sort of unnatural woman. In cultures where men and women are approximately equal in influence, the Amazon is looked on as a curiosity, and may even (at the DM's discretion) be looked down on as a representative of a race that hasn't yet come to the conclusion that neither gender should oppress the other.

Among player-character adventurers, the Amazon-priestess is likely to prove herself to be a doughty fighter and an effective spellcaster. If the priestess character starts out suffering a bit of discrimination when she's introduced into the campaign, that may be normal according to the culture but the DM shouldn't encourage this attitude, especially after she's proven herself in dangerous situations. Even if the campaign's main culture is discriminatory, the PCs should demonstrate a little more flexibility in their attitudes based on their adventuring experiences.

**Secondary Skills:** Required: Groom.

**Weapon Proficiencies:** Required: None. Recommended: Spear, long bow; if possible, various axes and swords.

**Nonweapon Proficiencies:** Bonus Proficiencies: Riding (Land-Based), Animal Training. Recommended: (General) Animal Handling, (Warrior) Animal Lore, Armorer, Bowyer/Fletcher, Hunting, Running, Survival, Tracking.

**Equipment:** When an Amazon character is first created, she must buy her armor from among the following choices only: Shield, leather, padded, studded leather, brigandine, scale mail, hide, banded mail, bronze plate mail. Once she has adventured elsewhere in the world, she may purchase other types of armor according to her priest-class limitations.

**Special Benefits:** Male opponents from cultures where women fighters tend to be rare will be amused, rather than cautious, the first time they confront an Amazon. Therefore, in a fight where such a warrior runs up against an Amazon for the first time, the Amazon gets a +3 to hit and +3 damage on her *first blow only*. This reflects the fact that her opponent's guard is down.

This bonus doesn't work on any Warrior character of fifth level or higher, or a character of any other class at 8th level or higher; in spite of any prejudices he might bear, this character is too seasoned an adventurer to let his guard down that way.

At the DM's discretion, he can give a wary, suspicious NPC an Intelligence check; on a successful check, he will see the attack coming and deny the Amazon the bonus.

The bonus won't work on any male fighter who comes from a culture where women do regularly fight, or who has had fighting-women comrades or faced fighting-women opponents before, or even who has seen the Amazon hit someone else with this bonus earlier.

It doesn't work on player-characters unless the player is role-playing honestly enough to admit that his character would underestimate the Amazon.

Once the Amazon hits a character with this bonus, the target (if he survives) will never fall for it again. It can only be used successfully once per victim, ever. But if the Amazon misses a target with this blow, she continues to receive it against this target until she hits him once.

**Special Hindrances:** The Amazon receives a -3 reaction roll adjustment from NPCs from male-dominated societies. Player-characters do not have to demonstrate this hostility unless they want to do so for role-playing purposes, and even then it should fade as they come to respect her.

**Wealth Options:** The Amazon gets the ordinary 3d6x10 gp as starting money.

**Races:** None are excluded. Humans, elvish, and half-elvish Amazons are most appropriate. Dwarves would substitute battle axe and warhammer for their weapons and swine for their preferred mounts. Gnomes would substitute throwing axe and short sword, and would ride ponies, and would have Tracking and Survival as their Bonus Nonweapon Proficiencies. Halflings would substitute javelin and sling for their weapons, and Endurance and Set Snares for their Bonus Nonweapon Proficiencies.

### Barbarian/Berserker Priest

**Description:** This priest is the priest of a culture halfway between what we think of as civilized and savage. His people live at the very edge of or beyond the borders of the edges of the campaign's main civilization. They tend to be very warlike, fighting battles with neighboring tribes and with intruding imperial troops. Their fighters aren't soldiers; they are warriors, and tend to be deadlier in one-on-one fighting but poorer at formation

combat than those of the "civilized" nations. These warriors may, in fact, be berserkers (see *The Complete Fighter Handbook*). They are still more in touch with nature and the world than the people of civilized lands. They may have very different customs from civilized folk.

Priests of this community perform the same functions as priests of civilized lands. However, barbarians have more respect for the gods than civilized folk, and priests also are well-respected. Kings and war-chiefs of their culture listen to their counsel. In their culture, those who disagree with them do not insult them or their guidance, and it is forbidden for a warrior to attack a priest of his culture (though defending himself from attack is all right... if he can prove that it was defense, not aggression).

There are no ability requirements to be a priest of a barbarian or berserker tribe. The warriors of the tribe must have Strength 15, and priests will be most impressive if they can approximate or match that score... but it's not a requirement of the kit.

As with the Amazon, abandonment of this kit means that the character renounces his allegiance to his tribe or clan and accepts citizenship in some other culture. This means that he must now perform his priestly duties in the fashion of the priests of that culture.

**Barred:** Barbarian tribes tend to have one or two patron gods, and most of their priests will serve those gods. These tend to be gods of natural forces (Agriculture, Animals, Darkness/Night, Earth, Elemental Forces, Fertility, Hunting, Lightning, Metalwork, Nature, Sky/Weather, Thunder) or other barbarian attributes (Strength, War). Gods of the "softer" attributes (Arts, Love, Music, etc.) would be represented but their priests would be much rarer. No priesthood is barred among the barbarians, however scarce.

**Role:** In the campaign, the barbarian priest is a spooky, dangerous figure. Like barbarian warriors, he'll be grim and a little alien to his allies from civilized lands. First and foremost, he's a defender of his people, and he'll most often be found wandering in lands other than his own because of some quest set him by the gods or some mystery he's encountered that requires him to travel in order to solve it. When he finds his own tribesmen captured or enslaved in the outer world, which might be a common occurrence, he must do his utmost to free them and return them to his own land, which can imperil other goals he and his player-character allies have . . . but as a leader and protector of his culture, this is a duty he cannot refuse. (If he were to do so, the god would take it as a betrayal of goals; see the Role-Playing chapter.)

**Secondary Skills:** The main occupation of the barbarian's tribe determines what sort of secondary skill he knows. If the tribe raises and sells horses, then the Groom secondary skill will be known by all tribesmen. Ask the DM what the tribe's main occupation is and that will determine the required Secondary Skill.

**Weapon Proficiencies:** Required: None. Recommended: Battle axe, sword/bastard, bow (any), sling, warhammer. Naturally, the priesthood may limit the priest's choice of weapons and not allow him to learn all these.

**Nonweapon Proficiencies:** Bonus Proficiency: Endurance. Recommended: (General) Animal Handling, Animal Training, Direction Sense, Fire-Building, Riding (Land-Based), Weather Sense, Blind-Fighting, Hunting, Mountaineering, Running, Set Snares, Survival, Tracking, Herbalism, Jumping. (Some of these are outside the priest's Nonweapon Proficiency Group Crossovers and will cost twice the listed slots if taken; see the description of the priest class, and the chart at the bottom of the *Player's Handbook*, page 55, for more details.) The DM may require this priest to take a

proficiency in the tribal specialty (Fishing, Agriculture, etc.).

**Equipment:** With his starting gold, the barbarian priest cannot buy armor heavier than splint mail, banded mail, or bronze plate mail. Once he has adventured in the outer world, he can buy any type of armor his priestly requirements allow him to use. With his starting gold, he can buy only weapons appropriate to his tribe (usually battle axe, bows, club, dagger/dirk, footman's flail, mace, or pick, hand/throwing axe, sling, spear, and swords); naturally, priestly restrictions may prevent him from taking some of these, depending on which god he serves.

**Special Benefits:** Barbarians are imposing and dangerous-looking. This tends to make others respect them or at least wish not to make enemies of them. Therefore, barbarian/berserker priests receive a +1 reaction adjustment bonus when encountering NPCs. This becomes a +3 among members of his own culture.

If the priest's culture has many Berserker warriors, as per *The Complete Fighter's Handbook*, the priest has an additional special ability. Berserkers normally take ten rounds to go berserk; in the presence of one of their own priests, then can do it in five. Additionally, if the priest, as part of his priestly class, has the *incite berserker rage* granted power, then berserkers of his culture in his presence can go berserk in *one round*. The priest is not required to use his power for this to take place; it just happens.

**Special Hindrances:** The barbarian/berserker priest has a problem in civilized lands: He doesn't respect the authorities and they have learned to be cautious of him. (This sort of priest keeps freeing his enslaved brethren, and, even if he worships a god known to this culture, he does so in a different way that the locals consider wrong.) Therefore, the barbarian/berserker priest receives a -3 reaction adjustment penalty when encountering NPCs in positions of power: Rulers, government officials, etc.

**Wealth Options:** No special requirements; this priest gets the usual 3d6x10 gp as starting money.

**Races:** There are no special restrictions here. Each individual DM has to decide whether or not his demihumans can live in what are considered barbarian cultures. If they can, then they will have priests among them.

### Fighting-Monk

**Description:** This priest belongs to an order devoted in large part to the study of fighting styles, especially barehanded martial arts. These monks live and study in monasteries devoted to their orders. If, for example, they are priests of the god of War, these monks do not live and study in ordinary temples of that god; they have their own secluded monastery away from the normal temples.

These monks do not confine their war-training to the monasteries, however. They travel the wide world in order to learn the secrets of life, the world, magic and the gods. As an order, they sometimes volunteer their services to rulers in times of war, and act as elite forces against the enemy.

These monks are most appropriate for an oriental-flavored campaign and the DM may wish to decide that they cannot be used in his campaign. Before you create a Fighting-Monk character, consult your DM and ask if he is allowing the Fighting-Monk kit in his campaign.

In order to be a fighting-monk, the character must have a Dexterity of 12 or more.

If a fighting-monk wants to abandon this kit, he must go through a difficult process in

order to do so. He must not use any of his unarmed combat techniques for three whole experience levels' worth of time. Once he's reached that third experience level, he has forgotten his unarmed combat techniques and may resume the wearing of armor; and, if he renounced some of his spheres of influence when he became a fighting-monk, may now resume those lost spheres.

As an example, a fighting-monk priest at 5th level decides to renounce his allegiance to the fighting-monk order. He adventures normally, still not wearing armor but otherwise performing as a normal priest of his priest-class. He abstains from using his unarmed combat techniques. At 8th level, he has abandoned his fighting techniques and may once again wear the armor appropriate to his priest-class.

If a character forgets himself and uses unarmed combat techniques during this process, he must "start over." It will be three experience levels from his *current* level, from the time he made the slip, until he can resume his priest-class.

**Barred:** A priest of any priesthood which starts out with Poor Fighting Abilities is barred from this choice.

**Role:** In the campaign, this priest is the philosophical warrior whose principal duty is self-enlightenment. He is less concerned with the ordinary priestly duties (such as guidance, marriage, community service) than those priests, but will still perform them; he just won't go out of his way to look for them, nor will he normally volunteer for them (NPCs must ask his help in these matters). Such characters are usually wanderers, which help make them appropriate for adventuring parties. They do periodically return to their monasteries, to pass on the learning they have acquired on the road, and to brush up on their fighting-skills; the rest of the time they spend out in the world.

**Secondary Skills:** This priest may choose or random-roll his secondary skill, if you are using the secondary skills system in addition to the weapon/nonweapon proficiencies system.

**Weapon Proficiencies:** Required: See under "Special Benefits," below. Otherwise, the priest may take any weapon proficiencies which his specific priest class allows him; he may not take any the class does not allow him.

**Nonweapon Proficiencies:** Bonus Proficiency: Tumbling. Recommended: Riding (Land-Based), Artistic Ability (any), Dancing, Reading/Writing, Religion.

**Equipment:** See "Special Hindrances," below.

**Special Benefits:** The principal benefit of being a Fighting-Monk is that the character receives *two free weapon proficiency slots* which he must use to take Specialization in one of the three styles of Unarmed Combat (Punching, Wrestling, or Martial Arts). These were described in greater detail in *The Complete Fighter's Handbook*, but that information also appears here, in the "Equipment and Combat" chapter. The Fighting-Monk is the only priest who can specialize in an Unarmed Combat style. He can specialize in any or all of the three styles, but he may only specialize in one of them at first experience level.

As a second benefit, regardless of what it says for the priest's class, the Fighting-Monk has a Nonweapon Proficiency Group Crossover with *all five* Proficiency Groups (General, Priest, Rogue, Warrior, Wizard). No proficiency he takes will cost double the usual number of slots.

The last of the Fighting-Monk's benefits is this: He doesn't have to spend all his starting Weapon Proficiency slots at first level. He can save his unspent proficiencies,

and they do not "go away." Later, he can spend them at a rate of one proficiency per experience level to improve his martial arts or buy new martial arts.

**Special Hindrances:** This priest cannot wear any sort of armor. Additionally, if he's a priest-class with Medium Combat Abilities, he must "give up" some of his Spheres of Influence. He may have no more than *three* Major Accesses (one of which must be All) and two Minor Accesses. The player may choose from the accesses he currently has which ones the character loses and which he keeps.

Additionally, the priest may never own more things (weapons, treasure, money, etc.) than he can carry on his back.

**Wealth Options:** The Fighting-Monk gets the usual 3d6x10 gp as starting money.

**Races:** No special limitations. Humans, elves and half-elves seem visually more suited to this kit than dwarves, gnomes, and halflings, but the DM can allow those races to take this kit if he so chooses.

### Nobleman Priest

**Description:** This priest was a member of a noble family and entered a priesthood. But even as a priest he keeps his opinions about the superiority of the ruling classes and his tastes for the finer things in life; he doesn't abandon his love of good food, good furnishings, comfort, the arts, intellectual stimulation, and so forth.

The Nobleman Priest prefers the company of nobles and is often appointed as an advisor to a noble family, a ruler, an important local governor, etc. He has less concern for the lives and welfare of commoners. When pressed, he will perform any and all priestly duties for commoners, but he usually seeks to avoid these duties; when he is a low-level character, he'll keep himself away from common folk as much as possible in order to avoid these inconveniences, and when he is higher-level he will assign a subordinate or a follower to attend their needs.

The Nobleman Priest is not necessarily evil or a bad person. In fact, he often adheres to a code of chivalric behavior much like a knight's. But he does have strong social prejudices which color his thinking.

Important note: A nobleman can become a priest and not take the Nobleman Priest kit. This sort of priest lives more frugally, like other priests, and does not have to have a disdain for the lower social classes; Nobleman Priests do not count him among their ranks.

There are no special requirements to be a Nobleman Priest.

If a Nobleman Priest player-character ever decides that he is wrong in his attitudes (which can occur in especially dramatic fashion if he is affected by the self-sacrifice of a commoner who has saved him, or if he falls in love with a character of the common social classes), he may choose to abandon this kit. If he does this, he will be ostracized by most of the nobles who were previously counted as his friends (the DM can have one or two more broad-minded nobles still count him a friend, and the player-characters can make up their own minds on the subject); he may even be exiled from his own family. As with any kit abandonment, he loses all other benefits and hindrances of the kit.

**Barred:** None.

**Role**: In the campaign, the Nobleman Priest is an aggravating snob (though he might not be aware of his snobbery). He is a fun role to play, but he'd better have some redeeming features if the other PCs are to continue to associate with him. If he does have

redeeming features, it's very likely that some PCs will try to "reform" him to their own way of thinking.

**Secondary Skills:** Nobleman Priests may choose or random-roll their Secondary Skill.

**Weapon Proficiencies:** Required: None. Recommended: Long sword, bastard sword, lance, flails (all), maces (all), if allowed by the priest's actual priest class.

**Nonweapon Proficiencies:** Bonus Proficiencies: (General) Etiquette, Heraldry, Riding (Land-Based). Recommended: (General) Animal Training, Dancing, (Warrior, double slots unless the priest class has a nonweapon proficiency group crossover including the Warrior group) Gaming, Hunting, (Priest) Local History, Musical Instrument, Reading/Writing.

**Equipment:** The Nobleman Priest may spend his gold as he chooses # but he has certain minimum standards he cannot violate. Before starting play, he must buy:

(1) A suit of armor (if he is permitted to by his priest-class . . . and, unless his class limits him to lesser armor, he cannot buy armor less protective than brigandine or scale mail).

(2) At least one weapon larger than a dagger (again, if his priest-class so permits him).

(3) A horse (at least a riding horse), riding saddle, bit & bridle, horseshoes and shoeing, halter and saddle blanket.

**Special Benefits:** The Nobleman Priest starts with more gold than other priests; see below under Wealth Options.

The Nobleman Priest receives a +3 reaction from any noble of his own culture, and a +2 from nobles of other cultures. The DM can ignore this if there is a cultural hatred between those people and the priest's culture or the priest's god.

When travelling, he can demand shelter from anyone in his own land; he can demand shelter for two people multiplied by the priest's experience level (if he's eighth level, he can demand shelter for himself and a retinue of fifteen more people).

**Special Hindrances:** The Nobleman Priest is expected to live well. If he has enough money to do so, he may only buy high-quality goods, and so must spend at least two times the minimum necessary money for anything he buys. If a basic long sword costs 15 gp, he won't buy one worth less than 30 gp; the extra money goes into quality, engraving, etc. (He can't save money by having a friend or follower buy cheaper things for him; he's just not satisfied with anything less than good-quality merchandise.)

If the priest is broke and cannot spend this extra money, he can then settle for lesser goods . . . but the other nobles of his culture, if they see him with shabby accoutrements, will mock him, and he does not get his reaction bonus until once again all his goods are high-quality goods. In fact, if his gear and possessions look sufficiently shabby (DM's discretion), people may not believe him to be a nobleman at all, and may refuse him the shelter he could ordinarily demand. (This happens most often if a nobleman priest is robbed of all his clothes and goods and left to fend for himself.)

As he can demand shelter of others, other Nobleman Priests can demand shelter of him. This can be expensive if they decide to stay for awhile. This is also a good way for the DM to bleed extra money from the priest if he seems to have too much.

**Wealth Options:** The Nobleman Priest begins play with more gold than other priests. He gets 225 gp plus the standard 3d6x10 gp. But he must spend a good portion of that on the Equipment required of him. If the priest abandons this kit, that money doesn't magically "go away," but as part of his social ostracization the character should suffer

some sort of financial loss, equal to at least 225 gp, as determined by the DM. (Perhaps a malicious ex-friend destroys some of his property; perhaps a petty-minded business acquaintance betrays him on a business deal.)

**Races:** This kit has no special requirements for race. The DM may decide that not all races have the same kind of social snobbery that humans do, in which case that race could not take this kit.

### Outlaw Priest

**Description:** This priest has decided to become part of some sort of outlaw community and serve that community's religious needs. The trouble is, for the character to take this kit, this group or community must be sufficiently outlawed that the priesthood in question does not approve of it. Alternatively, the priest may have decided that the god's priesthood is not serving him in an appropriate way, and he will have decided to create his own priestly order serving the same god. In this case, too, the regular priesthood does not approve of him. In either case, the priest must believe that he is still serving the god in a fashion that the god approves of. (The DM, obviously, must agree.)

Friar Tuck, the cleric who tended to Robin Hood's Merry Men, is the classic example of this type of priest.

This priest, in the pursuit of his duties, is opposed by other priests serving the same god. In addition, if he's identified himself with an outlaw or pirate band, he'll be wanted by the authorities as a member of that band.

There are no special ability-score requirements to be an Outlaw Priest.

A priest abandons this kit by leaving the outlaw band or opposing/disbanding the new religious order, whichever is pertinent. Additionally, by role-playing in the campaign, he must answer all the charges pressed against him by the authorities (he might do this by being tried and going to prison for a time, or paying reparations, or accepting tasks of penance from his temple); if he does not, he will continue to be opposed by his temple and wanted by the authorities.

**Barred:** Priests of the gods of Community may not take this kit. Priests of no Philosophy or Force may take this kit. (They can associate themselves with pirate or outlaw bands, but there is no censure within their orders because of it, and therefore no disadvantage to belonging to such a band.)

**Role:** This sort of priest has one of two roles, depending on the situation.

(1) With the first situation mentioned above, the priest has joined an outlaw or pirate band. In the campaign, then, he's the rogue priest who has decided that the band deserves his priestly guidance, and that this is more important than the demands of his priestly order. The priest either agrees with the band's outlaw activities or ignores them; his concern is that they receive the blessings of his god. Perhaps, too, he thinks that they'll be a more ethical group with him around; he may be present to keep them from performing acts of brutality or rapine, which they might undertake were he not present.

(2) In the second situation mentioned above, the priest is a rogue visionary who thinks that he must serve his god in a way not approved of by the normal priesthood. This character is probably someone who went through the temple's normal priestly training, decided that there was something wrong or lacking in it, and set out to found his own order. A classic example of this is the situation where a priesthood has become corrupt and lazy, and a reformer priest has appeared to try to return the worship of the god to its

former honorable state; the corrupt priests naturally wish to maintain the *status quo*.

**Secondary Skills:** The priest can choose his own secondary skill. If he's part of a pirate band, he may wish to choose Sailor, Shipwright or Navigator. If he's part of a landbound outlaw band, he might choose Forester, Hunter, or Trapper/Furrier. He may decide on none of these and make a decision based on his life before he entered the priesthood.

**Weapon Proficiencies:** Required: None. Recommended: If Pirate, cutlass*, belaying pin*, bill. If Outlaw, weapon choices appropriate for the outlaw band. (The "*" symbol refers to weapons introduced in *The Complete Fighter's Handbook*.)

**Nonweapon Proficiencies:** Bonus Proficiency: Religion.

Recommended Proficiencies (Pirate Priest): Pirate's Bonus Proficiencies: (General) Rope Use, Seamanship, Swimming, Weather Sense, (Warrior, double slots unless priest-class dictates otherwise) Navigation, (Priest) Engineering (for shipbuilding), Reading/Writing (for mapmaking), (Rogue, double slots unless priest-class dictates otherwise) Appraising, Set Snares (in association with Rope Use skill), Tightrope Walking, Tumbling, (Wizard, double slots unless priest-class dictates otherwise) Engineering (for shipbuilding), Reading/Writing (for mapmaking).

Recommended Proficiencies (Outlaw Priest): (General) Direction Sense, Fire-Building, Riding (Land-Based), (Warrior, double slots unless priest-class dictates otherwise) Animal Lore, Bowyer/Fletcher, Endurance, Hunting, Running, Set Snares, Survival, Tracking, (Priest) Healing, Herbalism, Local History, (Rogue, double slots unless priest-class dictates otherwise) Disguise.

**Equipment:** No restrictions. Within the context of the campaign, if this is a pirate or outlaw band, it's a bad idea to wear metal armor (banded, brigandine, bronze plate, chain, field plate, full plate, plate mail, and ring mail). Metal armor drags pirates down to their deaths when they fall overboard; and it's noisy when worn by outlaws trying to ambush their prey. But this is just a factor the DM needs to remember, not a restriction on the kit.

**Special Benefits:** The main benefit of this kit is that the priest does not have any superiors. He takes orders from no superior religious authority (unless the god himself chooses to issue some).

**Special Hindrances:** The outlaw priest is opposed by the normal priestly order serving his god. When they hear of his plans, they try to thwart them (break up religious meetings, disrupt building of his temple, etc.). This priest never gets to build a temple at cut-rate prices; he must always spend the whole amount to build his temple. (If he ever abandons his kit, the regular priesthood may accept his temple as one belonging to the priesthood, but will never recompense him half the money it took to build it.) If the outlaw priest is part of an outlaw or pirate band, he is sought by the same authorities that seek that band, and will pay the same penalties under the law as they do if he is caught.

**Wealth Options:** Outlaw priests get the standard 3d6x10 gp for starting gold.

**Races:** No special restrictions.

### Pacifist Priest

**Description:** This priest is devoted to the cause of peace. He is a champion of passive resistance, of achieving one's ends without resorting to violence of any kind.

There are no special requirements to be a priest of this sort. Nor are there special rules for abandonment of the kit, if the character eventually feels that he needs to be wielding

force to achieve his ends.

**Barred:** Priests of the following gods, forces and philosophies may not be Pacifist Priests: Disease, Evil, Justice/Revenge, War.

**Role:** In a campaign, this priest can be a real aggravation to the more combat-oriented player-characters. Therefore, the DM should allow this priest in only the following situations:

(1) When he's an NPC, so that the DM doesn't have to work to contrive to keep him with the party all the time (they'll have an easier time of abandoning him if they wish);

(2) When he's part of a specific quest or mission (i.e., they must accompany him and guard him throughout the quest or it will automatically fail); or

(3) When all the PCs are pacifists (this would be a very unusual campaign or quest, indeed...).

Note, though, that just because the priest demands peacefulness of all around him, his allies don't have to obey. However, it is inevitable that in combat situations the player of the pacifist priest will feel left out (he can't fight); additionally, he'll feel compelled by his philosophy to argue with the other PCs, to chide them for their violence, which will get on their nerves. Therefore, the DM should keep such quests short, so that the pacifist priest doesn't drive the other characters to the point that they'll kill him.

**Secondary Skills:** This priest may choose or random-roll his secondary skill. It may not be Armorer, Hunter, or Trapper/Furrier (if he rolls one of these up randomly, he may re-roll).

**Weapon Proficiencies:** The Pacifist Priest may not know any Weapon Proficiency except bow and dart, and may know them only if his true priest-class allows them. The priest may only use these weapons in competition, as described below under "Special Hindrances." The priest still receives all his Weapon Proficiency slots, and if he ever abandons this kit may "spend" them at a rate of two slots every experience level.

**Nonweapon Proficiencies:** Bonus Proficiency: Etiquette. Recommended: Languages (Modern), Languages (Ancient), Ancient History, Singing, Musical Instrument, Reading/Writing.

**Equipment:** This priest may not buy any armor, and may not buy any weapon except dagger or knife (for eating only), and bow and dart (if he has proficiency with them).

**Special Benefits:** This priest is a very compelling personality. He receives a +2 to his Charisma score (his Charisma cannot exceed 18 from this bonus), and, in addition to any reaction bonus that his heightened Charisma gives him, he receives a +2 reaction from anyone who is not utterly opposed to his philosophy. (Beings opposed to his philosophy include priests and devoted adherents of the gods, forces and philosophies mentioned above under "Barred," and certain warlike nonhuman races like orcs, ogres and trolls.)

**Special Hindrances:** This priest may never wear armor, and may never use weapons, spells or any other tactics to harm a human, demihuman, nonhuman, or monster. If he ever violates this decree, his *god* will not punish him (because the pacifist's oath is one he took for himself, not for his god), but his own guilt will deprive him of all magic spells for the span of one month. (If the DM wishes, if the priest is a follower of the god of Peace, the god can instead punish him as a "Betrayal of Goals" from the **Role-Playing** chapter.) Naturally, if he later abandons the kit, he can resume the wearing of armor and use of weapons according to his priest-class.

**Wealth Options:** This priest gets the usual 3d6x10 gp.

**Races:** No special limitations.

### Peasant Priest

**Description:** The Peasant Priest is the antithesis of the Nobleman Priest above. He's a champion of the common man, and prefers serving the commoner to any association with nobles. He has taken a vow of poverty; he believes he should sacrifice his worldly goods to the glory of his deity.

Note that the Peasant Priest need not have been born a peasant; he could have been born a nobleman and later abandoned that lifestyle and the privileges of his class.

There are no ability-score requirements to be a Peasant Priest.

There are no special rules for abandonment of this kit.

**Barred:** Priests of the following gods, forces, and philosophies may not take this kit: Evil, Good, Prosperity.

**Role:** In the campaign, the Peasant Priest devotes himself to the needs of the common man. If he's part of an adventuring party, he won't support any plans which endanger or exploit the peasants or serfs, and will try to recommend plans which advantage them. (For example, if the party wants to use the locals to help lure the dragon out of its cave, so that the locals will be the first ones flamed and eaten, the priest will object. But if the locals are to be along as support troops, and have information and chances of success and survival at least equal to the player-characters', he won't have any such objection.) He'll insist that treasures be shared with the locals of the area where the treasure was found. (Assuming that the treasure is split into even shares among party members, he'll insist that the local peasant community receive two shares, for example.) In a greedy or tight-fisted party, the party might refuse his requests, which doesn't mean the priest has to attack them or steal from them... but this will inevitably result in the priest becoming disillusioned with the party.

**Secondary Skills:** The player may choose his priest's secondary skill.

**Weapon Proficiencies:** The player may choose his character's weapon proficiencies, subject to the limitations of the priest's actual priest-class. The DM may insist that the character start out the campaign only with proficiencies appropriate to a peasant, such as short sword, spear, bow, footman's weapons and the like; long swords (and bigger blades), horseman's weapons, exotic polearms, lances, tridents and the like are not. This should only be a restriction when the character is first created; afterwards, he can learn any weapon his priest-class allows him.

**Nonweapon Proficiencies:** Bonus Proficiencies: Agriculture *or* Fishing (player choice), Weather Sense *or* Animal Lore (player choice). Recommended: Any of the General proficiencies.

**Equipment:** The Peasant Priest has restrictions on the way he spends his money. Other than weapons, with which he has no monetary limitation, he may own only one object worth as much as 15 gp, and other than that one object may own nothing worth more than 10 gp. He may never own more than 75 gp worth of (non-weapon) property at any one time. If he receives money or gifts which put him above that limit, he must give away money and possessions until once again he is within the 75 gp limitation.

**Special Benefits:** The Peasant Priest always has shelter when he's in his own community; his own people will shelter him even from the land's rightful authorities. Among peasants of other communities, he cannot count on this benefit, but he receives a

+2 reaction adjustment from all peasants.

**Special Hindrances:** The Peasant Hero's great limitation is described above under "Equipment."

**Wealth Options:** The Peasant Priest gets the standard 3d6x10 gp starting money. Of the money he receives, no more than 75 gp may be spent on goods other than weapons.

**Races:** No special limitation.

### Prophet Priest

**Description:** A prophet is one who receives signs, dreams, or clues about the future from his god. Priests of the god of prophecy are prophets, but they aren't the *only* prophets. Priests of other gods can receive and pass along prophecies. However, since this is rarer, the DM has the right to approve or disapprove any character taking this Priest Kit.

To be a Prophet Priest, the character must have a Wisdom of 15 or better.

A character may not abandon this kit. As long as he is a priest, he is a Prophet Priest.

**Barred:** Priests of the god of Prophecy may not take this kit. All other priests may. (Priests of philosophies or forces don't receive their prophecies from a god; their prophecies are more like psychic impressions.)

**Role:** In the campaign, the Prophet Priest is partly a tool for the DM; the DM can use the character to supply clues and even red herrings to the characters. His is often a thankless job, and he is often a bit alienated from the normal folk (see "Special Hindrances" below).

**Secondary Skills:** The priest may choose his own secondary skill.

**Weapon Proficiencies:** Required: None. Recommended: Any that the priest's actual priest-class permits.

**Nonweapon Proficiencies:** Bonus Proficiency: Weather Sense. Recommended: None special.

**Equipment:** No special restrictions.

**Special Benefits:** The character receives the Medium Granted Power "Prophecy" from the Designing Faiths chapter. However, it's more limited than the Prophecy which is granted to priests of the god of Prophecy. With this power, priests may receive visions from the god at any time the DM decides, but may only deliberately sink into a trance in order to receive a vision once per day.

**Special Hindrances:** It's not normal for anyone but priests of the god of Prophecy to be prophets. Therefore, normal people are a little edgy around other prophets, and react to them at a -2 reaction adjustment. (This adjustment may never result in a reaction worse than Cautious, however.)

**Wealth Options:** This priest receives the normal 3d6x10 gp starting gold.

**Races:** No special limitations.

### Savage Priest

**Description:** This is a shaman of a savage tribe. This character is a member of the tribe. The tribe itself is a technologically and culturally primitive one (by the standards and in the opinions of more "civilized" cultures), but is also one which is attuned to the natural forces of the world. The Savage Priest interprets the will of his god and acts as an

advisor or leader to the members of his tribe.

This character might be an animal-totem shaman who assigns all the tribal warriors their animal totems. He might be the witch-doctor who insists on the deaths of the adventurers from the outside world. Take a priestess of a nature-god and give her the Savage Priestess kit, and you end up with something very like a nymph. Whether the Savage Priest is good or evil, filthy or clean-limbed depends on the nature of the tribe itself; the DM decides what the tribe is like.

To be a Savage Priest, a character must have a minimum Strength score of 11 and a minimum Constitution score of 13.

In abandoning this kit, the character is renouncing his membership with the tribe and accepting citizenship in some other culture. This frequently happens with Savage Priests who join adventuring parties, stay with them in travels through the world, and learn so much of the outside world that they no longer feel like part of their tribe.

**Barred:** Priests of the following god and philosophies may not take this kit: Disease, Divinity of Mankind, Evil, Good.

Priests of the following gods are *most* appropriate to this kit: Animals, Earth, Elemental Forces, Fire, Hunting, Nature, Sky/Weather, Vegetation.

**Role:** In a campaign, this character usually plays the role of the primitive who finds his world-view shattered by his experiences in the outer world... but who might teach his "civilized" companions something about simple truth and justice as he adventures with them. The DM should insist that the character role-play his tribal origins in the first four or five experience levels, until the character is more used to the outside world; this priest will be baffled by "high-technology" inventions (iron and steel weapons, boats made out of more than a single log, hourglasses, anything more sophisticated than the tools of his tribe), by civilized morals and ethics, and especially by the strangeness and unfairness of the laws of civilized men.

**Secondary Skills:** The Savage Priest character must take Fisher, Forester, Groom, Hunter, or Trapper/Furrier as his Secondary Skill (player choice, based on the activities of his character's tribe).

**Weapon Proficiencies:** The Savage Priest is limited to the weapons his actual priest-class permits him, and is further limited (when he is first created) to the following set of proficiencies: blowgun, long bow, short bow, club, dagger, javelin, knife, sling, spear. After he has adventured in the outer world, the character may learn other proficiencies.

**Nonweapon Proficiencies:** Bonus Proficiencies: (General) Direction Sense *or* Weather Sense (player choice), (Warrior) Endurance *or* Survival (player choice). Recommended: (General) Animal Handling, Animal Training, Fire-Building, Fishing, Riding (Land-based), Rope Use, Swimming, (Warrior, double slots unless the priest-class dictates otherwise) Animal Lore, Bowyer/Fletcher, Hunting, Mountaineering, Running, Set Snares, Tracking, (Priest) Healing, Herbalism, Local History, Religion, (Rogue, double slots unless the priest-class dictates otherwise) Jumping, Tightrope Walking, Tumbling, (Wizard, double slots unless the priest-class dictates otherwise) Herbalism. The Savage may *not* take Etiquette or Heraldry when first created.

**Equipment:** The Savage Priest, with his starting gold, may buy no armor other than leather armor and shield, and may buy no weapon not listed above under "Weapon Proficiencies." He must spend all his gold when he is created, or lose any "change" he has left over.

If you have *The Complete Fighter's Handbook*, use the Equipment rules for the Savage Warrior Kit instead.

**Special Benefits:** The Savage Priest has a special *Detect Magic* ability, resembling the spell of the same name, which he may use once per day per experience level he has (i.e., a 5th-level savage could use his ability five times per day). The rules for this power are:

*Detect Magic*. The Savage Priest is in tune with nature and can feel when there is something magical in the vicinity. As with the first-level Priest spell, he has a 10% chance per experience level to determine the sphere of the magic.

**Special Hindrances:** The Savage Priest is imposing and strange, and he worships his gods "all wrong" (i.e., civilized folk and priests recognize that his rites are different, unlike theirs). Therefore, he suffers a -2 reaction adjustment from all civilized folk (NPCs, that is; PCs can decide for themselves how they react to him).

**Wealth Options:** The Savage starts out with only 3d6x5 gp. After the campaign starts, he will encounter money, and the player may decide either that he likes the stuff or rejects it as a stupid city-human idea.

**Races:** No special limitations.

### Scholar Priest

**Description:** This character is a researcher. He's most at home when he's poring over books, scrolls, papyri, clay tablets and other old writings. He's not forbidden from fighting, but is more likely to try to straighten out a bad situation with reason, personal charisma, or even trickery than with a weapon. His life is dedicated to the assimilation of knowledge (and, usually, the transmission of that knowledge to new generations).

A scholar priest must have an Intelligence ability score of 13 or better.

This kit cannot be abandoned. A scholar can break off correspondence with other scholars, can choose not to teach, can decide not to do any studying or writing for as long as he likes, but he can always re-enter the academic world.

**Barred**: Priests of the following gods, forces and philosophies cannot take this kit: Competition, Fertility, Life-Death-Rebirth Cycle, Strength, and War.

Priests of the following types are most appropriate for this kit: Arts, Crafts, Culture, Divinity of Mankind, Literature/Poetry, Music/Dance, and Wisdom.

**Role:** In the campaign, this priest is motivated by his desire for knowledge. He'll often be tempted by adventures where he's likely to be able to learn something. If an adventuring party is going to a ruin where a famous library once stood, he'll eagerly join on the faint hope that some scrap of that library still survives. He'll be part of expeditions to visit famous sites or ancient beings who might tell him stories of the past or solve old mysteries. He might be part of an adventure just so that he can chronicle it and preserve its events in history.

**Secondary Skills:** The Scholar Priest must take Scribe as his secondary skill.

**Weapon Proficiencies:** Required: None. Recommended: Any appropriate to the priest's actual priest-class. Note: See "Special Benefits," below.

Nonweapon Proficiencies: Bonus Proficiency: Reading/Writing. Recommended: (General) Artistic Ability, Etiquette, Heraldry, Languages (Modern), (Priest) Ancient History, Astrology, Languages (Ancient), Local History.

**Equipment:** The scholar-priest must always have writing material, quill and ink with him. If ever he loses them, he must regain or replace them as soon as possible, and in the

meantime will be recording his experiences in any fashion he can find. Other than that, this kit makes no demands on the way he spends his money.

**Special Benefits:** The Scholar Priest can "spend" any of his Weapon Proficiency slots on Nonweapon Proficiencies instead. He doesn't have to; he can adhere to the normal pattern of proficiency choice that is appropriate to his priest-class. But if he wishes he may turn Weapon Proficiency slots into Nonweapon slots and thereby become a very skilled character. Also, the Scholar receives a +3 reaction bonus from other scholars, admirers of scholastic concerns, writers, journalists, and people who imagine that they are scholars. Because of this, when the party thinks it is in a situation when no one is willing to help, it may turn out that the mousy clerk, antagonistic king or homely witch they met is an admirer of or even correspondent with the Scholar Priest and will help them.

**Special Hindrances:** Many scholars are egotistical, and debates between scholars can become very heated and personal. Whenever the DM rolls a reaction check from another scholar, he should first roll 1d6. On a 1, the player-character scholar gets a *-6* reaction adjustment instead of a +3, because at some time in the past (or even the present) he argued or disagreed with this scholar's pet opinion and offended him completely.

**Wealth Options:** The Scholar Priest gets the standard 3d6x10 gp starting gold.

**Races:** No special limitations.

## Recording Kits on the Character Sheet

To record your priest kit on your character record sheet, do the following:

(1) When you write down the character's priest-class, also add the name of his priest kit there. If the character were a priest of the Norse god of thunder and also a peasant priest, you'd write "Priest of Thor/Peasant Priest."

(2) Where you write down the character's nonweapon proficiencies, add the ones you got free from the priest kit, and put an asterisk beside them to indicate that they are free proficiencies provided by the kit.

(3) Wherever you have space for notes, mark down the character's special benefits and hindrances, and any other facts you want to remember.

## Multi-Class and Dual-Class Characters

Any multi-class priest can take one of the Priest Kits above. However, he can only take one kit, total. If he has several character classes, he can't take a separate kit for each class.

The same is true of dual-class characters. If a character begins play as a priest and takes one of the kits above, and then later changes to another class, he does not have to abandon the kit. However, he still may only have one kit. Also, if he chooses to abandon the kit when he changes class, he may not then take on a kit from the new class. The character may only have had one kit, ever, as long as he is played.

## Abandoning Kits

A character created with a Priest Kit might, later in his adventuring career, decide that he has to abandon it. For instance, a Pacifist Priest might be crushed when his inaction

resulted in the death of a friend, and might decide to abandon his pacifistic stance.

The player must tell the DM that he wishes his character to abandon the kit. If this choice is the result of some traumatic event, as in the example above, the character may simply wish to declare his intent. If the choice is a gradual one, the DM may want to work it into the storyline.

The priest abandoning his kit will have to role-play out his decision and its consequences. He'll announce his decision . . . and he must suffer the reactions of his allies (and the other members of his order!), whether good or ill.

He will give up all the kit's bonuses and hindrances. The character does not give up any bonus proficiencies, but they are no longer "bonuses." The character must "pay" for them by spending the next proficiency slots he receives on them.

Once he's abandoned a Priest Kit, the character may not take another Priest Kit to replace it. At this point, he's a normal priest of his specific mythos for the rest of his playing life.

## Modifying and Creating Kits

The DM should alter the kits above in order to fit them better into his campaign world.

For instance, if there are no Savage races to which the PCs could belong, the DM should disallow the Savage Priest kit.

If you'd like to create all-new Priest Kits, refer to the kit creation rules in The Complete Fighter's Handbook.

# Role-Playing

There's more to role-playing priests than bashing miscreants, casting spells, waving holy symbols and making earnest pronouncements. In this chapter, we're going to talk about the differences between priests, even priests of the same orders, and about how they relate to the campaign world and their deities.

## Priest Personalities

No two priests are alike in their goals, desires, quirks, and prejudices. It doesn't matter if they belong to the same priest-class, have the same Priest Kit, are at the same experience level and have rolled the same hit points . . . they're going to be different people.

Below are descriptions of several common type of priest characters. All of these personalities are drawn from priest character stereotypes common to the movies and fiction. Novice role-players should read through these descriptions and, if they wish, adopt one of these personality types for their priest characters or at least let these descriptions inspire them to work out the details of their characters' personalities. Experienced role-players, to whom the creation of personalities is second nature, should skip on to "Priest Adventures."

### The Crusader

The Crusader is a priest with a mission. What that mission is, is up to the player and the DM; he may wish to convert the heathens, to restore a temple to its original glory, to clean up a corrupt priesthood, to crush the enemies of his faith, to destroy a powerful clan, or to gain special rights or privileges for (or merely a lifting of bad or prejudicial laws from) his people.

This is not such a bad thing when the Crusader's goals correspond to the goals of the adventuring party. That's easy to sustain for a multi-episode adventure. But when the other player-character heroes' attention turns to some other matter or enemy, the Crusader is less willing to go along. He may continue on with them for a time, but his attention always turns back to his personal crusade.

The Crusader is best suited to lawful alignments (lawful good, lawful neutral, lawful evil). He tends to be humorless, but certainly doesn't have to be stupid.

In combat situations, the Crusader is a straightforward fighter, all according to the limitations of his priestly class. But if the enemy is related to his Crusade, he'll become the fiercest and most energetic of fighters, sometimes taking dangerous risks and going all-out to rid himself of this most personal enemies.

In role-playing situations, he doesn't have to be a boring idiot who talks about nothing but his quest. He can have other goals and interests, too. But the further away he is from his personal crusade, and the less he is able to promote his goals, the more of his attention they will take up in his mind.

### The Earnest Novice

This priest is a young fellow who has newly achieved his priestly rank. (Yes, all first-level priests are appropriate for this personality . . . but not all of them *have* to take it. Other first-level priests can be a little more sophisticated or world-wise than this fellow.)

The Earnest Novice is naive. He's easily tricked by smooth, polished liars. He is pure in his beliefs, especially those related to his priestly order. He serves as an inspiration for others; no matter how battered he is by life, he seems always just to stand back up and keep on going.

This character is best suited to the range of good alignments (lawful good, neutral good, chaotic good).

In combat situations, this character is prone to be a bit simple. He has very primitive combat tactics, such as "run at the enemy and hit him," or "stand where you are and shoot him;" such things as flanking maneuvers, feints, false retreats, and other military maneuvers are beyond his comprehension.

In role-playing situations, this character expresses cheerful optimism and, usually, a lack of understanding about the way the "real world" (that is, the campaign world) works. It doesn't occur to him to slip a waiter a bribe to get better service: That would be monstrously unfair and unprofessional! The ideas that a colleague might be corrupt, that a judge might render a decision based on how he felt that morning, that a beautiful young lady might not be absolutely virtuous are all alien to him. He'll accept them when his nose is rubbed in them . . . but they'll never occur to him naturally.

Most players who take this personality eventually abandon it; it's nearly impossible to play a character as remaining entirely innocent of the world through adventure after adventure. See "Changing Personality Types" below for more on this.

## The Hypocrite

This priest is a smooth talker and an advocate of all the goals of his priesthood and all the virtuous behaviors there are. But, deep down, he doesn't believe in them. He's fooled his superiors in the priestly order, he's probably fooled his adventuring companions, he's certainly fooled his flock . . . but he himself knows the truth.

This is a pretty villainous personality type; when a hypocrite priest isn't a villain, he's merely weak-willed. Either way, such characters are rare among player-character heroes. And they never get away with it forever.

Here are some examples of this character's typical behavior:

He generously gifts coins to city beggars and earns their praise. But on the side, out of sight, he trafficks in stolen goods, perhaps including objects stolen from temples of his order, and uses the respect accorded to priests to smuggle his stolen goods through city gates and inspection lines.

When a beautiful young member of the flock comes tearfully to him with problems, he arranges to see her privately to counsel her. Alone with the troubled young lady, he will seduce her, then abandon her, blackmailing her with the besmirching of her reputation to keep his own reputation clean. And should she, in her grief, decide to commit suicide, he'll be the most anguished of mourners at her funeral (perhaps he will officiate) . . . and then begin to work on the young lady's better-looking friends the same way.

When sinners come to him after doing evil, they'll always find absolution . . . for a hefty price in gold pieces. Such sinners are almost always repeat offenders, and so they are also repeat spenders.

Obviously, this sort of personality is best-suited to non-player characters. But it is always an option for, and can be a challenge to, player-characters as well.

The Hypocrite is limited to lawful neutral, lawful evil, true neutral, and neutral evil character alignments.

In combat situations, the Hypocrite will tend to behave like the priest he's supposed to be. If he can find reason to get out of the way of combat, he will: For instance, if an ally is injured, the Hypocrite will drop behind the lines to heal or doctor him. The Hypocrite is also prone to directing the actions of his teammates in such a way that they take all the risks. If one of them is killed or injured, of course, he will appear to agonize over it.

In role-playing situations, the Hypocrite will be the smoothest and most concerned character around. However, his player will need to communicate, in private consultation with the DM or through secret notes, the Hypocrite's true motives and plans.

Eventually the other characters will catch on, and ultimately they will expose or even kill him. It's up to the player then to decide what the Hypocrite will do (assuming he survives): He could change his name and start over again elsewhere, or pretend to reform and become a little more sophisticated in his tactics, or he could even reform and change personality types.

## The Motivator

This character is like a grown-up version of the Earnest Novice. He knows what the world is all about, but he intends to do his temple's business and see to it that his god's

goals are met, with no complaints and no back-talk. He's a combination of cheerleader and drill sergeant. He leads by example, and he usually leads. He gets to know the minds of his companions and plays upon their own goals and desires to get his accomplished. This doesn't make him a villain like the Hypocrite; he probably intends this to be to everyone's benefit.

Like the Crusader, he performs best when he's headed in the direction of his personal goal; unlike the Crusader, he doesn't have just one goal that dominates his life, and can add the other player-characters' goals to their own. (But if he does take on someone else's goal, you can be sure that he'll be unceasing and maybe unbearable in trying to motivate that character toward that goal. He won't let the other character abandon the goal. He jut never gives up.)

This character is suited to any alignment. Obviously, if he's lawful good, his goals will be the goals of his god and his society; if he's chaotic evil, his goals will be his own, and very destructive ones, too.

In combat situations, the Motivator charges into the thick of things and tries to whip up his allies into a combat frenzy. He gravitates to the center of the skirmish line, and if he's fit for it will try to take on the biggest and baddest opponents.

In role-playing situations, he'll be a vigorous font of advice and helpfulness. He tends to be abrupt of speech and firmly set in his opinions (i.e., stubborn), but he's usually a good friend to have around.

### The Philosopher

This character tries to fit each of his adventures and encounters into the grand scheme of the meaning of life. He's not a very exciting personality, being more thoughtful and reserved than the dynamic Motivator or energetic Earnest Novice. He often adopts a "Let's wait and see what happens" or "Maybe it was meant to be" attitude. He seldom initiates combat or aggression, but this doesn't make him a pacifist; once he gets into combat, he can be as formidable an opponent as any priest of his class.

The Philosopher is best suited to lawful and neutral alignments (lawful good, lawful neutral, lawful evil, neutral good, true neutral, neutral evil).

In combat situations, the Philosopher will often hang back for a round or so to gauge the situation and analyze things. In doing so, he may see something the other characters have missed (more enemies creeping out of a secret panel, an exit tunnel that would allow them to escape, or the stealthy motions of an enemy thief creeping around behind one of the heroes). But he won't hesitate long, particularly when it could mean life or death to his friends.

In role-playing situations, he tends to be very analytical, choosing his words carefully, thinking all the while.

### The Politician

This is an ambitious priest. He wants to have political power within the community, within the temple, or both. This doesn't mean he's bad; he may be acquiring power because he believes he can wield it better than others and make the world a better place. But he goes out of his way to gather favors, advise powerful people (and to do so well!),

to acquire treasure so that he can build great temples and influence the masses, etc.

The Politician has a weakness, though. Regardless of his motivations, he sometimes blinds himself to the truth so that he can continue acquiring power and influence. If two cities or countries are on the verge of war, and that war would benefit him and his power base, he might advocate that war be declared, and blind himself to the suffering this will cause among the people who have to do the fighting. If a woman comes to him with the classic dilemma where she is being told by her family to marry one man when she loves another, the Politician will first consider the influence he might gain from these respective matches first, and considers the lovers' and families' feelings second. He may not even realize this . . . but his advice will always be tinged with self-interest.

This is also a challenging role to play, especially if the character really is good at heart and is just concealing from himself the harm of his course of action. Eventually, the DM should confront him with the results of his selfishness: Perhaps one of his plans or pieces of advice results in tragedy, and the accusations of the PCs or NPCs who see through his motives convince him that he's been on the wrong path. When this happens, the Politician might wish to change to another personality type. On the other hand, sometimes the Politician is never caught at it, or never admits his culpability to himself, and just continues rising up the ladder of power and influence.

The Politician is best suited to lawful and neutral alignments (lawful good, lawful neutral, lawful evil, neutral good, true neutral, neutral evil). If he's Good, he'll probably eventually understand the damage he has done and can do. If he's Neutral, he won't go out of his way to harm people, but will not be truly touched by it when harm does occur. If he's Evil, this harm is merely another benefit of the job.

In combat situations, the Politician is like any other priest of his specific priest-class. However, if there's an important person around to impress, he may fight more vigorously or risk himself to save that person.

In role-playing situations, the Politician is continually ferreting out rumors and news, analyzing information, learning the personalities of important people, and looking at all situations and adventures in terms of the power and prestige they can bring him.

### The Proselytizer

This priest's primary motivation involves converting worshippers of other gods to worship of his god. Nothing else matters. If someone is not according due to his god, that someone is going to experience a religious conversion attempt. (This doesn't mean that the Proselytizer necessarily believes his god to be the only god. In a land where many gods are worshipped, this is an uncommon belief. But if he finds someone who worships several gods but excludes his deity, the Proselytizer goes on the job.)

Proselytizers can be of any alignment, but most are dutiful priests of good alignment (lawful good, neutral good, and chaotic good).

In combat situations, the Proselytizer acts as any other adventurer. He might be more gullible when it comes to an enemy who pretends interest in his deity and professes a desire to be converted, but this will only occasionally take place in the campaign. (The enemy would have to know him and his motivations pretty well to make this attempt.)

But in role-playing situations, the Proselytizer talks about little other than his god, his temple, and his personal adventures in service to his god and his temple. He can be quite

insufferable at times, in fact.

Ultimately, his adventures may convince him that there are other things to life than the ongoing conversion of non-believers; at this time, his player may choose for the character to take on a new, different personality. But even then, the character is likely to remain a bit more interested in religious conversions than other examples of his new personality are.

### The Sage Counselor

This priest is primarily interested in acquiring wisdom and passing it on. He likes to help people. And since he's a priest, people often come to him with their troubles; he's always willing to advise them. (Depending on his experience and personal wisdom, he could be quite good at it, too.)

This personality is best suited to lawful good and neutral good alignments. (A chaotic good priest could also try to be a sage counselor, but his advice is likely to be more dramatic and less well-reasoned than that of the other alignments.)

In combat situations, the Sage Counselor is likely to try to persuade the enemy to surrender, to run away, or just to be reasonable. This doesn't mean that he's stupid, though. Confronted with danger, he can hit just as hard and defend himself and his friends just as fiercely.

In role-playing situations, the Sage Counselor goes out of his way to help people; if he sees a sad face and has some time available to him, he'll gravitate to the stricken person, kindly ask if he can help, and end up wrapped again in some other person's troubles. Incidentally, this is a great way to get the character involved on new adventures: The DM need merely run a tearful NPC past the priest, and another adventure is on its way.

## Changing Personality Types

Sometimes, as mentioned above, it becomes necessary for a player to re-think his character's personality. Perhaps the character has outgrown that personality. (The Earnest Novice must eventually grow up, for instance.) Perhaps dramatic events have forced the character to re-think his goals and attitudes. (This often happens to the Crusader and the Politician.)

Since these Personality Types are not part of an official rule or game mechanic, the player can change them as he chooses. He shouldn't change his character's personality just because he's bored with it, though: Events in the campaign should be the factors which influence this change. Here are some ways it can come about.

The **Crusader** might achieve his life-long goal, or lead one party too many into death and disaster and realize that all he's doing is hurting people. In this case, he could become embittered and turn into a Hypocrite, playing on his good reputation, or could tone his approach down and become a Motivator, or could achieve a measure of wisdom and become a Sage Counselor.

The **Earnest Novice** could wise up and realize that the world is a more complicated and unfathomable place than he thought. If he becomes disillusioned by this, he could turn into a Hypocrite. If he simply matures a bit, he'd be a Motivator. If he acquires a specific goal, he could become a Crusader, Politician or Proselytizer. And if he simply

acquires a bit of wisdom or perspective, he could become a Philosopher or Sage Counselor.

The **Hypocrite** could change his personality if he is confronted by the harm he causes and cares at all about it. (If he doesn't care, he won't change.) If he does change, he's likely to become a Crusader (trying to expose and eliminate other Hypocrites), a Politician (so he can gain enough power to weed Hypocrites out of his order), or even a Sage Counselor (who can possibly anticipate the tactics of other charismatic users).

The **Motivator** could run out of energy; after too many years of battering himself against the brick wall of an uncaring world, he might tire out. In this case, he's likely to become a more sedate Philosopher or Sage Counselor. He could conceivably become embittered and become a Hypocrite.

The **Philosopher** isn't likely to change. His personality comes with maturity, not before it. If he does change, it will probably be because he's grown tired of being dull and undramatic, and he's likely to become a Motivator, one anxious for adventure, combat and life in general.

The **Politician** will probably change only if he perceives that he's doing more than good (and if he minds that). In this case, he'll probably shy away from real responsibility in the future and become a Philosopher.

The **Proselytizer** is likely to realize that he is not serving his god best simply by converting others to that god's worship. He's likely then to become a Crusader, so that he can avidly pursue one of his god's specific goals; a Motivator, so that he can bring energy to other priests of his order; or a Politician, so that he can improve the stature of his god's worship through reorganization of the priesthood.

The **Sage Counselor**, like the Philosopher, isn't likely to change; this is a personality that is acquired with experience.

## All Sense and No Brains

And now we're faced with one of the commonest questions about clerics and druids: How do you role-play a character who has a high Wisdom score and a low Intelligence score? How do you play all sense and no brains within an AD&D® game campaign?

Intelligence deals more with reasoning power, calculating ability, and memory retention. Wisdom deals with common sense, understanding of human nature, and judgement.

So when you're role-playing a character with a low Intelligence and a high Wisdom, try to break down the situations they face into the elements which the character's Intelligence and Wisdom would analyze.

*Example: The characters have come to a rickety bridge which spans a gorge. They need to cross the gorge, but the bridge looks dangerous. Should they cross?*

*The character's Intelligence will evaluate the bridge's chances of holding up while they cross over. The character will look at the state of the wood, ropes, nails, how much and where it sags, where it's rotted through, and so on, and then will try to calculate the answer to this question: Will the bridge hold up if the characters cross over? If the character thinks it will, then his reply, regardless of the group's current situation and time available, is Yes: They should cross. If the character thinks it won't, then his reply will be No: They shouldn't.*

*The character's Wisdom will compare the risk to their need and situation. The risk is that the bridge will collapse and kill someone, perhaps a party member dear to everyone. What is their current situation? If the party has little time and is being pursued by a superior enemy force, then the risk is necessary, more or less regardless of what the Intelligence thinks of the bridge's chances; the character will say Yes, they must try to cross now. If the party has a good deal of time, then the risk is not necessary; regardless of how safe the Intelligence thinks the bridge is, Wisdom says not to risk it. A human life is not worth it.*

This is the kind of decision-making process the character can undertake if he wishes to role-play a high-Wisdom, low-Intelligence character in a campaign . . . and obviously it can lead to great arguments between them and their high-Intelligence, low-Wisdom counterparts.

## Priest Adventures

The DM may want to slant some of his campaign's adventures specifically to his priest player-characters. It's not hard to do that; he has only to build the adventure around one or more of the priest's duties or responsibilities.

The priest-oriented plot device we use to motivate the priest to action is called a *Hook*. To design an adventure around the priest character, the DM has to provide a hook that will bring the priest into the adventure, and do so in such a way that the adventure doesn't exclude the other player-characters.

The hook must address the priest in one of his priestly roles or duties. Below we present a variety of hooks and approaches to this sort of adventure.

### Advisor of the Faithful

The priest provides guidance to the flock. Followers of the temple come to him for advice, and he's supposed to give it.

That advice can't be correct all the time, especially when the faithful come to him with no-win situations. When it goes wrong, the priest will probably feel guilty. When it goes disastrously wrong, and the injured party comes to the priest for help, the priest will probably be willing (if not anxious) to clean the situation up.

As an example of this hook, let's say a doting father comes to the priest with this story: His son has come to him and asked for money so that he can buy weapons and armor. His son has heard of a bandit encampment where there is much treasure to be found. The son is sure that with the right weapons and armor and a little luck he can sneak into the camp when most of the bandits are gone, defeat the guards, and make off with the treasure. The father doesn't know where the encampment is; his son won't tell him. The son is a good fighter and knows what he's talking about; on the other hand, he is youthful and a bit overconfident. The father asks "Should I give my son the money for this equipment?"

If the priest says Yes, the father does so. The son tries the raid but is captured after killing several bandits. The bandits send back his bloody, broken sword from their mystery encampment, with a ransom demand which the father (and even the PCs) cannot match.

If the priest says No, the father follows his advice. The son tries it anyway, and is

captured because he was under-equipped; no bandits died. Again, the son is ransomed beyond the father's means.

If the priest says "Maybe, but my friends and I would like to get in on it," the father will take him to talk to the son. The son will sound agreeable to the proposition, but will sneak off at first opportunity. He doesn't want anyone else horning in on his adventure. And because he had to charge off prematurely, he doesn't know enough about the bandit encampment and is caught up in snares set around its perimeter. Here, again, he's captured and ransomed.

In either of these three cases, the father comes back to the priest to say, in effect, "Your lousy advice got my son captured, and I can't ransom him! Please save him!" Which the priest will be inclined to do . . . and he'll probably want to have his friends, the other PCs, along with him.

Incidentally, we don't recommend that you face your PCs with no-win situations such as the one above very often. It wouldn't be fair to do this time and time again; the players would (correctly) assume that they could never do anything right unless the DM arbitrarily wanted them to.

## Agent of the Priesthood

When the priest is a low-level character, still near the bottom of the totem pole of the priesthood's hierarchy, his superiors will frequently send him on missions. A mission could be nothing more than "Take this letter over to the priest Aclastion in the next village," or it could be "There's supposed to be some horrible monster menacing our temple in the next village; do you suppose you could round up some of your more violent friends and go over there and destroy it for us?"

In the latter case, you have a situation where the priest character is the center of attention, and has ample reason and opportunity to invite his non-priest friends in on the action.

## Defender of the Faith

When the followers of one faith make war on the followers of another, the priests get involved in the action. Since these wars tend to take place between entire cultures, the player-character priest will probably be an ally of the other player-characters. In this case, his temple superiors are likely to ask him to round up some capable allies and go on dangerous missions into enemy territories, or to hold a crucial mountain pass during a military campaign.

## Defender of the Faithful

You read about Libels in the **Designing Faiths** chapter, under "Duties of the Priest," under "Vigilance." (If you didn't, you should now.)

When the faithful are threatened by such a libel, the priest must work against it; if he doesn't, or if he fails, his people will suffer more prejudice and be in more danger from people who believe the libel. (There will be enough who still believe the libel if it is proved false; if the characters *can't* prove it false, there will be many more believers still.)

In order to bring the other player-characters in on such a situation, try this technique: One fine day, the priest finds another priest (of the same temple) dead in his chambers. The dead man has been murdered, torn limb from limb. His chambers were barred shut from the inside; a thief could not have picked the bars. In the priest's hand is part of a page from his journal, and the rest of the journal is missing. The scrap of paper, written in his hand, is part of a longer chronicle: "in mortal danger. When the {insert the name of an enemy temple} summon the thing, it will kill him and we will be blamed. I know they work from the Citadel of Arbright, but could find out no more; I think perhaps they heard me as I listened to their talk. It is time for me to tell -- " There the passage ends, obviously when the priest was interrupted by his murderer.

This puts the priest-character and his temple in a delicate situation. Obviously, the enemy temple will summon up some sort of monster to kill some person, probably an important person, and the priest's temple will get the blame. Obviously, the summoned thing, whatever sort of monster it is, can penetrate locked chambers without violating the locks and bars.

The priest and his temple have to know more. But the authorities will not allow them to search the Citadel of Arbright, home of a powerful local family, on this flimsy and perhaps fabricated evidence. Therefore, the priest must sneak in, find out what is to be found out, and escape. He'll need the help of his friends . . .

And what they do find out, of course, is that the Clan Arbright is aiding the enemy temple. They together have found a way to summon an outer-planar creature into sealed chambers, and they plan to do this some night when the High Priest of the player-character's temple is closeted with the king. The being will kill the king and leave the high priest to take the blame, resulting in damage, perhaps permanent damage, to the faith . . . unless the priest-PC and his friends can thwart the plan.

### Martyr for a Cause

The priest's god or the rules of the priestly order might force the priest to undertake some actions that the local authorities just don't understand or approve of. (See below, under "Society's Punishments," for more on this.) If the priesthood is not protected against prosecution by the secular (non-priestly) authorities, then the priest might find himself on trial for any illegal action performed in the god's name.

Gods usually don't appear in court as defense witnesses. Therefore, the priest-PC must defend himself through legal means without the benefit of divine testimony. If he's convicted, he might have to escape jail to avoid execution; he might even choose to accept execution in order to dramatize the injustice of his plight. Or, the court might sentence him to some suicidal mission to atone for the crime he committed. He isn't required by the court to go on the mission alone, but no NPC adventurers want to march with him into certain doom. Thus the priest character is again brought into an adventure because of his faith, and his friends the other PCs, if they truly are his friends, will accompany him on this quest.

### Servant of the God

The god himself will sometimes send the PC on missions. Often, he will appear to the

PC when he is alone, or will appear to him in dreams, and make his wish known: "You will travel to the wild lands of the Sylvan Curtain and there find the artifact known as the Eagle-Spear. Find it; take it from our enemies, who hold it; bring it back and install it in your temple . . . "

When he investigates the Sylvan Curtain and the Eagle-Spear, the priest will find that it's certain death to go there alone. He needs adventurers of all descriptions and abilities to help him if he's to pull off this adventure successfully . . .

## Rites and Role-Playing

In a lot of campaigns, it's easy to ignore one of the priest's foremost functions: He's also the officiator at lots of rites, rituals, celebrations and ceremonies.

Every faith will have its own rituals and other special events; careful, judicious use of these will add a lot of detail and flavor to a campaign.

The DM *shouldn't* sit down and work up a lot of rituals for each priesthood in his campaign, and then keep them juggling around in his mind until they emerge, one by one, during adventures. But what he *should* do is bring individual ceremonies and priestly events into his campaign as adventure and story hooks.

For example:

"Jeriash, your party arrives in the city on October 30th. Now, you could head on from there the next day, but November 1st is Vine Day, which commemorates your goddess stopping her work for the year, winter setting in, wine-making ceremonies, and so forth; it sort of behooves you to volunteer your help at the local temple for that event . . . "

The Vine Day celebration, a Mardi Gras-like costumed parade featuring wine-drinking excesses, is a good opportunity to inject some color into the current storyline, but that isn't all it has to be. The DM could wrap an entire story around it; for example, imagine trying to capture a group of ghouls as they roam these streets strewn with drunken, costumed celebrants.

Though the DM shouldn't work up all a priesthood's usual ceremonies in advance, whenever he does create one, he should make note of it. If he doesn't, and the right time of year rolls around again, the players will inevitably remember it and wonder why Vine Day isn't being celebrated this year . . .

Following are descriptions of a number of different types of rituals. Each of these can be adapted to the characteristics of different faiths and different gods. Not all cultures and not all gods will feature each of these types of rituals; the DM should decide which apply to which gods and to which societies.

### Atonement

When the flock sins, or acts against the wishes of the god, the faith usually has a way for the sinner to reenter the god's good graces. This is an act of atonement. Usually, the bigger the sin, the more extravagant the act of atonement must be.

The first part of this process is usually the confession , a formal meeting of sinner and priest where the sinner confesses his deed. This puts the priest in the position of having to evaluate that sin and then charge the sinner with a course of action which will remove the stain of sin.

Remember that each different god will have different ideas of what constitutes sin. To the god of Love, for instance, the greatest sin is denial of love (particularly, growing old without having loved) or interfering in love (messing up someone else's romance).

Too, you must remember that in a pantheistic society (one which worships many gods), it is not usually a sin to do one god's will at the expense of another. If one culture worships both a god of Peace and a god of War, fomenting a war is *not* a sin directed at the God of Peace; it's a boon to the God of War.

To just about any god, an insult to the god (including verbal insults or desecration of a temple) is considered a sin.

Typical ceremonies of atonement include fasts and meditations where the sinner asks forgiveness of the god. More extensive sins require some sort of sacrifice (such as donation of a cherished object to the god's temple) or an act of expiation (the sinner doing his best to straighten out the bad situation he caused).

## Calendar Ceremonies

Lots of gods have ceremonies based around the calendar, especially agricultural gods. Communities may have celebrations for:

The day that marks the start of spring;
The day when planting begins;
The day when harvesting starts;
The beginning of the grape-stomping season;
The official start of winter;
The day that the first trade-ship of the year is launched;
The day that some heroic figure, a worshipper of the god, is commemorated;
The day of thanks for the god's bounty;
The day commemorating some ancient tragedy;
The day of the dead (just before or after the night that the ghosts walk the streets);
The day commemorating some great battle in which the god participated;
?And so on.

## Communion

This is a ceremony where the participants try to commune with the god, to invoke a little of his spirit, to briefly become more like the god.

Here, too, each god will have a very different ceremony. Communion with the god of Competition will take the form of athletic games. Communion with the god of Prosperity will be a great, enormous feast. Communion with the god of Kingship will be a private little coronation where each household leader is acknowledged as the head of the household. Communion with the god of Peace will be a quiet meditation. Communion with the god of Love or Fertility is left as an exercise for your imagination.

## Confirmation of Adulthood

The DM needs to decide when youths are considered to reach adulthood in the culture, and then it's possible to have Confirmations of Adulthood.

In a culture, this will be handled one of two ways.

Each youth could have a private ceremony on his birthday. Alternatively, all youths born in the same year could be confirmed on one specific day of the calendar.

Either way, in the ceremony, the priest will acknowledge the youth as an adult, and this will be marked by allowing the youth some activity which only adults can perform in the culture (for example, carrying weapons in public, wearing some garment reserved for adults, receiving a sword, etc.).

### Confirmation of Birth

With this ceremony, the priest visits the newborn child and, in a simple ceremony, asks the god's blessings upon the child. This is always done in the presence of witnesses, because it's important in the culture for others to witness that the child has been born and that specific people (the parents) acknowledge the child as theirs. This becomes important regarding questions of inheritance or the succession of the titles of leadership.

### Fast

This is a quiet sort of ceremony; the participants do not eat, usually for the period of a day, as a sacrifice to the god or a commemoration of some historical time of want.

### Feast

The feast can be as small or great a feast as the DM cares to allow, and can celebrate just about anything within the faith. Feasts should be one of the most common sorts of celebrations within the faith, and a great feast is a convenient place to introduce all sorts of adventure elements (challenges from enemies, assassination attempts, mysterious clues left in the soup, etc.).

### Funeral

Interment of the dead is also a common ceremony. Note that funerals don't have to be solemn affairs; all this depends on what the culture thinks happens to the departed spirit and how the culture feels about it. The funeral could be a time of mourning, a cheerful celebration of the departed person's life, a drinking-binge so that the mourners can forget their grief, and so on.

In any case, the ceremony can have several parts.

There is the Wake, which takes place before the funeral, where participants sit overnight with the body, exchange stories of the dead person's deeds, and (in some settings) protect the body from violation at the hands of evil spirits, who might try to inhabit and reanimate it, or to steal the not-yet-departed soul.

There is the Farewell, where the participants speak to the corpse of the departed and wish him well on his voyage; often, they present him with small gifts and tokens of their friendship.

There is the Interment, where the body is laid to rest, usually with the presents and a variety of the person's belongings. In some cultures of a type we consider cruel, the

person's slaves and perhaps even his wife will also be laid to rest, even if they aren't dead yet. (Alternatively, the body may be burned, again depending on the culture's views.)

There is the Commemoration, where the mourners exchange stories of the dead person; this could be a very solemn or a very merry event. In any case, it's likely to accompany a feast for the weary, hungry mourners and participants.

## Libation

Libation is the dedication of a little of one's drink to the gods. Every time a glass is refilled, the character pours a little to his god, either onto the ground or into a basin dedicated to the god.

## Meditation

This consists of sitting, in private or with other participants, and trying to achieve a peaceful state of exalted awareness.

## Mysteries

These are involved ceremonies which usually celebrate gods of nature or rebirth. Celebrated annually or semi-annually, they tend to have several elements and can go on for a full day or more, not counting the rituals which precede the actual celebration of the mysteries. Usually, the pattern is something like this:

In the days before the actual celebration, the participants go through *purification*. These rituals of purification involve fasting, ritual baths, and abstinence from physical pleasures.

On the day of the celebration, the participants dress in clothing appropriate to the ceremony, usually in featureless clothing of white (or a color preferred by the god), usually barefoot. They assemble at the temple of the god, and perform the *oath-taking*. A high priest administers the oath, where every participant swears that he will keep what he has seen a secret, and never discuss it with one who is not also an initiate into the mysteries. The participant swears in the god's name, and could suffer the god's punishment if he breaks his oath.

Next, there is the *procession.* All the priests and participants proceed in a parade to a site that is holy to the god. This is often a cavern or a very secluded glade, because there it is possible to keep the celebration hidden from the eyes of non-initiates. The procession is led by ranking priests, followed by lesser priests in charge of sacrifices, followed by musicians who play during the procession. Then come priestesses, who carry small caskets (or draw carts bearing those caskets); the caskets contain artifacts sacred to the god. (These artifacts aren't necessarily, or even usually, powerful magical items desired by greedy adventurers. They're more ordinary items: The rock sacred to the god, the fossilized stone showing the god's footprint, the bone from the feast in which the god participated, the statue the god himself blessed, the cast-off weapon used by the god in some famous event, and so on.) Then, there are more functionary priests: Priests in charge of the upcoming feast, priests who lead sacrificial animals (if sacrifice is a part of this culture's worship), and priests who act as sergeants-at-arms (they carry non-lethal

weapons such as staffs and use them to keep the disorderly orderly). Finally, the faithful (non-priest) followers come.

Once the procession reaches the sacred site, there may be a *sacred meal*. Sacrificial animals will be sacrificed and cooked, and then the feast eaten. The character of the meal depends on the character of the god: It could be stern and somber for a severe god, wild and orgiastic for a more free-spirited god. The sacred meal ends after nightfall.

Then, the three most important elements of the mysteries begin. They all take place at night.

First is the *recitation* , a series of songs or chants concerning the god, his deeds, his promises to the faithful, his demands on the faithful. The recitation sets the mood for the rest of the ceremonies; the listening followers are supposed to be reverential, at least, and the priests with the staves are still around to keep order and quell (or get rid of) troublemakers. Troublemakers tend to be rare.

Second, there is the *display*. The sacred objects carried in those caskets are displayed for the faithful. Since they actually are magical objects sacred to the god, they tend to inspire the faithful with the essence of the god.

Third, there is the *performance*. *Priests* trained as actors perform a play which commemorates the most famous of the god's stories, especially the one which most closely deals with the god's demands on and relations with his worshippers. Regardless of the quality of this play, it is performed at the end of a lengthy process of worship where the followers are exposed to many powerful forces of the faith, and the onlookers are all elevated to a state of rapture during the performance.

At the end, there is the *rebirth*. Once the performance has ceased, the lights are doused and the faithful are led in pitch darkness from the area where the play was performed. Once they arrive at the point of departure, where the procession home will begin, the torches or lamps are again lit, and among the faithful this journey in darkness is much like being born again.

Mysteries are an experience for the spirit, not the mind; this is not an educational event, but one which is intended to bring the followers closer to the nature of their god. Even in a culture which worships many gods, only a very few will have mysteries as part of their worship.

For the DM, the mysteries are an opportunity to introduce dramatic events into the story. During the mysteries, it is appropriate for the god to appear to one of his PC followers and charge that character with an important mission, for instance. Or it could be that during the celebration of the mysteries, one character will receive some sudden insight (a gift from the god) into some event which has been puzzling or confounding the player-characters for some time.

## Naming

This ceremony is often a part of the Confirmation of Birth event: The child is given his name before witnesses. In some cultures, though, the child might be given a use-name when he is born, and won't be given his true name (or will choose his true name) years later, when he is old enough to understand its significance. It may be that in this culture the character's true name is supposed to be kept a secret, and the child tells it only to one priest, so that the god might know it.

### Prayer

Prayer is one of the most common of rituals; it involves asking the blessing of the god, often through the recital of an ancient or famous prayer or part of a holy text.

Note that not all cultures demand that prayer be performed from a kneeling position or a pose of obsequience. Vigorous warrior cultures might perform their prayers standing erect and facing the skies, for example.

### Purification

When a person comes in contact with some contamination (a taboo substance), he must be purified. In some cultures, whenever a person has killed another honorably, though he is not considered to have sinned, he must be purified of the killing. This ceremony involves a ritual bathing or washing of the hands (or other contaminated part) under the supervision of a priest, who invokes the god's blessing during the washing.

### Sacrifice

In some cultures, animals are sacrificed to the glory of the god. One god may demand that the whole animal be destroyed; another will demand that the animal be killed for it and some part of it destroyed for him, but that the rest of the beast can be used as the worshippers see fit.

Obviously, human sacrifice is something demanded only by the most evil or unsympathetic of gods.

## Priests and Punishment

Priests are servants of their gods, and therefore can't just do anything they want whenever they want. The DM must keep an eye on the activities of priest characters (including clerics and druids), and if the priest violates some tenet or commandment of his god, the DM should see to it that the god punishes the priest.

It's easy to be unfair when doing this, though, so the DM also has to keep an eye on *himself*. It's all too easy to say, "You should have *known* that your god doesn't want you to wear red; I've said repeatedly that his favorite color is blue!" That's not justification for a punishment of the priest, unless the DM has explicitly stated that the god's priests must always wear blue or face divine consequences.

### Minor Offenses

Minor offenses which the god punishes include such things as:

Making a joke about the god (and even then, it must offend the god; some gods have a sense of humor);

Failing to perform all required priestly duties in a day (for example, "not having the time" to listen to the problems of one of the faithful and offer guidance); and

Becoming annoyed with the god's demands.

The god punishes such minor offenses by withholding some of the priest's spells on the following day.

### Inappropriate Weapon and Armor Use

If a priest violates his order's restrictions on weapon and armor use, the god will punish him for it. There are two different types of violation of this restriction, and a different punishment for each.

If the priest deliberately violates the restriction because he wants to (for instance, if he puts on a set of metal armor when he isn't supposed to), this is a willful disobedience and makes the god very angry. He immediately does 2-12 (2d6) points of damage to the priest and takes away all the spells he granted to the priest today, and doesn't let the priest have any more for 1-6 (1d6) days. Even then, the priest must undergo rituals of purification and undertake an act of atonement if he's to have spells again.

If the priest violates the restriction for the best of reasons (for instance, if a gargoyle is strangling his friend, and he must use a forbidden weapon in order to be able to harm the creature), the god does 1-3 (1d3) points of damage to the priest (*after the fight is done*) and, if the priest does not undertake a ritual of purification at his earliest opportunity, will take away the priest's spells on the next day.

### Betrayal of Goals

If the priest deliberately violates the goals of the god, then he's in real trouble. For instance, if a priest of the god of war advocates peace when war is in the offing, or if a priest of the god of love tells young lovers to wise up and forget about romance, then the god will definitely be offended.

The first time this happens, the god will give the priest an unmistakable warning. This could be a heart attack, costing 50% of the priest's current hit points. It could be a portentous destruction of a statue of the god while the priest is present. It could be an earthquake or other warning. The warning doesn't have to be *immediately* after the betrayal, but will be soon after.

The second time this happens, the god will appear to the priest. It doesn't have to be in person, right then; it might be in a dream, the night following the betrayal. The god will sternly ask the character his motives and order him to return to proper worship.

The third time this happens, the god will immediately reduce the character to 1 hit point and change his character class. The priest will become an ordinary fighter at an experience level two lower than the priest's level (minimum first level); his normal hit point total and possessions will be unaffected. Until the character undergoes a severe ritual of atonement, the god will despise the character and plague him with little ills, diseases, and enemies. Once the character atones for the deed, the god forgives him . . . but the character will still be a fighter.

Sometimes, a god might deliberately confront the character with a test of the character's faith. For example: Part of the god's worship demands that anyone who tramples his sacred flowers be blinded. Then, the god befuddles the priest's wife or daughter, and that character stumbles across the sacred flowers where only the priest can see it. If he conceals the sin, he's punished. If, regretfully, he prepares to carry out the

punishment, the god will be pleased. The god might interrupt the punishment, or wait until it has been carried out and then restore sight to the priest's loved one.

## Divine Retributions

It could be that the priest will betray more than the god's usual dictates. The priest might turn on the god, betraying him utterly. This can happen when another deity, an enemy god, persuades the priest to serve him instead, and persuades the priest to steal some important artifact from the god or reveal some critical information about the god.

When this happens, the god will punish the priest (assuming he survives the betrayal, which most gods will).

The minimum punishment the priest can expect is the character class change described above.

A medium punishment the god will bestow is instant death.

A greater punishment from the god involves the ruin of the character. The god can kill or merely take away the character's family and loved ones, curse him with afflictions such as blindness and lameness, see to it that all his enemies find out about his weaknesses, give extra power and weapons to his enemies, force the priest's loved ones to betray *him*, and so on. This doesn't happen all at once, but every episode for the rest of the character's life introduces some new, horrible calamity until the character is mercifully killed or kills himself. In any case, the character is no longer a viable one to play and the player should dispose of him as quickly as possible.

At the ultimate level, the god performs the greater punishment above, and then tortures the character's spirit forever in the afterlife.

Note that this punishment isn't just for priests. If a non-priest betrays the god in the same fashion, the god will visit the same sort of punishment on the character.

## Society's Punishments

Unless the priesthood is the State Religion, priests are not immune to the law for their deeds.

If, for example, the priest of the god of Justice and Revenge hears about some great injustice, wanders over to the offender's house and kills the offender, then he's guilty of murder. There's no question. He'll be arrested, tried, and (the efforts of his priesthood notwithstanding) probably convicted; the only thing that could save him would be a declaration from the god, which is usually not forthcoming.

Therefore, when priests decide to do something which is illegal in the culture, they should do so circumspectly. If they wish to accomplish the desires of their god when those wishes are illegal, they'll have to do so in a fashion which protects them.

## When Priests Renounce Their Faith

It's possible for a priest to renounce his faith # to declare that he is no longer a priest of a particular god. When that happens, he has one of two choices.

He can stop belonging to the priest-class and start over as a rogue, wizard, or priest of another god, according to the rules for dual-class characters. Naturally, he loses all his

granted powers.

If his priesthood had Good Combat Abilities, he can lose one experience level and become a fighter; if Medium Combat Abilities, he can lose two levels and become a fighter; if Poor Combat Abilities, he can start over as a fighter according to the rules for dual-class characters. He'll never again be a priest.

## When Gods Bestow Spells

Another effect of the fact that priests are servants of their gods is this: The god doesn't have to give his priest the spells the priest wants.

In most situations, when the priest prays for his spells, he gets the ones he desires. But if the god and DM wish, he could get different spells on some occasions.

There are two usual causes for this to happen:

If the god is displeased with the priest for some minor infraction, he might give the priest spells which dictate the priests' actions for the day. A fighting-priest might emerge from his meditation with only healing spells on hand, for instance, a clear sign that the god wants him to act in a supporting role today.

Or, if the god knows of a specific opponent that the priest will be fighting today, he might give the priest spells appropriate to defeating that enemy.

In neither case will the god send a telegram explaining why he's done what he's done. The priest has to accept what the god hands him that day, and has to do so without knowing why.

## Priestly Followers

It's good to remember that the priest's followers, the ones who come to him around 8th level, are not mere spear-carriers or meat for the monsters. They haven't shown up so that they can be thrown to the jaws of dragons in order to give the priest more time to get away. They've shown up to serve the god and the priest.

That's why, in the **Designing Faiths** chapter, we talked about giving them names and personalities, and likewise talked about the priest getting fewer and fewer replacements if he wastes the followers he has.

Once again, this is a sign that the priest cannot act with utter impunity. He is dependent on the good will of his god, and his god will not look kindly on a priest who brings about the deaths of other followers of the god. The god who says, "Yes, my son, kill off my other followers so that you can have more gold" is a foolish god indeed.

### Toning Down the Cleric

The cleric class is a very powerful one. He has access to sixteen Spheres of Influence (more than *any* other priest-class), good armor, and fair weapons. It's been a sign of the cleric's advantages that he is the preferred character class of many, many campaigns.

If this ultra-efficient character is too powerful in your own campaign, you might prefer to alter him. If you want to do this, tell all the cleric players well ahead of time and give them the option to convert their clerics to priests of specific mythoi provided in the **Sample Priesthoods** chapter.

Then, establish the following rules about the Cleric class:

(1) Keep his weapon and armor limitations exactly as they are.

(2) Establish that the Cleric has Major Access to only three spheres (one must be All; the other two are player's choice) and Minor Access to two spheres (player's choice). The player must choose his four sphere options when the Cleric is first created (or converted); it may not be changed afterwards. Each Cleric may choose a different set of spheres.

Naturally, you should only do this if you personally feel that the cleric class is too powerful in your campaign. If you don't, don't change him.

# Equipment and Combat

In this chapter, we'll talk about some of the gear that the priest carries and uses in the performance of his duties, and also about new weapons and combat styles used by some priests.

## Priestly Items

The most common and important tools of the priest (as far as his culture is concerned, anyway) aren't his weapons and armor. They are the actual symbols of his priesthood.

Not all of these symbols are useful in combat situations, but they're appropriate for role-playing the priest. Let's discuss them briefly.

### The Canon

Many faiths have a *canon* , or holy book. This work was written at some time in the distant past, either by the god or by a believer obeying the word of the god. This book usually describes important events of the past in which the god participated, explains the requirements the god makes on his followers, and explains the god's philosophy, goals, and concerns.

If the faith has a canon, then the priest will wish to have one. Books are expensive commodities: Assuming that it's a mere 200 sheets (400 pages) in length, according to the costs in the *Player's Handbook*, you're talking about 400 gp in paper alone (2 gp per sheet); binding will cost another 50 gp, for a total of 450. Sometime between 3rd and 5th level, the priest should have saved or accumulated enough money to commission a copy of the canon; perhaps, if he is lucky, someone will gift him with one, or he will inherit one. Regardless, a priest who reaches 6th level without having acquired a copy of the canon will be viewed with some suspicion by commoners and his fellow priests, who will question his devotion.

The priest should carry the cannon wherever he travels, and if it is stolen should make every effort to recover it. The canon is not a magical work, and does not act as a Holy Symbol when used to confront vampires or similar monsters.

Not all faiths do have an individual, written canon. Some faiths share a common canon. Some transmit their canon orally; it is not written down anywhere. Some have none at all.

### Holy Symbol

Most faiths have a holy symbol, some sign which serves as a representation for the god and his faith. This symbol is usually duplicated in wood, glass, or precious metals and carried by priests of the god. Ordinary followers of the god also can carry the holy symbol.

Every priest player should know what his holy symbol looks like. The DM can either decide, or let the player of the priest design it. (If he does allow the player to do so, the design of the symbol is still subject to the DM's approval.)

It's easy to create symbols for most deities, and there are suggestions for symbols for all the gods represented in the **Sample Priesthoods** chapter.

### Holy Water

Holy water, that bane of vampires and many other monsters, is created in the following way:

In a temple of the god, three priests of second level or higher stand over an empty water-basin and perform a ritual of prayer. They pray for the god's blessing and protection for an entire hour. At the end of that time, they each cast a spell, and do so simultaneously: One casts *create water* , the second casts *protection from evil*, and the third casts *purify food & drink*. Half a gallon of holy water is created.

(The *create water* spell can create up to four gallons of water, but the *protection from evil* and *purify food & drink* used this way can only create half a gallon of holy water. Therefore, for every two extra priests, one to cast each of those two spells, an extra half-gallon can be created. Nine priests together can create four gallons.)

The tremendous expenditure of magic and the time involved are the reasons why a single dose of holy water costs 25 gp to the adventurer. Obviously, any three priests can create holy water "for free" so long as they are second level or higher and are priests of the same god.

Holy symbols are enchanted in the same way. Each enchantment takes an hour, requires three priests (substituting *sanctuary* for *create water*), and requires a material component: Some object carved with the god's symbol.

### Priestly Vestments

As mentioned in the **Designing Faiths** chapter, each priesthood has its own distinctive costume, and priests normally wear these priestly vestments whenever they perform their official duties. Some must wear them whenever they appear in public.

It adds color to a campaign when the players know what these vestments look like. If the DM doesn't wish to design the priestly vestments for all the priest player-characters, he should allow the players to do so (subject to his final approval).

## New Weapons

Several new weapons are mentioned at various times in this supplement. Below, we'll describe them.

## New Weapons List

| Item | Cost | Weight | Size | Type+ | | Speed Factor | Damage | |
|---|---|---|---|---|---|---|---|---|
| | | (lbs.) | | | | | S-M | L |
| Bill* | 5cp | 2 | S | P | | 2 | 1d4 | 1d8 |
| Lasso** | 5sp | 3 | L | - | | 10 | -- | -- |
| Maul** | 5gp | 10 | L | B | | 9 | 2d4 | 1d10 |
| Net** | 5gp | 10 | M | - | | 10 | -- | -- |
| Nunchaku* | 1gp | 3 | M | B | | 3 | 1d6 | 1d6 |
| Scythe** | 5gp | 8 | M | P/S | | 8 | 1d6+1 | 1d8 |

- * This weapon is intended for one-handed use, and may not be used two-handed. In the case of nunchaku, two-handed flourishes are common, but blows are struck with one hand only at a time.
- ** This weapon is intended for two-handed use only.
- + The "Type" category is divided into Bludgeoning (B), Piercing (P), and Slashing (S). This indicates the type of attack made, which may alter the weapon's effectivness against different types of armor. See the optional rule in the *Player's Handbook*, page 90.

## New Weapons Descriptions

The **Bill** is a short hook on a short cross-handle, and is a weapon derived from the sort of hook used to spear and haul in fish or to carry sides of meat around.

The **Lasso** is a rope with a loop at the end; it's thrown at targets, and on a successful hit the loop settles around the target. The wielder can then pull the rope taut and seriously inconvenience his target. Extensive rules for the lasso appear in *The Complete Fighter's Handbook*.

The **Maul** is a polearm with a heavy bludgeoning head at the end. It is therefore a Bludgeoning weapon, and is appropriate for the use of clerics and specific priests who aren't allowed to use bladed weapons. When a priesthood allows the use of polearms, this includes the maul (and the mancatcher, for that matter); but when maul alone is listed, the priest cannot use the other polearms.

The **Net** is a weighted combat net on the end of a rope. Like the lasso, it is thrown to spread over a target; if it hits, it can be pulled closed, and the trailing rope used to pull the victim around. Also like the lasso, extensive rules for this weapon's use appear in *The Complete Fighter's Handbook*.

The **Nunchaku** is an oriental weapon and only suitable for oriental-based campaigns. It consists of two wooden handles connected by a short chain or short length of cord. It was originally derived from an agricultural implement, which is why so many priests of nature-oriented gods can use it.

The **Scythe** is a large, curving blade that is sharp only on the underside of the blade (the concave edge); the blade is attached to a twisted pole some 5-6' in length. The wielder uses the weapon two-handed. The scythe is a harvesting tool used by farmers to cut down their grain; as a weapon, it is symbolic of gods of agriculture, time, and death.

# Unarmed Combat

The following material is reproduced in part from *The Complete Fighter's Handbook* , so that players of Fighting-Monks will have access to the rules for martial arts combat.

## Attacking Without Killing

Before proceeding, you should familiarize yourself with the "Attacking Without Killing" rules from the *Player's Handbook*, pages 97-98.

## Knowing Punching, Wrestling, Martial Arts

As you saw in the *Player's Handbook*, *everybody* knows how to punch and wrestle. Any character, from the doughtiest warrior to the spindliest scholar, knows hot to twist someone's arm or punch him in the jaw. (Naturally, such factors as strength, dexterity and experience level have a remarkable effect on how often one hits and how much damage one does.)

Martial Arts are another matter. By "Martial Arts," we mean generic unarmed combat. This isn't karate, kung fu or tae kwan do: It's movie-style martial arts with no basis in real-world fighting styles.

A character may only know Martial Arts if the DM declares that this style is available for characters to learn. In many campaigns, it won't be. In most oriental campaigns, it will be. In campaigns where the occidental and oriental worlds have a lot of contact with one another, it could easily be.

To know Martial Arts at its basic level, the character must spend one Weapon Proficiency slot on Martial Arts. That's all it takes. Once he's spent that proficiency slot, he can use Martial Arts in the same way that other people use Punching and Wrestling, as we'll describe immediately below.

## Martial Arts Results

At its basic level, Martial Arts skill is used just like Punching and Wrestling. Martial Arts combat occurs when a character attacks with his bare hands, feet, and even head. No weapons are used. (A character can hold a weapon in one hand and nothing in the other, attacking with his weapon one round and with his Martial Arts skill in the next.)

When attacking with Martial Arts skill, the character makes a normal attack roll against the normal Armor Class of the target. (If the attacking character has armor on, he does suffer the "Armor Modifiers For Wrestling" from Table 57 on page 97 of the *Player's Handbook*.) Any other normal modifiers are applied to the attack roll (from the attacker's Strength bonus, for example).

If the attack roll is successful, the attacker consults the table below for the result of the attack. If, for instance, the character rolls a 13 to hit, the result is a Body-Punch, doing 1 point of damage (plus the character's damage bonus from Strength, if any).

## Martial Arts Results Table

| Attack Roll | Martial Arts Maneuver | Damage | %KO |
|---|---|---|---|
| 20+ | Head Punch | 3 | 15 |
| 19 | High Kick | 2 | 10 |
| 18 | Vitals-Kick | 2 | 8 |
| 17 | Vitals-Punch | 2 | 5 |
| 16 | Head Bash | 2 | 5 |
| 15 | Side Kick | 1 | 3 |
| 14 | Elbow Shot | 1 | 1 |
| 13 | Body-Punch | 1 | 2 |
| 12 | Low Kick | 1 | 1 |
| 11 | Graze | 0 | 1 |
| 10 | Body-Punch | 1 | 2 |
| 9 | Low Kick | 1 | 1 |
| 8 | Body-Punch | 1 | 2 |
| 7 | Knee-Shot | 1 | 3 |
| 6 | Side Kick | 1 | 5 |
| 5 | Head Bash | 2 | 10 |
| 4 | Vitals-Punch | 2 | 10 |
| 3 | Vitals-Kick | 2 | 15 |
| 2 | High Kick | 2 | 20 |
| 1* | Head Punch | 3 | 30 |

* Or less

## Descriptions of the Maneuvers

**Body-Punch:** This is a straightforward punch into the target's stomach or chest.

**Elbow Shot:** With this maneuver, the attacker plants his elbow into the target's chest, side, or stomach.

**Graze:** This could have started out as any sort of maneuver, but it merely grazed the target; it wasn't landed firmly.

**Low Kick:** The attacker kicks the target in the leg or thigh.

**Head Bash:** The attacker slams his forehead into the target's face, which is a stout maneuver.

**Head Punch:** This is a good, strong blow with the fist to the enemy's head, particularly his jaw.

**High Kick:** The attacker kicks the target in the upper body somewhere: Stomach, chest, back, or shoulder.

**Knee-Shot:** The attacker brings his knee up into the target's stomach or thigh.

**Side Kick:** With this maneuver, the attacker has time to prepare and launch a very powerful sideways kick (which may be at the end of a cinematic leap).

**Vitals-Kick:** The attacker kicks his target at some vulnerable point: Groin, kidney, neck, solar plexus, etc.

**Vitals-Punch:** The attacker puts his fist into one of the vulnerable points mentioned immediately above.

## Specializing in Punching

Any priest can specialize in Punching (or Wrestling, or Martial Arts). Of all the types of priests, though, only the Fighting-Monk can specialize in more than one unarmed combat style. The DM may decide for his own campaign that Priests other than the Fighting-Monk may not specialized in any unarmed combat, or that certain types of priests (for example, of the god of peace) may not.

In order to do specialize in Punching, the Priest must devote a Weapon Proficiency slot to Punching. When he does, he gets the following benefits:

He gains a +1 bonus to all his attack rolls with Punching;

He gains a +1 bonus to all damage with Punching; and

He gains a +1 *chart bonus* with all Punching attacks.

The chart bonus is a reflection of the character's superior accuracy with Punching. When the Fighter-Monk rolls and successfully hits, as you know, the roll itself determines which maneuver was made.

But on a successful hit, the Punching Specialist can modify that result. If he has a *chart bonus* of +1, he can choose the maneuver one higher or one lower on the chart.

*Example: The fighter-monk Toshi punches an orc. He rolls a 18 to hit, and this turns out to be a successful hit. On the "Punching and Wrestling Results" chart, we see that this is a Rabbit Punch. But Toshi is a Punching Specialist with a chart bonus of +1. He can choose instead for the result to be a Wild Swing (which does less damage and has an inferior chance of accomplishing a knockout) or a Kidney Punch (which does the same damage but has a superior chance of accomplishing a knockout). He changes the maneuver from a Rabbit Punch to a Kidney Punch.*

Only if a character Specializes in Punching and thus has a *chart bonus* can he affect his punch results in this manner.

### Specializing in Wrestling

The same rules given for Specializing in Punching also apply to Wrestling. If a Priest spends one Weapon Proficiency slot on Wrestling, he is a Wrestling Specialist:

He gains a +1 bonus to all his attack rolls with Wrestling;

He gains a +1 bonus to all damage with Wrestling (that is, all his maneuvers will do 2 points of damage plus his Strength bonus, and continued holds cause cumulatively 1 more point of damage for each round they are held); and

He gains a +1 chart bonus with all Wrestling attacks.

So if, for instance, he rolls a 9 to hit, and that hits, his result would normally be a Leg lock. If he chooses, he can change it to an Elbow smash or a Headlock.

### Specializing in Martial Arts

The same rules given for Specializing in Punching and Wrestling also apply to Martial Arts, with one exception. No character knows Martial Arts automatically. Therefore, the character must first spend one Weapon Proficiency slot to know Martial Arts in the first place, and then must spend one more to become a Martial Arts Specialist.

As usual, when the character becomes a Martial Arts Specialist:

He gains a +1 bonus to all his attack rolls with Martial Arts;

He gains a +1 bonus to all damage with Martial Arts; and

He gains a +1 chart bonus with all Martial Arts attacks.

So if he rolls a 15 to hit, and the attack hits, he has performed a Side Kick. If he uses his +1 chart bonus, he can change that into an Elbow Shot or a Head Bash. He'll probably choose to change it to a Head Bash, for the improved damage and improved chance of KO.

## More Than One Style

Only a Fighting-Monk can specialize in more than one unarmed combat style. A Fighting-Monk can only specialize in one of the three unarmed combat styles when he is first created. After first level, however, he may specialize in the other two.

As described in the writeup of the Fighting-Monk kit, the character can save some of his Weapon Proficiencies.

For example, at first level, he could specialize in Martial Arts, then spend another slot at second level to specialize in Wrestling, then another at third level to specialize in Punching.

However, if he first specializes in Punching or Wrestling, he cannot specialize in Martial Arts at the next experience level. He can only spend one slot per experience level, meaning that he'll first gain proficiency with Martial Arts at one level, then specialize at the next level.

Usually, the character, if he wants to specialize in more than one style, will take either Martial Arts or Punching, not both, and then take Wrestling. Martial Arts and Punching overlap one another somewhat, but Wrestling is useful when the character is being held.

## Continuing Specialization

This is an option only for Fighting-Monks (and Warrior characters); other Priests *may not do this*.

If a Fighting-Monk continues to devote Weapon Proficiency slots to an unarmed combat style *after he is already specializing in it*, he gets the following benefits.

For each additional slot devoted to his art, as before:

He gains a +1 bonus to all his attack rolls with his combat style;

He gains a +1 bonus to all damage with his combat style; and

He gains a +1 chart bonus with all attacks in that combat style. With chart bonuses of +2 or more, the character can choose any maneuver within the range of maneuvers covered by his chart bonus (see the example below).

A Fighting-Monk, once he has specialized in a fighting style, can only devote one Weapon Proficiency slot to that style *per experience level*. Therefore, a first-level Fighting-Monk could specialize in Martial Arts by devoting two slots to it. He could not devote another slot to it until second level, and then could not devote another slot until third level, and so on.

Let's use that character as an example.

*Example: Toshi the Fighting-Monk specializes in Martial Arts at first level, adds one proficiency slot to it at second level, and another at third level.*

*At third level, he has a +3 bonus to attack rolls with Martial Arts, a +3 to damage*

*rolls with Martial Arts, and a +3 chart bonus.*

*Let's say he rolls a 17 to hit someone, and that the attack does hit. This would normally be a Vitals-Punch. But he has a +3 chart bonus. He can choose for the maneuver to be a Head Punch, a High Kick, a Vitals-Kick, the Vitals-Punch that was rolled, a Head Bash, a Side Kick, or an Elbow Shot. Assuming that he takes the punishing Head Punch, he'll do 3 points for the maneuver, +3 points from the damage bonus he gets for specializing, and any bonus his Strength grants him.*

* * *

That, in brief, is the way Martial Arts works for the fighting-monk. You are encouraged to read the Combat chapter of *The Complete Fighter's Handbook* for more rules and guidelines on the use of unarmed combat in the game.

# Introduction

Mysterious guardian of a sacred grove, wise counselor to monarchs, cunning master of many shapes, friend of animals, and terrible defender of unspoiled Nature: This is the druid of the Advanced Dungeons & Dragons® game.

Although the priests of the Celtic tribes of Western Europe in the time of Rome called themselves druids, the druids of the AD&D® game are not Celtic priests, nor do they practice the bloody rites that made the ancient druids infamous in the eyes of Rome. Rather, these druids more closely resemble creatures of Victorian romance and modern fantasy, Merlin figures who revere Nature and wield power over plants, animals, the weather, and the elements.

This book is designed to illuminate the many abilities of druids and show how the neutral and "unaligned" druid can best adventure with a party of predominantly good characters. It also reveals what a druid does when not adventuring and demonstrates how a druid can become the center of a new and exciting campaign.

*The Complete Druid's Handbook* adds numerous options to the druid class from the *Player's Handbook*, including druids from regions other than the woodlands, and introduces many specialized druid kits. Also included are new spells and magical items, as well as rules for a druid's sacred grove.

Those using this book with the AD&D Original Edition game should know that page references correspond with the AD&D 2nd Edition *Player's Handbook (PH)* and *Dungeon Master® Guide (DMG).* The original druid class appears here as an appendix, with some material from the AD&D Original Edition reference book *Unearthed Arcana.*

# Chapter 1: Druid Characters

The traditional druid is a guardian of the woodlands. Nature, however, is vast and diverse; thus the druids detailed in this book might live their lives protecting jungle rain forests, arctic tundra, or even the subterranean Underdark. As a result, several distinct branches of druid are presented here, each essentially a new subclass built around the

basic concept of the druid class. As a player, choose your druidic branch right after deciding to play a druid character.

## Druidic Organization

The basic druid as described in the *PH* is referred to here as the "forest druid." The names of the other branches reflect their geographic specialty: arctic druids, desert druids, and so on.

Members of all the branches of the druidic order have the same alignment--true neutral--and worship Nature. They share one ethos and owe at least nominal allegiance to the world's Grand Druid. But, as befits the infinite diversity of Nature, every branch differs in details and approach to its mission. The granted powers and spells that Nature finds appropriate for a druid in one region are often inappropriate for a druid from a very different climate and terrain.

For instance, while the forest druids described in the *PH* have major access to the Plant sphere of priest spells, the branch of desert druids has only minor access to that sphere, reflecting the less abundant plant life in the desert. Similarly, while a forest druid's ability to pass through overgrowth is very useful in the woods, it has much less utility for a desert druid. Instead, the branch of desert druids has granted powers enabling them to survive in arid country.

Some rivalry exists between the different branches of druids. On most worlds, the forest druids belong to the dominant branch. However, on a few worlds (such as one in the midst of an ice age) another branch might wield the most power. For more details on rivalry between branches, see Chapter 3: The Druidic Order.

The Dungeon Master can restrict some branches to nonplayer characters (NPCs) or even prohibit them to suit the background or direction of a campaign. For example, the Dungeon Master (DM) might decide that the gray druids of the Underdark would make exciting adversaries for the characters. Since having player characters (PCs) as gray druids would water down the impact of the gray druids as foes, the DM can prohibit players from choosing that branch. Later in the campaign, after the party has encountered the gray druids, the DM might open the branch to players.

Similarly, some druid branches simply may not seem very logical or useful in certain campaigns. A wise DM would discourage players from selecting the arctic branch for their druid characters in a campaign set in a jungle.

## The Essential Druid

Some characteristics and limitations apply to *all* branches of the druidic order. The following section expands on the rules for druid characters in the *PH* (pgs. 35B38).

### Alignment and Ethos

All druids are of neutral alignment and share an ethos devoted to protecting the wilderness and maintaining natural cycles and a balance between good and evil (*PH*, pgs. 37, 47). For a detailed discussion of the neutral alignment and the beliefs of druids, refer to Chapter 4: Role-playing Druids.

## Experience and Hit Dice

All druids must use the druid column of Table 23: Priest Experience Levels (*PH*, p. 33). Druids, like other members of the priest group, use eight-sided Hit Dice (HD), gaining one die per level from 1st through 9th level. After 9th level, druids receive an additional 2 hit points per level, but gain no special bonus for high Constitution.

## Proficiencies and Crossovers

Druids gain proficiencies just like other priests (*PH*, p. 50), starting with two weapon and four nonweapon proficiencies.

It is strongly recommended that you, the player, use the optional nonweapon proficiency rules when creating druid characters with this book. The various branches of druids (and the druid kits described later) make extensive use of the nonweapon proficiency system to differentiate among types of druids.

Note that druid nonweapon proficiencies come from the general, priest, and warrior groups. Druids have access to the warrior group (even though many other priests do not) because it contains many of the proficiencies associated with outdoor skills the druid needs to operate in the wilderness.

## Money and Equipment

Druids start with 3d6-10 gp, which they can use to purchase equipment. All but a few coins (less than 1 gp) must be spent prior to entering play.

If using the optional druid kit rules described later in this book, both the initial money and the equipment allowed might vary depending on the kit.

## Magical Items

Druids use all magical items normally permitted to priests, with the exception of written items (books and scrolls) and those types of armor and weapons that are normally forbidden them. (The weapons and armor permitted to members of each branch and kit do vary, but they remain similar to those allowed to druids in the *PH*.)

Thus, a druid who finds magical chain mail may not wear it, since druids must use only nonmetallic armor. Similarly, a druid cannot wield a magical mace, since maces are not among the permitted druidic arms.

## The Secret Language

All druids can speak a secret language in addition to other tongues they know. Using the optional proficiency system, the secret language does not require a proficiency slot.

*The secret language of the druids has its roots in British tradition. A language called Thari, derived from Celtic roots, apparently was spoken as a secret tongue throughout the British Isles by a small number of traveling folk such as tinkers and bards. It later*

*was adopted by some Gypsy clans in addition to Romany, their own Indic language. Thari may predate the Dark Ages, and some claim fluency in it even today. Certain researchers seeking the roots of Thari as a language distinct from Gaelic have linked its origins to both ancient Celtic craft guilds and to the historical druids. If the DM wants to name the druids' secret language, Thari possesses some historical relevance.*

Not only can druids use the secret language to provide passwords, they can speak this private tongue when they wish to baffle nondruidic eavesdroppers. It is a precise tool for discussing Nature; a druid can say "dense, old-growth pine forest" in one word rather than a whole phrase.

The secret language has a specialized and detailed vocabulary limited to dealing with Nature and natural events; beyond this sphere, it is very basic. A druid could use the secret language to talk about the health of a person, animal, or plant; discuss the weather; or give detailed directions through the wilderness. The language also can describe druidic spells, ceremonies, powers, and any natural and supernatural creatures known to the druids. However, it contains no words for sophisticated human emotions, for most tools or artifacts (beyond those used for hunting, farming, or fishing), or for weapons and armor (other than items druids use). The language also contains few words that refer to concepts peculiar to sentient beings, like *property, justice, theft,* or *war*. Tense distinctions blur in this secret tongue; usually the concepts druids express bear a certain immediacy or timelessness.

Finally, the secret language of the druids remains a purely spoken tongue. A few simple runes or marks (symbolizing *danger, safe water, safe trail,* and so on) exist for marking paths and leaving messages, but the language cannot communicate actual sentences and complex ideas in writing.

Here's an example of how the secret language works in practice. Suppose two druids are discussing a magical item and want to converse entirely in the secret language, using no words borrowed from other tongues. One druid wishes to say:

> This magical long sword was a gift to Melinda, wife to King Rupert, from Rupert's court wizard Drufus. The mage gave it the power to throw lightning bolts. But then King Rupert grew jealous of Melinda. He had her executed and took the blade for himself. After Rupert died, the sword was left buried in the dungeons under his castle.

In the secret language, the story might come out something like this:

> This magic scimitar was for the Tall Golden Female, mate of the Man-Leader, from the Wielder of Magic from the Vale of the White Eagles. He put the call lightning power in it. But the Man-Leader wanted it. He killed the Tall Golden Female and took it for himself. He died. The scimitar stayed in the cave under his big stone man-den.

See the difference? There's no word for *long sword*, so our druid has substituted "scimitar." (All druidic weapons have names.) The idea of a *gift* is described in more basic terms. In addition, the concept of naming has no place in this Nature-oriented language; people and creatures are known by description, status, or place of origin.

*Wizard* becomes the more generic "wielder of magic." *Lightning*, a natural

phenomenon, has an equivalent in the secret language. But the secret language cannot convey a human emotion such as Rupert's *jealousy*, so the druid has had to substitute less precise phrasing. Similarly, the private tongue does not cover *execution* or *murder*, so the druid used the more generic "killed." Finally, no druidic term corresponds to *dungeon* or *castle*, so the druid has had to use other words—"cave under his big stone man-den"--to convey that image. Of course, a druid not worried about being overheard might mix the secret language and normal speech in a single sentence.

The secret language helps bind the worldwide druidic order together. Druids from different circles (See Chapter 3: The Druidic Order) or branches all speak the same secret language. However, they may have developed their own regional accents or dialects. These could enable a listener to identify the region the druid comes from, or provide a clue to the speaker's branch.

In a Spelljammer® or Planescape® campaign and through the use of certain spells and magical items, druids from different worlds can meet. The DM should decide whether their secret languages resemble each other enough to allow communication.

Finally, the druid's secret language, while private, is not supernatural--theoretically, others can learn it. However, because the tongue provides druids with code phrases or passwords, they simply *will not* teach it to nondruids. The great druid of the region will punish any who break with this tradition.

## Shapechanging

Characters belonging to almost all druidic branches (discussed later in this chapter) can shapechange into various animal forms upon reaching 7th level. For more than the following guidelines, consult the description of a particular branch's granted powers.

Normally, the druid can assume only a limited number of shapes each day, depending on the character's branch; the choice of branch usually restricts the types of forms the druid can assume.

Shifting shape takes one round, during which the druid cannot take other actions. The druid can remain in the new shape indefinitely--the duration of a form ends only when the druid turns back to the original shape or assumes another one. A druid can shift from one shape to another without returning to human form first.

Upon assuming a new form, the druid heals 10% to 60% (1d6-10) of all damage. (Round fractions down.) For example, a druid who has suffered 15 points of damage rolls a 3 on a d6. Therefore, the character regains 30%-15 hp, or 4.5 hp. This value becomes 4 hit points after rounding.

The animal form a druid assumes can vary from the size of a bullfrog or small bird to that of a black bear. Unless noted otherwise, the druid can assume only the form of a normal (real-world) animal in normal proportions. A druid in animal form takes on all the beast's physical characteristics movement rate, abilities, Armor Class (AC), number of attacks, and damage per attack. The druid retains original hit point and saving throw values.

The druid's clothing and one item held in each hand also become part of the new body; these reappear when the druid resumes normal shape. Generally, a druid in animal form cannot use such items, but in particularly challenging campaigns, the DM may allow protective devices, such as a *ring of protection*, to function normally.

A shapechanged druid radiates strong Alteration magic.

### Turning Undead

No druid has the granted power to turn undead. Such creatures are not of the living world--the only world that concerns druids--so members of this class have no control over them.

### Higher-level Druids

The worldwide organization of the druids allows for the existence of only a limited number of 12th- or higher-level druids, assigning them special titles, servants, and responsibilities. Druids who gain enough experience to reach 12th level can advance only if they find a vacancy within the Order's ranks or wrest a position from another druid through the challenge. (See Chapter 3: The Druidic Order.)

Only one 15th-level druid exists in any campaign world: the Grand Druid, chief of all druids in the world. The Grand Druid can come from any branch, though on many worlds this position requires a member of the usually dominant forest druids. A Grand Druid who retires and continues to gain experience can become a hierophant druid, of which a world can have any number.

The rules for druids of 12th and higher levels described in the *PH* on pgs. 37-38 apply to all druidic branches. For more details on the hierarchy of druids and the special responsibilities of higher-level characters, see Chapter 3: The Druidic Order.

## Druidic Branches

Each branch within the druidic order operates, effectively, as a separate priest class under the standard druid rules. Here's how the pages that follow describe the characteristics of each branch:

**Minimum Ability Scores.** The druidic prime requisites of Wisdom 12 and Charisma 15, or slightly modified scores, serve as the minimum ability scores necessary for a character to choose a particular branch.

**Races Allowed.** Standard (forest) druids are usually humans or half-elves, but members of other races can choose some druidic branches. (Details on these options appear in *The Complete Book of Humanoids*.) A number in parenthesis shows the maximum level these characters normally reach; they can achieve higher levels only with high ability scores, as stated in the *DMG*, pgs. 14-15.

*The Complete Book of Humanoids* offers four new races for use as druid PCs: alaghi, centaurs, saurials, and swanmays. Other nonhumans can become druids, at the DM's option, though details on these characters should be carefully worked out within the guidelines of *The Complete Book of Humanoids*. Possible allowable races include:

**Dryads.** A dryad is quite shy and unable to travel far from her home tree. Unusual circumstances might allow a dryad PC to become a druid and travel within a large forest using magical items that link her with her home tree, but it remains unlikely that the dryad will advance beyond 4th level in ability. DRAGON® Magazine (#109, "Hooves

and Green Hair") has suggested that half-dryads (born of a union of human male and dryad) might reach 7th level or higher. Dryads and half-dryads always become forest druids.

**Elves.** The AD&D Original Edition *Unearthed Arcana* reference book allowed elves to become druids. Only sylvan elves may achieve druidhood, perhaps in remote areas such as lost islands or other worlds. Sylvan elf druids can reach 12th level (like regular clerics) and can take the Herbalist kit from *The Complete Book of Elves* (pgs. 83-84). They always fall under the forest druid branch. Interested players might develop a druidlike priest kit for an elf, such as the halfling's Leaftender. Though drow cannot become druids, half-drow (like all half-elves) can; these almost always become gray druids.

**Giant-kin**. Firbolgs and voadkyn, described in *The Complete Book of Humanoids*, might become forest druids in certain remote regions of a campaign. They could reach the 7th level of ability. Again, players could develop a druidlike priest kit for this race.

**Halflings.** The AD&D Original Edition game allowed halflings to reach the 6th level of ability as NPCs; *Unearthed Arcana* allowed halfling druid PCs to reach higher levels. In the AD&D 2nd Edition *Complete Book of Gnomes and Halflings* (pgs. 119-120), halfling priests gained the Leaftender kit, which strongly resembles the druid class. Leaftender priests normally may achieve 8th level. If halflings become true druids, they can reach 8th level, too, usually in the forest or plains branches.

**Lizard Men.** A civilized group of lizard men on a world in the Spelljammer setting might have druids among them. Though some lizard men aboard the ship Spelljammer (detailed in *The Legend of Spelljammer* boxed set) achieved high levels of clerical ability, most lizard man druids would not advance beyond 7th level. These beings become jungle or swamp druids.

**Satyrs.** As a rule, satyrs concern themselves too much with having fun to bother with the serious side of a druid's life. Satyr druid PCs should not gain levels above 4th. An article in DRAGON Magazine issue #109, "Hooves and Green Hair," allowed half-satyrs (born of human women and satyrs) to reach 6th level or higher. Satyrs and half-satyrs always belong to the forest druid branch.

**Armor and Weapons Permitted**. Most druids wear natural armor (leather) and use wooden shields. Other armors, especially metallic kinds, are forbidden to all druids.

Most of the weapons permitted to druids of a particular branch resemble tools used in herding, hunting, and farming, or hold symbolic meaning to the druid. For instance, the curved scimitar and khopesh represent both the sickle used in the harvest and the crescent moon, which stands for birth, death, and rebirth in the cycle of Nature.

The standard druid can use the following weapons: club, sickle, dart, spear, dagger, scimitar, sling, and staff (*optional:* scythe).

Use of metallic weapons and tools usually remains unrestricted, but local availability can prove a problem, especially in areas like the arctic tundra. Nonmetallic materials can make effective weapons, with the following modifiers (compared to similar metallic items):

*Bone:* 30% cost; 50% weight; -1 damage; -1 to attack roll.
*Stone:* 50% cost; 75% weight; -1 damage; -2 to attack roll.
*Wood:* 10% cost; 50% weight; -2 damage; -3 to attack roll.

The damage modifier reduces the damage normally done by the weapon, with a minimum of 1 point of damage. The attack roll modifier does not apply to missile weapons, as the attack roll reflects the character's aim and is not a function of the material used to make the weapon. Damage modifiers do apply to missile weapons, however.

Enchanted nonmetallic weapons must overcome the negative modifiers, too; thus a *bone dagger +1* works just as well as a normal steel dagger.

Whenever a nonmetallic weapon inflicts maximum damage in combat, it has a 1 in 20 chance of breaking and becoming useless. (The DM rolls a d20.)

**Nonweapon and Weapon Proficiencies.** A druid of a particular branch must have certain proficiencies *required* by the branch. *Recommended* proficiencies are only strong suggestions. If the DM permits the optional druid kits from the next chapter, select the druid's proficiencies only after you, the player, have chosen a kit, since kits have their own proficiency requirements.

If the DM prefers to use secondary skills rather than nonweapon proficiencies, choose appropriate druidic skills from Table 36 in the *PH*, p. 53.

*The* scythe *is a weapon available to many druidic branches. Its large curved blade, sharp only on its inner edge, attaches to a handle 5 to 6 feet long. A harvesting tool used to reap grain, the scythe costs 5 gp and weighs 8 lbs. This medium-sized (M) weapon must be used two-handed. It causes piercing/slashing (P/S) damage with speed factor 8. A scythe inflicts 1d6+1 points of damage vs. small or medium-sized opponents, or 1d8 vs. large opponents.*

**Spheres of Influence.** Each branch allows its members access to different clerical spell spheres. (An asterisk indicates a sphere to which branch members have only minor access.) Druids gain bonus spells for high Wisdom.

**Granted Powers**. A druid has a wider variety of granted powers than a standard cleric, an advantage balanced by a druid's more limited sphere selection and inferior armor.

**Special Limitation.** Some branches suffer from unusual disadvantages. For example, heat debilitates an arctic druid.

**Holy Symbol and Grove.** Many branches of druids use plants as holy symbols and spell components mistletoe, for instance, symbolizes the forest druid. In habitats where mistletoe is not available (such as deserts or arctic regions), druids use other symbols.

Forest druids worship in groves of ancient trees, which have become sanctuaries, meeting places, and sites of power for them. Alternate worship sites can replace groves for branches whose primary terrain does not foster tree growth. (See Chapter 6: Sacred Groves.)

## Branch Portraits

The following section of this chapter describes the various branches of druids that might exist in a campaign world. The DM may freely create other branches as desired, such as wildspace druids (from unusual worlds in the Spelljammer campaign), aquatic druids (tending ocean life on the continental shelves), aerial druids (living on semisolid cloud islands), and so on. Note that kits function within and in addition to branches.

## Arctic Druid

**Description:** Arctic druids feel at home on the frozen polar tundra or on the slopes of snowcapped mountains and ancient glaciers. They even venture at times across lifeless ice fields to assist lost animals. If an Ice Age took place in the distant past, arctic druids may very well claim to belong to the oldest druidic branch, tracing their ancestry all the way back to the days when humans huddled within caves.

Glydo, a typical arctic druid, (illustrated above) concerns himself more with animals than with plants. Guardian of caribou herds, penguins, auks, seals, polar bears, and other arctic and subarctic animals, he relentlessly pursues those who exploit animals out of desire for profit. However, he faithfully befriends hunters and trappers who respect the land and take from it no more than they need.

**Minimum Ability Scores:** Wisdom 12, Constitution 13, Charisma 15.

**Races Allowed**: Human, half-elf. *Optional*--alaghi (11).

**Armor and Weapons Permitted:** Leather armor, wooden shield; club, dagger, dart, harpoon, knife, sling, spear, staff. Arctic druids can use metallic weapons if they find them, but mining is extremely rare in arctic areas, making such items rare as well.

**Weapon Proficiencies:** *Recommended*-- knife, harpoon, spear.

**Nonweapon Proficiencies:** *Required*-- (general) fire-building, weather sense; (warrior) survival (arctic); *Recommended*-- (general) animal handling, animal training, direction sense, fishing, swimming; (priest) ancient history, healing; (warrior) endurance, hunting, mountaineering, tracking.

**Spheres of Influence:** All, Animal, Divination*, Elemental, Healing, Plant*, Weather. (The arctic druid's minor access to the Plant sphere reflects the less abundant plant life in arctic climes.)

**Granted Powers:** An arctic druid like Glydo has the following granted powers:

- Receives a +2 bonus to all saving throws vs. cold-based attacks.
- Learns the languages of intelligent monsters whose natural habitats are tundra, arctic, and subarctic regions. The arctic druid gains one extra proficiency slot for this purpose every three levels (at 3rd, 6th, etc.). Such languages include those spoken by ettins, frost giants, ice toads, selkies, werebears, white dragons, winter wolves, verbeeg, yeti, and others.
- Ignores the effects of freezing weather upon himself at 3rd level.
- Identifies with perfect accuracy arctic plants and animals, thin ice (ice that would give way under the weight of a person or a sled), and pure water at 3rd level.
- Passes over ice and snow without leaving a trail and can move over such terrain at full movement rate at 3rd level.
- Shapechanges up to three times a day at 7th level. The druid can assume the form of a land mammal, marine mammal, or bird that dwells in arctic and subarctic climates: a caribou, penguin, polar bear, seal, reindeer, snowy owl, wolf, wolverine, and so on. The druid can't take the same animal's shape more than once each day.

Special Limitation: An arctic druid is used to a cold climate and suffers a -1 penalty to attack rolls, saving throws, and ability checks in environments with temperatures above 80 degrees Fahrenheit.

**Holy Symbol and Grove:** Glydo, as an arctic druid, uses as his holy symbol a bone of an arctic animal that has been carved into the shape of a knife, whistle, flute, or other instrument. If the druid dwells beyond the arctic tree line, he chooses as his "grove"--usually near a glacier--an ancient cave whose walls are covered with prehistoric paintings of animals.

## Desert Druid

The deserts prove as inhospitable to most normal plant and animal life as the arctic regions. However, deserts remain vital to the worldwide order of druids.

Desert druids such as Otaq (pictured on p. 11) are either members of native nomad tribes or hermits who have moved to the desert to escape civilization. Valued for their abilities to heal sick animals (and people) and to find or create pure water, they normally remain on good terms with desert nomads. Although desert druids revere all the flora and fauna of a desert, from cacti and scorpions to vultures and camels, they most fiercely protect the few fertile oases, which house their sacred groves.

Desert druids also may reside in semidesert areas, hot scrub lands, and chaparral. Unless a DM sets a campaign in actual desert land, this branch best suits an NPC the party may encounter traveling through the wastes. Many desert druids live as hermits, not fond of disturbances, and can be short tempered or downright eccentric. However, no one can top their knowledge of their own desert area. If a party seeks something in the trackless wastes or finds itself lost, facing a sandstorm, or running out of food or water, a chance encounter with a desert druid like Otaq may spell salvation.

**Minimum Ability Scores:** Wisdom 12, Constitution 12, Charisma 15.

**Races Allowed:** Human.

**Armor and Weapons Permitted:** Leather armor, wooden shield; club, sickle, dart, spear, dagger, khopesh, scimitar, sling, short bow, staff.

**Weapon Proficiencies:** *Recommended*-- scimitar, short bow, staff.

**Nonweapon Proficiencies:** *Required*-- (general) direction sense, weather sense; (warrior) survival (desert). *Recommended*-- (general) riding (land-based); (priest) healing, local history; (warrior) endurance, tracking.

**Spheres of Influence:** All, Animal, Divination*, Elemental (air, earth, fire), Elemental* (water), Healing, Plant*, Weather.

**Granted Powers:** A desert druid like Otaq has the following granted powers:

- Receives a +2 bonus to all saving throws vs. fire or electrical attacks.
- Goes without water for one day per level without suffering thirst. Regaining use of this power requires the druid to have resumed a normal intake of water for a time equal to the days of deprivation.
- Learns the languages of desert-dwelling intelligent creatures (brass dragons, dragonnes, lamias, thri-kreen, etc.), gaining one extra proficiency slot for this purpose every three levels (at 3rd, 6th, etc.).
- Infallibly identifies desert plants and animals and pure water at 3rd level.
- Sees through nonmagical mirages at 3rd level and gains a +4 on any roll to save against illusions cast within a desert.
- Crosses sands and dunes on foot without leaving a trail and at full movement rate at 3rd level.

- Senses the distance, direction, and size of the nearest natural water source (well, spring, oasis, sea, etc.) if one lies within 1 mile per level. This power, gained at 3rd level, is usable once per day.
- Shapechanges up to three times per day at 7th level, once each into a normal mammal, reptile, and bird. The druid can shapechange only into animals whose natural habitat is the desert. Common desert-dwelling animals include camels, eagles, hawks, lizards, mice, rats, snakes, and vultures. Otherwise, this power functions identically to that described in the *PH*, p. 37.

**Special Limitation:** None.

**Holy Symbol and Grove:** A desert druid's grove normally lies within a beautiful oasis in the deep desert. Branch members use as their holy symbol a vial of water from a sacred oasis, filled under a full moon.

## Gray Druid

The rare gray druids inhabit and tend the shadowy realms of the hidden life that exists without sunlight--fungi, molds, and slimes--and the nocturnal creatures that dwell in lightless, subterranean realms. Gray druids are more closely associated with the earth than with other elements of Nature. While many of them live in underground caves or ruins (especially in the Underdark), they are found any place fungal life grows abundantly, either above or below ground.

Gray druids tend to oppose dungeon delvers, especially dwarves, who they believe defile and exploit the underground environment. They have very good relations with deep gnomes and passable relations with drow, who they feel show more appreciation of the beauty of the Underdark than most dwarves or men.

But the gray druids don't always oppose surface dwellers. Suppose a maze of caverns has developed a complex ecology: fungi, slimes, rust monsters, subterranean lizards, purple worms, and so on. Then an evil wizard and his ogres move in and begin "clearing" the caverns, destroying the monsters in preparation to establish an underground stronghold. In this situation, the gray druid Rybna (pictured on p. 11) might recruit a party of adventurers--not to loot the caverns (though the PCs may take the wizard's treasure) but to defeat the wizard's forces--and in so doing, save the local ecology from destruction.

**Minimum Ability Scores:** Wisdom 12, Charisma 15.

**Races Allowed:** Human, half-elf (drow).

**Armor and Weapons Permitted:** Leather armor, wooden shield; club, sickle, dart, spear, dagger, scimitar, sling, staff.

**Weapon Proficiencies:** *Recommended*--dart, scimitar.

**Nonweapon Proficiencies:** *Required*-- (general) direction sense; (priest) herbalism; (warrior) blind-fighting. *Recommended*-- (general) animal training, fishing; (priest) ancient history, healing.

**Spheres of Influence:** All, Animal, Divination*, Elemental (earth, water), Elemental* (air, fire), Healing, Plant, Weather*.

**Granted Powers:** A gray druid like Rybna has the following granted powers:

- Identifies with perfect accuracy pure water, fungi, subterranean animals, and all slimes, puddings, jellies and molds (including monster types) at 3rd level.

- Learns the languages of subterranean creatures (orcs, goblins, troglodytes, xorn, etc.), gaining one extra proficiency slot every three levels (at 3rd, 6th, etc.) for this purpose.
- Controls fungi, jellies, molds, oozes, puddings, and slimes (nonintelligent or of animal Intelligence) at 7th level. The druid can use this power once per day to control 1 Hit Die of creatures per level. It affects only a 30-yard radius around the druid. For instance, Rybna, a 10th-level druid, could control two 5 HD slimes or one 10 HD pudding. The creatures receive no saving throw, but remain controlled only as long as they stay within 30 yards of the druid. An uncontrolled creature reverts to its normal behavior patterns. A gray druid like Rybna will not send a controlled monster to its death unless by doing so she can protect the subterranean ecology. This power does not animate a stationary entity or grant it any new abilities. (Rybna could command a shrieker to shriek or be silent or move, but not to sing or speak.) Control lasts for one turn per level of the druid.
- Shapechanges into a normal reptile, a normal mammal, or a nonpoisonous giant spider at 7th level; the druid can assume each form once per day. The druid can change only into a reptile or mammal that dwells underground, such as a mole, badger, tunnel snake, etc. The ability is otherwise identical to druidic shapechanging in the *PH*.

**Special Limitation:** Gray druid Animal sphere spells affect only animals native to subterranean environments. So, Rybna could cast *animal friendship* on a rat, a huge spider, or a badger, but not on a wolf or horse.

A gray druid has a -2 penalty on saving throws against spells creating bright light, such as continual light.

Due to long enmity, dwarves react to gray druids at -2. (The reverse is also true.)

**Holy Symbol and Grove:** Gray druids use a puffball mushroom grown and harvested in complete darkness as their holy symbol. They usually take part of an underground cavern--a thriving subterranean ecosystem--for a grove.

## Forest Druid

The forest druid--the druid described in the *PH*--serves as the guardian of both the great forests of the wilderness and the smaller woodlands and orchards that lie next to cultivated fields in flat lands, rolling plains, or wooded hills. Forest druids hold trees (especially ash and oak) sacred and never destroy woodlands or crops, no matter what the situation (although a druid could act to change the *nature* of a wood enchanted with evil, for instance, without destroying it). The forest druid acts as a living bridge between the wilderness and those humans--such as hunters, loggers and trappers--who dwell on its borders.

As the player, you can choose to role-play one of two kinds of forest druids: one from a temperate deciduous forest, or one from a subarctic conifer forest. The former type is better known and more numerous on most worlds; though conifer forests grow to vast sizes, they exist within often hostile environments and lack the great variety in wildlife of warmer forests.

For quick reference, the information on the temperate-forest druid branch is repeated here, along with suggested proficiencies. Unless otherwise noted, information applies to

both temperate- and cold-forest druids.

**Minimum Ability Scores:** Wisdom 12, Charisma 15.

**Races Allowed:** Human, half-elf. *Optional*--alaghi (11), centaur (14), saurial (9), swanmay (12). (Only humans, half-elves, alaghi, and centaurs can become cold-forest druids.)

**Armor and Weapons Permitted:** Leather armor, wooden shield; club, sickle, dart, spear, dagger, scimitar, scythe, sling, staff.

**Weapon Proficiencies:** *Recommended*--any two of the above weapons.

**Nonweapon Proficiencies:** *Recommended*-- (general) animal training; (priest) healing, herbalism; (warrior) animal lore, survival (forest), tracking.

**Spheres of Influence:** All, Animal, Divination*, Elemental, Healing, Plant, Weather.

**Granted Powers:** The forest druid has the following granted powers:

- Receives a +2 bonus to all saving throws vs. fire or electrical attacks.
- Learns the languages of woodland creatures (centaurs, dryads, elves, satyrs, gnomes, dragons, giants, lizard men, manticores, nixies, pixies, sprites, treants, etc.), gaining one extra proficiency slot for this purpose every three levels (at 3rd, 6th, etc.). (The languages of cold-forest druids include those of the giant lynx, giant owl, pine treants, and cold-dwelling groups of centaurs, elves, gnolls, gnomes, etc.)
- Identifies plants, animals, and pure water with perfect accuracy at 3rd level.
- Passes through overgrown areas at 3rd level without leaving a trail and at full movement rate. For instance, the temperate-forest druid Garon (pictured above) can move with ease through dense thorn bushes, briar patches, pine trees, tangled jungle vines, and so on. He also is immune to poison ivy, poison oak, and similar irritating plants. When using this power, Garon must be on foot, not riding an animal.
- Has immunity to *charm* spells cast by woodland creatures such as dryads at 7th level. The druid's immunity does not extend to *charm* spells cast by creatures who merely happen to be living in or passing through a forest, such as a woods-dwelling human mage or vampire.
- Shapechanges into a normal, real-world reptile, bird, or mammal up to three times per day at 7th level, exactly as described in the *PH*. Each animal form (reptile, bird, or mammal) can be used only once per day. The druid cannot assume giant forms.

Special Limitation: See "Holy Symbol and Grove."

**Holy Symbol and Grove:** The grove of a forest druid is just that: a stand of hallowed trees. Druids of this branch--such as Gatha, a cold-forest druid (illustrated on p. 15)--use mistletoe as a holy symbol. For full effectiveness, Gatha must gather the mistletoe by the light of the full moon using a golden or silver sickle specially made for this task. If a spell requires a holy symbol and Gatha only has mistletoe harvested by other means, halve the damage and area of effect (if any) and add +2 to the target's saving throw (if applicable).

### Jungle Druid

The protectors of tropical rain forests, jungle druids usually grow up in tribes, as jungle pests, vegetation, and climate discourage farming, herding, and city-building. Because most tribal members live closely attuned to the natural world, jungle druids have a greater likelihood of involving themselves directly in the affairs of humans than other druids might. In fact, a jungle druid like Sima (pictured on p. 15) usually holds a position of power and respect, wielding great political authority.

However, jungle druids do not associate themselves with a particular tribe or people, as do most tribal priests or witch doctors. Instead, they adopt a neutral position, mediating intertribal feuds and handling relations between human tribes and jungle-dwelling humanoids, demihumans, or intelligent monsters. In some cases, a great druid becomes a virtual "king of the jungle," wielding power over a coalition of several tribes, nonhumans, and animals.

**Minimum Ability Scores:** Wisdom 12, Charisma 15.

**Races Allowed:** Human. *Optional*--saurial (9).

**Armor and Weapons Permitted:** No armor, wooden shield; blowgun, club, dart, knife, spear, staff.

**Weapon Proficiencies:** *Recommended*-- blowgun, knife.

**Nonweapon Proficiencies:** *Required*-- (priest) healing, herbalism. *Recommended*-- (general) animal taming, weather sense; (priest) local history; (warrior) survival (jungle), tracking.

**Spheres of Influence:** All, Animal, Divination*, Elemental, Healing, Plant, Weather.

**Granted Powers:** The jungle druid has the following granted powers:

- Passes through overgrown areas, such as thick jungle, without leaving a trail and at full movement rate.
- Learns the languages of tropical forest and swamp creatures (couatl, lizard men, naga, tasloi, yuan-ti, etc.), gaining one extra proficiency slot for this purpose every three levels (at 3rd, 6th, etc.).
- Identifies plants, animals, and pure water with perfect accuracy at 3rd level.
- Shapechanges into a normal (not giant) reptile, bird, or mammal up to three times per day at 7th level. The druid can use each animal form (reptile, bird, or mammal) only once per day and can choose from only those animals that make their normal habitat within jungles or tropical swamps.

**Special Limitation:** None.

**Holy Symbol and Grove:** The jungle druid uses a tom-tom (jungle drum) as a holy symbol. Constructing a replacement takes two weeks. The grove is usually a circle of trees, often near a waterfall.

### Mountain Druid

The mountain druid dwells in areas of rugged hills, alpine forests, and peaks and rocks above the tree line. Members of this branch, such as Dansil (illustrated on p. 19), wield over their environments a power gained from the element of earth and especially from stone. They also draw power from the weather, especially storms and clouds. Dansil and his fellows protect mountains and alpine flora and fauna from those who would exploit them. This role frequently brings them into conflict with miners, especially

dwarves. Mountain druids often ally themselves with storm and stone giants, which further angers dwarves.

**Minimum Ability Scores:** Strength 9, Wisdom 12, Charisma 15.

**Races Allowed:** Human, half-elf.

**Armor and Weapons Permitted:** Leather armor, wooden shield; club, sickle, dart, spear, dagger, scimitar, sling, staff.

**Weapon Proficiencies:** *Recommended*--club, sling, spear.

**Nonweapon Proficiencies:** *Required*-- (warrior) mountaineering, survival (mountain). *Recommended*--(general) animal training; (priest) healing, herbalism; (warrior) animal lore.

**Spheres of Influence:** All, Animal, Divination*, Elemental (earth, air), Elemental* (fire, water) Healing, Plant, Weather.

**Granted Powers:** The mountain druid has the following granted powers:

- Receives a +4 bonus to all saving throws vs. electrical attacks and to mountaineering proficiency checks.
- Gains a modifier of +3 to experience level when determining the effects of a spell from the Elemental (earth or air) or Weather spheres cast while in the mountains.
- For instance, say Dansil, a 5th-level mountain druid, cast the Weather spell *obscurement* while in his mountain environs. That spell, which has effects normally lasting 20 rounds (four rounds per level), has an adjusted duration of 32 rounds, as though Dansil were 8th level. Modify its normal area of effect of 50 feet - 50 feet (10 feet - 10 feet per level) to 80 feet - 80 feet.
- Senses avalanches, volcanic eruptions, and rockfalls one turn before they happen when the player rolls 1 to 5 on 1d6. This ability also enables the druid to detect deadfall traps and falling blocks on a roll of 1 to 3 on 1d6.
- Learns the languages of mountain-dwelling sentient creatures (such as dwarves, red dragons, stone or storm giants, etc.), gaining one extra proficiency slot for this purpose every three levels (at 3rd, 6th, etc.).
- Identifies plants, animals, and pure water with perfect accuracy at 3rd level.
- Shapechanges into a normal, real-world reptile, bird, or mammal up to three times per day at 7th level, exactly as described in the *PH*. Each animal form (reptile, bird, or mammal, excluding giant forms) can be used only once per day.

**Special Limitation:** None.

**Holy Symbol and Grove:** The mountain druid uses an eagle feather as a holy symbol. The grove of a druid (such as Dansil) usually lies in the higher elevations, often a glade near a beautiful waterfall on a slope or an ancient circle of standing stones on a peak.

## Plains Druid

The plains druid lives on open grasslands with few or no trees: temperate prairies and pampas, hot veldts and savannas, cool steppes, and the like. Yalla is such a druid. (See illustration next page.) She often finds herself in the company of nomadic hunters and herders. Her powers and interests resemble those of a forest druid, but she has a closer interest in the weather and the health of great herds roaming her lands than in trees

and crops. Second only to the forest branch, plains druids remain among the most common and best known of all druids.

**Minimum Ability Scores:** Wisdom 12, Charisma 15.

**Races Allowed:** Human, half-elf. *Optional*--centaur (14).

**Armor and Weapons Permitted:** Leather armor, wooden shield; club, sickle, dart, spear, dagger, scimitar, scythe, sling, staff.

**Weapon Proficiencies:** *Recommended*--club, sling, spear.

**Nonweapon Proficiencies:** *Required*-- (general) riding (land-based), weather sense; (warrior) animal lore, tracking. *Recommended*--(general) animal handling, animal training; (priest) healing; (warrior) endurance, hunting, survival (plains/steppes).

**Spheres of Influence:** All, Animal, Divination*, Elemental (air, earth, fire), Elemental* (water), Healing, Plant, Weather.

**Granted Powers:** Yalla, a typical plains druid, possesses these granted powers:

- Receives a +2 bonus to all saving throws vs. fire and electrical attacks (due to this branch's need to fight such natural dangers as prairie fires, lightning strikes, etc.).
- Has a +4 bonus to any animal handling, animal lore, or animal training proficiency checks concerning plains-dwelling herd beasts or riding animals.
- Learns the languages of plains-dwelling sentient creatures (such as centaurs), gaining an extra proficiency slot for this purpose every three levels (at 3rd, 6th, etc.).
- Identifies plants, animals, and pure water with perfect accuracy at 3rd level.
- Speaks with any land animals that humans can ride, as well as plains-dwelling herd animals, at 3rd level as though she had cast a *speak with animals* spell.
- Shapechanges into a normal, real-world reptile, bird, or mammal common to the plains up to three times per day at 7th level, exactly as described in the *PH*. Yalla can use each animal form (reptile, bird, and mammal) only once per day and cannot assume giant forms.

**Special Limitation:** None.

**Holy Symbol and Grove:** Plains druids typically wear their holy symbol: a diadem or arm band woven from prairie grass under a full moon. They often choose as their grove a circle of standing stones on the open grass.

### Swamp Druid

The swamp druid's role centers around guarding marshes, fens, bogs, wetlands, and swamps, as well as the abundant plant and animal life within them. Willoo, an average swamp druid (pictured next page), resembles a normal forest druid, but his particular habitat makes him less socially acceptable. He opposes anyone who would drain his swamp in the name of "progress," even if such land were needed for farming or urban construction. Swamp druids often live as hermits; the more sociable among them sometimes serve as priests for outlaws hiding in the swamps or for lizard men who lack their own shamans.

**Minimum Ability Scores:** Wisdom 12, Charisma 12.

**Races Allowed:** Human. *Optional*--saurial (9).

**Armor and Weapons Permitted:** Leather armor, wooden shield; club, dagger, dart,

khopesh, scimitar, scythe, sickle, sling, spear, staff.

**Weapon Proficiencies:** *Recommended*--any two of the above.

**Nonweapon Proficiencies:** *Required*-- (general) swimming; (priest) herbalism; (warrior) survival (swamp). *Recommended*-- (general) seamanship (for small boats), weather sense; (priest) healing, local history; (warrior) animal lore.

**Spheres of Influence:** All, Animal, Divination*, Elemental (earth, water), Elemental* (air, fire), Healing, Plant, Weather.

**Granted Powers:** A swamp druid has the following granted powers:

- Has an immunity to insect-transmitted diseases common to swamps, such as malaria, and a +2 bonus on saving throws vs. any other diseases.
- Receives a +1 reaction adjustment from normal animals that live in swamps (such as crocodiles) and from monsters whose habitat is a swamp or marsh for instance, black dragons, bullywugs, and lizard men.
- Learns the languages of intelligent humanoids and monsters that inhabit the swamp (black dragons, bullywugs, lizard men, shambling mounds, will o' wisps, etc.), gaining one extra proficiency slot for this purpose every three levels (at 3rd, 6th, etc.). (Note that to "speak" with a will o' wisp, a swamp druid needs a light source, such as a hooded lantern, to signal with.)
- Identifies plants, animals, and pure water with perfect accuracy at 3rd level.
- Passes through overgrown areas and mud at the full movement rate without leaving a trail at 3rd level. The swamp druid can use this power to cross quicksand without sinking.
- Uses the *animal friendship* spell (which usually affects only normal or giant animals) at 5th level to influence semi-intelligent swamp-dwelling monsters or those of animal Intelligence. The effects on such monsters, including catoblepas, hydra, lernaean hydra, and pyrohydra, remain those of *animal friendship*. The druid has to want to befriend the monster, not use it as sword-fodder.
- Shapechanges into a normal reptile, bird, or mammal up to three times per day at 7th level. The druid can assume only the form of real-world creatures that live in swamps or wetlands (crocodile, frog, marsh bird, snake, etc.). The druid can adopt each animal form (reptile, bird, or mammal) once per day.
- Casts an *insect plague* (as the spell) once per day at 7th level. This power works only when the druid is within the boundaries of a swamp or marsh.

**Special Limitation:** Willoo's clothes, like those of most swamp druids, frequently look caked with mud and often drip with swamp water. He always has a faint odor of the swamp about him. His lack of cleanliness gives him a -1 penalty to reaction adjustment from most people and a -3 penalty regarding upper-class individuals, such as gentry or nobles.

**Holy Symbol and Grove:** The grove usually lies deep within a marsh or swamp--a stand of beautiful mangroves, weeping willows, swamp oak, or the like. Many groves are actually islands, sometimes guarded by natural traps such as quicksand. A swamp druid uses as a holy symbol a vial of water from a sacred swamp grove.

## Multi- and Dual-Class Druids

This section elaborates on the options for players who wish to role-play multi- or

dual-class druids. The choices and descriptions are culled from a variety of sources, including the *PH* and *DMG*.

## Multi-Class Druids

Only half-elves can be multi-class druids. Multi-class druids must abide by the weapon, shield, and armor restrictions of their branches. The *PH* (pgs. 22, 44) mentions the half-elf's options of druid/fighter, druid/ranger, druid/mage, and druid/fighter/mage. (Some earlier printings incorrectly cite only the druid/fighter combination on p. 44.)

**Druid/Fighter.** The core AD&D rules permit the druid/fighter.

**Druid/Ranger.** The core AD&D rules permit the druid/ranger. *The Complete Ranger's Handbook*, p. 79, gives guidelines for playing such characters: A Nature deity of good alignment must exist whose specialty priests are all druids. This priesthood must ally with a group of rangers. Any half-elf druid/ranger must obey the level limits for demihumans (*DMG*, p. 15), making it unlikely for the character to compete for high levels of druidic power. The druid/ranger's multiple interests antagonize conservative druids, and the character usually suffers from divided loyalties. (Create a similar character with fewer problems by giving a druid/fighter the Avenger or Beastfriend kit, described in the next chapter.)

**Druid/Mage and Druid/Fighter/Mage.** The core AD&D rules permit the druid/mage and druid/fighter/mage. While these combinations exist, they remain rare and require the DM's permission. They cannot wear armor or use shields, and must limit their weapons to those permitted to druids.

## Dual-Class Druids

All normal rules for dual-class characters apply to druids. The druid's restriction to neutral alignment limits the options to bard/druid, fighter/druid, wizard/druid, and thief/druid. Some druids prefer to see the upper ranks of the Order filled by "pure" druids those who have devoted their lives solely to the Order. Dual-class characters sometimes face prejudice from other druids.

**Fighter/druids.** Often acting as wandering guardians of Nature and country folk (much like neutral rangers), fighter/druids also can become hermit-knights, living away from society and defending a particular grove with their lives. Fighters who become druids often do so because they seek spiritual growth, because they have grown disgusted with the world of man, or occasionally as penance for a particular misdeed.

Druids who become fighters, on the other hand, want to take a more direct approach to defending the wilderness; others seek to attune themselves to Nature by mastering their own bodies using eastern-style fighting arts, often becoming rather enigmatic Zenlike warrior-mystics.

**Wizard/druids.** Looked upon with deep suspicion by most other druids, wizard/druids generally find themselves stereotyped as untrustworthy or scheming. Conservative elements within the druidic order often attempt to block wizard/druids from reaching 12th level. If they fail, they deliberately encourage rising druids to challenge the dual-class character to a duel in preference to other targets.

Wizards usually become druids for philosophical reasons: either a fear that unrestrained use of magical or divine forces threatens the cosmic balance, or a desire to learn the druidic arts to better understand the workings of Nature. Druids who study wizardry most often see this magic as another part of Nature to study and master.

**Thief/druids.** Such combinations appear rarely, since the city serves as the optimum home base for the thief. As with wizard/druids, people tend to distrust thief/druids. A druid who becomes a thief usually does so after becoming disillusioned with the druidic order. A thief becomes a druid usually as the result of highly unusual circumstances an outlaw flees to the wilderness to escape pursuit only to befriend a local druid, come to love Nature, and decide to adopt a new way of life.

**High-level Dual-Class Druids.** A dual-class character who achieved a high level as a fighter or wizard before becoming a druid has an edge in the challenge a druid faces to advance beyond 11th level. For fairness, the Order generally bans such player characters from initiating challenges; they can gain experience levels above 11th only to fill a vacancy.

DMs with a taste for political intrigue may permit an exception if the character receives special dispensation from the druidic order. This means a dual-class druid must have a sponsor: in theory, a higher-level druid who attests to the character's fairness and commitment to the Order. In practice, the sponsor is often a druid who wants a dangerous rival removed and believes the dual-class character has a good chance of doing so! In the case of wizard/druids, however, the Order often (but not always) forbids wizard spells during the challenge.

A peculiar situation can occur if a character has achieved 12th to 15th level as a druid, then adopts another class. In effect, such characters have "dropped out" of the Order. Although inactive as druids, they retain their former Hit Dice and hit points. When they wish to use their druidic powers again (after achieving one level more in the new class than their druid level), they must challenge an incumbent for the high-level druidic position they once held.

A dual-class character who loses the challenge must drop a level, as usual but then may face another challenge and another, until the player character eventually wins a position or falls to 11th level. As a result of this danger, dual-class player characters usually prefer to switch classes before reaching 12th level or after exceeding 15th level.

## Agriculture: Expanded Rules

The DM may use this expansion of the agriculture proficiency when druid characters assist a small village facing tough times or if a PC takes up farming. These rules can figure the prosperity of an entire village if the DM groups area farms together and uses the proficiency rating of the village leader or druid with Tables 1 and 2. Before applying the following rules, the DM must decide how many people the farm in question is designed to support.

A medieval farm needs a manager with the agriculture proficiency. At optimum level, a farm has one worker per every two people it supports. A farm with more workers may produce a slight surplus; if it has fewer workers, it will yield less, since the crew would have more chores than hands. Children between ages 7 and 11 count as half a worker each, and those 12 and older each count as another full worker.

## How Did the Farm Perform?

To quickly determine the success of a farm (or garden or village) for the year, the DM looks at the number of people it can support. For instance, a family farm might produce enough to support six people. If the family has five members, the farm shows a profit. With six, the farm merely scrapes by. A family of seven is starting to get hungry.

## Figuring Farm Profitability

DMs wanting more precise details about a farm's performance can follow these steps:

1. Determine Proficiency Base. Every year the DM rolls 1d6 and adds the result to the farmer's Intelligence score. Then, the DM locates the farmer's adjusted agriculture proficiency rating (base score) on Table 1.

**Table 1: Farm Rating**

| Base Score | Farm Profitability |
|---|---|
| 1-5 | Disastrous year |
| 6-10 | Poor yield |
| 11-16 | Average harvest |
| 17 and up | Bumper crop |

2. Apply the Worker Modifier. The number of farm workers modifies the base proficiency score. For each 10% by which the farm crew falls below its optimum number of workers, the DM applies a -1 penalty to the base score in Table 1. If the farm has 20% more workers than optimum, the DM adds a +1 bonus to the base score in Table 1. (Having more workers gives no extra bonus.)

3. Figure the Random Events Modifier. As any farmer would tell you, what makes the farming life interesting is Nature's eternal cussedness: random events. The DM should roll on Table 2 to see what's in store for the farm, then apply the random events modifier to the adjusted base score.

**Table 2: Farm Random Events**

| d20 | Event | Check Modifier |
|---|---|---|
| 1 | Ruinous weather | -6 |
| 2-3 | Bad weather | -4 |
| 4-6 | Animal disease | -2 |
| 7-8 | Building damaged | -2 |
| 9 | Predators | -1 |
| 10 | Poachers or bandits | -1 |
| 11-14 | No bad news | 0 |
| 15-17 | Used good seed | +1 |
| 18-19 | Good weather | +2 |

Note that often the actions of the farmers (or PCs helping them) and available priestly or druidic spells can reduce the penalty from random events. See the descriptions below:

- Ruinous weather may include flooding or a long drought. A successful weather sense proficiency check by the farmer halves the penalty. (The farmer had advance warning and prepared for the weather.) If the farmer knows a druid to use the *control weather* spell, the DM can negate the penalty.
- Bad weather might mean an early frost, a slight drought, or excessive rain. The weather sense proficiency and *control weather* work as in "ruinous weather," above.
- A disease breaks out among the farm's domestic creatures. A successful healing proficiency check (one try) by the farmer halves the penalty; the *cure disease* spell negates this penalty.
- Building damage may result from a severe storm, fire, or other disaster. The penalty applies only if the farmer cannot afford to fix things, and continues to apply every year until repairs are made. Paying 10 gp for every person the farm supports "repairs" each penalty point.
- Predators, poachers, or bandits repeatedly steal food or animals. If PCs negotiate with, drive off, or destroy the menace(s), the penalty does not apply.
- A special roll means something unusual occurs. Perhaps a wizard war or a dragon devastates the farm--apply -10 to all checks this year! If a god's avatar stops by and blesses the crops, apply +5 to farm rolls.

Note: A *plant growth* spell can add 20% to 50% to a farm's annual yield (*PH*, p. 212).

**4. Find the Farm's Profitability.** After applying the worker and random events modifiers to the base proficiency score, the DM determines profitability using Table 1. A disastrous year means the farm produces 50% less than it should. A poor harvest yields 20% less than normal. An average year means the farm produces at capacity. Finally, a bumper crop comes to 20% above normal yield. (Normal yield is the amount required to feed those the farm supports.)

## The Harvest's Cash Value

DMs also can measure farm productivity in cash terms. The value of the harvest equals the number of people the farm can support times 36 gp (the minimum annual cost of living for a person in squalid conditions--*DMG*, p. 34). The DM subtracts the yearly cost of living of the farmer and workers from the harvest value, leaving the farm's profit. With this information, the DM can see if any families are starving and how much aid would get them back on their feet.

Determining a farm's profitability can provide role-playing opportunities for druids in a party. The guidelines of many branches and kits require druids to offer aid to farms and villages in need. In the course of helping, the druid can stumble on a number of adventure hooks. DMs can even design whole campaigns around a party's effort to get a farming village back on its feet.

# Chapter 2: Druid Kits

A *kit* is a collection of proficiencies, restrictions, hindrances, and benefits intended to make a druid more colorful. A kit helps you, the player, create a detailed personality and background for your PC, which makes the character fit easily into the DM's campaign.

## Using Kits

A druid kit works with the basic *PH* druid or with any of the branches described in the previous chapter. Thus, a desert druid could be a Savage (coming from a primitive desert tribe), a Wanderer (traveling the desert wastes), a Guardian (protecting a certain oasis), or some other kit.

### Branch and Kit

When building your druid character, choose the branch first, as it has specific ability score requirements. After that, pick from any of the applicable kits. However, make sure you have enough proficiency slots to take the weapon and nonweapon proficiencies required by both the branch and the kit--although in many cases branch/kit proficiency requirements overlap.

### DM Restrictions

Prior to letting players select kits, the DM should examine each kit and decide whether it fits the overall campaign. The DM might want to restrict some kits to NPCs or prohibit others altogether.

The DM also may wish to make changes or add material to some kits, to better match the conditions of a particular campaign. Take the Savage druid, for instance. If the campaign already features a primitive tribe of, say, pearl divers, the DM might adjust the Savage kit to fit established details of that tribe's cultural background for instance, the DM might make swimming a required or bonus proficiency.

### Reaction Bonuses and Penalties

Druid kits occasionally receive reaction bonuses or penalties as part of their special benefits and hindrances. A reaction adjustment due to either the druid kit's requirements or an extreme Charisma score (*PH*, p. 18) is expressed as a bonus (+1, +2, etc.) or a penalty (-1, -2, etc.).

When rolling 2d10 for encounter reactions (Table 59, *DMG*, p. 103), the DM must subtract the bonus or *add* the penalty--not the other way around. For instance, the druid Snapdragon has a combined +7 reaction adjustment bonus for her high Charisma and her druid kit. The DM then subtracts 7 from the 2d10 encounter reaction roll to reflect the bonus, due to the way Table 59 in the *DMG* is designed.

### Kits and the Character Record Sheet

To record a druid kit on your character record sheet (pgs. 125-127), take the following steps:

- Add the name of the druid kit following the druid's branch. For instance, a druid with the Hivemaster kit and the plains druid branch would be written as: plains druid (Hivemaster).
- When recording the character's proficiencies, put an asterisk next to those the character received free through the druid kit. This will help you and your DM remember how many proficiencies the character is due.
- Where you have space (on the back of your character sheet or on a separate piece of paper), write down the kit's special benefits, hindrances, and any other features you wish to recall quickly. You also can use the space provided on a copy of the druid character sheets.

## A Look at Druid Kits

This section provides a short explanation of the structure of kit entries. The entries themselves follow in alphabetical order.

### Kit Structure

Each kit entry begins with a description discussing the nature of the kit and listing any special requirements a character needs to take it. (For instance, to live as a Savage druid, the character must have been born into--or adopted by--a primitive tribe.) This description introduces an archetype character designed to demonstrate general attributes of the kit, *not* to serve as a character you, the player, have to role-play in a campaign. A character of either gender can take any kit.

The kit entries also include the following sections:

**Role.** Role-playing suggestions are offered, as druids of varying kits can play widely different roles in a campaign.

**Branch Restrictions.** If a member of a specific druidic branch cannot take this kit, that restriction is noted.

**Weapon Proficiencies.** A druid with the kit in question should take *recommended* proficiencies but must take *required* ones.

**Secondary Skills.** If your DM uses the rules for secondary skills, you may choose from Table 36 (*PH*, p. 53) or select one of the choices listed here, in addition to those skills appropriate to the character's druidic branch.

**Nonweapon Proficiencies.** A given druid kit usually requires the character to choose certain nonweapon proficiencies. Sometimes a proficiency merely is *recommended*--the character doesn't have to take it. Often kits offer a bonus proficiency, which does not use up a proficiency slot. Druids can take both priest and warrior proficiencies at normal cost (*PH*, pgs. 54-55).

**Equipment.** A few druid kits limit the type and amount of equipment the character can start with, acquire, or use.

**Special Benefits.** This paragraph details additional abilities of druids with this kit.

**Special Hindrances.** This section discusses any kit's restrictions, limitations, or

disadvantages.

**Wealth** Options. Usually the character starts with the priest's standard 3d6x10 gp.

## Adviser

As a druid, your character can act as (or work to become) counselor to a ruler--perhaps a local knight or a high king. Think of Merlin, whom older tales cast as a druid.

An Adviser like the druid Elam (pictured above) tries to make himself indispensable to his lord. The class's well-known neutrality makes a ruler perceive his advice as nonpartisan, while the druid's high Charisma almost guarantees that the lord listens to his counsel. Elam can use his "eyes in the wilderness" (described in Chapter 4: Role-playing Druids) to provide his master with timely and vital information.

At the same time, the druid subtly manipulates his master to serve his own ends. For example, Elam might encourage his lord to hunt in a beautiful forest the druid wishes to protect. Why? Because Elam knows the lord is a jealous man. Once he sees the beautiful forest and its fine animals, the lord will pass a law making the forest a royal game preserve. As a result, the lord's foresters will keep poachers away and prevent peasants from cutting the trees down. The ruler and his courtiers will hunt there only once or twice a year'not enough to threaten the animals seriously.

For similar reasons, a druidic Adviser like Elam might take over part of the education of the lord's children, ostensibly to teach them herb lore, history, survival, and similar skills. Actually, he uses the opportunity to instill in them a respect for Nature and the neutral world view--and perhaps encourage them to become druids when they grow up.

**Role:** As an Adviser, Elam is a man of subtlety and mystery. He rarely speaks unless he has something important to say, and he always thinks carefully before he says it. While not a fixture at his lord's court, he keeps an eye on things from a distance, often using animals to observe the ruler. He tends to pop up when most needed or least expected, stay a day or a month, then vanish into the wilds.

Always hungry for information, Elam often roams the land disguised as a common traveler (or, at high level, in animal form), listening to the gossip of peasants, traders, and innkeepers to better serve his own interests and those of his lord. As a PC, he carefully considers the purpose and long-term ramifications of each adventure and insists on careful preparation and information gathering before taking action.

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Recommended*--staff.

**Secondary Skills:** Scribe.

**Nonweapon Proficiencies:** *Bonus*--etiquette. *Recommended*--(general) heraldry, weather sense; (priest) healing, local history, spellcraft; (rogue, double slot) reading lips; (rogue, one slot, per "Special Benefits") disguise.

**Equipment:** The Adviser need not spend all starting money on equipment, but can retain any leftover coinage.

**Special Benefits:** As an Adviser, Elam can purchase the rogue's disguise proficiency at normal rather than double cost. He stays free at the ruler's stronghold (no cost of living), and has the ear of the ruler.

The DM should establish an NPC ruler for the druid to advise. Help the DM develop

a reason why the ruler trusts the PC, beyond his druidic background. Perhaps Elam is a relative (a cousin and younger son who failed to inherit and so joined the druidic order), or the apprentice of a (recently deceased) older druid who used to tutor the lord. For play balance, the DM should place a 1st-level player character as only one of several counselors to a lord of a small domain--perhaps a knightly manor or a barony. (If you, the player, really want to role-play an Adviser to a king, make it an exiled king trying to regain his crown.) It's up to the PC to increase the lord's influence.

**Special Hindrances:** People of the lord's domain (and immediate neighbors) easily recognize Elam as the court druid. If the lord favors him or if the populace knows him to give good advice, many will ask him to intercede for them with the lord. In addition, he may become a target for his lord's enemies or jealous rival courtiers.

On the other hand, if Elam fails to please his master, he will find himself in disfavor at court: He suffers a minimum -2 reaction penalty from the lord and court--possibly from all in the region (if his bad advice led to a spectacular failure, like defeat on the battlefield). Depending on the lord's temper, an Adviser who has fallen into disfavor may face exile or worse until he makes amends.

**Wealth Options:** 3d6x10 gp.

## Avenger

The Avenger druid has seen Nature suffer great wrongs. Take the case of the druid Torrens. (See illustration.) He had hoped to live as a Guardian or Village Druid (listed later in this chapter). However, during his training, forces defiled the area under his protection and slew his mentor. Maybe he feels he was too gentle, too weak. It doesn't matter. He won't let it happen again.

Torrens the Avenger no longer holds the defensive. Instead, he roams the world seeking wrongs to right and foes to fight. And whether his opponent is a brutal king cutting down an ancient forest to build a fleet of war galleys, or an evil vampire menacing a peaceful halfling village, the Avenger acts to stop him. Permanently.

**Role:** This druid is a grim, strong, and silent warrior of the wilds. Torrens has little time for anything but his mission, although he's as patient as a spider when it serves his plans. A loner, he avoids love or friendship, fearing either could compromise his mission; if he associates with a party of adventurers, he treats them as allies, but not as friends.

The Avenger rarely speaks more than absolutely necessary to humans and most demihumans (although he may talk to animals or sylvan races like wood elves). He doesn't bother to explain or justify his actions. The Avenger dislikes remaining in one place, and frequently moves on after finishing a particular job.

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Recommended*-- scimitar, spear.

**Secondary Skills:** Hunting, weaponsmith.

**Nonweapon Proficiencies:** *Bonus*-- tracking. *Recommended*--(general) animal training; (priest) herbalism; (warrior) animal lore, endurance, set snares, survival.

**Equipment:** The druid should spend his initial allotment of gold pieces entirely on equipment, for he loses any unspent starting money in excess of 1 gp.

**Special Benefits:** The Avenger receives an additional *free* weapon proficiency slot to use for any proficiency his branch allows.

**Special Hindrances:** The druid's grim and silent demeanor gives the character a -1 penalty to reaction adjustment from people in encounters. Torrens, like all Avengers, cannot have henchmen, hirelings, mercenaries, or servants until he reaches 13th level. He can have any amount of treasure, but cannot own more treasure and equipment than he can carry on his back--any excess must go to a worthy cause.

**Wealth Options:** 3d6x10 gp.

## Beastfriend

A deep--perhaps instinctive--knowledge of the habits, actions, and behavior of animals comes naturally to a Beastfriend. Lasell, a typical Beastfriend character (pictured on the next page) feels quite protective of animals and fiercely punishes those who inflict unnecessary harm upon them. She has nothing against people hunting for food (which, after all, animals also do) but considers hunting for sport repugnant and the use of animals in gladiatorial games a horrible crime.

**Role:** A Beastfriend like Lasell spends most of her time in the company of animals. In fact, she lives so much of her life around animals that sometimes she lacks social graces among humans. Many Beastfriends are gruff and hostile, preferring the company of honest natural creatures to deceitful humans, demihumans, and humanoids; others like people, but feel shy or tongue-tied around them and sometimes behave with poor manners. Lasell, like most with her kit, usually travels with one or more animal companions to whom she feels especially devoted.

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Recommended*-- staff.

**Secondary Skills:** Groom, hunter.

**Nonweapon Proficiencies:** *Bonus*-- animal lore. *Recommended*--(general) animal handling, animal training, riding (land-based), riding (airborne); (priest) healing.

**Equipment:** The druid should spend her initial allotment of gold pieces entirely on equipment, as she loses any unspent starting money in excess of 1 gp.

**Special Benefits:** If Lasell, as a Beastfriend, carefully but fearlessly approaches a tamed or untamed animal, she can try to modify the beast's reaction. The druid can affect only natural animals--that is, those found in the real world (bears, wolves, snakes, etc.), as well as giant or magically enlarged versions of normal animals. When dealing with a nonhostile or domestic animal, the druid can approach and befriend it automatically. Wild beasts or animals trained to fight (like attack dogs or war horses) get a saving throw vs. rods to resist the druid at a minimum penalty of -1. An additional -1 penalty applies for every four full levels the druid has achieved: -2 at 4th level, -3 at 8th, etc. (The druid's power is not magical, though.) If the animal fails to save, the druid may choose to shift its reaction one category either direction on Table 56 (*DMG*, p. 103).

The Beastfriend receives a +4 bonus on animal lore, animal training, and animal handling proficiency checks. If she does not have the actual proficiency, she can function as if she did, without the +4 bonus.

If Lasell, as a Beastfriend, casts an Animal sphere spell on an animal, the subject saves against it at a -2 penalty.

Thanks to her knowledge of animals, a Beastfriend can recognize a lycanthrope (whether in human or animal form) on a successful animal lore check. The Beastfriend

notes subtle differences in the behavior of a lycanthrope in animal form compared to a normal animal; she also notices subliminal clues in the movement and behavior of a lycanthrope in human form that point to its animal nature. The Beastfriend may make her one check only after she has been in the lycanthrope's presence for a round.

**Special Hindrances:** A Beastfriend does everything she can to help and treat a hurt animal or free an abused one and will kill an animal only to put a dying beast out of its misery. A Beastfriend who has come to know an animal may not harm it, allow others to hurt it, or send it suicidally into harm's way. In general, the Beastfriend does not recruit animals specifically as bodyguards; rather, she accumulates friends and pets, who may choose to do favors for her, such as scouting or defending her. In return, the druid feeds and shelters them, heals their injuries, and rescues them from captivity.

As with all Beastfriends, Lasell's lack of social grace prevents her from learning the etiquette proficiency and gives her a -1 penalty to encounter reactions with those of her own race (except another with her kit).

**Wealth Options:** 3d6x8 gp. Beastfriends have little interest in civilized matters such as money, and seldom venture into towns.

## Guardian

Some druids establish themselves as the guardians of a particular place--the habitat of an endangered species, a stand of ancient trees, the lair of a dryad, or a sacred grove. Often the druid watches over a sacred grove with magical powers that others try to exploit for selfish or evil purposes.

The DM should decide the extent of the Guardian's responsibility--usually one druid protects no more than a few acres of wilderness--and establish why the area needs special druidic attention. For instance, a mountaintop might serve as the nesting place of a rare breed of hawks prized by nobles as hunting falcons, forcing the druid to continually guard against those who want to steal the chicks or eggs.

A druid with the Guardian kit may act as the protector of several places in a lifetime. Say the druidic order places Wazir, a low-level Guardian druid, in charge of a nonmagical grove. If he fulfills his charge (and rises to at least 3rd level), the Order may grant him the responsibility of a magical grove, while a lower-level druid takes over his old position.

In order to abandon this kit, a Guardian like Wazir has to find someone else (usually a druid of similar level) to take over his guardianship. He must abandon the kit involuntarily if someone destroys or irreparably desecrates his grove. In this case, the Guardian might become a Lost Druid or devote his life to revenge as an Avenger.

**Role:** A Guardian lives deep in the wilderness, away from humanity. Like most Guardians, Wazir normally feels wary of strangers, suspecting that they come to exploit or threaten the site he defends.

Some Guardians can become fiercely protective: If Wazir were to witness the near-extinction of a particular species of plant or animal, the last few examples of which now live only in his grove, he could grow into an angry and ruthless protector. Such druids may strike out without warning to frighten off or kill intruders or even may make pacts with local monsters to protect the grove.

Other Guardians are simply shy hermits who welcome good-intentioned visitors.

Perhaps Wazir lives as a lonely, dedicated sentinel; he misses human contact, but his strong sense of duty prevents him from leaving his post undefended.

Frequently, a Guardian goes years without seeing another human; Wazir may have as his only friends just the animal or nonhuman residents of his protectorate. As a result, he may seem eccentric or awkward relating to humans--even other druids.

**Branch Restrictions:** None.

**Weapon Proficiencies:** Recommended-- staff.

**Secondary Skills:** Hunter.

**Nonweapon Proficiencies:** *Bonus*--local history (of his guardianship). *Recommended*-- (priest) herbalism, ancient history, religion; (warrior) animal lore, set snares.

**Equipment:** The druid should spend his initial allotment of gold pieces entirely on equipment, as he loses any unspent starting money in excess of 1 gp.

**Special Benefits:** The druid receives a +1 bonus on saving throws and attack rolls when fighting to protect his guardianship. Enemies suffer a -2 penalty to saving throws while they remain in this protectorate.

As a Guardian, Wazir receives the respect of other druids (+1 reaction adjustment) in his circle. (See Chapter 3: The Druidic Order for more on circles.)

Although not all Guardians serve as warders of sacred or magical groves, some receive this responsibility. (For details on these special sites, see Chapter 6: Sacred Groves.) A low-level druid character should watch over a grove with no more than one lesser power. In addition, the DM must come up with a good reason why a magical grove falls into the hands of a low-level druid; perhaps the original Guardian, the PC's mentor, met with an unexpected fate while still grooming the character to take over.

Whenever a grove has any special abilities, the DM always should take care to limit the power they give the druid. For instance, a grove containing a magical pear tree with unique golden-hued fruit that gives the eater the effect of a *treasure finding* potion could unbalance a campaign. Perhaps the tree produces only one such magical pear a year--the remaining fruit is normal, although exceptionally succulent. When the special fruit ripens, the druid must turn it over to a messenger from the great druid.

**Special Hindrances:** The druid needs to guard a site containing something others eventually will want. The DM should encourage the player to have the character devote some time to defending the place, setting up magical or normal traps, checking with animal spies, and so on.

If the druid, such as Wazir, fails in his guardianship, he becomes seriously depressed. He suffers a -1 penalty on all attack rolls, saving throws, and ability and proficiency checks until he recovers from his loss. He also loses standing in the Order (-2 reaction penalty from other druids in the region, instead of the previous +1 bonus). Wazir cannot recover from this depression until 1d4+1 years pass *and* he performs some action to atone for his failure.

For instance, if a dragon destroyed the ancient stand of elder trees Wazir guarded, he must either defeat the dragon or find a way to restore the forest to life.

**Wealth Options:** 3d6x10 gp.

### Hivemaster

The Hivemaster druid lives to foster insectoid and arachnid life wherever it exists. Most low-level Hivemasters, such as Cagua (pictured on the next page) work as beekeepers or the like.

**Role:** Hivemasters appear somewhat enigmatic. Many attempt to instill insectoid virtues in their followers, such as patience, hard work, and close cooperation. Some higher-level Hivemasters even attempt to influence human societies to adopt a communal pattern modeled on that of hive insects. Others--often styling themselves Webmasters--take on the patient, deadly personas of predator arachnids or insects such as dragonflies or spiders, ruthlessly hunting down (or lying in wait to trap) the enemies of the druidic order. A Hivemaster--s grove usually centers around the dwelling place of the creature for which the druid has the greatest affinity--a forest covered with spider webs, a field with beehives, etc.

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Recommended*-- scimitar, staff.

**Secondary Skills:** Farmer, woodworker/carpenter.

**Nonweapon Proficiencies:** *Recommended*--(general) agriculture; (warrior) animal lore, endurance, set snares.

**Equipment:** The druid should spend her initial allotment of gold pieces entirely on equipment, as she loses any unspent starting money in excess of 1 gp.

**Special Benefits:** A Hivemaster receives a +4 bonus to saving throws against stings or bites of poisonous insects or arachnids, including giant versions.

The druid also gains a +4 bonus on agriculture, animal training, and animal lore proficiency checks concerning insects or arachnids, and can apply the animal training proficiency to giant insects and arachnids.

A Hivemaster like Cagua may pass harmlessly through spider webs of all sorts, including webs created by the *web* spell. When she casts a *summon insects*, *giant insect*, *creeping doom*, or *insect plague* spell, the player increases her effective level by three.

Upon reaching 7th level, the druid gains the ability to shapechange into a giant insect or arachnid type once per day. She can take the form of a nonpoisonous giant ant, giant centipede, giant spider, or giant wasp. The Hivemaster may assume this insectoid form instead of one of her other shapechanging choices (bird, mammal, or reptile). For example, Cagua may choose to avoid the bird form today in favor of the insectoid form, but tomorrow she may decide not to shapechange into reptile form. The druid still can assume only three forms per day, just like the normal druidic shapechanging ability. Note: Gray druids with the Hivemaster kit may assume the insectoid form instead of any one of their usual shapechanging choices: mammal, reptile, or nonpoisonous giant spider.

**Special Hindrances:** The Hivemaster's *animal friendship, speak with animals*, and *summon animals* spells allow her to summon or communicate with only insects, giant insects, or arachnids. Hivemasters receive a -3 penalty when using animal proficiencies (animal lore, animal training, etc.) on creatures that are not insects or arachnids.

**Wealth Options:** 3d6-10 gp.

## Lost Druid

The strangest members of the druidic order, Lost Druids find that many other druids no longer consider them kin. The Lost Druids come from lands that have been

maliciously destroyed--forests burned to the ground, swamps drained, mountains ruined by mining, and so on. Rather than try to rebuild or move on, a Lost Druid such as Struma (pictured next page) allows his heart to darken from brooding on the devastation and embraces strange magic to seek revenge.

Under extreme stress (and the DM's discretion), a druid may renounce a particular kit forever and become a Lost Druid. Druids of 2nd or higher level lose one level as a result of the change but suffer no other penalties. Note that this is an exception to the rule on abandoning kits (p. 42), so the DM may wish to restrict it to NPCs.

**Role:** Lost Druids always feel bitter. Sometimes they go insane, their hearts filled with an insatiable, often impossible, desire for vengeance against those who destroyed their land. For instance, say Struma became a Lost Druid when he found his forest destroyed by orcs. He may attempt to plot the downfall of the entire orcish race and the death of every last orc. Most Lost Druids live solitary existences, but sometimes they group together, often within the sinister Shadow Circle. (See Chapter 3: The Druidic Order.)

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Recommended*-- scimitar, staff.

**Secondary Skills:** Hunter, weaponsmith.

**Nonweapon Proficiencies:** *Recommended*--(priest) herbalism, spellcraft; (warrior) animal lore, endurance, set snares, survival.

**Equipment:** A Lost Druid such as Struma should spend his initial allotment of gold pieces entirely on equipment, as he loses any unspent starting money in excess of 1 gp.

**Special Benefits:** The druid gains minor access to the Necromancy spell sphere. Upon reaching 6th level, he gains an additional power, the ability to animate dead animals. Treat this power as the priest spell *animate dead*; however, the druid may use it only once per day, and it affects 1 HD of normal (real-world) animals per level of the druid.

**Special Hindrances:** The Lost Druid cast only the *reversed* versions of *heal* or *cure* spells.

As a Lost Druid, Struma may never attain Grand Druid status, and thus may not progress past it to hierophant rank. A character of Grand Druid or hierophant rank may not become a Lost Druid.

All rangers and druids with other kits react to Lost Druids at a -4 penalty, usually with a mixture of pity and fear. (Other Lost Druids have only a -2 penalty to encounter reactions.) Most druids consider Lost Druids enemies and attempt to hunt, slay, or imprison them.

**Wealth Options:** 3d6x10 gp.

### Natural Philosopher

From youth, the unbridled curiosity of Natural Philosophers has lent them a fascination about everything from the characteristics of plants and animals to the workings of natural forces like lightning and weather, in addition to the ancient history of the druidic order. Besides the usual ability score requirements, a druid needs at least Intelligence 15 for this kit.

**Role:** Xenia, a typical Natural Philosopher, delights in the study of new plants and

animals. She thinks nothing of venturing into a haunted forest to observe a rare circle of toadstools or visiting a dragon's den to observe firsthand the miracle of a hatching. She rarely interferes with her subject of study, preferring to observe and sketch rather than bring home specimens.

Natural Philosophers often undertake adventures out of sheer curiosity. This becomes a good role for an NPC druid: Xenia (as either a doddering old sage or a brash young student) hires a party to accompany her on a dangerous scientific expedition to visit a living island spotted in a sahuagin-controlled ocean. A party also might accompany her to study the ecology of the salamander on the Elemental Plane of Fire or to check out a rumor that a previously extinct species of giant owl now lives in the woods by a lich's castle.

**Branch Restrictions:** Arctic and jungle druids cannot take this kit, as their harsh home terrain forces them to devote their time to mere survival, not scientific pursuits.

**Weapon Proficiencies:** *Recommended*-- staff.

**Secondary Skills:** Hunter, navigator, scribe.

**Nonweapon Proficiencies:** *Bonus*-- ancient history. *Recommended*--(general) artistic ability, languages (modern), weather sense; (priest) herbalism, languages (ancient), reading/writing; (warrior) animal lore.

**Equipment:** The druid should spend her initial allotment of gold pieces entirely on equipment, as she loses any unspent starting money in excess of 1 gp.

**Special Benefits:** The Natural Philosopher may use weapon proficiency slots for nonweapon proficiencies. This allows Xenia to devote multiple slots to a single proficiency (such as animal lore, herbalism, or weather sense), making her an expert in zoology, botany, or meteorology.

**Special Hindrances:** Remember to reflect in your role-playing the Natural Philosopher's insatiable curiosity. For instance, Xenia would rather study a new monster than kill it or run away. She finds puzzles and riddles irresistible and risks even her life to find the answers.

**Wealth Options:** 3d6x10 gp.

## Outlaw

In a region where evil forces have triumphed and hold a position of authority, good people who resist have turned outlaw. From their exile in the wilderness, these folk conduct guerrilla warfare against the cruel victors in the fashion of Robin Hood and his Merry Men. Since the balance has swung so far to the side of evil, the druid may freely act as a military commander in the struggle to overthrow the oppressors. In some situations, the druidic order itself may be outlawed; then the Outlaw druid faces threats like widespread persecution of druid followers and burning of sacred groves.

**Role:** Because an outlaw band often fights in the wilderness (ambushing enemies along forest roads or defending against patrols), the druid's powers and skills naturally come to the forefront. One such Outlaw druid is Mackay. (See illustration on this page.) Outside combat, he proves excellent at gathering information and using his priestly curative powers. Depending on the nature and alignment of those in the group, you can role-play the Outlaw druid as just another party member or as the band's spiritual (or actual) leader.

**Weapon Proficiencies:** Recommended-- scimitar, sling, staff.

**Secondary Skills:** Farmer, forester, hunter, weaponsmith.

**Nonweapon Proficiencies:** *Bonus*--set snares. *Recommended*--(general) animal training, brewing, rope use, singing, weather sense; (priest) healing, herbalism, local history, religion; (rogue, double slot) disguise; (warrior) animal lore, tracking.

**Equipment:** The druid should spend his initial allotment of gold pieces entirely on equipment, as he loses any unspent starting money in excess of 1 gp.

**Special Benefits:** None.

**Special Hindrances:** Local authorities are always hunting for Outlaws like Mackay. Capture means imprisonment--or worse.

**Wealth Options:** 3d6x10 gp.

## Pacifist

The Pacifist druid believes in the sanctity of all life, but especially that of creatures with animal Intelligence or higher.

**Role:** The restrictions on the druid's actions (below) make this a challenging role to play, and one that works best within a party of good-aligned adventurers. To give the player of a Pacifist druid a chance to shine, the DM should design adventures in which the character can help negotiate a diplomatic settlement of a crisis between neighboring lords or where party members sometimes can win over opponents by negotiation or moral persuasion.

For example, suppose a tribe of goblins menaces human lands. The DM alone knows that the goblins actually were displaced from their old caverns by an evil vampire and would return home if someone destroyed the vampire. A scenario like this gives a clever Pacifist druid, such as Lark (above) a chance to talk to the goblins, discover why they intruded into human land, then convince the party to ally with them against the vampire.

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Recommended*-- staff.

**Secondary Skills:** Farmer, groom.

**Nonweapon Proficiencies:** *Bonus*-- healing. *Recommended*--(general) brewing, cooking; (priest) herbalism, religion, spellcraft; (warrior) animal lore, survival.

**Equipment:** A Pacifist like Lark can purchase no weapons except darts or a staff. She should spend her entire initial allotment of gold pieces on equipment, as she loses unspent starting money in excess of 1 gp.

**Special Benefits:** The Pacifist druid can use some or all of her weapon proficiency slots to buy nonweapon proficiencies.

Pacifists such as Lark have the ability to speak soothing words to ease tempers and calm savage beasts. This power can remove the effects of a *fear* spell, calm an enraged animal, or pacify a hostile crowd. Lark can use this power a number of times per day equal to her experience level. Using soothing words accomplishes one of the following:

- Negates one *fear* spell (or similar monster ability) on a single victim;
- Halts a single creature's berserker rage; or
- Temporarily calms down a number of animals, characters, or monsters (whose combined levels or Hit Dice total no more than twice the druid's level). A calmed group usually remains calm for 1d4+1 rounds, as long as others refrain from

hostile action against them, their allies, or their property. During this time, the druid or others can attempt to escape or to negotiate a resolution to the situation.

**Special Hindrances:** You, the player, must role-play this druid as a strict pacifist. A character like Lark does not totally oppose others who do harm when necessary--after all, animals kill for food. However, she never injures a person or animal herself. In addition, she encourages her companions to use the minimum required force during encounters: to ask foes to surrender before attacking them, let retreating enemies flee if she thinks they won't be a menace again, and so on.

Use of herbal brews or magic that does not permanently harm enemies is perfectly appropriate. For instance, Lark can *entangle* foes, turn them into trees, use sleeping poison, etc. However, she absolutely refuses to let harm come to captives or innocents under her care; in fact, she uses her powers and risks her life to protect them.

The Pacifist druid's code against violence does not extend to evil undead. These creatures are already dead but need help finding their rest; in other words, the druid will destroy them.

Like all Pacifists, Lark eats only vegetarian meals. (You, the player, decide whether your Pacifist character eats fish.) She won't prevent others from eating meat, but usually expresses disapproval.

High-level Pacifists find themselves disadvantaged when attempting to advance a level, as winning a druidic challenge usually requires violent behavior. However, if Lark wanted to even up her chances in the challenge, she either could get her opponent to agree to a nonviolent contest, or she could win using harmless tricks or magic.

Finally, the player cannot roll or choose the following secondary skills: armorer, hunter, trapper/furrier, or weaponsmith.

**Wealth Options:** 3d6x10 gp.

## Savage

This druid lives in primitive Stone Age tribe, usually in a rain forest. Haro, a typical Savage druid (pictured on the next page), differs from a savage priest, shaman, or witch doctor in that he belongs to the worldwide druidic order and, of course, to a druidic branch. Some Savage druids work and live among primitive tribes as missionaries from more civilized cultures.

**Role:** Rather than associate with a particular tribe--as do most shamans or witch doctors--the Savage druid adopts a neutral position, mediating intertribal feuds and handling relations between human tribes and neighboring humanoids, demihumans, or intelligent monsters. Most Savages live as hermits in the wild, although if Haro gains high rank, he could control a coalition of tribespeople, nonhumans, and animals.

If Haro joins a party in more civilized lands, he occupies the role of outsider and observer. The Savage character should act puzzled by some aspects of more advanced civilization, impressed, amused, or disgusted by others. The Savage druid's reaction to big cities is unlikely to be favorable!

**Branch Restrictions:** None.

**Weapon Proficiencies:** Savage druids are restricted to a choice of blowgun, club, dagger, harpoon, knife, spear, or staff. After adventuring in civilized lands (advancing at least one level doing so), they can learn other weapon proficiencies.

**Secondary Skills:** Hunter.

**Nonweapon Proficiencies:** *Bonus*--fire-building, survival. *Recommended*--(general) direction sense, fishing, swimming, weather sense; (priest) healing, herbalism, local history, musical instrument; (warrior) animal lore, endurance, mountaineering, running, set snares, tracking.

**Equipment:** The Savage druid can buy no armor (though he may acquire a wooden shield) and can buy only those weapons listed above under "Weapon Proficiencies." He should spend his entire initial allotment of gold pieces on equipment, as he loses any unspent starting money in excess of 1 gp.

**Special Benefits:** The Savage druid's body is covered with ceremonial scars and tattoos. These eliminate the need to use the holy symbol of Haro's branch when casting spells--his tattoos and other markings are as effective as holy symbols other druids use.

**Special Hindrances:** Haro, like most Savage druids, has an unusual and imposing appearance. While he could alter his primitive dress easily, his strange accent, weathered appearance, tattoos, and scars mark him as a foreigner when he travels in civilized lands. These alien features give him a -2 reaction penalty among civilized NPCs; players can decide how their PCs react.

**Wealth Options:** 3d6x5 gp. Savage druids begin adventuring unfamiliar with money; all their starting wealth is actually an equivalent value in goods.

## Shapeshifter

Shapeshifter druids master their shapechanging powers at a lower experience level than other druids. This ability takes a special gift (perhaps a taint of lycanthropic or silver dragon blood in the druid's family tree) and intense training. But, those who persevere, such as Rimi (pictured on the next page) gain unusual metamorphic powers.

**Role:** Shapeshifters have mercurial personalities. Although by no means chaotic, they are quick to anger, and easily moved to joy or tears. Rimi, like many Shapeshifter druids, makes an excellent spy or messenger and stands a good chance of being picked as a servant to a high-level druid, an archdruid, or a great druid.

**Branch Restrictions:** Only forest, plains, and mountain druids can take this kit, as druids in other branches have limits on their shapechanging powers.

**Weapon Proficiencies:** *Recommended*-- staff.

**Secondary Skills:** Hunter, groom.

**Nonweapon Proficiencies:** *Bonus*-- animal lore. *Recommended*--(priest) spellcraft; (warrior) endurance, survival, tracking.

**Equipment**: The druid should spend her initial allotment of gold pieces entirely on equipment, as she loses any unspent starting money in excess of 1 gp.

**Special Benefits:** As a Shapeshifter, Rimi gains her branch's shapechanging power at 1st level rather than at 7th level. However, until she reaches 7th level, the druid can assume only the form of natural creatures whose Hit Dice total no greater than half her level. (A 1st-level Shapeshifter only assumes the form of a creature with 1/2 HD or less.) Rimi can shapechange *twice as often* as her branch normally allows, which doubles the number of changes she can make daily. (Forest Shapeshifters, then, can change to animal, reptile, and bird form, each twice per day.) However, using this power more than the normal three times per day may have dangerous consequences. (See "Special

Hindrances.")

At 7th level, Rimi the Shapeshifter can transform a portion of her body. Instead of turning into a reptile, she can give herself a snake's fangs, which she can use in an attack to cause 1d2 bite damage plus poison. Rather than turning into a bird, she can transform her arms into a bird's wings and fly at a movement rate of 21. Short of transforming into a bear (or other mammal), she can sprout a bear's claws from her fingers and make two attacks causing 1d3 points of damage each, plus Strength bonus. Each of these actions counts as one change for the day.

**Special Hindrances:** A Shapeshifter regains hit points only when resuming her human form, and then recovers only 1d4 hp. If the druid has 0 hp or fewer, she regains none with her human shape.

If Rimi uses her Shapeshifter power more than three times per day, she must make a saving throw vs. spell after each extra use. A failure locks her into her current form until the next day, when she can attempt a new saving throw. However, for each failed save, the druid's next one bears a -1 penalty. If Rimi fails three saving throws in succession, she keeps her current animal form permanently, as if she had been reincarnated as that creature. Only a *polymorph any object*, *limited wish*, or *wish* can turn her back to human or another form.

**Wealth Options:** 3d6x5 gp. Shapeshifters spend too much time in animal form to concern themselves with money.

## Totemic Druid

The Totemic Druid closely identifies with a particular species of mammal, reptile, or bird. While Vanier, a typical Totemic Druid, stops short of worshiping his totem animal, he believes that particular animal represents his spirit. The Totemic Druid picks a normal (real-world) wild mammal, reptile, or bird as his totem. This creature cannot be larger than a bear or smaller than a mouse. Some common choices include the black bear, bobcat, eagle, owl, wolf, rattlesnake, and beaver. In addition, Vanier's totem animal must correspond to his branch; if Vanier belongs to the desert druid branch, he can select as his totem only an animal that normally lives in the desert.

**Role:** Totemic Druids tend to adopt characteristics associated with their totem animal. They feel especially protective of their totem animal in the wild and want to befriend the creatures. As a Totemic Druid, Vanier acts to promote the interests of the totem species and its individual members.

Even if his totem is traditional prey (a deer, for example), Vanier never hunts the animal himself, nor does he eat its meat. While he usually does not try to ban hunting of his totem (except in the case of endangered species), he opposes cruel or wasteful hunting practices.

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Recommended*-- staff.

**Secondary Skills:** Groom, hunter.

**Nonweapon Proficiencies:** *Bonus*-- tracking. *Recommended*--(general) animal handling, animal training; (priest) healing, herbalism; (warrior) animal lore, survival.

Note that Totemic Druids have a reduced number of proficiency slots. (See "Special Hindrances.")

**Equipment:** The druid should spend his initial allotment of gold pieces entirely on equipment, as he loses any unspent starting money in excess of 1 gp.

**Special Benefits:** A Totemic Druid like Vanier can shapechange into the form of his totem animal a number of times per day equal to his experience level divided by three (rounded down), plus one. So, a 3rd- to 5th-level Totemic Druid can change twice per day, a 6th- to 8th-level druid can change three times per day, and so on. This ability functions as normal druidic shapechanging, except that the druid does not regain hit points when shapechanging into or out of the totem form; the druid's spirit remains so closely bound with the totem that he fully experiences any damage the animal form took. The Totemic Druid can use this shapechanging ability *in addition* to his shapechanging granted powers.

A Totemic Druid can communicate freely with normal or giant examples of the totem animal species (as with the *speak with animals spell*). He receives a +4 bonus to any healing, animal training, animal lore, or animal handling proficiency checks related to the totem. A druid who doesn't have one of these proficiencies may behave as though he did when dealing with his totem animal, but does not apply the +4 bonus.

**Special Hindrances:** A Totemic Druid has one fewer nonweapon proficiency slot than normal, as a result of spending so much time in animal form. So, Vanier would start with three slots rather than four.

**Wealth Options:** 3d6x5 gp. Totemic Druids, like Shapeshifters, have a less pressing need for money due to the amount of time they spend in animal form.

### Village Druid

Kabil the Village Druid (next page) associates himself closely with a single rustic village or hamlet. As he gains experience, his influence can extend to cover a shire, barony, or entire region. However, his focus remains rural. A Village Druid always hopes to see ordinary folk live in harmony with Nature.

As a Village Druid, Kabil's aim is twofold: to keep people from exploiting Nature (by short-sighted agricultural practices, etc.) and to defend and protect villagers who follow the proper druidic path. Thus, although he will not stand idly by to see the wilderness threatened, his more vital interest lies with the local crops, domestic animals, and his own followers. Kabil uses his skills and magic to protect all living things within his village from foes, disease, drought, forest fires, or natural disasters.

**Role:** A Village Druid normally replaces a conventional priest or cleric in villages where most inhabitants subscribe to the druidic ethos. As well as offering protection and guidance, the druid leads the citizenry in ceremonies to observe births (of humans and animals), deaths, marriages, harvests, the changing of the seasons, and so on. (See Chapter 4: Role-playing Druids for details.)

This kit suits PCs when the DM decides to set the campaign in a rural area under a threat or perhaps near unexplored ruins.

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Required*--sickle or scythe. *Recommended*--staff.

**Secondary Skills:** Farmer, forester, groom.

**Nonweapon Proficiencies:** *Bonus*-- agriculture. *Recommended*--(general) animal training, brewing, rope use, weather sense; (priest) healing, herbalism, local history,

religion.

**Equipment:** The druid should spend his initial allotment of gold pieces entirely upon equipment, as he loses all unspent starting money in excess of 1 gp.

**Special Benefits:** With the DM, decide which village a druid like Kabil protects; the druid lives in or near this village.

Locals respect Kabil highly and provide him with information about happenings in the area. He receives a +2 reaction bonus from people and domestic animals in the village--as long as he remains diligent about his duties. In addition, the villagers support Kabil at a middle-class lifestyle (*DMG*, p. 34). This hospitality, rather than tithes, represents the generosity of a grateful people willing to provide their Village Druid with the best of everything he needs to live in their midst.

**Special Hindrances:** As a Village Druid, Kabil doesn't have a lot of free time. Locals ask him for help with all their problems, ranging from bandit raids to a child lost in the woods. In addition, the druid must spend at least one day each week attending to village matters: listening to grievances, mediating disputes, finding lost livestock, tending animals, offering advice on crops, curing diseases, delivering babies, etc. If he misses a week, his reaction bonus drops by 1 point (minimum 0) and his income declines a step (from middle class to poor to squalid) as people become less hospitable. The druid can avoid these penalties if he arranges with someone else (another druid or a ranger) to look after the village in his absence.

Kabil's villagers also expect him to protect them from serious harm. If he fails or if no one sees him at least making an honest effort the DM may reduce or eliminate his reaction bonus and benefits for as long as the villagers likely would feel resentful. Role-playing can win back a Village Druid's lost respect; Kabil can regain his lost reaction bonus and benefits quickly by doing a great deed to benefit the village, or slowly by simply completing his duties diligently for several months.

**Wealth Options:** 3d6x10 gp.

## Wanderer

While most druids eventually settle in a specific locale, Wanderers travel widely, delighting in Nature's infinite variety of life. They typically have a better idea of the "big picture" in the world than other druids and usually remain on good terms with local bards and rangers. Druidic leaders often use Wanderers as messengers or missionaries.

**Role:** Wanderers like Fife (right), more gregarious than most druids, enjoy meeting and talking with people--especially rural folk. Although Fife acts carefree, this genial nature masks a keen mind and a strong interest in everything going on around her. Many Wanderers have animal companions.

**Branch Restrictions:** None.

**Weapon Proficiencies:** *Recommended*-- staff, one other weapon.

**Secondary Skills:** Hunter, navigator.

Nonweapon Proficiencies: *Bonus*-- direction sense. *Recommended*--(general) animal training, singing, weather sense; (priest) healing, herbalism, religion; (warrior) mountaineering, running, survival, tracking.

**Equipment:** The druid should spend her initial allotment of gold pieces entirely on equipment, as she loses all unspent starting money in excess of 1 gp.

**Special Benefits:** A Wanderer like Fife receives a +1 reaction adjustment bonus from bards, rangers and traveling folk such as tinkers and Gypsies.

When traveling over long distances, Fife covers ground at a one-third faster rate than a normal traveler would--that is, if a normal person can walk 24 miles in a day without force-marching, the druid can walk 32 miles with the same exertion. Fife, like all Wanderers, simply feels more accustomed to walking long distances than most--plus, she knows short cuts and secret trails. (This heightened speed is cumulative with the ability of many druids 3rd level and higher to travel through overgrowth or other difficult terrain without penalty.)

With a Wanderer guide, a party can increase travel time by one-sixth; thus, an unencumbered party led by a Wanderer would travel 28 miles in a day, not 24.

**Special Hindrances:** Constantly on the move, a Wanderer never allows herself to be burdened. Fife cannot have retainers, hirelings, mercenaries, or even servants until she reaches 12th level (but animal companions can travel with her). The druid cannot possess more treasure than she can carry; she either converts the excess into a portable form (gems, etc.) or donates it to a worthy cause, such as the druidic order.

**Wealth Options:** 3d6x10 gp.

## Abandoning Kits

A character who started with a druid kit later may desire to abandon it. There should be a good campaign reason for this decision. For example, an Adviser whose lord has died or whose schemes have been thwarted repeatedly might decide to give up politics in favor of more personal involvement with Nature. Or, an Outlaw who has won a pardon has no reason to remain an Outlaw.

Discuss the question of abandoning the current kit with your DM. If this decision hinges on a specific event that happened to the *character*, change the druid's kit as soon as it's convenient. If, on the other hand, you have simply grown tired of *playing* a certain kit, the DM should come up with a scenario whose story line presents the character with a good reason for abandoning the kit.

Suppose, for instance, that you have been role-playing an Avenger--a druid who became an Avenger because orcs destroyed his forest. It can become boring to play a character whose sole goal is vengeance. Here are some possibilities for retiring the kit:

- The DM arranges a scenario in which the Avenger destroys the orc leader, then realizes he has sated his thirst for revenge.
- The DM sets up an adventure in which the Avenger chances upon a village threatened by marauding monsters. After saving the villagers, he decides to devote his time to continuing to protect them, rather than hunting down his one-time foes.
- The DM designs a story in which the Avenger, in his obsessive thirst for vengeance, comes close to harming innocent people or wildlife. As a result, the Avenger decides to alter his approach to life.

The player whose druid character abandons a kit must role-play the decision and any consequences that arise from it. The druid gives up all the kit's benefits and hindrances. The PC does not lose any bonus proficiencies (marked with asterisks), but they are no longer bonuses. The former Avenger in the above example must pay for them as soon as

possible by spending the next proficiency slots he gains on them.

## Modifying and Creating Kits

You and your DM may change the kits to customize them for your own campaign world, or even restrict the availability of some kits to NPCs. Similarly, feel free to create totally new kits. For guidelines on doing so, refer to the kit creation rules in *The Complete Fighter's Handbook* (*PH*, pgs. 37-38). However, make sure that no kit is more powerful than any in this book.

# Chapter 3: The Druidic Order

The druidic order--often simply called the Order--can be thought of as a federation of regional priesthoods that form a loosely organized worldwide faith, all of whose members worship Nature and follow a similar ethical philosophy.

Druids divide up their world into regions, here called *domains*. A domain is a well-defined geographic area bounded by mountain ranges, rivers, seas, or deserts-- druids normally divide a good-sized continent into three or four domains. Druidic regions do not rely on national borders, or on racial or ethnic groups; a domain can encompass several countries, races, and peoples.

For example, in a fantasy world based on our Earth, one European domain might include England, Ireland, Scotland, Wales, and the Channel Islands; a second could consist of Western Europe (west of the Rhine and north of the Alps and Pyrenees, bounded by the North Sea and the English Channel to the north and the Bay of Biscay to the west); a third might contain Southern Europe (south of the Alps and bounded by the Mediterranean Sea and Danube River); another would include the Iberian peninsula.

North America could be divided into an Atlantic domain (east of the Mississippi River and south of the St. Lawrence River and Great Lakes), a Pacific domain (west of the Rocky Mountains), a Central domain (between the two domains above, roughly south of the Missouri River), a Caribbean domain, a Southern domain (south of the Rio Grande and east of the Rockies), and a Northern domain (all of North America roughly north of the Missouri and Ohio rivers and east of the Rocky Mountains).

## The Circles

All druids dwelling within the bounds of a domain are organized into a *circle*. Circles typically are named for the geographic area their domain occupies, but sometimes they bear other names, harking back to their founders or the gods the druids worship (if they worship deities rather than Nature itself). For instance, druids might have formed "The Dragon Isles Circle" or "The Circle of Danu."

The members of a circle hold themselves responsible for the well-being of the wilderness and the continuation of the orderly cycles of Nature within their domain. This doesn't mean a circle remains unconcerned about what occurs in other domains--forming circles is just the druidic order's way of recognizing that those druids who live in a particular region can best serve to protect it, and should therefore hold formal

responsibility for the domain.

Circles operate within a very loose structure. They use no large temples or abbeys, for rarely do more than a few druids live together. When they do, their dwelling places are usually less than ostentatious: small cottages or huts of the style of local hunters or farmers. All druids within the circle acknowledge a single great druid as their leader and recognize this figure's moral authority. The great druid gives the circle's members great freedom compared to most other religious leaders. The druids adhere to a rather informal hierarchical structure and require their initiates to hold true to the basic ethos of the druidic order and respect higher-ranking druids.

A few traditions described in this chapter have grown up to govern the harmonious workings of a circle: initiations, the challenge, the ban, the moot, and selection of acolytes. All druids, from the humblest initiate to the great druid, may freely follow their own interpretation of druidic beliefs and act however they believe best serves Nature.

## Druidic Demographics

A typical domain (one that has seen no persecution of druids but includes other priestly faiths as well) contains, on average, one druid for every 10 square miles of rural farmland or 400 square miles of lightly inhabited wilderness or steppe. Druids dwelling in rural areas usually are initiates (1st to 8th level, generally). Those in the wilderness usually have reached higher experience levels, frequently 7th to 11th level. A circle may include a maximum of nine 12th-level druids, three 13th-level druids, and one 14th-level druid. Often circles have no higher-level druids at all.

Below 12th level, the number of druids of a given experience level stands at about double the population of the next level up. So, a typical circle may include 18 initiates of 11th level, 36 initiates of 10th level, etc., all the way down to some 18,000 1st-level initiates. The entire circle thus consists of more than 36,000 druids. A domain might feature one druid per 500 to 1,000 citizens, although this statistic gives a distorted picture, since druids are concentrated in some locales and rare in others.

## Circles and Branches

Chapter 1: Druid Characters examined the different branches of the Order: forest druids, desert druids, and so on. A given circle normally covers a domain vast enough to include members from several, but usually not all, branches. A domain with a temperate climate might contain a circle composed of forest, swamp, and mountain druids. In contrast, a circle in a tropical domain with flat terrain would consist of jungle, plains, desert, and swamp druids.

All druids should possess an equivalent number of advantages and disadvantages regardless of branch. However, equality is never guaranteed. In most fantasy worlds, the forest druids exercise the most influence. Due to the resources of the woodlands and humanity's desire to clear them for use as farms, forest druids often consider their problems the most pressing. The Order's priorities frequently reflect this stance; circles dominated by forest druids try to make sure that a member of that branch ends up as Grand Druid, the leader of the druidic order. As jungle druids and swamp druids share many of the forest druids' concerns, they often become allies.

A well-balanced druid sees each branch as part of a single tree, all equally important. Unfortunately, though, not all druids have this vision. Members of the informal forest-plains-swamp-jungle coalition sometimes look down upon desert and arctic druids due to the relative infertility of their habitats. Sometimes druids fall too deeply in love with their own particular part of the world--forest druids who see trees as the be-all and end-all of Nature may hold arctic, desert, and gray druids to be inferior. The victims of such prejudice, in turn, can come to resent the forest branch. Great druids from the few circles dominated by arctic or desert druids often ally to try to keep a forest druid from becoming Grand Druid-- although more often than not, they fail.

### Initiates

Initiates constitute the 1st- to 11th-level druids within a circle. Their experience level determines their role in the circle.

A typical 1st- or 2nd-level initiate (an NPC) often works part time as a Village Druid. This initiate keeps up a rural occupation (beekeeper, farmer, herder, etc.) while studying under a higher-level druid mentor. The exceptions to this stereotype are rare individuals (PCs). An average person finds it tough to recognize beginning druids, since most seem just like other peasants.

Initiates between 3rd and 6th level have achieved most of their granted powers, with the exception of shapechanging. The cornerstones of the druidic order, they frequently devote their full time to their faith. They normally live in stone, wood, or mud-brick cottages and act as the protectors of a small tract of wilderness--a wood or river valley--or of a village or group of hamlets. Most druids of this status have the Village Druid or Guardian kit, and those who choose to protect a village usually have become respected community leaders.

Initiates between 7th and 11th level have received all their branch's granted powers. Such druids live simply but have widened their areas of influence, perhaps becoming the guardians of entire forests or mountains, or of all the villages in a barony. These druids often dwell near a sacred grove surrounded by a few acres of virgin wilderness a sanctuary for rare and magical plants, animals, and supernatural creatures. This natural setting may be magically defended as well. Temporal rulers of the area respect (or fear) druids of such level.

## High-level Druids

Only a limited number of druids in a given circle can reach the *inner circle*--nine of druid rank, three archdruids, and a single great druid. A character cannot replace one of these druids without having sufficient experience. In addition, a vacancy must open up, or the rising druid must defeat one of the current higher-level characters the druidic challenge to assume a new rank.

Some tension exists between druids of the inner circle, since they remain constantly aware that a subordinate may be preparing a challenge. Unlike clerics, who normally settle down by this point, high-level druids continue adventuring as part of their duties and to stay in shape to fend off challengers.

## Druids

Upon reaching 12th level, a character receives the official title *druid*, of which a circle never has more than nine. (Lower-level characters, though called "druids" by most, are technically "initiates.") A druid's role in the circle resembles that of a 7th- to 11th-level initiate, with some exceptions.

At 12th level, a druid has gained access to the *commune with nature* spell and should use it along with other druidic resources to aggressively root out emergent threats to the wilderness within a domain. Druids attend the High Council of the Moot (described later this chapter) and always act based on the needs of the circle as a whole. The circle's great druid at times asks 12th-level druids for advice and sends them on missions for the good of the circle.

But the life of a druid involves more than just adventuring--serving as a mentor takes up much of a druid's time, too. Selecting young people to train as druidic candidates constitutes a major responsibility of those who reach druid rank. Each year druids (and other inner circle members) pick the single most worthy of their advanced students to initiate into the Order as 1st-level druids. (For more on initiations, see Chapter 4: Role-playing Druids.)

## Archdruids

A 13th-level druid is called an *archdruid*. Each circle can have only three archdruids and, as with the druid rank, advancement requires either filling a vacancy or winning a challenge against a seated archdruid.

An archdruid's role resembles that of a druid, with two differences. Archdruids concern themselves more with maintaining the balance of Nature, making sure no one alignment or ethos comes to utterly dominate the domain. Also, archdruids spend time training to step into the role of the great druid. To accomplish both these goals, they devote much time to travel, ensuring their familiarity with the geography--human, natural, and magical--throughout the domain.

**The Moot.** The three archdruids share the druid's responsibility for initiating newcomers to the Order. In addition, they each have the right to summon a moot: a gathering of the entire circle, traditionally held at the solstices and equinoxes. By ancient custom, moots are called four times a year at these set dates, once by each archdruid and once (usually in spring) by the great druid. A moot on a nontraditional date means the summoner sees something so deeply amiss in the domain that the entire circle must discuss it as soon as possible.

These gatherings enable the circle to celebrate the changing of the seasons, to gossip and socialize, to exchange information on the state of the domain, and to fight druidic challenges before an audience. Druids at a moot perform ceremonies to celebrate Nature, honor their dead, marry a couple within the Order, and initiate new 1st-level druids. Along with these ceremonial duties, small groups at moots disappear together into the wilds to talk quietly while searching for herbs or mistletoe.

The climax of any such gathering is the High Council of the Moot; the circle's nine druids, three archdruids, and great druid meet in a secret location to discuss the state of the domain and make plans to rally the circle against a particular problem, if necessary.

Sometimes an ambassador from a neighboring circle (usually a character of at least druid rank) or an emissary of the Grand Druid attends a council. These personages bring news and greetings--and sometimes requests for help. After the High Council, the great druid (or an archdruid) addresses the entire moot, answers questions, and takes advice.

To call a moot, an archdruid (or the great druid) sends messengers out across the domain to spread the word to druids of all branches. All members of the circle above 7th level must attend or explain the absence. Members of 3rd to 6th level may come, but usually do so only if their journeys bring them to the vicinity or if they have business with others there. Those of 1st or 2nd level may attend a moot only with the permission of a member of the inner circle.

The moot is scheduled to begin two weeks after the summoner dispatches the announcements, giving all druids in the circle enough time to settle their business and arrive. Such a gathering generally takes place at a sacred grove under the stewardship of the summoner. Though most moots last about four days, the meeting cannot end until the summoning archdruid or the great druid dissolves it.

Bards, elves, rangers, swanmays, and other sylvan folk often are invited to a moot, but its location remains a secret to others. In troubled times, elves, rangers, friendly beasts, or forest creatures may patrol the moot and take trespassers prisoner.

If the domain's circle is on good terms with the land's rangers, a spring or autumnal moot may take place in conjunction with a rangers' forgathering. (See Chapter 10: Forgatherings in *The Complete Ranger's Handbook*.) However, like rangers, druids prefer to keep their gatherings to themselves, and such cooperation usually results from personal friendships between the great druid and notable rangers--or signals a desperate alliance against a greater foe.

## Great Druids

As stated earlier, the *great druid* leads a circle. Like other inner circle members, the great druid usually has won the position through the challenge and has to maintain the ascendancy by defeating other challengers. However, some great druids become so respected (or feared!) that subordinate archdruids forgo challenging them, instead preferring to enter the service of the Grand Druid or wait until the great druid advances in level.

All druids within a circle know the name of their great druid--even if they have never met in person--because this figure wields a certain amount of power over their lives. The DM should decide how strongly the great druid influences the members of the circle. For instance, a great druid who is loved, respected, or feared holds more sway over NPC druids than would a weak or unpopular leader. While PCs remain free to pursue their own goals, opposing the policy of a strong great druid means a character has little chance of receiving support from superior druids. Supporting the leader's policy, on the other hand, can win lesser druids praise and aid from the top.

Turmoil can erupt within a circle governed by a weak or unpopular great druid, as the ranking archdruids vie for the head post or ignore the leader's advice to follow their own paths. Player characters may get occasional assistance from inner circle druids in this scenario, but for the most part, individuals all go their own way.

The great druid has the same power to initiate druidic candidates and summon a

moot as archdruids. In addition, this figure has the job of maintaining harmonious relations among all the druids of the circle--preventing factional battles and infighting, other than what is allowed through the challenge. To do so, the great druid has one special tool: the ban.

**The Ban.** The great druid can impose a strong, nonviolent sanction upon those who have offended the circle. All must shun someone placed under the ban; no druid in the circle will aid, speak to, or associate with the target of the ban. When an entire town or village suffers the ban, no druid may enter that area or speak to or aid any resident. Some druidic allies volunteer to follow the custom of the ban as well. For instance, a clan of sprites or centaurs on good terms with a circle may receive word of a ban and choose to honor it.

The great druid has the right to pronounce a ban on any druid in the circle. A ban also can cover nondruids, whole communities, or druids visiting from other domains (except the Grand Druid and personal servants), to demonstrate the circle's displeasure.

To pronounce the ban, the great druid stands up during a moot and announces to the group the reasons to impose the ban. Then the subject of the ban--if present--answers the accusations before the assembly. Finally, the High Council of the Moot votes on the matter openly, usually at sunset. If a majority of the council votes in favor of the ban, it passes. If not, the great druid should start keeping an eye on the circle's archdruids--the opposition to the ban likely reflects an impending challenge.

A ban punishes a druid for violating the tenets of the druidic order or reprimands a character whose actions, while within the bounds of the druidic ethos, nevertheless were contrary to the Order's interests. For instance, suppose an angry druid massacred the inhabitants of a human hamlet because they would not turn over two hunters who slew a stag in the druid's sacred grove. The druid acted within the bounds of the druidic ethos, but the great druid might call the character's indiscriminate vengeance out of proportion to the crime, adding that the slaughter has threatened to make local commoners hate and fear all druids in the circle. So, the great druid imposes the ban, both as a punishment and as incentive for the character to change.

Nondruid individuals are less likely to fall victim to a ban--usually the great druid finds that direct action against the offender proves more effective. However, if the people of an area depend on druids rather than other priests for healing and religious ceremonies, a ban sends them a message of disapproval. And sometimes a ban can serve as a symbolic gesture against a subject too powerful or influential to confront directly--a baron or king, for instance.

A ban generally lasts 10 summers. However, the inner circle can vote to lift a ban early or (once the time is up) to extend it. The shunning does not extend outside the domain, so banned druids usually choose to go into exile--the result the great druid probably intended in the first place.

**The Challenge.** The traditions of the Order prohibit an inner circle from including more than nine druids, three archdruids, and one great druid. If a character gains enough experience to achieve official druid level but finds no vacancy in the inner circle, the only way to advance involves ceremonial combat: the druidic challenge.

The challenge remains one of the oldest druidic traditions. It purges the weak and complacent, ensuring that the highest ranks of the druidic order remain filled with strong and cunning individuals. The masters of the druidic order are not politicians, but men and

women of action. They believe that the challenge, by bringing ambition into the open, allows them to by-pass some of the worst excesses of hypocrisy and behind-the-scenes power plays found in other religions.

A circle's great druid expects at any time to face a challenge from one of the archdruids, while the archdruids keep an eye on rising druids. Those of druid rank, in turn, look out for ambitious 11th-level initiates. This system puts a constant strain on the Order's upper ranks: It's hard to stay on good terms with folk who want your job and eventually will challenge you to a battle to gain it. As a result, most friendships and alliances form among druids of equal level or among characters several levels apart.

All inner circle druids do their best to appear strong, to avoid looking like easy targets. Many actively adventure to enhance their reputations and gain power through acquiring magical items and experience. Others simply try to remain popular among the other members of the Order. If an inner circle member takes an unpopular or controversial stance, fellow druids may decide to encourage the ambitious to aim for that particular target; the replacement would likely prove more cordial.

The challenge operates under prearranged rules: Characters who violate the letter of the rules will fail to advance in level, just as if they had suffered defeat. Always a one-on-one battle, the challenge does not allow even servants or animal companions of the combatants to participate.

First, the two parties must agree upon the time of the duel--if they can't agree, it will take place at the next moot. Druids consider it impolite to set a challenge outside of a moot, although it's still done.

Second, the challenge needs a witness--a druid whose level equals or exceeds the challenger's. Hierophant druids (described later in this chapter) work well as witnesses, as do druids or archdruids visiting from different circles or from the Grand Druid's entourage. This individual must witness the terms of the challenge and make sure the combatants obey the rules. The great druid of the circle always names the witness, even if the challenge involves that very leader.

Third, the terms by which the battle will be fought are set out by mutual agreement. Once agreed upon and witnessed, the terms may not change. If neither side can agree on the terms, the witness selects them and proclaims the duel an all-out battle until one druid surrenders or becomes incapacitated.

Terms to discuss include:

- The size of the battlefield. Until the duel ends, leaving the bounds of the area means conceding defeat. Usually the space is no more than a dozen yards across, to ensure the battle does not take too long.
- Whether to allow weapons, magical items, granted powers, and spells. (Note: Nondruidic spells *cannot* be used.) Most contests involve full use of weapons and spells, although many commonly disallow magical items. Some memorable duels have permitted *only* granted powers--no spells or weapons. The combatants used only the claws and fangs of their different animal forms. A few challenges have forbidden all weapons and magic--they became simple wrestling matches.
- Whether to alter the normal battle-oriented conditions of the duel. Although rare, methods less stringent than actual combat have been honored, especially between two friendly rivals. Such unorthodox formats include a race, a scavenger hunt, a competition to defeat a particular monster, a drinking contest (the first druid to

fail three Constitution rolls loses), or even a game of hide and seek.

The challenge begins with the witness's invocation, asking Nature (or a druidic deity) to watch over the duel. This means that challengers who defeat foes through cheating will find themselves unable to gain a level after all, and incumbents who cheat automatically lose the level. Once the witness concludes the invocation, the druids enter the battlefield from opposite ends, and the contest begins.

**Appointment of Acolytes.** Great druids, archdruids, and druids have the traditional right to select initiates as their servants. The number and level of these retainers depends on the level and position of the inner circle member. (See the *PH*, p. 37, for details.) The chosen initiates are called *acolytes*.

Acolytes, chosen from the high-ranking druid's own circle, are restricted to serving only certain inner circle members (again, based on their experience level). The appointing druid must determine which eligible initiates will serve him.

An inner circle druid usually approaches a favored initiate quietly and offers an acolyte position. The initiate then decides whether to accept the post. While serving as an acolyte holds honor, it also entails a loss of freedom. Therefore, the decision depends on factors such as the reputation of the inner circle member.

An acolyte swears an oath of service: to be loyal and obedient, to listen and learn, to keep no secrets from one's master, but to guard the master's secrets. An acolyte who breaks this oath faces the wrath of the high-ranking druid. In addition, unless the acolyte can prove the master's commands violated the spirit of the druidic ethos, the servant usually becomes subjected to the ban.

The advantage of serving as an acolyte is that the character wins the patronage, and perhaps the friendship, of a powerful druid. The position enhances the initiate's prestige in the eyes of the entire circle. Furthermore, acolytes injured or wronged by an enemy can expect assistance from their master.

The disadvantage? The character-- always at the beck and call of a master-- loses personal freedom. An acolyte fulfills all the normal duties of a loyal retainer but, most importantly, acts as an emissary and representative of the inner circle druid. As high-level druids cannot be everywhere at once, acolytes often go on long journeys to do their master's bidding. Whether the mission involves finding a reclusive swamp-dwelling initiate to notify of the next moot's date and location or delivering a stinging ultimatum to a dwarven king to shut down his mines or face the circle's wrath, acolytes can expect to visit a lot of interesting--though sometimes unpleasant--places.

An acolyte's term of service lasts until the master's experience level changes or until the acolyte advances a level. In the latter case, the acolyte leaves service, and the inner circle member must select a replacement.

## The Grand Druid

Above all others within the Order stands the figure of the *Grand Druid*, the highest-ranking (although not the highest-level) druid in the world. The Grand Druid, a 15th-level character, attains this position through a selection process rather than by the challenge. Since only one person can hold the title of Grand Druid, each world can have only one 15th-level druid at a time.

**Duties of the Grand Druid**. First and foremost, the Grand Druid acts as a politician,

responsible for keeping harmony between the great druids of each domain and between the various druidic branches.

The Grand Druid also rallies the circles against the rare global threat to Nature or the cosmic balance. This always proves a difficult task, as many circles fiercely cherish their autonomy, believing each one should remain self-sufficient and not meddle in other domains' affairs. Few circles willingly send contingents off to aid other circles unless they feel absolutely certain that the threat will menace their own domain as well. To make matters worse, the inflated pride of many circles prevents them from accepting help from "foreign" druids. As a result, often only one thing can convince the Order a threat warrants a combined effort: the destruction of an entire circle. Fortunately, such occurrences are few and far between.

The Grand Druid and entourage (detailed below) spend most of their time visiting different regions and speaking to the great druids, archdruids, druids, and, rarely, lowly initiates. In particular, this leader serves as a diplomat and peacemaker, who mediates disputes between druids of neighboring circles and struggles involving members of the mysterious Shadow Circle (described later in this chapter).

Normally the circles act with autonomy. However, if a circle appears in great disarray--for instance, an enemy has killed most of its members or forced them into hiding--the Grand Druid may try to rally the circle or recruit aid from other domains. If a circle has been effectively destroyed, the Grand Druid might decide to rebuild it from scratch. After selecting a rising archdruid from a neighboring circle to step in as the new great druid, the Grand Druid helps recruit volunteers from nearby domains to replenish the circle. Often this assignment proves difficult and dangerous; whatever destroyed the previous circle probably still lurks nearby, ready to pounce on the new circle that, while wary, will remain understrength for some time.

**Servants of the Grand Druid.** Like other inner circle druids, the Grand Druid has personal servants: an entourage of nine druids of various levels. These druids no longer owe allegiance to their original circles but are subject only to the Grand Druid. All druids consider it a high honor to serve the leader of the Order, an honor that bears great responsibility but gives a druid prestige and influence far beyond others of similar level. Assuming a vacancy arises--and service involves enough danger that openings occur reasonably often--a druid of any level can seek out the Grand Druid and petition to become a retainer. This relationship lasts as long as both sides wish--often many years--and can end by mutual agreement at any time.

Three archdruids, often called the Emissaries, always serve the head of the Order. They act as the Grand Druid's personal agents--their leader's eyes, hands, and voice. To aid them in their duty, they receive four additional spell levels (one 4th-level spell, two 2nd-level spells, etc.), usable as they see fit. To keep the Grand Druid informed on the operations of the circles in every land, they roam the world, visiting the various circles as well as other places of interest to their master. The arrival of an Emissary often coincides with the ascendance of a new great druid. While conveying the respects of the head of the Order, the archdruid takes the new leader's measure and reports back to the Grand Druid. These servants also visit a circle in response to a great druid's request for aid.

Traveling Emissaries normally find themselves welcomed, for their visits give circles a chance to learn news from far-off lands. An Emissary also may offer counsel about a menace or carry a request for help to the Grand Druid or neighboring circles.

But Emissaries also must remain on the alert for problems within a circle that the great druid has failed to adequately handle--such as widespread conflicts between druids or corruption in the ranks. In such cases, it is the Emissary's solemn duty to take action to remedy the problem or, lacking sufficient power, to report it the Grand Druid. For this reason, some circles-- particularly those secretly dominated by the ruthless Shadow Circle--regard the arrival of an Emissary with deep suspicion. In their role as agents of the Grand Druid, these archdruids sometimes resemble spies. More than one Emissary has met a mysterious end while visiting a supposedly friendly circle.

Besides the Emissaries, a Grand Druid has six other servants. These druids, usually of 7th to 11th level, come from a variety of branches but have all proven their dedication to the Order. Many Grand Druids have been known to take on the occasional lower-level druid, either because they feel the need for a fresher viewpoint or because they sense a special worthiness in a particular individual. These six druids of mixed level act as servants, counselors, bodyguards, and useful agents.

**Selection of the Grand Druid.** One of the duties each Grand Druid must perform is appointing a successor, always an acting great druid. After serving usually a minimum of four years, a Grand Druid steps down to allow the chosen successor to assume the mantle of leadership.

In theory, selecting a new Grand Druid is solely up to the last Grand Druid. In practice, druidic order politics plays a major role. For instance, if the forest druids have held the position of Grand Druid for several generations, they may come to consider it "their right" to do so. However, in the name of fairness and harmony, druids from other branches may lobby to convince the current Grand Druid to pick a successor from a different branch. On the other hand, choosing a Grand Druid from a minority branch could alienate large segments of the druidic order's membership, even with an extremely competent Grand Druid.

As a result, when a Grand Druid begins getting on in years, the impending choice of successor becomes the subject of much gossip, speculation, lobbying, and intrigue by archdruids, great druids, and hierophant druids. For instance, a great druid afraid of being passed over for the position in favor of a rival may encourage a powerful, ambitious archdruid to challenge that rival, hoping to put the favorite out of the running before the Grand Druid can finalize the succession.

## Hierophant Druids

The *hierophants* make up a unique part of the druidic order. Some even go so far as to say they *are* the Order, and that the other ranks represent mere practice for hierophant status. Check p. 38 of the *PH* for details on achieving the rank of hierophant (pictured on the next page) and the powers that go with it.

Hierophant druids live as free agents. They are encouraged to respect the Grand Druid, but need not obey the druidic leader's mandates nor operate within the borders of any circle. Although a few settle down in particular groves, many become famous wanderers, some even visiting other planes or (by spelljamming) distant worlds. They often travel about in disguise, using their appearance-alteration powers. Wherever they go and whatever they do, they always aim to promote the ethos and values of the druidic order.

Unlike lesser druids, hierophants typically have a global perspective and agenda. They concern themselves with the rise and fall of empires, the migrations of peoples, the growth or extinction of species, and the role of each race in the destiny of the world. Some devote their lives to a particular cause, such as reclaiming the forests of a continent infected by evil, or acting as the personal nemesis of a being whose actions threaten the world's balance.

Hierophants are notorious behind-the-scenes manipulators. They use their long life spans to weave subtle schemes with far-reaching plots that might take decades to hatch, but which--they believe--ultimately will benefit their cause. The 17th-level druidic ability to hibernate enables most of them to appear effectively immortal: some hierophants will hatch the initial elements of a scheme, go into hibernation, then awaken decades later, unaged, to bring the next stage into play. Such druids might become patrons of gifted families of adventurers, recruiting the latest generation when they need heroes.

The existence of hierophant druids tends to make great druids and Grand Druids very nervous, for they represent a power beyond their control--and sometimes beyond their ken. Whether any hierophant druids belong to the Shadow Circle is not known.

## The Shadow Circle

The druidic order tolerates a wide range of philosophies under the umbrella of its loosely organized structure. The variety of different branches demonstrates this scope. So does the existence of the Shadow Circle.

A secret society of druids within the larger druidic order, the Shadow Circle accepts members who see Nature as a hostile, cleansing force that ensures the survival of the fittest. According to their philosophy, civilization--especially the building of towns and cities--has weakened humankind and many demihuman races.

### Methods

The Shadow Circle sees barbarian humans and more primitive races as inherently more vital than civilized peoples. Thus, the Shadow Circle often allies itself with barbarian tribes or hostile humanoids such as orcs, giants, and goblins, especially those who choose to live in forests or mountains in the wilds. They deliberately encourage people to abandon civilization's "decadence" and return to the more natural existence of hunting and gathering.

But while their intentions are neutral, the methods of Shadow Circle members tend to promote chaos and evil. They behave as they do not due to an evil nature--their enemies include powerful evil empires as well as good kingdoms. Rather, they feel their cruel activities work toward the best interests of evolution and of Nature itself. For instance, the Shadow Circle may provide magical assistance to barbarian hordes trying to sack a city or lead humanoid tribes in raids against human or dwarven towns.

Sometimes the Shadow Circle even assists the cause of good. For instance, members would consider an evil city-state based around slavery a fair target, and they would feel as eager as any lawful good paladin to support a slave revolt in the hopes of toppling the city. The difference? The Shadow Circle would encourage the slaves in revolt to burn the city to the ground and then settle down as farmers, hunters, or outlaws in the countryside.

Lower-ranking members of the Shadow Circle often wage campaigns of terror against small settlements, usually working behind the scenes. Their favorite puppets are intelligent monsters like evil lycanthropes.

## Membership

The members of the Shadow Circle keep their allegiance secret from other druids while maintaining their parallel "circle" rankings. An archdruid in the Shadow Circle is also an archdruid in a mainstream circle, for example. Shadow Circle druids of 11th level or higher follow the normal druidic practice of advancing in level through the challenge; in fact, Shadow Circle druids encourage each other to challenge nonmembers in mainstream circle hierarchy, thereby increasing their number among inner circle members. These duels almost invariably turn quite bloody.

An arc of the Shadow Circle exists in any domain where druids live, and its members may come from any druidic branch. Typically only one in five initiates--but as many as one in three 12th-level or higher druids--secretly belongs to the Shadow Circle. A great druid usually is not a member, but one never can tell for sure. In some troubled domains--particularly those in which druids face persecution and the wilderness displays signs of wanton destruction from human cities--*most* of the druids may join the Shadow Circle!

Shadow Circle druids adopt secret names to conceal their identities from each other. When they meet, they do so while shapechanged or wearing masks carved to represent predators native to the domain. This secrecy is important. Although the Shadow Circle ethos corresponds to that of the Order, most druids disdain the group's methods--and therefore, its members.

A known Shadow Circle initiate faces the enmity of other druids--and possibly the ban, for refusing to recant--as well as the ire of local authorities. Lower-level druids constantly challenge exposed Shadow Circle druids 12th level and higher, seeking to depose--and possibly destroy--offenders.

In turn, the Shadow Circle often tries to cause trouble within the druidic order. For instance, in order to recruit disaffected druids into their midst, group members covertly encourage rivalry between druidic branches (such as the jealousy between the dominant forest druids and the members of less influential branches). Characters may learn of the Shadow Circle when they discover a plot to ferment such trouble between druids from rival branches.

Note that these are the methods of a group of extremist druids, not evil ones. Their anti-civilization feelings do not alter their neutral alignment.

**Shadowmaster.** The highest-level druid in the Shadow Circle--usually an archdruid or druid--takes command of the group as the Shadowmaster. If two or more druids of equal level seek the post, they generally duel to the death, though one combatant--usually the younger--could agree to serve under the other. Unlike the semiautonomous mainstream circles, the Shadow Circle maintains strict discipline over its various far-flung arcs. The Shadowmaster exercises absolute authority over the membership.

**Inner Circle.** Under the Shadowmaster are the members of the inner circle, which consists of all the druidic order's Shadow Circle druids (12th level) and archdruids (13th level). (The Shadowmaster remains apart from the inner circle.) Together, the

Shadowmaster and the inner circle make policy and direct the initiates. Only the Shadowmaster knows the real names of members of the inner circle--the identities of even these high-ranking members remain unknown to each other.

The 1st- through 10th-level initiates within this secret society, unlike the more independent initiates of mainstream circles, are expected to obey all orders from inner circle members and the Shadowmaster. Failure means punishment--death.

**Shadowed Ones.** Initiates who have reached 11th level have special status in the Shadow Circle. These initiates are known as "Shadowed Ones," the Shadowmaster's special tools. In particular, they act as enforcers and assassins for the secret group, hunting those who have disobeyed their fearsome leader or have been expelled from the mysterious society. The Shadowmaster sometimes encourages Shadowed Ones to serve as ambassadors to arcs of the Shadow Circle operating in other domains. Shadowed Ones automatically advance to the inner circle in this secret group when they achieve 12th level in their mainstream circle.

## Shadowclave

Members of the Shadow Circle work in secret, pretending to be mainstream druids. For example, they attend all druidic moots. But every season each arc of the Shadow Circle also holds its own secret meeting--the Shadowclave--in the dark of the moon. The meeting lasts three nights, during which the membership celebrates its own version of traditional druidic ceremonies and receives new orders from the Shadowmaster and inner circle. Prisoners the Shadow Circle has taken throughout the season--along with disloyal or disobedient members--are kept alive until the Shadowclave. There, the inner circle tortures and publicly executes them, to remind the membership of what happens to traitors and enemies of the Shadow Circle.

## Recruitment

The Shadow Circle does not take volunteers--it finds new members on its own. Recruitment, by invitation only, is in the hands of the Shadowmaster and the inner circle, always on the lookout for druids who seem ready to embrace the ruthless Shadow Circle philosophy.

For example, if a druid massacres a party of travelers who ventured into a sacred grove, the Shadow Circle soon comes looking for this prospective candidate. Another good possibility is a character who has destroyed a village whose peasants dared to clear a wood for use as farmland.

A Shadowed One spies on the potential member for a few weeks or months, often using animal spies as additional eyes. If the druid's deeds and words seem in sympathy with the Shadow Circle's goals, the character receives a visit from this Shadowed One (or a pair for a candidate 11th level or higher) before the next Shadowclave. The Shadowed One explains the group's purposes, inviting the newcomer to join. Of course, druids who refuse--or even waver--coincidentally turn up dead shortly thereafter.

Candidates who agree to join are blindfolded, given a mask, and taken to the Shadowclave. There the Shadowmaster gives each a secret name. After receiving their sworn allegiance, the Shadowmaster formally welcomes the new members into the

Shadow Circle and commands them to perform some symbolic but dangerous task to prove their ruthlessness and dedication. (The difficulty of the assignment depends on the character's experience level.)

This kind of mission usually involves assassinating a specific enemy of the Shadow Circle, such as a noble or priest in a city the group has targeted for destruction. However, the task might be physically much simpler-- say, poisoning a town well. The Shadowed One who recruited the druid will follow along (secretly), ready to slay a newcomer who shows weakness, risks capture, or tries to betray the group. Those who succeed, the Shadow Circle embraces as full members.

## Creating a Druidic History

The druidic order and hierarchy presented here are designed to work as a default or base system. Many circles of druids have their own customs, and on many worlds the druidic order has its own unique history that shapes its structure.

The DM always should understand the history of the druidic order before beginning a campaign involving druids. A typical Order, like the one this chapter has detailed, is an ancient organization whose origin has become lost in the dim reaches of the past.

But that doesn't have to be the case. Instead, the druidic order may have an origin alive in history or myth. This background should explain where the first druids came from, why they worship Nature (or a specific Nature deity), why they protect the wild, and their purpose in standing at the crossroads between good and evil. The druidic origins might reflect true history, a legend whose truth remains uncertain, or a mixture of both. In any case, the origin tale must have a profound effect on how druids see themselves in the campaign.

As an example of how the druidic order springs from a more detailed history, three very different possible beginnings for the druidic order are sketched out below.

### The Exiles

*The secret founders of the druids were the crew of a spelljamming vessel, long-ago exiles from a world that would not accept their neutrality following the final triumph of evil--or good. (Exile was preferable to the fate of the members of the vanquished alignment, however.) The present druidic order traces its legacy to these ancient castaways.*

*As victims of an unbalanced world, the exiles and their descendants and followers vowed to preserve the volatile relationship between good and evil in their adopted home. They can see this balance best illustrated by the forces of Nature. In addition to their normal druidic duties, the members of the Order remain on guard against invasion from their ancestors' home world.*

### The New Faith

*The druids belong to a relatively new faith, founded less than twenty years ago by a charismatic Nature priest. This amazing leader also preached that the older gods constitute only one small aspect of great Nature.*

*Active missionary work, the charisma of this founder, and the simplicity of the Order's beliefs draws more and more converts to druidism every day from the old, tired, polytheistic religions. But the largest rival religion considers druidism a threat; its priests have convinced the region's rulers to begin persecution of the "godless, troublemaking" druids.*

### The Myth of the Great War

*Almost two thousand years ago a terrible war broke out between the two mighty guilds of wizards--one good and one evil--that controlled great empires. Wizards on both sides vowed to fight until they were utterly triumphant, seeking to purge their rivals from the earth. With fearsome magic and dragon armies they battled for centuries, neither side winning final victory.*

*In the process of their warfare, the wizards wrought vast devastation on the world--forests blazed up, islands sank into the sea, entire races became extinct. Eventually, the great goddess of Nature awakened from her sleep to witness the savage conflict. Shocked by the destruction, the Goddess sent a vision to a single human: the woman who would become the first Grand Druid.*

*Through the vision, this chosen figure saw that she must found a druidic order to preserve the fragile remains of her world's ecology. With the guidance of her goddess, the Order grew in strength until finally it had the power to intervene in the wizard war. The force of young druids pooled their powers and together vanquished the members of both battling guilds, transforming the combatants into innocent wild beasts. Once the former wizards--now unable to fathom the concept of good versus evil--slithered, bounded, loped, and crawled off into their ruined habitats, the Order began to heal the world.*

*Since then, the druidic order continually works to prevent such destruction from ever occurring again. Druids pledge to make sure the wars of good and evil no longer mar the precious earth. But, the Order also has bitter enemies in the ancient remnants of the guilds of warring wizards--those good and evil mages who luckily escaped the fate of their fellows. Each guild claims it had been on the verge of victory and would have won, had druids not interfered.*

Each of these backgrounds--or one that you, the player might create with your DM--provides the druids of a world with a history, a purpose, and some idea of who their enemies might be. Add more details to these options as desired, to explain the Order's triumphs and failures, the history of its relation to other faiths, and perhaps the attempts of factions within the druidic order to deviate from its original purpose.

## Chapter 4: Role-playing Druids

So, now that you have learned about the druidic order and selected your branch and kit, you think you're ready to assume the challenge of role-playing this colorful class? Well, there's still a lot more to know about druids. For example:

- What is a druid's world view like?
- How can a druid fit into a normal adventure?

- How does one role-play the neutral alignment?
- How do members of the Order relate to others?
- What are some typical druidic duties?
- Can druids become the center of entire campaigns?
- What strategies do druids follow as champions of Nature and the balance?
- How can a player make a specific druid stand out?

This chapter gives you, the player, hints for making your character really come alive.

## Druidic Faith

Druids fit into the hierarchy of a worldwide Order that espouses a well-defined ethos yet grants each member considerable freedom of action. This liberty makes druids much more diverse than many other priest classes--reflected in the different druidic branches and kits--as they pursue their shared goals in their own ways.

Druids serve the force of Nature and its inherent natural cycles, such as that of birth, growth, death, and rebirth (*PH*, p. 37). Though some druids do choose to worship Nature embodied in a particular god, Nature, as a force, has no specific form or personality. (*The Complete Priest's Handbook*, on p. 11, defines a force as a process, natural or unnatural, that influences the world.)

The processes of Nature generate magical power its worshipers can tap. Failure to perform the ceremonies and follow the tenets of druidism leads a druid to fall out of touch with Nature and lose spell access, just as other unfaithful priests do.

### Druids Who Worship Gods

Not all druids worship Nature as a force. Some see it personified by a great deity of Nature, often either formless or possessing many forms.

The most common manifestation of a druidic Nature deity is that of the Great Goddess--Chauntea and the Earthmother in the Forgotten Realms® setting or Beory in the World of Greyhawk® setting, for example. The Great Goddess embodies Nature through multiple avatars that represent her different aspects: a virgin warrior-huntress, an adult mother, and an ancient crone.

The Great Goddess sometimes has a Consort (often appearing as an antlered huntsman), the subordinate lord of the hunt, death, and animals. Followers frequently worship both Goddess and Consort as a single power rather than as two deities.

### Life after Death

Since they see the universe as a cycle or series of cycles, druids tend to believe the life force of a person (especially one who follows the druidic faith) is reborn again and again. A being's reincarnation will not remember a former life but may possess a similar personality.

All druids believe a person's soul may be reincarnated into an animal instead of a sentient being--yet another reason they revere all the world's creatures.

Are the druids correct? That depends on the nature of the DM's universe.

### Nature and the Gods

Druids differ in their attitudes toward non-Nature gods. Before beginning a new campaign, it's important for you and your DM to establish a circle's position toward other gods. Some possible beliefs include:

**Nature as Supreme.** These druids consider Nature a force beyond mere gods. Other faiths do exist, but they are mere aspects of the greater whole. To worship one of them means celebrating just a fragment of Nature (like the thunder, the ocean or death) rather than the whole, as druids do.

Most druids in AD&D game worlds use this approach. They believe their own faith is somewhat superior, but do not actively oppose other faiths and may ally themselves with the worshipers of natural, agricultural, or elemental deities.

**Nature as Progenitor.** Followers of this philosophy see Nature as an integral part of a pantheon of gods. In this case, druids identify the other gods as "children of Nature," perhaps born in some mythic way. For instance, the druids may teach that, in the time before the world, first came formless chaos, and out of it emerged Nature. From Nature was born the Great Goddess, who married the Sky and gave birth to many children: all the other gods.

**Nature by Another Name.** Druids may identify Nature as one aspect of an existing god--usually a powerful and primal earth or natural deity. For instance, if the DM wants druids in a fantasy world involving the gods of Greek myth, Nature may be worshiped as the great earth goddess Gaia without causing other changes in druidic behavior. This belief pattern enables the druids to participate directly in a pantheon of deities.

**Nature is All.** Other gods do not exist! Druids who hold this belief see other priests either as deluded or worshiping Nature under a different name. Unless the druids are right, (in which case, no other class of priest would function in the campaign!) this philosophy leads them to have a rather close-minded and inflexible faith. Druids may live apart from mainstream society as hermits or work as missionaries to recruit people to the "one true faith." Quite possibly, believers in other faiths would take a dim view of such druids, as no one likes to hear their beliefs called lies!

**The Gods Threaten Nature.** Other gods are acknowledged as powerful entities, but the druids consider them *unnatural*-- interlopers from the outer planes or beings and philosophies created by the belief of foolish mortals. Followers of aggressive, proselytizing religions that actively seek converts and start religious wars become dangers to the natural order. Druids with this belief tend to act hostile to those of most other faiths, considering them instruments of "outside influences" that threaten the balance of Nature!

**Nature as Equal with Other Forces.** These druids believe that other primal forces exist on the same level as Nature, such as Magic or Entropy. The priests of these forces may become either rivals or allies to druids.

## The Neutral Alignment

True neutral, the most misunderstood of all alignments, often causes problems for players. One common mistake is for neutral characters, such as druids, to seek a balance by deliberately acting chaotic evil one day and lawful good the next. Such behavior

makes characters unpredictable, and the cumulative effect promotes chaos more than anything else.

Druids consider each alignment equally valid in a cosmic sense. They try to remain nonjudgmental and uncommitted to any specific moral, legal, or philosophical system beyond the basic tenets of the druidic order. Because a druid's main charges--plants, animals, and the health of the planetary ecology--essentially lack alignment or ethos, the character feels free to use almost any means necessary to protect them.

Chapter 4 of the *Player's Handbook* discusses alignments in a general sense; the druidic order works to maintain the natural balance among these alignments. (See "Keeper of the Balance" later in this chapter.) However, druids do realize that most individuals actions--including their own--will not prove significant to the cosmic balance. The druid sees the friction between alignments as the driving force in the world. Although most druids personally may *prefer* to live among good people, they recognize that the existence of evil keeps intelligent beings from stagnating.

Despite their neutral status, druids don't resent being pulled into the struggle between alignments. Neutral individuals do *not* lack interest, ambition, or passion--they value their own well-being and that of friends and loved ones. They may struggle passionately on behalf of themselves and others, as well as feel a compassion blanketing everything that makes up the Nature they swear to protect. Never doubt that druids will act for their own goals and the Order's.

For example, the druid Rebecca has no philosophical objection to helping a group of lawful good paladins and clerics defeat an evil dragon--if they can demonstrate a good reason. She won't agree to kill the dragon merely "because it is evil." But, she might help if the dragon had harmed or threatened her friends or a forest or village under her protection. She might also offer assistance simply because she realizes the danger of living near a powerful and unpredictably evil creature inclined to wreak havoc upon the natural surroundings. Finally, she might join the party in return for a pledge that the members aid her in protecting a wilderness area from those who would exploit it--or in order to get treasure and magical items to do the job on her own.

Clearly, playing a druid true to alignment is no easy task. The character must consider carefully all the variables in a situation before acting. Remember that, when faced with a tough decision, a druid usually stands behind the solution that best serves Nature *in the long run.* So, Rebecca could have an equally valid reason to join a band of evil adventurers hunting a lawful good dragon as she has to join a good party hunting an evil dragon. Although a gold or silver dragon is unlikely to threaten Rebecca or her sacred grove, she might wish to use its treasure to purchase equipment to fight a greater threat or win the trust of an evil party she can use for her own ends.

Of course, druids understand that others may not take so pragmatic a view. Rebecca knows a party of adventurers wouldn't be pleased to find she has stymied its efforts. Alignment struggles constitute just another aspect of Nature, so Rebecca would never seek to stop the members of a party from continuing the struggle unless she deems it harmful to her own interests or those of the force she worships and safeguards.

A druid allied with a party of adventurers usually goes along with the party's actions unless they threaten trees, crops, wild plants, and other things the druid holds sacred. At the same time, the character needs a reason for joining a party--often something as simple as a desire to gain the experience and power needed to become a more effective guardian

of Nature.

Druids tend to react nonjudgmentally toward other races. With the possible exception of undead, they feel that every race and species has its place in the world. For instance, a druid recognizes most orcs as evil and cruel. The character might not enjoy the company of orcs, but doesn't consider this feeling an excuse to exterminate the entire race. Conflict between orcs and humans is the way of the world, some druids say. They point out that orcs live a harsher existence than humans, often dwelling in the deadly subterranean world. And, while the average human may be less cruel than the average orc, mankind is capable of greater evil through superior organization and civilization.

Druids who stray from their alignment or cease to follow the tenets of the Order lose major sphere spell access and granted powers until they make atonement. In addition, the circle's great druid may place any subordinate druid under the ban as a temporal punishment for such violations.

## A Druid's Responsibilities

The beliefs and ethics of druids cover two main areas: keeping the balance between the alignments and serving as guardians of Nature. When role-playing a druid character, keep in mind that the character's behavior should reflect the importance of these duties.

### Keeper of the Balance

Druids have seen that a balance between the forces of good and evil, law and chaos, best fosters the continuance of life from one generation to the next. This druidic duty is not so much a personal matter as the ethical responsibility of the entire Order.

Only an event or threat of considerable magnitude can cause the balance to tilt toward one alignment or another--a matter that could affect the destiny of nations. Deciding that a menace of this degree exists and how best to handle it is traditionally left to those of archdruid or higher rank, or the High Council of the Moot. However, lesser druid PCs may decide they know better and take action on their own!

Remember, keeping a balance doesn't spell stagnation. Druids view a slight shift in the balance--like the ascendancy of one alignment--to be as natural as a change in the weather. An individual druid may prefer a period of good (or of law) just as one might prefer a warm summer day. But autumn and winter remain just as necessary--in a world of eternal summer, the autumn harvest never comes.

But druids also believe in free will, and with free will comes the danger that the balance will tilt too far in one direction. Many druids believe--rightly or wrongly-- that powerful beings (gods and extraplanar entities) manipulate mortals for just such an end: to see their own alignment or faith permanently triumphant.

When druids perceive the balance tilting too far in any direction, the Order becomes concerned. Some individual members may profess that the balance will swing back by itself, regardless of the actions of mankind. Such druids contentedly sit back and let events pass without taking action. A druid with this belief would not make an interesting PC, although such a mindset gives the DM a good excuse to have senior druids refuse to aid the player character!

But most druids do not share this belief. The majority see human and demihuman

races in general and the druidic order in particular as pivotal to maintaining the cosmic balance. They look at the cycles of the world as driven by the actions and machinations of mankind (and other intelligent races) and believe that, as individuals play their part in the great cycle, they can also upset it.

This means that, when the cosmic balance is obviously in danger of being tilted in favor of one alignment or faith, druids will ally themselves (openly or covertly) with the opposing side. Normally an archdruid or great druid makes this decision and devotes all energies to rallying the circle against the threat. Sometimes a circle of druids becomes divided about the situation: Is it serious enough to warrant intervention? The circle leaves it up to individual druids to decide whether to offer assistance. However, keep in mind that druids who frequently refuse to aid their circle's cause will find themselves unable to attract help from senior druids when they need it.

Although the balance could swing too far in any direction, DMs should set their campaigns at times when *evil* has grown alarmingly in strength, for such periods allow druid PCs to become heroes. With the balance threatened by the power of evil, most druids find themselves in the position to serve the cause of good willingly. This motivation is good for the game, as it provides plenty of adventure for good-aligned PCs while giving druids a chance to fight by their sides.

Similarly, in a game featuring the PCs as rebels or outlaws against authority, the balance may have swung in favor of inflexible law. In such a case, druids may side with the forces of chaos--good, neutral, and maybe even evil--in the struggle of liberty against oppression.

### Defense of the Wilderness

The second major responsibility of druid characters is to defend the wilderness and its wildlife. Players sometimes feel uncertain as to the limits of a druid's concern for Nature, especially in regard to how druids treat those who make a living hunting or farming.

Since all druids are charged with protecting natural wilderness, trees, wild plants, wild animals, and crops, they also protect the people who follow druidic beliefs, such as peasants and hunters living in harmony with Nature. (See the Guardian and Village Druid kits, Chapter 2.)

Druids realize all creatures have basic needs for food, shelter, and self-defense. Humans must hunt animals for food and must clear trees to farm and build houses. These actions constitute a necessary part of the natural cycle. But druids do not tolerate unnecessary destruction or exploitation of Nature. Sensing violations, a druid investigates the motives of the people involved, weighing them against the risk to the land. Then the druid decides whether to take action.

**Protecting Animals.** Only a very few druids (like those with the Pacifist kit) oppose hunting or raising animals for food, skins, or fur. In fact, many druids hunt animals for food and clothing themselves. They do frown upon killing animals simply for sport, over-hunting (or over-trapping) a region, and treating animals with excessive cruelty. And most druids do not even take this feeling to extremes. They know that feudal nobles, for instance, enjoy the hunt; few such hunters are cruel killers, and their game ends up on the lord's tables.

Druids oppose trapping or hunting beasts to use their fur or other body parts for frivolous reasons. A hunter may kill a single wolf and take its pelt to make a wolfskin cloak, according to druidic philosophy. If the hunter kills a couple wolves every year and sells their pelts, a druid may or may not be upset, depending on the prevalence of wolves in the area. But if a hunter regularly traps dozens of wolves and makes a fortune selling their pelts to local merchants, a druid will become angry and take action.

Even more than trapping for food or fur, druids hate to see animals captured for use in events like bear baiting, bullfighting, or other such "sports." Druids always try to stop these spectacles and free the animals. They may wreak terrible vengeance on those who capture wild beasts for sport or operate the arenas where animals are forced to fight.

**Protecting Trees and Woodlands.** Druids have nothing against most forms of farming, even if it means clearing woodlands or draining swamps to create new fields. Although druids feel a special reverence for trees, crops are plants too, and civilized races have a right to practice agriculture.

The druid may object to destroying a wilderness area for a farm extension that is strictly for profit. For instance, clearing a forest for a large plantation to grow cash crops--especially ones intended for pleasure, such as tobacco--would raise a druid's ire.

A druid also will oppose farming that requires the destruction of ancient wilderness areas, large spreads of land, or any region that serves as a sanctuary for rare, endangered, or magical plants and animals. Most importantly, no druid ever tolerates the destruction of a sacred grove! Druids also discourage farming practices that harm the soil and selfish irrigation schemes (dams, aqueducts, etc.) intended to parch one region to slake another's thirst.

Druids sometimes tolerate logging or clearing land to mine useful minerals like salt, copper, tin, and iron. After all, they use manufactured items themselves. Whether to accept such land use depends on the motives and need of those involved and the nature of the region in question, just as with farming.

Cutting down a forest to build houses is one thing--especially if the builder makes some effort at replanting. Using the wood to build a fleet of warships to satisfy the ambitions of a tyrant is much less likely to find sympathy with the druid. On the other hand, if the proposed fleet will oppose the invasion force of a king whose conquests threaten to tip the balance of good and evil, some druids may justify the forest's loss.

**Cleansing Nature.** Some acts defile the very essence of Nature and require immediate opposition. For instance, the magical forced transformation of a large forest into a bizarre, otherplanar landscape instantly draws the enmity of the circle. If a sacred grove falls under a curse, druids will work to lift it and reclaim the land.

A more common perversion of Nature is the undead. The fact that no druidic branch has the power to turn or control undead does *not* mean druids tolerate them. Rather, the druid's lack of power over the living dead reflects the absolute aversion this class has toward them. Things exist in a natural cycle: birth, growth, death, rebirth. The undead break this cycle--worse, they are the enemies of life. Therefore, most druids see the undead as abominations to stamp out to restore the proper workings of Nature.

Yet, druids do not actively hunt undead. This is primarily because undead rarely directly invade a druid's sphere of interest. However, if a vampire starts menacing a peaceful village, a banshee begins stalking the moors, or a lich introduces a reign of terror to the wilderness, a druid may intervene. Because druids lack the key powers

necessary to fight undead (although their elemental magic can prove useful), they will ally with a good-aligned party also interested in wiping out the undead.

**Defending Croplands and Farmers.** A druid feels an obligation to protect farmers who worship Nature and to safeguard fields and livestock. For details, see the Village Druid kit (Chapter 2) and the "festivals" section in this chapter.

## Eyes in the Wilderness

Defending an entire tract of wilderness and safeguarding the balance of forces within it spells a *lot* of work for one druid. (In addition, sometimes druids are asked to give reports on their section of the domain at moots.) Clearly, to do a good job, the druid needs reliable sources of information and early knowledge of possible threats.

Druids' own powers do go a long way in keeping them aware of the goings-on in and near their area. The ability to pass without a trace and blend into the woods allows druids to maintain watch on anyone entering the wild. Even better is their shapechange power. Druids risk detection when using it, but very few people--unless they know they have a druidic enemy--ever would suspect that a spy lurks in the form of the mangy hound munching a bone under the lord's table or the cat hiding under the bed. To infiltrate a foe's stronghold, druids often assume the shape of a domestic animal, allowing themselves to be bought at market or given as a gift--although those shapechanging into an edible animal should take care to avoid the stew pot!

At high levels, the ability to cast *speak with plants* or *stone tell* proves very useful. If the druid is looking for general information, good recipients for such a spell include trees or standing stones at crossroads, at wells, or near town or castle gates.

**Animal Aides.** Still, druids can be in only one place at a time. In addition to their own powers, they also use animal resources. *Speak with animals* gives druids an ability enemies always regret underestimating.

Druids rely on animals mostly in the wild: a spread of furry, feathered, and scaly "spies" all over the land to keep watch on the movements of friends and enemies alike. Normally, small, inconspicuous animals work best--especially birds, with their excellent mobility, aerial vantage point, and good eyesight. Rodents, from squirrels to mice, rarely get noticed. Domestic animals constitute another good choice due to their intelligence. They have the added bonus of being able to tell the druid about the activities inside a building.

To this end, a druid who can speak with animals should use every opportunity to insinuate these aides into important areas, such as the lord's stronghold--perhaps a character can even covertly cast *animal friendship* (or better, *charm person* or *mammal*) on a foe's animals. Some individuals may protect their servants from *charm*, but few think to check domestic animals.

One problem with using animals kept inside a building involves the difficulty of staying in touch with them. Animal helpers should have an opportunity to slip out to meet the druid (like a cat that is put out at night) or should remain in magical contact with the druid. (See the *animal spy* spell in Chapter 5: Druidic Magic.) With this logistical problem solved, domestic animal spies can prove exceedingly effective. People may search high and low to discover a traitor, never dreaming that traitor is actually a falcon, pet dog, or war horse!

Animals have a limitation, though: They often don't understand what they see and hear and sometimes can't determine what is worth reporting. A dog can recognize certain people and usually has a general idea what its owners are doing, but it cannot understand speech. A mouse or bat probably cannot tell one person from another. Animals can tell druids of unusual events, like the passage of a large body of men. They can warn druids when people have entered or left buildings or mention when a new monster appears. But, for detailed and reliable intelligence, the druid needs just that: intelligent spies. To this end, all druids should make use of the eyes and ears of other inhabitants of the wilderness.

**Human and Demihuman Assets.** Druids who have lived in an area for a long time should cultivate friendly contacts among the surrounding manors and villages. If the people openly follow druidism, they generally inform the druid of unusual happenings as a matter of course. Otherwise, druids try to place one "agent" in each village or castle in their area; low-ranking servants often have reason to go into the wilds every now and then (chopping firewood, grazing the animals, etc.), giving them an excuse to secretly meet the druid. Some druids befriend children for this purpose, since no one will miss them when they go out to play, nor will most people suspect children of passing information.

Druids try to keep in touch with a friend at every roadside and village inn within their territory. This source isn't necessarily the innkeeper: Someone less obvious, like a servant or stablekeeper, works better. Since adventurers and other interesting travelers usually stop at inns, the source can update druids on newcomers.

The druid must contact these aides regularly to advise them of the sort of information they should look for and receive their news. Just as important as having agents is having a means of collecting updates from them, after all. The 2nd-level *messenger* spell suits this purpose ideally. Innkeepers and the like tend to stay terribly busy, so providing them with a trained messenger animal (often a bird) can ensure periodic reports. If the agent (or druid) cannot read or write, the pair can arrange a simple code: a red ribbon on the bird's foot means, "Come immediately," a blue ribbon means, "Interesting strangers staying at the inn."

A druid's agents almost never work professionally as spies, and few know much about the druid's doings (helpful, if an enemy questions them). Most are just ordinary (0-level) men and women. Druids don't have to reveal their identity to these contacts--they just use their natural charm (Charisma of 15 or better) to appear as romantic, mysterious figures who will pay well if kept informed of local gossip. Just as often, druids recruit from among those who are in their debt. For instance, a druid who used magic to save a child from disease might recruit the grateful mother as another set of eyes. Also, druids utilize members of families that have followed the druidic faith for generations (often in secret). Finally, druids do not hesitate to use *charm person* or *mammal* to create excellent involuntary spies when necessary!

Besides these local folk, druids should also strive to be on good terms with travelers like tinkers, Gypsies, bards, merchants, entertainers, and rangers. These people, often the first to bear news from the next county, always know what the neighbors are talking about. Being on "good terms" usually requires making friends with a few prominent members of these groups and offering magical assistance at times.

**Sylvan Creatures.** Elves, satyrs, dryads, treants, sylphs, and similar native creatures

represent a priceless resource every druid should cultivate to the utmost. Their special powers and ability to blend into the wilderness make them excellent scouts. In addition, their goals usually parallel those of the druid--the protection of the woodlands and wilderness--so their information likely will prove timely and reliable. A character tends to receive a more regular flow of gossip by befriending *particular* sylvan beings--make friends with Shaylara the Pixie rather than just staying on good terms with a "band of pixies." To foster this comradeship, the druid should often visit the dwellings of local pixies, sprites, elves, and the like, and always stand ready to offer help, such as magical *cures* or protection from adventurers or monsters.

**Humanoids and Evil Monsters.** Druid characters should not forget that their neutral alignment enables them to make use of all sorts of information sources. Those who live near a monster and stay on speaking terms with it sometimes receive a messenger with information from the creature--which undoubtedly hopes for a favor or bribe. This relationship generally requires that the druid first win the monster's trust: by providing food in a harsh winter, using magic to heal injuries, etc.

However, druids must use the stick along with the carrot--most evil creatures prove truly helpful only after the character demonstrates the fury of druidic wrath! Even so, humanoids and monsters usually feel happy to alert the druid if something mysterious is making them uneasy--or if *good* forces are infiltrating the wilderness.

Remember, evil creatures are notorious liars: They will tell the druid only what suits them. A tribe of forest-dwelling goblins attacked and routed by two high-level rangers and a paladin might warn the druid of these intruders--after changing some details of their encounter with ". . . dozens of human warriors! We got many, but they were too much powerful. We see them chop down tree . . ." *Caveat emptor*.

## Druidic Ceremonies

Besides protecting the wilderness and maintaining the cosmic balance, druidic responsibilities include worshiping Nature through the appropriate ceremonies. This duty also involves casting spells and presiding over rites, many of which involve the use of the druids' secret language. (See Chapter 1.) Other ceremonies benefit the druid's flock--those rural folk who worship Nature (or a Nature deity) and follow the druidic ethos. The exact rituals vary from circle to circle and branch to branch, but all druids practice the common ones, including:

**Prayers**. Druids almost always pray in the form of poems or songs celebrating the beauty and power of Nature and the druid's role in it. These poems are valued as much for the beauty of their language and imagery as for their ritual value; dual-class bard/druids created some of the most memorable ones. A druid should create new prayers after personal inspiration. Many prayers celebrate a specific aspect of Nature, such as the beginning of spring, and are sung, chanted, or spoken only certain days.

**Wild Dancing.** The ceremonies of druids--especially younger initiates--often involve dancing. The movements, rarely formal or ritualized, are wild, impulsive, individual, and ecstatic--a spontaneous celebration of Nature's energy. Druids may dance while praying to regain spells; although in motion, the druid remains in deep communion with the powers of Nature during the dance, as oblivious to the rest of the world as if deep in study.

**Holy Days.** Like other priests, druids offer brief prayers one or more times a day, but they also have holidays in which they devote the entire day (or night) to sacred ceremonies. Druids typically spend two full days every month observing the holy days of their particular branch and of the Order as a whole. Minor celebrations usually take place in accordance with the lunar calendar; on the highly important first days of the full moon and new moon, most druids hold daylong or nightlong rites, either on their own or in the company of other druids.

Even more important are those ceremonies held four times a year to celebrate the changing of the seasons. At such times, an archdruid or the great druid summons most druids in the circle together for a great moot. Initiations and challenges often, but not always, occur at these times.

**Festivals.** Festivals are holy days celebrated not just by druids but by the entire community. If a village or tribe openly follows the druidic philosophy, some or all the seasonal rites include a joyous public festival. Druids praise Nature and bless the village, livestock, and crops. Then, with the locals, they sing, dance, and make merry for the rest of the day around a tree or Maypole in the village green.

Following the day of celebration, the assemblage builds bonfires on the hills to ward off evil, enjoys performances by visiting bards, and watches locals dressed as animals dance to ensure good hunting. Springtime rites, the most important, end with the casting of *plant growth* on the fields to guarantee their fertility come harvest time.

Private rites involving only the druids usually follow a festival--often late at night.

**Appeasement.** Druids, while they do not always object to replacing wilderness with cropland, insist on performing a ceremony before any land is cleared. These rites, designed to appease, comfort, and lay to rest the spirits of the trees and plants about to be cut down, normally require a druid's presence for half a day per acre of wilderness slated for clearing. In some cases, a druid high enough in level casts a *commune with nature* spell to determine if permitting the destruction is the right thing to do.

A druid unable to perform the rites before the clearing of the land begins will become very upset. At the DM's discretion, this lack of appeasement also may lead to the appearance of creatures such as treants, who seek to avenge the destruction.

**Rites of Passage.** A young person coming of age usually undergoes a rite of passage into adulthood. A druid living among the local folk administers this usually secret rite, which may involve anything from a spiritual revelation to a painful ordeal, depending on the culture.

For example, the druid, after invoking a blessing, might lead the candidate into the deep woods, then leave the adolescent to find the way home. Along the way, the druid may appear in shapechanged forms to act as a guide. Candidates who make it out of the woods (very likely, unless they ignore or mistreat their animal guides) are considered adults from that day forward. If they guess that the druid had been watching over them in animal form, they may find their destiny lies in a druidic career.

**Marriages.** Druids perform marriage ceremonies for locals under their spiritual care, usually simple affairs in a druid's grove or village green. There, the man and woman share vows to love, respect, and protect one another, with the druid serving as witness. Following the vows comes an exchange of tokens, prayers for the couple's health and fertility, and finally a party and feast.

Druids themselves, rarely celibate, usually choose to marry and raise children. Some

circles prefer their druids to limit their choice to "suitable" mates: druids or bards, and perhaps elves, dryads, or sylphs. Independent rural folk like tinkers, rangers, Gypsies, or foresters also constitute good choices. Love can be blind, but a druid generally prefers a mate of neutral alignment, from a rural background, who follows the druidic faith.

**Funerals.** Most druids bury their dead (although some prefer cremation), returning the body of a loved one to the earth near a sacred grove. Mourners celebrate the deceased through poems and prayers, and a hired bard may offer additional memorials in song. Finally, the presiding druid blesses the departed spirit and--since most druids believe in reincarnation--prays for its safe rebirth. Friends and family then hold a wake to remember the departed person through song, dance, and merrymaking.

**Initiations.** Worthy aspirants seeking to enter the druidic order must be initiated by an inner circle member. The initiation takes place at a moot or in a sacred grove on a holy day. The candidate, after being purified with holy water, takes the druidic oath: a promise to preserve the balance of the world, to follow the druidic ethos, to respect the freedom of other druids in and beyond the circle, to act as a guardian of Nature (or the deity that personifies Nature to the Order), and to live true to the druidic order and keep its secrets safe.

## Character Strategy

Exactly *how* do druids go about fulfilling the responsibilities discussed above? In role-playing terms, there are some interesting strategies you, the player, can use to make the most of your druid character's potential.

Suppose the druid Dannay wished to preserve an old wood, but the local baron and his peasants want it cut down, claiming they need the land to plant crops to keep from going hungry. What does the druid do?

### Find the Root of the Problem

First, Dannay must determine the truth of the situation--what lies behind the decision to chop down the wood? Are the peasants really in need or just greedy? Is their lord simply attempting to increase his own income? Why are the peasants likely to starve? Is there any other land to plant?

After investigating, Dannay decides the peasants do have a legitimate need to develop the old wood. Next, he considers the threatened trees themselves. Is the woodland ancient? (Druids prefer to preserve the eldest trees.) Does it harbor species of rare animals or plants? Will its destruction displace sylvan races? Is this forest one of the few unspoiled areas left in the region? Does a sacred grove lie within the forest? All these, particularly the last, constitute good reasons for a druid to take a stand opposing the destruction of the wood.

Assume that, for one of these reasons, Dannay finds this wood of ancient oak worth preserving. In most cases he first seeks a peaceful compromise.

### Negotiate a Solution

For instance, if the area possesses no other available land, Dannay might show the

peasants that expansion isn't necessary. Say the peasants' problem is that their current crops don't yield enough to feed them and cover their tithes. Dannay might offer his services as an adviser if the lord agrees to lower the peasants' taxes. If the baron refuses--or already levies merely reasonable taxes--the druid could try to help directly.

How should Dannay help? As an expert in agriculture, he can suggest techniques to increase the yield of the peasants' current crops so they don't require expansion. Or he might make a bargain: In exchange for the peasants agreeing not to encroach on the wood, he will use druidic magic to cure (or prevent) disease among their animals, or heal sick villagers and livestock. High-level druids could promise to control the weather to extend the growing season or to prevent droughts or floods. Most useful of all, a druid with access to the 3rd-level spell *plant growth* can increase the prosperity of any farm dramatically.

But suppose the idea of a compromise does not meet with favor. Maybe the peasants have a priest of their own who already provides this sort of magical aid. Perhaps they follow a religion that distrusts druids. Maybe the baron has determined to expand his land at all costs--or perhaps he just doesn't like a druid telling him what to do! In any event, Dannay may have to turn to harsher measures. Exactly what he does depends on his assessment of the strength and character of the opposition and the importance of the wilds in question.

Several options make themselves available when negotiation fails. Many call for the druid, short of destroying an enemy, to break that enemy's morale instead.

### Ultimatum

Dannay could simply announce to the peasants and lord, "Violate my wood, and you will regret it." This threat may work for prestigious druids; it also may prove successful if backed up with a flashy demonstration, like a *wall of thorns* around a portion of the threatened wood or a *call lightning* spell in the midst of the speech.

The DM should judge the effect of the ultimatum depending on the alignment of the NPCs involved, how desperately they want the land, and the reputation and actions of the druid. Most likely the lord and peasants will not be so easily cowed, and Dannay will have to turn to direct action.

### Harassment

The druid could choose to use passive, nonviolent resistance to prevent the leveling of the wood. Suppose a party of lumberjacks enters to begin work. Dannay could have enchanted plants entangle or snare them, order chipmunks and squirrels to steal their food, cast *summon insects* to harass them, make them lose their way using *obscurement*, summon rain and wind down on them, and so on.

Strong, determined loggers may succeed in clearing a few acres despite Nature's torment. But, what will they do when, upon waking the next day, they see all their work undone thanks to a *hallucinatory forest* spell? If they are wise, they'll turn around and head for home!

### Fear

Alternately, Dannay might try to convince the locals that the wood is haunted; he wants them to stay out just for their own safety. Even if the wood was previously safe, the druid may convince the peasants that their intentions to cut it down have awakened ancient wood spirits ready to rise against any intruders.

Careful use of spells like *faerie fire* and *dust devil* can simulate ghosts; *obscurement* makes mysterious mists; *control temperature, 10' radius* creates eerie chills; and druids also can call up packs of howling wolves or flocks of bats. Props like an erected gallows with a human skull or two lying around in the wood strike terror into the hearts of peasants and common soldiers alike.

Naturally, some people will suspect Dannay is behind this, especially if he tried negotiating with the locals and lord earlier. So, some druids simply use fear tactics *before* attempting a compromise!

### Hit-and-Run

A ruthless druid facing a determined foe may combine fear with violent actions, such as killing intruders and leaving their bodies for others to find or just allowing the victims to vanish without a trace. This technique can prove very effective, especially when the deaths are mysterious and not directly traceable to the druid's magic. But Dannay should be wary of doing the job too well: Misleading the natives into believing that murderous undead roam the wood, for instance, may lead them to call upon outsider paladins or clerics to purge the area.

### Defense

Dannay may decide merely to defend his land aggressively, attacking anyone who enters the wood. Druids frequently resort to a defensive stance when fear or harassment fail. The character aims to convince intruders exploitation is too costly to be worthwhile. The druid's tactics resemble a more violent form of harassment. In particular, Dannay would mobilize native creatures (using *animal friendship* and sometimes *animal growth* spells) to attack intruders and--if he has time--would set lethal traps, such as pits and deadfalls. The druid also may recruit allies, perhaps other druids or monsters who could lose their lairs to the axe.

Like many good generals, Dannay himself often stays back from the fighting, instead setting up magical traps and sending animals and plants into battle. Normally a druid would risk himself to save an animal, but in this case he is battling not just for one creature, but for an entire habitat. Dannay knows he must spare his own life so he can continue to preserve the lives of others.

### War

Usually as a last resort, the druid may choose to carry the fight to the enemy's castle or village. Typically, only a high-level druid has the ability to do this. And remember, Dannay has no obligation to use "honorable" tactics. If he has chosen to fight, it is because he believes his opponents have failed to compromise.

A druid's actions in war may range from subtle tricks, like stealing some or all the local plow animals and war horses, to something direct but nonviolent, like shapechanging into a bird, sneaking into the offending lord's bedchamber, and taking his first-born hostage for his good behavior. Or, Dannay could use spells like *call lightning, conjure fire elemental, creeping doom*, or *earthquake* to wreak destruction. Even low-level spells like *produce flame* can easily set fire to a peasant's cottage or a field of grain.

Please note that Dannay will direct his every action solely against those who cause the problem. If a greedy baron represents the threat to the wood, the druid targets the baron. If the problem lies with the peasants, he tries to intimidate them or drive them away. A druid never engages in wanton violence for its own sake.

When a PC druid uses any of these strategies, the DM should work out the response of the factions opposing the druid's interests. For instance, perhaps the baron sends up to three village work parties daily into the wood, each of which can clear one acre of forest if allowed to work unimpeded. If the druid decides to harass them or frighten them off, the DM should refer to the rules for morale and NPC reactions (*DMG*, pgs. 69-72, 114-115) and make morale checks any time the druid succeeds with an action the DM deems would frustrate, impede, or frighten them. If a work party fails enough checks, the workers either get nothing done that day or return home, too scared to come back. Perhaps soldiers or the lord's mage escort the next work parties. If Dannay succeeds in dealing with this new threat, the DM may wish to check the *baron's* morale. Failing this check, the baron may negotiate.

## Revenge

A druid who has failed to stop the defilement of Nature often seeks vengeance, for one of three reasons. First, the druid removes his foe to make sure the defilement doesn't happen again. Second, a druid's act of revenge sends a message to others. And third, as most druids are human, they can succumb to anger and feelings of injustice as easily as anyone else.

Vengeful druids must consider this question carefully: Who is the intended object of revenge? For example, a druid may immediately target as foes trappers massacring winter wolf cubs for their fur. But, upon investigation, the druid discovers that the trappers are merely poor yeomen or peasants simply trying to earn money to support their families. The real enemies become the gentleman furriers who grow rich off the sale of the pelts, and the lords and ladies who demand winter wolf fur as this year's high fashion. The druid should take revenge on these people.

A character seeking vengeance will wait patiently and make careful plans. This behavior sometimes makes them seem cold-blooded, but the druid has a long memory--a foe who appears too strong today may prove weaker tomorrow.

Druids prefer subtle forms of vengeance. If a wicked sheriff were responsible for the destruction of a druid's grove, the druid might try to frame the sheriff for treason against his lord rather than risk a direct attack. For the sheriff to be executed as a traitor would be a fitting revenge!

Some druids enjoy irony. Suppose a noble cleared an ancient forest to set up a vineyard. After the first pressing, a druid might sneak into the wine cellar and spoil the vintage.

A druid carefully considers the consequences of an act of vengeance and works them into the overall plan. For instance, if a king's sheriff were the druid's enemy, the druid would not try to destroy the sheriff without knowing what would happen afterward. In particular, the druid would not try to destroy an enemy who might be replaced with an even worse foe. Instead, the druid might take vengeance in a different form--perhaps by kidnaping the sheriff's infant to raise as a druid who one day would prove a foe to the sheriff.

## Relations with Others

Here's how relations often stand between druids and the people and monsters that live in or near the wild.

### Woodcutters and Hunters

Druids act much as game wardens do, letting woodcutters know which trees they may cut and which they must leave standing, and telling hunters which species they may hunt and which are protected.

Sometimes these folk resent or even disobey such orders, but most druids temper their restrictions with reason and balance punishment with reward. People who live or work in the wild and follow a druid's laws remain under druidic protection. Druids use their spells when necessary to cure injury or sickness in hunters' families, prevent starvation among woodcutters in harsh times, and so on. Those who don't follow druidic rules cannot expect help, even in cases of dire need.

### Local Animals

Druids try to get to know most wild animals within a few miles of home, learning their daily habits, the locations of their lairs, and so on. A druid makes a point of keeping track of animals that are pregnant, weak, or sick, and usually aids (or puts down) diseased, mad, or injured local creatures. However, a druid does not interfere with normal cycles of predators and prey. Think of this attitude as that of forest rangers or game wardens: Protecting species holds greater importance than safeguarding individuals. Still, druids often befriend a few local animals, whom they respect and protect as they would human companions. Animals frequently serve as a busy druid's eyes and ears.

### Sylvan and Faerie Creatures

Druids respect certain creatures as sentient embodiments of the "spirit" of Nature. Forest druids, in particular, would risk their lives to protect sylvan or faerie beings and would oppose other humans to protect the wilderness where they live. In return, these creatures often give druids official standing in their communities, perhaps as ambassadors to human realms. A druid might receive an invitation to speak at a sylvan or faerie council to offer a "human viewpoint," although only rarely would humans extend the same courtesy.

## Outlaws, Fugitives, and Bandits

Folk living away from society sometimes find themselves operating in the same wilderness areas as druids. As druids know their woods intimately, they can become vital allies--and bitter enemies, for they know exactly where outlaws hide and can lead pursuers to them if they choose. Thus, any outlaws exist on the druids' sufferance.

Druids usually prefer to avoid becoming involved with criminals. They sometimes shelter individual fugitives and, rarely, offer assistance to entire bands of outlaws whose activities further druidic goals and show proper respect toward Nature. Druids' actions generally depend on the situation.

For instance, a character wishing to discourage farmers or loggers from making inroads into a forest might consider an alliance with bandits, while one on good terms with neighboring villagers and nobility would seek to drive them away or reveal their location to the law. But most often, the druid remains uninvolved, acting only to protect the wilderness from threats.

## Local Monsters

Druids usually stay on good or neutral terms with local monsters, opposing them only if they threaten the entire area or the druid personally. For instance, a beholder that uses a woodland cave as its sanctuary makes a fine neighbor for a druid; one that tries to enslave large numbers of sylvan folk to conquer a nearby elven kingdom means trouble and should be eliminated before it engulfs the forest in a devastating war.

In general, the druid will act more favorably to creatures that "belong" in an area. A green dragon, a native of woodlands just as much as an elf or bear, finds it only natural to prey on elves and men. A druid has no argument with this tendency. After all, the humans and elves can always send a knight to slay the dragon.

Most druids make an effort to stay on speaking terms with intelligent monsters, good, evil, or neutral. The druid may do occasional favors for a creature on a *quid pro quo* basis. For example, the druid might volunteer to heal a sick or injured monster; the druid wants something in return, like a promise that the beast will refrain from attacking a certain village, will free its captives, or will aid the druid in battle.

## Evil Humanoids

The druid knows these evil humanoid races make up a natural part of the world and have a right to struggle for existence. As a result, druids will not act against orcs, goblins, or the like simply because of their race or "evil" nature. In fact, in the eyes of the druids, these races represent less of a threat to the wilderness than do humans or dwarves: Few humanoids organize beyond the tribal level, they rarely build big cities above ground, and they prefer hunting and gathering to extensive farming.

A few druids--especially Shadow Circle members--ally with native humanoids to protect the wilderness against encroachment or to aid weaker tribes being persecuted for no good reason. However, they make these agreements with care and in utmost secrecy, for they realize the humanoids' evil nature makes them treacherous comrades. Moreover, if word of such an alliance got out, it could damage the druidic order's reputation among

humans and elves.

Evil humanoids hold the druids in fairly high regard--some tribes always release druid captives. While these races couldn't care less for the sanctity of Nature or the welfare of animals, most humanoids respect Nature's mighty power and its servants.

## Rangers and Elves

The ranger class and the elven race resemble each other in that both consist of good aligned beings dwelling in the wild, protecting it from evil forces. Elves and rangers sometimes argue with druids over how best to guide the sylvan peoples and maintain the guardianship of the forests, but this is usually a friendly disagreement. If an area has a particularly effective ranger presence, druids may agree to divide up responsibility for its guardianship: Rangers handle human and demihuman affairs, while druids take care of sylvan creatures and the problems of native animals and plants. Such informal arrangements, however, often prove subject to swift change.

Druids consider it a courtesy for a ranger of equivalent or lower level to ask permission to operate in an area they occupy and usually resent those who neglect this courtesy. If a ranger does ask permission, a druid generally feels pleased to cooperate.

Occasionally druids find elven or ranger actions one-sided, impetuous, or insufficiently ruthless to the job at hand. On the other hand, some elven council chambers and ranger gatherings ring with the accusation that druids would give as much credence to the word of an orc or a green dragon as they do an elf or a treant. Those outside the Order fear the overly cunning druidic stratagems do not have the best interests of the elven nations at heart. But despite the occasional suspicion, many friendships grow up between druids and rangers or elves, and each group respects the other as protectors of the wild.

## Gnomes and Halflings

Druids generally get along with the small folk and help them when the need arises. In turn, a majority of gnomes and halflings (even those that do not follow the druidic religion) respect druid characters.

Most gnomes and halflings follow an ethos compatible with druidic beliefs: Live in harmony with the environment and rarely take from it more than needed. Moreover, druids see them as practical people who, though inclined toward good, rarely develop the fanatical opposition to "evil" the druids have seen in some humans, elves, and dwarves.

## Dwarves

The dwarven affinity with the earth primarily extends to unliving stone and metal, while the druids prize living trees and animals. As a result, druids and dwarves have very different philosophical outlooks.

It doesn't help relations when dwarves cut down forests and dig ugly mine shafts in green mountainsides in their quest for the coal and firewood needed to feed their hungry forges. Nor do dwarves enjoy seeing druids favor elves and advocate a "live and let live" policy with the dwarves' arch-foes, the goblin races. The result? Druids and dwarves

remain on poor terms and have harsh words for each other when they meet.

## Personality Types

You've now read how typical druids act in a variety of situations. But every druid--just like every other PC or significant NPC--should be different, with unique habits and personality traits. Chapter 2: Druid Kits illustrated the "role" of each kit and how a druid with a certain kit usually behaves. But not every druid of the same branch and kit acts the same way. To expand on this idea, a half-dozen common personality archetypes for druids follow.

Please note that using these personality types is totally optional--feel free to make up your own! This section, while intended for use primarily by novice role-players, can prove quite useful for experienced players who feel temporarily stumped for role-playing ideas or for DMs wanting a quick personality for an NPC druid.

### Diplomat

The diplomat serves Nature best by resolving conflicts between intelligent beings through negotiation; wars must be avoided, as fields and forests burn regardless of which side wins. The fabled druidic neutrality makes these characters the clear choice for settling disputes, especially between human and nonhuman races.

For instance, if a heated dispute between wood elves and sylvan centaurs threatened to flare into war, the character might step in as a peacemaker, discover the root of the conflict, and arrange a just compromise. Or, the druid could act as an ambassador for a kingdom of sylvan folk, representing them in a human court.

In role-playing, the diplomat behaves with fairness and empathy. He always tries to see someone else's point of view, whether that someone else is an angry green dragon or a frivolous pixie, a proud knight or a hard-working farmer. But this fairness often masks an adamantine core of ruthless pragmatism. The character prefers solutions that benefit an entire region--including animals and plants--rather than a single faction. The diplomat isn't necessarily a pacifist--he may fight if talking fails or to enforce a peace he's brokered--but he prefers that a velvet glove mask the iron fist. Even so, the character generally takes the long view and values the harmony of the whole over the good of the individual.

This personality type works especially well with the Adviser, Pacifist, and Wanderer druid kits. It doesn't fit the Avenger or Guardian, but it can work with any other druid kits. The diplomat is best suited to an all-druid campaign, since other classes prefer fighting to talking. However, a peacemaking role can lead to adventure and intrigue (providing roles for bards, thieves, illusionists, and other characters skilled in subtlety), especially if--as often happens--a third party or warlike faction secretly works to foment wars or quarrels. And trying to mediate a dispute between an angry green dragon and a human baron can prove both exciting and dangerous!

### Gardener

The gardener views the world as a garden: It needs loving care and someone to cut

down the weeds. The character remains very much aware of her responsibilities as a druid. A deep love for the land--with all its animals and people--drives her to take decisive action to nurture and protect it.

A gardener believes a druid should actively intervene to promote the goals of the druidic order. She won't isolate herself in a grove in the wilderness. On the other hand, she usually stays in a particular region or country, feeling a close kinship to her own land, and knowing that she cannot take responsibility for the entire world.

The gardener sees combat as a job that sometimes has to be done: Avoid the unnecessary battles, but win the necessary ones. She uses her head when she fights, trying whatever tricks and tactics might give her an edge. However, she does not believe the ends justify the means and will not resort to strategies that go against the druidic ethos or her own conscience.

The character will see other people's points of view. Nevertheless, she lives devoted to the druidic ethos and actively carries the fight against anyone who threatens the land she holds dear.

The gardener personality is common among druids. It suits the Adviser, Savage, Wanderer, and Village Druid kits, but avoid using it with the Guardian kit--a gardener doesn't limit her attention to just one area.

### Idealist

An idealist character--usually a young initiate--feels convinced that Nature needs saving, and he's the one to do it. Always optimistic, he sometimes bites off more than he can chew. He prefers to seek simple solutions to complex problems.

The idealist is usually pure of heart, meaning he doesn't lie or cheat and has few vices. While he seems fond of saying "Nature doesn't lie," he has yet to learn that many people do. Perhaps for that reason, people find it relatively easy to trick this character. However, if he realizes he's been manipulated or if he discovers corruption in someone he considered honest, his temper will flare in a fierce fit of anger.

In combat, the idealist rarely uses sophisticated tactics. He prefers to wield flashy spells, but will fight with physical weapons if necessary.

A young idealist usually doesn't feel ready to settle down, so sedentary kits like the Guardian or Village Druid don't work for him. He does not possess the bitterness of an Avenger and lacks the discipline of a Natural Philosopher and the subtlety of a good Adviser. The best kits for him are Beastfriend, Shapeshifter, or Wanderer.

### Mysterious Figure

The mysterious figure is a druid with an enigmatic nature. She tends to appear and disappear regularly--show up, take swift action, vanish suddenly, and appear again when least expected and most needed.

The mysterious figure normally has a personal mission to fulfill: a wrong to right, an archenemy to defeat, or a balance to redress. Often she has returned from exile, escaped death, or overcome some other personal tragedy, and uses her secretiveness to surprise and confound foes.

The mysterious figure travels regularly, often going about in disguise or in animal

shape. She makes many friends in unlikely places, but reveals her real identity or purposes only to her closest companions. Her fondness for drama leads her to save her best spells for a grand entrance or for the crucial moment where she casts aside her disguise.

Some druids with this personality have a quirky sense of humor. For instance, the druid may shapeshift into an animal before joining a party, becoming "adopted" as a pet before revealing her true form (if she does reveal it). This mischief works best for an NPC among PCs, or vice versa.

But for all her showmanship, the mysterious figure remains a careful and cunning strategist. She always makes sure she has a few tricks up her sleeve that even her friends don't know about. If she has a flaw, it is an unwillingness to share with others the details of her plans.

The mysterious figure works well as an Adviser, Outlaw, Shapeshifter, or Wanderer. Avoid pairing this personality with the Guardian or Village Druid kits.

### Nurturer

The nurturer always seeks to help those around him, whether the beneficiary is a plant, beast, or human; he feels especially drawn to the suffering of others. Unlike the gardener, the character concerns himself more with individuals than with communities or members of a particular alignment. The character may work as a professional healer, but also may take a more active role. For instance, he might go adventuring to seek and rescue captives and victims of oppression. Whatever his reason for joining a party, he cannot resist a genuine cry for help.

The character does well providing emotional support to others, and people frequently turn to him with their troubles. He often proves a tower of strength in a crisis, rarely losing his courage. In combat, the character prefers to take a defensive role, protecting others and healing the injured. The character, while not a pacifist, remains reluctant to engage in violence, except to defend those under his care.

The nurturer comes as close to a good alignment as any other druid personality archetype. However, he does provide care without regard to the victim's alignment. Also, unlike most good characters, this druid gives as high a priority to the suffering of beasts as to the plight of humans.

### Rustic

This druid champions the common people. She prefers a roadside inn to a noble's castle and would rather visit a village fair than a knightly tournament. Depending on whether she likes to stay in one place or move around, she'll usually have either the Outlaw, Village Druid, Avenger, or Wanderer kits. She has no interest in wealth--what she earns or finds she either gives to the needy or devotes to projects aimed at improving people's lives.

The rustic won't take any actions she believes would endanger or exploit peasants; she always tries to suggest plans by which the party's actions might benefit the commoners. For instance, instead of rescuing a noble from a band of orcs, she'd prefer to take action against a robber baron who has been oppressing his tenants. Afterward, she'll

try to make sure the peasants reclaim some of the treasure their greedy overlord took from them.

If the character witnesses any kind of oppression of the common people, she becomes angry and wants to do something about it. If possible, she'll try to fix the situation--overthrow the evil baron, free the slaves, etc. If she doesn't believe she can win, she--ll usually try to make some gesture to help the victims, perhaps by giving agricultural advice, suggesting means of passive resistance, curing disease, donating money, or even helping a single family escape to a better life. Then she'll vow to come back and do more when she gains the power to help. In short, the rustic believes in treating all fairly, regardless of social class.

### Traditionalist

The traditionalist takes pride in the old ways and opposes change for the sake of change. This mindset applies to alterations in land use, shifts in the structure of the druidic order, and fluctuations in the pattern of daily life in the character's region.

The traditionalist's philosophy means the druid vehemently opposes destroying the wilderness to replace it with crops, towns, or mines. Of course, he stands equally against radical druids like Shadow Circle members, who advocate the destruction of towns or cities. (However, some clever Shadow Circle members use a traditionalist facade.)

Traditionalist druids usually think things were better in the past and talk incessantly about how the present doesn't match ancient glories. They take pride in the history and accomplishments of the druidic order and usually have the ancient history nonweapon proficiency. A traditionalist believes unshakably in the basic tenets of druidism, such as protecting the wilderness and maintaining the balance of Nature, as well as protecting druidic customs, such as the challenge. Often the character takes an active interest in druidic politics to make sure that suitably tradition-minded druids find their way to high-ranking positions.

Almost any druid kit suits a traditionalist personality, provided the Order has an ancient history. On the other hand, say the DM decides that druids have developed the powers of the Shapeshifter kit only recently. In such a campaign, a traditionalist would avoid that kit.

### Fanatic

A character with this personality has a drive to accomplish a particular self-appointed mission. All his personal efforts must go toward its fulfillment; he feels guilty if he has to devote time to other activities.

A fanatic believes the ends justify the means. Anyone and anything could become a sacrifice to the cause. One can inject fanaticism into any druid character by exaggerating the normal behavior of his branch or kit. Possible fanatics include the characters below:

- Druids with the Avenger kit may seek revenge for the defilement of a particular area of wilderness.
- Village Druids may act fanatically in defense of their villages, seeing all outsiders as potential threats and ruthlessly destroying anyone who harms "my people."

- Guardian druids can have a fanatical bent toward preserving the area under their protection. They have been heard to say things like, "You may travel through my forest, but if you cut even one living branch for firewood, damage one single leaf, or kill the smallest animal, you will regret it!"
- Druids with any kit may act like fanatics about duties to the Order, taking extreme actions against anyone who harms the wilderness. This kind of druid often adopts the viewpoint of the Shadow Circle.

The fanatic archetype does not normally suit a PC, but this personality can make an interesting NPC. In particular, fanatics make good rivals for more moderate druids, who work to rein in the excesses of extremists to maintain the Order's good name.

### Misanthrope

The misanthrope doesn't like the company of people. Usually she considers mankind bad for Nature. A misanthrope may have had a particularly bad experience that soured her on mankind. Depending on her kit, she may prefer the company of animals or the solitude of the wilds.

In role-playing, the misanthrope generally assumes the worst of people. She may not act hostile, but it takes a lot of effort from the party to encourage friendliness. By her very nature, she tends toward dour, pessimistic behavior. She trusts no humans, and few demihumans or humanoids.

The misanthrope's unselfish love of Nature partially redeems her hostility; characters who display a similar affection for animals or the wild find her a true friend. Even so, deeds, not words, are the only things that can win her friendship.

The misanthrope has trouble verbalizing feelings--even if she likes or approves of someone, she won't say so. She'll simply offer her assistance. If she dislikes someone, or if something makes her angry, she's likely to turn her back and leave without a word.

In combat, she doesn't bluff and rarely utters a threat more than once. If she must use violence to protect herself or something she cares for, she'll strike without warning.

A misanthrope doesn't fit in with a party of human adventurers, but she makes a good NPC, especially if the party has a particular reason to seek her friendship.

This personality type works well with Beastfriends, Guardians, Shapeshifters, and Totemic Druids. It can fit Avengers, Natural Philosophers, and Wanderers, but does not suit Advisers, Savages, or Village Druids.

## Druid Campaigns

So far this chapter has dealt with ways to role-play druid characters in normal AD&D campaigns. But it's quite possible to use this information to run an adventure focusing on druids alone. A DM could handle such a campaign one of several ways.

### All or Mostly Druids?

The DM of a druid-centered campaign can choose to restrict players to druid characters only. This setup works best with fewer than four players. On the other hand, druid-centered campaigns involving many players can benefit from the presence of one or

two appropriate nondruid characters. The DM may allow bards, rangers, and those clerics, mages, or fighters with Peasant or Outlaw kits. (See *The Complete Priest's Handbook*, *The Complete Wizard's Handbook*, and *The Complete Fighter's Handbook*.)

After DMs choose to run an all-druid campaign, they must next decide whether to have a party of druids from a variety of branches or from only one.

**Single-Branch Campaigns.** Some campaigns center around druids in a single circle and the doings of those native to the area. Most PCs will represent the same branch: that of the area's dominant terrain. For example, campaigns set in mountainous terrain feature mostly mountain druids; if the campaign were set in the Underdark, most of the characters would be gray druids.

This campaign gives the PCs a strong sense of identity and creates a united party, since all its members have similar goals. It also allows the DM to focus on interdruid politics (such as the rise of the Shadow Circle or the rivalry between various druidic branches). A single-branch campaign involving an unusual branch (like the arctic druids) gives the DM an opportunity to run a change-of-pace adventure set in a different environment. PCs can venture to remote locations, meet members of little-known cultures, and encounter monsters they otherwise would rarely happen upon.

On the down side, although players can distinguish the characters from each other by giving them each different kits, players still may wish for more variety within the party. Try making some of the characters druids from associated branches; for instance, if the adventure takes place near a forest on a mountainside, some of the characters resemble a mix of both the forest and mountain druid branches.

**Multibranch Campaigns.** In a campaign involving only druids, the DM may encourage players to choose characters from different branches. The advantage of this arrangement? It provides a strong variety of characters--especially since they also may have different druid kits. However, a disadvantage is the difficulty of explaining why a jungle druid and an arctic druid want to adventure together in the first place.

One way to get around this problem requires bringing the PCs together for a reason. Perhaps the characters each represent their particular region in a quest the Grand Druid has launched to help fight a world-shaking problem. This scenario gives them the single-branch campaign's sense of shared mission, but more variety.

And, there could be any number of reasons why this special group of beginning characters was selected. Pick one of the following justifications:

- The Grand Druid chose them because they fit an ancient prophecy.
- The upper ranks of the druids are too conservative (or filled with untrustworthy agents of the Shadow Circle), and only these members of the younger generation see the true threat facing the world.
- There are few druids left--a growing evil wiped out most of the Order's upper ranks. (A very nasty situation indeed!)

A more serious problem in game balance for multibranch campaigns lies in the fact that each branch works best in a single terrain type: the desert druid operates best in the desert; the gray druid has optimal powers only in the underworld, and so on. As a result, a multibranch druid campaign needs to involve a fair bit of traveling; if the characters stay in the forest or the dungeon all the time, the player of an arctic or swamp druid will feel useless! Forcing the characters to travel widely, fighting an evil that recurs in several guises, can make for an exciting adventure involving all the characters.

For example, in a campaign with the goal of defeating the followers of a chaotic evil god corrupting Nature, the first adventure might take the party to a swamp that had been defiled into a place of horror. The druids would deal with toxic water, mutant giant insects, will o' wisps, black dragons, and other swamp monsters. A clue then can lead them to an adventure in the frozen arctic, where the PCs hear of a blizzard without end and the creatures that lurk within it. With this kind of approach, every branch of druid has a chance to shine.

### Guardians of the Wild

In this campaign, the druids must defend a tract of wilderness from those who wish to exploit it. To make this story stronger, develop druid characters with a personal stake in the area. For example, the region could hold an ancient grove in which a PC was initiated into the druidic order. Or maybe it serves as home to a tribe of sylvan beings who have befriended a character.

An interesting problem develops if the druids discover that the individuals cutting down their wood or draining their swamp have a very good reason to do so. As a result, the druids--and players--find themselves faced with a more complex moral dilemma than simply, "Run those exploiters off the land." They must look behind the problem to get at its heart.

This campaign suits players who enjoy diplomacy and politics, and generally works best with relatively high-level druids. This scenario lets the characters explore a key element of the druid's ethos: the need to see everyone's point of view, then judge which path best serves druidic interests.

For instance, suppose the druids learn of a problem in the area when hundreds of migrant laborers--mostly poor folk with no farms of their own--descend like locusts on the characters' ancient forest, chopping down trees and bearing them away. Worse, several species of rare animals live near here, and the logging threatens to destroy their home.

Where did these laborers come from? The party learns they work for a nation of dwarves living nearby. These mountain dwarves, having exhausted their supply of coal, had to turn to wood to keep the forges burning. They pay the poor human laborers in gold for every log they bring in. Already the dwarves' own mountain stands denuded of trees. The druids' verdant preserve seems the only nearby source of firewood.

The migrant laborers have more immediate concerns than the dangers of exfoliation. A lean harvest this year has meant little work, and without the dwarves' bounty, the humans risk starvation. As long as the dwarves pay, they will be able to buy food for the winter. . .

But what made the dwarves decide to expand their activities so much that they exhausted their coal resources?

War. The mountain dwarves are forging weapons for a small elven kingdom two day's journey away, struggling against an alliance of migrating bugbear and ogre tribes. Except for the royal guard, these elves--caught by surprise--lacked proper armor and weapons to withstand the onslaught. The dwarves didn't want to get involved, but agreed to forge the elves fine long swords, armor, and arrowheads in exchange for a share of the valuable emerald deposits located within the elven kingdom.

The DM could stop here and decide to call the bugbears and ogres the villains. But perhaps things are not quite that simple. What started the bugbear-ogre migration? Perhaps a powerful dragon drove them from their land; now they have become refugees themselves, wishing to settle in empty areas within the elven wood. However, the elves refused (not desiring such rude neighbors).

A campaign of this sort gives druids many options. The characters could merely drive the woodcutters from the forest--but terrorizing them may spur the dwarves to hire adventurers to deal with the druids! The party could play it sneaky--help the elves win a quick victory by destroying the ogre-bugbear alliance. (The druids slay the bugbear chieftain, but make it look like a rival ogre chief did it.) Or, the solution could prove complex, if the druids decide to try negotiating a peace treaty between the elves and the bugbear-ogre alliance. If the DM works out the personalities and goals of the major figures, each of the druids' actions could carry its own set of consequences.

## The Evil Woods

In the center of a once beautiful sylvan forest lies a place of power--a grove at one time sacred to the druids. Unfortunately, its defenders were not as strong as they thought and, in a weak moment, allowed a dreadful evil to creep into the land. These forces captured and defiled the sacred grove; now darkness has fallen over the ancient woods.

Nature itself has felt the corrupting power of this evil. Flocks of vampire bats, clusters of stirges, and clouds of stinging insects darken the skies. Bugbears and goblins roam the outskirts of the wood, but even they do not venture into the interior, which rumor calls home to horrors beyond imagining: flesh-eating treants, cannibal elves, undead animals, and dark unicorns with poisoned horns. All these creatures manifest the terrible cancer emanating from the once sacred grove, which now bears a terrible curse--a curse that is spreading . . .

This campaign will prove a challenge for any druidic party. The evil forces include a mix of standard woodland monsters like bugbears and green dragons, and twisted, evil versions of normally good or neutral sylvan beings like dryads and elves. The druids--possibly allied with good-aligned adventurers--do not know exactly what evil corrupted the sacred grove, so they have to move carefully at first, scouting the forest. The cursed woods resembles a dungeon: The farther the characters penetrate, the more deadly it becomes, with the power that destroyed the original Guardians waiting, spiderlike, in the center of the sacred grove.

## Druid Mini-Adventures

Try these druid-centered adventures.

- The druid is approached by a female bard who loves a Shapeshifter druid. While she worked in town, he spent too long in the form of a bear and became trapped in that shape. Worse, hunters captured him and sold him to an arena, where handlers will force him to fight other animals (or humans) to the death. The games begin in a week. The bard beseeches the PC--the nearest druid--to help her free her love.
- A dryad heard that a group of pixies is tormenting a green dragon--playing tricks

on it while invisible, stealing trinkets, and the like. The dragon can't find the ones responsible, and the dryad fears its rage will devastate the wood. Someone must tell the pixies to stop--and calm the dragon down.

- While hunting a stag in the forest, the king's youngest son was killed by a great wolf. The grief-maddened monarch has decreed that every wolf in the wood must die, enticing hunters with a bounty of 50 gp for each pelt. What should the druid do?
- A young elf and a human ranger love each other, but their parents do not approve. They run away to the woods, begging the druid to marry them. But the angry parents are not far behind . . .
- A strange blight is afflicting the forest, turning leaves a luminous white. The druid must discover this disease's secrets before all greenery disappears from the forest.
- Someone has stolen a sylph's egg! She left it only an hour to visit her nymph friend. Now, heartbroken, she asks the local druid for help. Suspects or witnesses in this forest whodunit include a flighty pseudo-dragon, a pool of nixies, a jealous aerial servant, and a drunken satyr.

## Against the Shadows

The Shadow Circle can spark adventures rife with intrigue, betrayal, and druid vs. druid conflict. Composing such an adventure requires a good understanding of the local druidic hierarchy. The DM should sketch out the personalities of the domain's NPC druids, then secretly decide which (if any) belong to the Shadow Circle. PCs can glean some information about the NPCs but will not know their secret allegiances.

Here are some adventure ideas:

**The Horde.** A rumor now circulating says druids from the Shadow Circle have set up a secret meeting with chieftains of nearby orc or barbarian tribes. Obviously they plan to mount an assault on one or more human towns or cities--but when, how, and where will they strike? As druids opposed to Shadow Circle policies, the PCs may try to find out what is going on so they can sound the alarm or nip the plan in the bud--but getting anyone to believe word of an impending invasion may prove difficult without concrete evidence, for few know the truth about the Shadow Circle.

If infiltrating the secret society seems like too great a challenge, the characters could kidnap an orc leader for questioning. And this step might be only the beginning; the PCs might learn that Shadow Circle druids have found a secret weapon--a dragon or a magical war machine . . .

**The Invitation.** The DM can send a Shadowed One to recruit a PC druid who has been especially ruthless. This isn't good news for most PCs: Few want to become the obedient pawns of the faceless, secretive organization's inner circle. However, those who refuse must foil the dreaded Shadowed Ones intending to kill uncooperative druids.

**The Traitor.** One of the PCs--a druid loyal to the Order--learns that one of the three archdruids in the domain belongs to the Shadow Circle. This inner circle member has hired assassins to kill the circle's great druid next month, rather than have to face the leader in a duel. Unfortunately, the PC's informant mysteriously dies before revealing the traitorous archdruid's identity. Can the PC uncover the traitor in time to prevent the

Shadow Circle's victory?

The characters may want to talk to those who know the three suspects and examine each archdruid's behavior for any hint of allegiance to the Shadow Circle. Of course, the real traitor may speed up the Shadow Circle's agenda if the PCs are discovered--or try to do away with the investigators!

**The Defector.** A druid defecting from the Shadow Circle has important information about the sinister organization's plans, but she will talk only to the Grand Druid, whom she knows stands outside the group. Her defection has not gone unnoticed--the dread Shadowed Ones plot her death--so the PCs must protect her on her way to an Emissary of the Grand Druid. They will face magical, monstrous, and personal attacks, as well as treachery from those they *thought* were allies.

# Chapter 5: Druidic Magic

As detailed in Chapter 3 of the *Player's Handbook* (p. 35), druids have access to priest spells in certain spheres and can use a variety of enchanted weapons, armor, and other magical items. This chapter expands the magic available to player characters in the druid class, adding many spells and magical items along with the new field of herbal magic.

## New Spells

Druids have major access to spells in the following spheres of influence: All, Animal, Elemental, Healing, Plant, Weather; they have minor access to the Divination sphere. (Note any sphere restrictions due to kit or branch.) As druids concern themselves with plants, animals, and natural phenomena more than most priests, they specialize in casting Nature-oriented spells.

Characters of any priest class have the potential to use these spells if they have access to the relevant spheres. However, DMs may make this magic available only to the druid class, on the grounds that these spells represent secret lore of the Order.

### Optional Sphere Expansions

Some existing Nature-related spells remain unavailable to druids due to sphere restrictions. To offer these spells to druids, DMs may expand the selection of spells accessible through certain spheres of magic:

- *Call woodland beings* becomes part of the Animal sphere.
- *Commune with nature* becomes part of both the Animal and Plant spheres.
- *Insect plague* becomes part of the Animal sphere.
- *Reincarnate* becomes part of the Animal sphere.

An expansion does not remove a spell from a sphere that already contains it, but merely makes the spell accessible from an additional sphere or spheres.

### First-level Spells

**Beastmask** (Illusion/Phantasm)

Sphere: Animal
Range: Touch
Components: V, S, M
Duration: 12 hours
Casting Time: 4
Area of Effect: 1 creature
Saving Throw: Neg.

*Beastmask* may affect any single person or animal, or characters may cast it on themselves. It allows the subject to take on the illusory form of a single animal species--but only that species of animal can perceive the illusion. The subject may not assume an animal form more than twice or less than one-quarter the character's size.

The almost perfect illusion the spell creates deceives the animal's sight, hearing, smell, and touch. For instance, once a character casts a "bear" illusion on a subject, bears believe that subject to be a bear, while to humans, other races, and other creatures, the subject remains the same.

Characters normally use *beastmask* to travel among or hunt a particular species. This spell lets a druid assume the guise of a caribou to move among a herd without causing them to panic. A character also could avoid being attacked by a pack of dire wolves by wearing a wolf's "mask."

*Beastmask* does not allow communication with the animal species, though it can be used with animal communication spells.

The material component is a miniature wooden mask carved to look like the animal.

**Puffball** (Alteration)

Sphere: Plant
Range: Touch
Components: V, S, M
Duration: 2 rounds/level of caster
Casting Time: 4
Area of Effect: 1 mushroom, etc.
Saving Throw: Special

A character who casts *puffball* on a normal mushroom, truffle, or toadstool (up to 6 inches in diameter) transforms the fungus into a magical puffball, which the character may drop or throw. The DM should decide what type of roll, if any, is required to hit the target (Strength, Dexterity, etc.) See the *DMG*, pgs. 62-63, for rules on grenadelike missiles.

The puffball bursts upon landing, releasing a cloud of spores 10 feet in diameter. Those caught in the spore cloud must save vs. poison or suffer an attack of coughing and choking. Victims can make no attacks and lose all Dexterity bonuses to Armor Class and saving throws. The cloud dissipates in 1d3+1 rounds; residual effects still afflict characters one round after they escape the cloud or it fades.

The spell's effects do not affect undead or similar nonbreathing creatures. If no one throws (or drops) the missile by the time its duration expires, the enchantment is lost.

The caster sprinkles the material component--a pinch of ground puffball--over the fungus to be enchanted.

**Whisperward** (Alteration)

Sphere: Guardian, Weather
Range: Touch
Components: V, S, M
Duration: Permanent until triggered
Casting Time: 4
Area of Effect: 1 item
Saving Throw: None

*Whisperward* can be cast on any single item, portal, or closure (such as a book, door, or lid). It may ward up to a 30-foot radius.

The character keys the ward to become activated (like a *magic mouth* spell) under specific conditions--such as when a certain individual enters the area or opens the warded closure. When the ward is triggered, a soft whispering breeze blows across the caster's face. The caster must stay within 1 mile per experience level of the ward to receive the warning.

The material component is the priest's holy symbol.

## Second-level Spells

**Animal Spy** (Divination)

Sphere: Animal
Range: 10 yards
Components: V, S
Duration: 1 turn/2 levels of caster
Casting Time: 5
Area of Effect: 1 animal
Saving Throw: Wizard familiars may save vs. spell to negate.

Only a normal (real-world) animal or a giant version of a normal animal species may become an animal spy. This spell enables the caster to share the animal's senses--see through the animal's eyes, hear with its ears, smell with its nose, and so on. The animal is completely unaware of the spell's effect, unless the druid warns the beast before casting. *Animal spy* grants no control over the creature. However, most casters will use it on a trained animal or one befriended via the *animal friendship* spell.

For the duration of the spell, the caster remains in a trance, unable to move or use human senses. This consequence can prove dangerous; for instance, characters attacked while using the spell cannot feel injuries to their bodies. However, at the start of any round, the caster may choose to return the animal's senses to the creature and resume

control of the human body. This decision ends the spell immediately. The spell also ends if the animal travels more than 100 yards away per level of the caster.

**Beastspite** (Enchantment/Charm)

Sphere: Animal
Range: 10 yards
Components: V, S
Duration: 1 hour/level of caster
Casting Time: 5
Area of Effect: 1 person
Saving Throw: Neg.

*Beastspite* afflicts a single person with a magical aura that induces one species of animal to hate and fear the character. The character becomes loathed by any species of normal (real-world) animal. While this range excludes monsters, it includes giant animals of the same real-world species. (For example, if *beastspite* causes bats to hate the subject, giant bats will react similarly.)

When the character comes within 30 yards of an animal from the target species, the creature will make warning signals (barks, growls, etc.). Its further reaction depends on the animal's nature.

- Aggressive animals, including all predators and most trained guard animals, attack the spell recipient.
- Nonaggressive beasts shun the character, fleeing or attacking if approached.
- Owners can restrain their domesticated animals, but the beasts show obvious distress and may become very hostile if the character tries to touch them.
- If the subject was riding when the spell took effect, the mount tries to throw off the character. The subject must make a riding proficiency check each round to stay astride and to avoid a fall if thrown off.
- An animal extremely loyal to the subject, such as a pet dog, a creature influenced by an *animal friendship* spell, a wizard's familiar, or a paladin's war horse does not become utterly hostile to its owner. Instead it notices something "wrong" about the character and acts unusually nervous.

**Fortifying Stew** (Necromancy)

Sphere: Healing
Range: Touch
Components: V, S, M
Duration: Stew retains enchantment 1 turn
Casting Time: 5
Area of Effect: 1 bowl of stew, etc./level
Saving Throw: None

Any bowl of broth, porridge, or stew the priest has concocted can become subject to *fortifying stew*. A character can enchant one bowl of stew (about 8 ounces) per

experience level. Someone must consume the enchanted meal within one turn of the casting.

Anyone partaking of an entire bowlful reaps magical benefits. First, the diner gains nourishment for an entire day from the single meal. In addition, for two hours plus one round per the caster's level, the character receives 1d4+1 temporary hit points. Any damage suffered comes off the extra hit points first. The effects of multiple helpings of *fortifying stew* are not cumulative.

For example, Snapdragon, a 7th-level druid, cooks a meaty broth, casts *fortifying stew* on it, and eats the bowlful. A roll of 2 gives her 3 extra hit points. When the spell's effects wear off just over three hours, she loses these extra points. If she suffers 5 points of damage in the meantime, she actually loses only 2 hp of her own, since 3 hp came off the extra hit points.

The material component is a vial of stock made of the first fruit of the harvest.

**Gift of Speech** (Enchantment/Charm)

Sphere: Animal
Range: 10 yards/level of caster
Components: V, S, M
Duration: 1 turn/level of caster
Casting Time: 5
Area of Effect: 1 animal
Saving Throw: None

The *gift of speech* spell grants a normal animal (or a giant version of a normal animal) the ability to speak any *one* of the languages the caster knows, whichever the caster chooses, along with the ability to understand words and simple concepts expressed in that language. The affected animal's reactions do not change, nor does its Intelligence increase. The spell has no effect if cast on a creature with an Intelligence score of less than 1.

The material component of this spell is the priest;s holy symbol.

## Third-level Spells

**Pass Without Trace, 10' Radius** (Enchantment/Charm)

Sphere: Plant
Range: 0
Components: V, S, M
Duration: 1 turn/level of caster
Casting Time: 1 round
Area of Effect: Radius 10 feet around caster
Saving Throw: None

Identical in function to *pass without trace, pass without trace, 10' radius* affects everyone within 10 feet of the caster. The effect moves with the caster, so creatures must

stay within 10 feet of the caster to continue to avoid leaving tracks. A creature who leaves the area of effect can then be tracked normally. Creatures moving into the area of effect after casting are unaffected.

The material component is a sprig of pine burned to ash. Upon casting the spell, the character scatters the powder in a circle.

**Shape Wood** (Alteration)

Sphere: Plant
Range: Touch
Components: V, S, M
Duration: Permanent
Casting Time: 1 round
Area of Effect: 9 cubic feet+1 cubic foot/level
Saving Throw: None

By means of *shape wood*, the caster can reform wood. For example, the character can cast it upon any appropriate-sized piece of wood to fashion a wooden weapon, make a rough door, or even create a crude figurine.

The spell also allows the caster to reshape an existing wooden door, perhaps to escape imprisonment. Again, the volume of the wooden object must be appropriate to the desired result and fit in the area of effect.

While a character might form a wooden coffer from a tree stump or a door from a wooden wall, the result does not bear high-quality detail. If a shaping has moving parts, there is a 30% chance they do not work.

The alteration endures permanently, at least until the wood rots or is physically destroyed. The caster blows the material component, a pinch of fine sawdust, over the wooden subject of the spell.

## Fourth-level Spells

**Detect Animal Attacker** (Divination)

Sphere: Animal
Range: Touch
Components: V, S, M
Duration: Instantaneous
Casting Time: 1 turn
Area of Effect: 1 creature
Saving Throw: None

Depending on how it is cast, *detect animal attacker* gives the druid a visual image either of a creature that injured an animal or of an animal that attacked any victim.

While casting the spell upon any victim of an attack by a natural animal (a victim whose body still bears the marks of claws, fangs, or other natural weapons), the druid touches the victim's wound. This brief touch gives the caster a fleeting vision of the

animal that caused the injuries as it looked at the time of the attack.

Likewise, a druid casting the spell upon an injured real-world animal can touch its wound and receive a vision of the person, monster, or animal that harmed it.

Even if the caster receives a vision of an unfamiliar attacker, the character usually can get an idea of its size, primary attack method, and alignment. (The druid senses good, evil, or neutrality.)

In addition, if the creature still lives and fails a saving throw vs. spell, the caster senses its current position, location, and direction of travel.

*Detect animal attacker* works only within one hour per level of the caster after the victim receives the injury in question. The spell is effective regardless of whether the attack proved fatal.

The material component is the priest's holy symbol.

**Earthmaw** (Alteration)

Sphere: Elemental (earth)
Range: 50 yards
Components: V, S, M
Duration: 1 round
Casting Time: 7
Area of Effect: 10-foot diameter circle
Saving Throw: Neg.

*Earthmaw* causes a patch of ground 10 feet in diameter to open and form a gigantic mouth with stalactite teeth. The mouth springs forth on a short serpentine neck, much like a water weird, and attacks once in a direction the caster dictates. Then it retracts into the earth and closes solidly. The site of an *earthmaw* spell appears as if the ground has been tilled recently.

The mouth can attack one large creature, two man-sized creatures, or four small-sized creatures within 10 feet of its outer edge. It can strike multiple creatures only if they remain clustered within a 10-foot diameter circle adjacent to the maw.

The *earthmaw* attacks as a monster with Hit Dice equal to the caster's level. Creatures standing on the site of the maw suffer a +3 penalty to Armor Class for purposes of this attack only. Creatures standing next to the maw suffer no AC penalty.

A successful hit inflicts 1d4 points of damage per level of the caster. An *unmodified* roll of 19 or 20 means the maw has swallowed the victim whole, burying the character 2d4 feet below ground. Victims can be dug out manually, with appropriate spells (such as *dig*), or with magical items (such as a *spade of colossal excavation*). A creature trapped underground will suffocate unless freed within a number of rounds equal to one-third its Constitution score.

*Earthmaw* may be cast on any area of loose or packed earth, sand, or vegetation-covered soil. It may be cast indoors on an earthen surface: for example, on the dirt floor of a barn or basement, but not on the marble floor of a home or temple. It may not be cast on an area containing a tree, any portion of a building, or any type of pavement.

An object present on the site of the maw (such as a campfire or a tent, etc.) counts as a creature of that object's size in attacks.

The material component is a tooth from any predatory creature.

**Hunger** (Alteration)

Sphere: Animal, Plant
Range: 10 yards
Components: V, S, M
Duration: 1 day/level of caster
Casting Time: 7
Area of Effect: 1 person
Saving Throw: Neg.

Those affected by *hunger* no longer gain sustenance from food. No matter how much they eat, they still feel hungry. If the spell did not end, victims eventually would starve, visibly wasting away.

After one day under the spell's effect, victims' concentration suffers (due to their preoccupation with their constant hungry feeling), causing them to suffer a -2 penalty to all ability and proficiency checks. On the eighth day without food, victims who have been maintaining normal activity levels lose 1 Strength point; on the ninth day, they lose 1 Constitution point. This alternating pattern continues until one of the character's ability scores falls to 3; at this point, the character becomes comatose. If a score reaches 0 before the *hunger* spell ends, the recipient dies. The victim regains lost points after the spell ends at a rate of 1 Strength and 1 Constitution point per day.

When casting the spell, the character secretly whispers a particular type of food; by eating the specified food, the victim breaks the spell. It must be a single, natural food (such as lamb, honey, or an apple) but can be exotic (dragon meat) as long as the caster has tasted it personally at some point.

*Hunger* cannot be dispelled, but can be broken by the *remove curse* spell. Failing all else, a sufferer must wait to find relief until the spell's duration elapses.

The spell's material component is a pinch of the food that can end the spell.

**Knurl** (Alteration)

Sphere: Plant
Range: 5 yards/level of caster
Components: V, S, M
Duration: 1 turn/level of caster
Casting Time: 7
Area of Effect: 1 person
Saving Throw: Neg.

Casting a *knurl* spell transforms a creature's arm into a tree branch of the same thickness, covered with bark and twigs. The new limb possesses neither elbow nor wrist joints not even a hand. The "arm" remains attached to the shoulder. The spell's recipient can use it as a club but not to manipulate tools, weapons, or spell components.

The caster chooses which of the recipient's arms to affect. A character could use

multiple *knurl* spells to transform both arms of a humanoid. The arm is treated for all purposes as a tree branch: It becomes subject to fire, wood-altering spells, and tree diseases. *Dispel magic* ends the spell's effects.

The material component is a small twig.

**Needlestorm** (Alteration)

Sphere: Plant
Range: 60 yards
Components: V, S, M
Duration: Instantaneous
Casting Time: 7
Area of Effect: 1 tree or plant
Saving Throw: Save vs. spell for half damage

A favorite of cold-forest and desert druids, *needlestorm* causes the spines on any pine tree or similar needle-bearing plant to spray out in a deadly barrage. The shower of needles has a radius of approximately 1 foot for every 2 feet of the subject plant's height.

Everyone within this area suffers one attack, which inflicts 1d12 points of damage for every three full levels the caster has achieved. Thus, a spruce tree enchanted by a 7th-level character attacks with a THAC0 of 16 and inflicts 2d12 points of damage.

The material component is a spine from a needle-bearing tree or plant.

## Fifth-level Spells

**Cloudscape** (Alteration)

Sphere: Weather
Range: 120 yards
Components: V, S
Duration: 3 turns/level of caster
Casting Time: 8
Area of Effect: 1,000 cubic feet/level of caster
Saving Throw: None

A character can cast *cloudscape* on a single cloud or part of a cloud bank, usually from a nearby mountaintop or while flying. It causes 1,000 cubic feet of cloud per level of the caster to become solid enough to support any weight. The solidified clouds remain airborne and feel like a thick carpet.

A creature that falls onto the magically strengthened cloud sustains falling damage per the *PH*, p. 104. An animal or individual that flies into the solidified cloud falls, stunned, for a round and must make a successful Dexterity check to recover. If a creature is flying through a cloud at the moment it becomes solidified, it may make a saving throw vs. petrification. Those who succeed escape the cloud in time. Creatures that fail the save become trapped as the cloud solidifies around them. However, as the cloud is porous, they can continue to breathe until the spell's duration elapses.

The solidified cloud itself continues to drift with the wind as usual. While the caster cannot use this particular spell to propel the cloud at all, a *control winds* spell can summon a great gust of air to turn the cloudscape into a unique flying conveyance easily enough.

**Nature's Charm** (Enchantment/Charm)

Sphere: Elemental (earth, water)
Range: Touch
Components: V, S, M
Duration: 2 hours/level of caster
Casting Time: 1 round
Area of Effect: 15-foot radius/level of caster
Saving Throw: Creatures native to the area of effect are not affected.

*Nature's charm* causes a particular place to exert a special fascination beyond mere beauty to anyone entering the area except the spellcaster.

This spell must target a site of notable natural splendor that possesses both edible plants and fresh water. The spot may not be larger than the spell's area of effect. For instance, a 12th-level druid could cast this spell on a forest glade up to 360 feet across, with flowers and fruit-bearing trees centered around a waterfall.

Anyone coming upon the enchanted region must save vs. spell; those who fail invariably make up excuses to remain there long after they should have left. They say they want only to bathe, rest, admire the beauty a bit longer, eat the berries or fruit, paint a picture of the area, or defend the spot jealously from others.

Whatever the reason, those who fall victim to the enchantment forcefully resist all attempts to make them leave until the spell's duration ends.

The spell's material component is the druid's holy symbol.

**Strengthen Stone** (Alteration)

Sphere: Elemental (earth)
Range: 10 yards
Components: V, S, M
Duration: Permanent
Casting Time: 1 hour
Area of Effect: 1 building or wall
Saving Throw: None

*Strengthen stone* can reinforce any stone construction (house, tower, wall segment, aqueduct, etc.), against physical damage. The DM adds +4 to the structure's saving throw against any kind of damage, from siege engines to natural earthquakes. The stone object gains a saving throw vs. the *earthquake* spell. (See the *PH*, p. 233.) The spell may be cast only once on any stone object.

If a character casts this spell on a stone golem or other animated stone being (like one created by animate rock), the creature receives a -1 bonus to its Armor Class and

adds a +1 bonus to its saving throws for the duration of the spell. Strengthen stone has no effect on earth elementals or galeb duhr.

The material component, a diamond chip worth at least 500 gp, must be crushed and sprinkled on the construction.

**Thornwrack** (Alteration)

Sphere: Plant
Range: Touch
Components: V, S
Duration: 1 thorn/level of caster
Casting Time: 8
Area of Effect: 1 person
Saving Throw: Neg.

*Thornwrack* causes long, painful thorns to grow out of the spell recipient's flesh, piercing the skin from the inside. One thorn appears each round, inflicting 1d3 points of damage, until all the thorns have appeared. When the number of thorns exceeds the subject's experience level or HD, a victim still conscious becomes immobilized by the pain, unable to take any action.

One round after the last thorn erupts from the victim's flesh, the first one disappears. The thorns continue receding at a rate of one per turn. Immobilized subjects can move again once the number of thorns falls below their HD or experience level. For instance, say the body of a 4th-level character has seven thorns. After four turns had passed, only three thorns would remain, so the victim would no longer be immobile.

*Cure* spells can restore hit points but do not eliminate the thorns. *Dispel magic* will end the spell but prevents existing thorns from receding. A *heal* spell cancels the *thornwrack*, eliminates all existing thorns, and cures all damage. Without the benefit of magical remedies, the spell ends when the last thorn has receded.

## Sixth-level Spells

**Earthwrack** (Alteration)

Sphere: Necromantic, Plant
Range: 20 yards/level of caster
Components: V, S, M
Duration: 2d4+10 years
Casting Time: 1 round
Area of Effect: 30-foot radius/level of caster
Saving Throw: None

This spell causes an area of soil to become barren and blighted. Healthy plants wither and die within 1d4 days of casting. No seed planted there will grow for the duration of the spell. Plant-based creatures entering the despoiled area can see the ruin and feel an intense "wrongness" within the soil. Each round they remain within the area,

they suffer 1d4 points of damage.

The blight can be cured using a *limited wish*, a *wish*, or by casting a *remove curse* spell (at the 12th level of experience) and a plant growth spell simultaneously.

Most druids consider *earthwrack* an abomination, although some Shadow Circle druids use it as last-ditch "scorched earth" vengeance against an unruly hamlet.

The material component is the priest's holy symbol.

**Ivy Siege** (Enchantment)

Sphere: Plant
Range: 90 yards
Components: V, S, M
Duration: 6 turns
Casting Time: 9
Area of Effect: 1 building or similar structure
Saving Throw: Special

The *ivy siege* spell must be cast upon a stone or brick building constructed upon the earth; flying castles and the like remain unaffected. Immediately after casting, ivy begins to grow at a fantastic rate, climbing from the ground up the building's walls. At the end of one turn, the ivy has climbed the walls. At the end of the second turn, green creepers have covered the structure. On the third turn, the ivy has deepened to a black-green and begins to squeeze the building.

Starting on the third turn and every turn thereafter, the building must make a saving throw vs. siege damage, as if attacked by a small catapult (*DMG*, p. 76). Two cubic feet of the building crumbles away for each point by which the saving throw misses each turn. This cycle continues until the spell's duration expires or the building is destroyed. The ivy rots away instantly at the spell's end.

A druid can cast only one *ivy siege* per building at a time. After the ivy has rotted away, the druid may cast the spell on the same building again. However, multiple druids can cast several *ivy siege* spells on the same building. In the case of a large, interconnected series of buildings (like a castle), each casting affects only a single tower, keep, or wall segment, to a maximum of 1,000 cubic feet per level of the caster.

The DM may choose to prohibit arctic and desert druids from using this spell if they are not familiar with ivy.

The material component is an ivy leaf.

## Seventh-level Spells

**Tree Spirit** (Necromancy)

Sphere: Plant
Range: Touch
Components: V, S
Duration: Permanent
Casting Time: 1 turn

Area of Effect: 1 tree
Saving Throw: None

*Tree spirit* permanently links the soul of the caster with a tree, usually chosen carefully for its health, vigor, and remote environment. Casting this spell joins the life force of the druid with that of the tree; as long as the tree lives, the caster ages at one-tenth the normal rate. (Because the spell causes the tree to devote all its energy to maintaining health rather than growth, it always remains exactly the size it was at the time of casting.) Moreover, the caster's spirit merges with the tree at the character's death. No form of reincarnation or resurrection (except a *wish*) on the character's body will work unless it lies within 10 feet of the tree.

One year after the caster dies, the druid's spirit animates the tree as a treant. (DMs should roll up treant statistics for the tree at the time the spell is cast, to determine the tree's Armor Class, Hit Dice, etc.) The chosen tree must be of treant height; the exact size determines the size of the new treant, which possesses the caster's memories and personality but has no granted powers or spellcasting ability. It must communicate as a treant.

The DM decides whether to consider this treant an NPC or allow the player to control it. (DMs should use the guidelines that apply to PCs who become lycanthropes or undead.)

However, when a druid uses *tree spirit* to link with a tree, the character suffers any physical damage inflicted on the tree. For instance, if someone hacks at the tree with an axe and causes 4 points of damage, the caster also loses 4 hit points; the druid knows the tree has been harmed, but does not know the nature of the injury.

If the tree dies but does not sustain enough damage to kill the caster, the character feels stunned for 1d6 rounds and must make a successful system shock roll to avoid death. Spells that heal the druid do not affect the tree.

Damage to the caster does not affect the tree, as the extra energy the tree expends on strength and health makes any damage the player sustains negligible to the tree. However, it's usually in the druid's best interest to have an animal friend or two guard the tree.

In addition, the druid should choose the tree carefully; if the surrounding land is cleared for construction work or lumber before the druid's prolonged life span finally ends, the character is in trouble.

Casting *tree spirit* first requires a full month's preparation. The druid lives near the tree during this time of prayer and mediation. Then the character conducts a private bonding ceremony at the height of a solstice. This spell often is cast by ancient druids, who wish to preserve their wisdom or make sure their groves remain defended even after their death.

**Unwilling Wood** (Enchantment/Charm)

Sphere: Plant
Range: 5 yards/level of caster
Components: V, S, M
Duration: Permanent

Casting Time: 1 round
Area of Effect: 10-yard radius
Saving Throw: Special

A caster can transform one or more living creatures within a 10-yard radius into *unwilling wood*, causing them to sprout roots, branches, and leaves. The victims become trees of a type native to the region and of the characters' age before the transformation. The spell works only if cast on beings occupying ground that could support a tree; recipients flying or suspended in water at the time of casting remain unaffected.

This spell can mutate a number of creatures equal in total Hit Dice (or levels) to the caster's level within the area of effect, of course. If this area holds a group of creatures with Hit Dice (or levels) totaling a number greater than the caster's experience level, the character may decide the order in which the creatures become affected.

For instance, say a 14th-level druid casts *unwilling wood* into a target area containing a giant with 12 Hit Dice and two 3rd-level warriors. The druid can transform either the giant or two warriors, but not all three. "Leftover" Hit Dice or levels are lost.

Each creature affected may attempt to save vs. polymorph. The spell mutates all those failing their saving throw, along with any items they carry. A new tree has a height of 5 feet per level (or Hit Die) of the victim. The effect is permanent; a person transformed into a tree ages as a tree and dies as a tree. However, affected characters retain awareness, memories, personality, and intelligence. Only damage severe enough to kill the tree can kill an *unwilling wood* victim.

Tree-characters can return to normal if a spellcaster of greater level than the original caster uses *remove curse*. The original caster can release a transformed entity at will.

The material components are a bit of tree root and the priest's holy symbol.

## New Magical Items

Druid characters can use the magical items generally permitted priests except written ones, such as scrolls or books. They can wear magical armor only when it is natural, such as wooden shields. Any magical weapon a druid uses must be of a type permitted to priests, as well as by the character's druidic kit and branch.

This section contains new magical items that fit the druid's role of Nature priest, keeper of the balance, and dweller in the country. In addition, a small number of the items are designed for use against druids.

Although this listing contains some powerful items, many are fairly low-key. Items like the *bountiful spade*, or *seeds of plenty* represent the kind of magical item a high-level character would create as a gift for a favored farmer or lord. Druids might offer cursed items like the *necklace of beast speech* to someone as punishment for wronging the Order or the land.

### Creating Magical Items

The normal rules for priests creating magical items (*DMG* pgs. 83-88) apply to druids as well. In almost all cases, gathering the rare, unique, or impossible components and combining them properly remains more important than purchasing expensive

materials; quest and ritual take precedence over the depth of the druid's purse.

The personal touch is vital: Druids must make the vessels for enchantment using their nonweapon proficiencies. Characters needn't be expert artisans, but they cannot create a magical scimitar merely by enchanting a weapon someone else has made. As a result, a druid who completes an arduous series of tasks to collect the necessary components may not actually have to spend any money to build the item, although major magical items require components easily worth the 1,000 to 10,000 gp noted in the *DMG* (p. 87).

Priest characters must spend up to three weeks meditating, fasting, and purifying themselves before they can enchant an item. Druids must begin this process at a sacred time, like an equinox, for the enchantment to have any chance of success. Druids purify the vessel and pray for its consecration not at an altar, but at their grove.

## Potions

**Potion of Plant Health.** This potion vitalizes a living plant when poured upon its roots. It cures the plant's illnesses and keeps it free from natural parasites and disease for a year. During this time, the plant grows 50% better than normal, and 10% better than normal the next year. Edible fruit, berries, or sap from the plant taste unusually succulent, while flowering plants bloom exceptionally well. If a vegetable monster such as a treant or shambling mound drinks this potion, treat it as a *potion of extra-healing.* XP value: 400.

**Sap of the Eldest Tree.** Usually found in an earthen flask, this potion resembles thick corn or maple syrup. Characters who drink the sap (or bake it in a cake and eat it) will not age a day for the next 10 years! However, unlike a *longevity* potion, it does not make the drinker any younger. A person must consume the entire potion to gain the full benefit; if five characters share the syrup, each stops aging for two years. Additional doses are not cumulative--later imbibings supplant earlier ones. XP value: 500.

## Wands and Staves

**Wand of Shape Binding.** Characters often use this item *against* druids. When hit by its multicolored beam (projected up to 80 feet), beings with the ability to shapechange or polymorph must save vs. wands at a -3 penalty. Victims who fail cannot voluntarily alter shape for 2d10 turns. Attempts to shift shape using spells, magical items, or innate powers result in failure. A use of this rechargeable wand consumes one charge per 4 HD or levels of the subject. XP value: 800.

**Wanderer's Staff.** This resembles a stout oaken staff, which radiates magic and, in fact, functions as a *quarterstaff +1*. However, its primary power is locomotion. If carried as a walking stick, users hiking at a steady pace do not tire or need sleep. Any time spent walking counts as sleep for the purpose of resting the character. If desired, the character can walk night and day, taking only brief breaks for food, drink, etc. XP value: 2,000.

## Rings

**Ring of the Hierophant.** Only druids can utilize this ring, which enables characters to speak the language of elementals. This, the ring's lesser power, uses up no charges.

More impressively, a druid wearing the ring may shapechange into an elemental. Druids in elemental form retain their own hit points and saving throws, but otherwise possess the characteristics of a 12 HD elemental. The transformation functions just like a druid's shapechanging power this rechargeable ring even restores hit points when the druid changes back. However, transformations last only for a maximum of one hour. Each elemental form (air, fire, earth, and water) may be assumed only once per month. XP value: 4,000.

## Weapons

**Lunar Sickle.** This weapon, a sickle crafted from silver and bound to the moon, may have been forged for druids as a symbol of the cyclic nature of time. The sickle boasts its greatest strength during the waxing moon. It has a +2 bonus from the new moon to half moon, a +3 bonus from the half moon to full moon, and +4 during the full moon. When the moon begins to wane, the *lunar sickle* drops to a +1 bonus. During the dark of the moon it loses all magical bonuses; until the new moon rises, it no longer affects creatures that can be hit only by magical weapons. XP value: 1,500.

**Sickle of the Harvest.** This sickle appears to be a normal farm implement, albeit of superior quality. If used in combat, it functions as a +1 weapon. However, its real power is as a magical harvesting tool.

Anyone who grasps the sickle and speaks in the secret language of the druids can order the sickle to harvest a field on its own. When so commanded, the sickle takes to the air and harvests up to half an acre of grain per turn. It can accept precise orders, such as, "Cut down all stalks of ripe grain within a mile, save for Farmer Dowd's field."

The sickle continues working until: three hours pass; its owner orders it to stop; or it moves a mile from its owner. Characters can also halt the sickle by destroying it or snatching it out of the air. Anyone trying to grab the sickle must make a successful attack roll against AC -4. Those who fail suffer 1d6+1 points of damage; success means a character grabs it and stops the harvesting.

Treat attacks on the sickle as attacks against a *sword of dancing*; the sickle, while physically unstoppable, can be affected by failing a saving roll against a spell such as *fireball, lightning bolt*, or *transmute metal to wood*.
XP value: 1,300.

**Heartwood Cudgel.** This club, made from the heartwood of an oak, is a *club +1--club +2* in a druid's hands. XP value: 500.

**Mistletoe Dart.** The body and tip of this dart are fashioned from enchanted mistletoe. Magical armor, shields, or rings give no bonus protection against it; for example, a person wearing *chain mail +4* would have AC 5, not AC 1. Darts, while not innately poisonous, can be coated with any venom. Characters usually find these darts in groups of 2 to 8 (2d4). XP value: 50 each.

## Armor

**Antlered Helm.** This metal-reinforced leather helm, adorned with a stag's antlers, allows the wearer to run like a deer, with a base movement rate of 18. Moreover, stags and deer see, hear, and smell wearers of an *antlered helm* as if they were stags, and react accordingly. This power makes the item very useful for hunting. XP value: 800.

## Miscellaneous Magic

**Bountiful Spade.** Characters who use this enchanted farm implement to turn over the earth prior to planting a field receive a +3 bonus on their agriculture proficiency check for that year. XP value: 500.

**Cloak of the Beasts.** This plain brown cloak bears patches of many different animal skins. A character who speaks a word of command while wearing it instantly becomes transformed into a random animal for 1d6 hours. The cloak and the person's other clothing become part of the new form.

The type of animal varies with each use of the cloak's power--roll 1d100 on the *reincarnate* spell table (*PH,* p. 235), rerolling any nonanimal result. The nature of the change is identical to a druidic shapechange, except that wearers have no control over which animal form they take on and cannot change back until the enchantment wears off.

Upon returning to normal, the wearer regains 10% to 60% of any lost hit points (10d6). The cloak cannot be used again until 12 hours pass. XP value: 1,000.

**Druid's Yoke**. While this item looks like an ox yoke, it is small enough to fit a donkey or human. Worn by an animal, it offers no benefit. If fastened onto a human, demihuman, or humanoid, it transforms the wearer into a full-sized ox; the yoke expands to fit. The ox retains the wearer's mind, but cannot speak or use spells and becomes vulnerable to magic that affects normal animals. The effect lasts as long as the yoke stays on the wearer can't remove it, but a friendly humanoid can. A character reverts back to normal immediately after the yoke comes off. Wearers killed in ox form die; their bodies revert back to humanoid form once the yoke is removed.
XP value: 2,000.

**Herbmaster's Pouch.** This small bag of finely woven grass keeps herbs--including herbal magical ingredients--as fresh as if newly harvested. The -2 penalty for using preserved herbs to create magical herbal brews does not apply to ingredients kept in an *herbmaster's pouch*. XP value: 500.

**Necklace of Beast Speech.** This gold choker bears the image of a particular beast. To determine what kind, roll on the *reincarnate* table (*PH*, p. 235), rerolling any result that's not an animal.

Anyone who dons the device loses all power of speech, except with the animal species on the necklace. The character cannot remove the choker without a wish spell; a carefully worded wish might allow a wearer to retain the necklace and beast speech and

regain human speech. XP value: 0.

**Seeds of the Hedge.** Usually found in a leather bag or pouch, these seeds resemble flower or grass seeds. A pinch of *hedge seed* sprinkled on earth or grass instantly causes a thorny hedge to grow. The user can decide to make this 10-foot - 10-foot - 5-foot hedge 5 feet long, 5 feet high, or 5 feet wide.

Creatures caught in the hedge's growth or trying to break through the hedge suffer 8 points of damage plus additional points equal to their Armor Class (excluding Dexterity adjustments). It takes two turns to safely cut through each 5-foot thickness. Normal fire does not harm it, but magical fire sets it ablaze in one turn, creating a temporary *wall of fire* effect (as if cast by a 9th-level wizard) of the same size. One bag of seeds sows three hedges. XP value: 600.

**Seeds of Plenty.** An ample sack holds magical seeds of the crop most important to local farmers enough to sow a single large field. The only thing unusual about the seed is that it radiates magic (noticeable if a character checks). Fields sown with this seed produce superior crops: exceptionally large plants that prove resistant to disease.

*Seeds of plenty* double a normal harvest, increasing a typical farm family's income 50% to 100% for the year. Furthermore, products made from the crop are superior. Porridge or bread made from a grain harvest prove especially tasty and nutritious; clothes made from flax crops have exceptionally high quality; and so on. For this reason, a known sack of *seeds of plenty* sells for up to 2,000 gp.
XP value: 200 per sack.

**Seeds of Doom.** A sack holding these seeds appears identical to one filled with *seeds of plenty*. However, sowing a field with these seeds leads to disaster. The night after the planting, a dense field of noxious weeds springs up, each weed 5 to 7 feet high. Anyone less than giant size passing through the weeds can move only 10 feet per round. One turn after spending any time in the weeds, those not fully covered in armor (generally, anyone not wearing plate mail or better) must save vs. poison. Those who fail instantly develop a painful rash that lasts 2d6 days (-2 penalty to all attack rolls, as well as attribute and proficiency checks; -4 penalty if wearing armor or tight clothing).

Weeds set ablaze do burn, producing a foul stench that lasts 2d6 turns (equivalent to a *stinking cloud* spell over the field) and leaves a residual unpleasant smell for 2d6 days. Furthermore, the black ash left behind poisons the field so nothing will grow there for 2d6 years. Uprooting the weeds manually requires 100 people working for a week, due to the weeds' fast growth. XP value: 0.

**Serpent Seeds**. Normally available in a packet of 1d3 seeds, a *serpent seed* springs up into a 20-foot tree one round after being planted in an inch of dirt, watered, and told to grow in the druids' secret language. A serpent tree has no branches; its limbs are 1d8 brown serpents with green eyes, barklike skin, and wooden fangs dripping with poisonous white sap.

While the tree cannot move, its branches can reach out up to 20 feet and follow the druid's orders. Each serpent-branch's bite is poisonous. A person who fails to save vs. poison becomes incapacitated within one turn; the character does not die, but slowly

becomes transformed into a "serpent of the tree," a nonpoisonous version of the branch-snakes.

Despite its barky appearance, this new creature resembles nonpoisonous snakes of the region in appetite and attacks. While serpents of the tree are not attached to the serpent tree, they remain subject to the druid's orders, just like the tree itself.

A victim can be restored with a *cure serious wounds* or *heal* spell administered within one day of the bite. On the second day, the transformation to a serpent of the tree is nearly complete; only a *wish* can return the victim to normal then.

The serpent tree remains permanently where planted and stays loyal to its maker as long as it exists. XP value: 1,000 per seed.

Serpent tree: Int Low (5); AL N; AC 6; MV 0; HD 6+6; THAC0 15; #AT 1/limb; Dmg 1d4/limb; SA poison changes victims into serpents of the tree; ML 8; SZ H; XP 875.

Serpent of the tree: Int Animal (1); AL N; AC 5; MV 15; HD 2+1; THAC0 19; #AT 1; Dmg 1; ML 8; SZ S (5 ft.); XP 90.

**Stone of Lost Ways.** This pebble might be mistaken for any other magical stone. However, those who carry it through trackless wilderness (not following a road or path) increase their chances of becoming hopelessly lost. Having a character with a *stone of lost ways* in a party adds 20% to the group's chance of becoming lost, in any terrain. (See Table 81 in the *DMG*, p. 128.) Furthermore, two checks instead of the normal one are needed, one for each half-day's travel. The stone affects only characters traveling on the ground. XP value: 0.

**Swarm Queen's Crown.** This dread item resembles a gold tiara set with a piece of amber encasing an insect--usually a queen bee. The crown has a value of 2,000 gp.

With a command word, a user's body mutates into a human-shaped mass of stinging, venomous wasps, bees, and spiders: a miniature, living *creeping doom*. The user's new "body" contains 10 insects per hit point. For example, a character with 10 hit points becomes a mass of 100 insects.

The user attacks by touching someone (a normal attack roll). After a hit, the user decides how many insects sting or bite the victim. Either 10, 20, or 30 insects may swarm over a victim per attack; for every 10 insects that hit, the victim loses 1d10 hit points, and the wearer of the crown loses 1 hp--each insect dies after its attack. So, a character may inflict up to 3d10 points of damage per attack at the cost of 3 hp.

While in insect form, the user has a move of 3, but can climb walls and ceilings. The user cannot employ any weapons, spells, magical items, tools, or armor. The swarm, which has AC 0, suffers no damage from piercing weapons (P), 1 point of damage from slashing weapons (S), and half damage from bludgeoning weapons (B). Magical bonuses and fire inflict full damage. Every point of damage to the wearer kills 10 insects. The user remains transformed as long as desired, but the crown can be used only once per day. XP value: 4,000.

**Treeship.** A living tree shaped like a currach (*PH,* p. 71), a *treeship* unites the magic of druids and the craftsmanship of elves. The mast is a magical tree, from which hang

branchlike rigging and leaf-sails. The roots form the hull's ribs, covered by thick bark instead of hide. A ship carries up to eight people and 5 tons of cargo. While the vessel cannot sail by itself, a crew finds it quite seaworthy and swift (seaworthiness 80%, base move 3/6, emergency move 12).

*Treeships* can sail only in freshwater lakes, rivers, and seas; salt water poisons them within a week. When beached on grass or soil (not sand) for more than a week, they grow additional roots into the soil and require 1d6 days of pruning to become seaworthy again. XP value: 6,000.

## Herbal Magic

A character with the herbalist proficiency may use herbs as an adjunct to the healing skill, as explained in Chapter 5 of the *PH* (p. 59). However, some druids possess exceptional herb lore, which enables them to produce magical herbal brews. Druids who devote at least three slots to the herbalism proficiency can create these brews.

An *herbal brew* is a concoction of several herbs (and sometimes fungi or tree bark) that produces exotic effects. The name of a brew does not refer to the herbs in it, but to its effects. Herbal brews require no magical plants; power comes from the combination of herbs and the secret techniques herbalist druids use in each stage of preparation.

### Locating the Herbs

Finding an herbal brew's ingredients requires first locating the right place to look. The druid must search in the proper terrain for the time indicated in the brew's listing (starting on p. 105). Then, make an herbalism proficiency check, applying the brew's search modifier and a -4 penalty for snow-covered ground or darkness, if applicable.

Success means the druid locates enough herbs to produce one brew; failure means the character finds none. In either case, additional searches may be made, though a druid really should search only once per square mile of appropriate terrain. Repeated searches of an area carry a cumulative -2 penalty--there may be nothing there to find!

### Some Common Herbs

Druids find these herbs especially useful in their magic. Others may be included, real or unique to your own campaign world.

| | |
|---|---|
| Angelica root | Mustard seed |
| Anise seed | Myrrh gum |
| Cassia buds | Peppermint leaf |
| Chamomile flowers | Poppy seeds |
| Cloves | Sage leaf |
| Damiana leaf | Sarsaparilla root |
| Elder flowers | Thyme leaf |
| Gentian root | Valerian root |
| Marjoram leaf | Yerba mate leaf |

## Preserving Herbal Ingredients

Most herbs work best while fresh, but druids may wish to store some for future use rather than immediately turning them into brews. Preserving ingredients by drying, powdering, and packing the herbs takes six hours per set of ingredients (enough for one brew) and requires a successful herbalism check.

The DM makes this roll, informing the player whether the ingredients have spoiled only when the druid tries to use them in a brew. A successful roll ensures the herbs stay fresh while in a waterproof container. Failure indicates they will spoil in 1d6 days.

## Making an Herbal Brew

To create an herbal brew, the druid must have the appropriate ingredients, either fresh or preserved. The brewing process requires a quiet place that fosters deep concentration. It involves both physical work (chopping and cleaning herbs, mixing the ingredients in proper portions, steaming them, etc.) and ritual gestures and prayer. As with granted powers and spells, if the druid has not remained faithful to the Order, the herbs fail to take on their magical properties.

After preparing the concoction as long as the brew's description requires, the druid rolls another herbalism proficiency check, using the modifiers shown. In addition, a -2 modifier applies if the druid used preserved rather than fresh herbs. A successful check means the druid creates the brew. Failure means the druid ruins the ingredients; a roll of 19 or 20 always fails.

A druid with several sets of ingredients for the same herbal brew may mix multiple batches at the same time. If the final proficiency check succeeds, the druid concocts all the batches; if it fails, the ingredients all go to waste.

## Types of Herbal Brews

The next several pages offer descriptions of various herbal brews. Feel free to create new ones for your own druid characters.

Each brew entry includes these details:

**Terrain** tells where to find ingredients for the brew, as well as any special notes (gather only at night, etc.).

**Search Time/Modifier** indicates how many hours a druid must search for the brew's ingredients and offers a modifier to the herbalism proficiency check that determines whether the druid finds them.

**Preparation Time/Modifier** suggests how many hours it takes the druid to prepare the brew and offers a modifier to the herbalism proficiency check needed for successful brewing.

**Application** tells how to apply the brew: either as a tea, ointment, poultice, or vapor.

A *tea* consists of a mix of broken or crushed dried herbs infused into water. The rules for drinking potions apply to herbal teas, which keep indefinitely in dry form.

An *ointment* is a brew mixed with lard, beeswax, lanolin, or another similar base and rubbed onto skin. Treat it as a magical oil.

A *poultice* consists of a damp herbal brew bandaged onto a wound or area of skin. The contents of the poultice soaks into the skin gradually. Applying a poultice takes two rounds; it can be applied only to an unresisting or grappled subject.

A *vapor*, a mixture intended to be inhaled rather than drunk, usually affects an area. The dry ingredients must be stirred into boiling water so the brew's recipient can breathe in the steam. Administration requires two rounds and a source of hot water.

**Effects** describes what the brew does.

**Save** explains what kind of saving throw, if any, can resist the brew's effects. Most saving throws are against poison even if a brew is not actually deadly.

**Crawlbane**

**Terrain:** Swamp and deep forest
**Search Time/Modifier:** 6/-1
**Preparation Time/Modifier:** 2/-1
**Application:** Ointment
**Effects:** This ointment strongly repels insects. Anyone covered head to foot in it remains unaffected by normal insects, even those summoned by spells such as *creeping doom* and *insect plague*. Giant insects still may attack the character, but do so at a -3 penalty, due to their revulsion.
**Save:** None

**Darkweed**

**Terrain:** Desert oasis
**Search Time/Modifier:** 6/-2
**Preparation Time/Modifier:** 10/-4
**Application:** Ointment
**Effects:** A character who smears this ointment over both eyes becomes blind within two rounds. However, the character can see invisible, astral, ethereal, or illusory objects as if they were real and fully visible.
**Save:** Neg. if save vs. spell

**Deathmock**

**Terrain:** Mountain slopes
**Search Time/Modifier:** 4/-3
**Preparation Time/Modifier:** 6/-3
**Application:** Tea
**Effects:** *Deathmock* causes drinkers to fall into a cataleptic trance; characters display muscle rigidity and do not appear to breathe or have a heartbeat. While injuries cause them little bleeding, they otherwise suffer normal damage. Those under the influence of this tea sleep for 2d4 days, during which time they need no food or water. They need only one-twentieth the air unaffected people do and can survive freezing temperature.
**Save:** Neg. if save vs. poison

**Fiendflower**

**Terrain:** Deep forest or jungle
**Search Time/Modifier:** 12/-4

**Preparation Time/Modifier:** 8/-3
**Application:** Tea
**Effects:** Characters who drink this bitter tea see horrifying visions that drive them temporarily mad. After 1d20 turns, drinkers suffer an episode of 2d6 minutes, during which they turn enraged, violent, and homicidal; such a PC should be played by the DM. Afterward, drinkers cannot recall what happened during the episode, which recurs once per day (at irregular intervals) for the next 2d4 days. A *neutralize poison* spell ends *fiendflower's* effects.
**Save:** Neg. if save vs. spell

**Ghostroot**
**Terrain:** Old graveyards at night
**Search Time/Modifier:** 8/-4
**Preparation Time/Modifier:** 4/-6
**Application:** Vapor
**Effects:** This mixture's luminous vapors repel undead. Any undead attempting to draw near must save vs. spell. Failure prevents them from approaching within 10 feet of the steaming brew. Success allows them to ignore its effects; once they save, they remain immune to the brew for the rest of the day. The vapors last for one turn.
**Save:** Neg. if save vs. spell

**Nevermind**
**Terrain:** Forest clearings or caverns
**Search Time/Modifier:** 8/-3
**Preparation Time/Modifier:** 8/-7
**Application:** Tea
**Effects:** Characters develop amnesia one minute after drinking this tea, permanently forgetting all events since they last slept.
**Save:** Neg. if save vs. spell

**Hushthorn**
**Terrain:** Forests at night
**Search Time/Modifier:** 4/-3
Preparation Time/Modifier: 4/-3
**Application:** Tea
**Effects:** This tea causes drinkers to fall into a deep, natural sleep, from which they cannot be awakened for 2d10+13 hours.
**Save:** Neg. if save vs. poison

**Snakesalve**
**Terrain:** Jungle
**Search Time/Modifier:** 6/-1
**Preparation Time/Modifier:** 2/-1
**Application:** Poultice
**Effects:** If applied to a living snake-bite victim, this poultice neutralizes the poison.
**Save:** None

**Springberry**

**Terrain:** Moonlit spring meadows
**Search Time/Modifier:** 8/-3
**Preparation Time/Modifier:** 8/-7
**Application:** Tea
**Effects:** Within an hour of drinking the tea, characters fall in love with the first person of the opposite sex they see. The drinkers, while not *charmed*, act besotted and devote all efforts to wooing their love. The effects last for 2d4 days unless a player rolled a 20 on the save; in that case they are permanent.
**Save:** Neg. if save vs. spell

**Wintersalve**

**Terrain:** Mountain slopes or tundra
**Search Time/Modifier:** 6/-3
**Preparation Time/Modifier:** 6/-3
**Application:** Ointment
**Effects:** This ointment, when smeared over exposed body parts, provides the same protection against cold that a heavy fur coat would, but without the encumbrance. Combined with winter clothing, it allows for survival below zero and gives a +1 bonus to saving throws against cold-based attacks.
**Save:** None

# Chapter 6: Sacred Groves

When not adventuring, druids prefer to live near a *sacred grove* and worship there as well. While the term "sacred grove" usually calls to mind a stand of trees within a forest, here it refers to any sacred place where druids worship Nature. All sacred groves are places of great natural beauty--and sometimes magical power. Areas with a history of druidic veneration tend to acquire wondrous abilities from their prolonged contact with druidic magic and rites.

Sometimes several druids share a single sacred grove. This arrangement enables them to take turns adventuring or traveling, leaving someone always on hand to protect and tend the grove. Druids occupying a sacred grove singly have to arrange for its safety before departing: setting various wards and traps, or arranging for allies to protect it in the druid's absence.

## Features of a Sacred Grove

Each branch of the druidic order prefers certain sites for sacred groves. These include the woodland groves of the forest druids, the oases of the desert druid, the fungus-rich caves of the gray druid, and so on. In nearly every case, the overriding requirement is that the sacred grove possess a natural splendor. This splendor may range from the stark grandeur of a ring of standing stones atop a hill on a windswept moor to the gardenlike beauty of a tended forest glade.

A sacred grove is typically between 60 feet and 360 feet across (6d6 - 10 feet).

Besides the expected grass, undergrowth, bushes, trees, or other local features, desirable groves share certain elements.

### Distinct Boundaries

Sacred groves reveal themselves readily to those who know what to look for. A grove's boundary markers often result from the efforts of generations of druids. For example, the trees in a woodland grove may form concentric circles, the outermost layer reserved for the largest, most ancient trees.

Often the trees in a sacred grove are of an unusual size or a type distinct from others in the wood. For example, a sacred grove in a birch forest might have many oaks. Their branches may even entwine to form natural arches to welcome visitors. In more open terrains, sacred groves may surround themselves with high, thorny hedges or even a river. Some groves have artificial borders, such as an outer ring of standing stones. A few are small islands.

### A Clearing

A quiet place of meditation blanketed with soft moss or grass lies in the center of the grove. Druids prefer groves carpeted with soft ground cover that encourages dancing over a floor of simple dirt or stone.

### Source of Water

A spring, well, brook, or pool (often fed by a waterfall) provides the grove with pure, drinkable water. Druids use this water in their rituals and in their day-to-day life as well. Some druids prefer still water to a brook or spring, since the quiet water is less distracting during meditation and can prove useful in divination.

### Central Feature

A commanding structure--perhaps the source of water--acts as a natural altar in the grove or as a focus for worship. Other common central features include a single great tree, a standing stone, or a fairy ring (a circle of toadstools or other fungi). These and other features sometimes possess magical powers, detailed in a later section.

Native Animals

An owl lives in a grove's great tree, a snake dwells under a stone--the druid is never really alone in a sacred grove. The place feels alive in every sense, and druids usually befriend a grove's inhabitants.

### Living Quarters

While the druid and any servants or family members rarely live within the sacred grove proper, home lies not far away. A forest druid, for instance, generally has a stone, log, or sod cottage within a mile of the grove, with a vegetable and herb garden, and perhaps a few domestic animals.

## Stewardship

Although druids do not claim to "own" sacred groves, they take responsibility for them very seriously. The druid associated with a grove normally goes by the title of steward, keeper, or caretaker. Stewardship of a sacred grove is traditional: Keepers always designate their successors.

## Guards and Wards

The steward of a sacred grove is first and foremost responsible for the grove's safety, especially if the grove has "awakened" with magical powers (explained later in this chapter) or if beings such as dryads live there. Therefore, druids devote considerable effort to protecting a sacred grove--in some cases, through secrecy. Only a few trustworthy people and creatures know the grove's location. A druid obscures the pathway to the grove, while *hallucinatory forest* spells and better-cleared false trails twist away from it, leading a searcher astray.

More active defenses include pits covered with branches and leaves (perhaps sharp stakes, poisonous spiders, or snakes). Druids of at least 5th level use the *snare* spell liberally, as its defenses remain fixed until triggered. Using *plant growth* to set up permanent dense barriers around the grove is a very good strategy, especially if a druid plans to lace the obvious paths through these barriers with traps and snares, leaving only one or two concealed "safe" passages.

If enemies are on their way, the druid should strive to prevent them from using fire to damage the grove. Controlling weather to create a rainstorm before foes even reach the grove keeps the enemy miserable and stops the grass, bushes, and wood from igniting. Of course, one of the best ways a druid can defend a grove is to discover potential enemies and strike before they even reach the sacred natural site. (See "Eyes in the Wilderness," Chapter 4.)

## Tending the Grove

While safeguarding the grove remains most important, stewards must not neglect regular care. This day-to-day work involves tending the plants and animals in the grove, talking to them, and dealing with illnesses or parasites that might appear. In addition, if a druid prefers a gardenlike appearance to a wild one, the steward cleans up loose branches, prunes trees and bushes, and so on. Druids should devote 12 days per month to this job, or about three days per week. If a druid fails in this duty, the DM can assume the sacred grove's health and appearance deteriorates (as does the magic of awakened groves, lesser powers first). Deterioration is immediately obvious to any visiting druid.

Several druids may use the same sacred grove as a place of worship, sharing the work detailed above, but only one is its steward; the others usually consider themselves the sacred grove's tenders. By tradition, if the keeper dies or retires, one of the tenders takes over the stewardship.

It is considered a crime for one druid in the Order to forcibly displace another from a stewardship. Such an incident, when reported to the great druid, constitutes grounds for

the ban. In response, several druids will join together to expel the offender from the grove, finding a more suitable replacement--the original steward, if that druid did not die in the grove's defense.

An exception is allowed when a druid's negligence results in the deterioration or defilement of a sacred grove. In this case, an inner circle druid or the great druid appoints a new keeper for the grove. It becomes that druid's responsibility to reclaim the grove, by force if necessary, from its inept steward.

## Grove Law

Druids, far stricter about protecting their sacred groves than any other wilderness area, have established a law to safeguard these special sites. The following points make up the law of the grove, upheld by all except the steward and those with special dispensation from the steward:

- No trees or plants within the grove may be harmed, cut, or pruned. No one may pick or cut branches, berries, nuts, or fruit, either; visitors can eat or otherwise use only that which has fallen to the ground.
- No one may fight within the grove.
- No bird or animal within a sacred grove may be harmed. If a hunted creature flees into the grove, hunters must break off the chase; they cannot shoot at the beast from outside the grove once it enters.
- No one may fish in the waters of a grove, nor foul these waters in any way.
- None may light a fire within a grove's bounds--not even tinder or a pipe.

The maximum penalty for violating the law of the grove is death, though a druid may apply a lesser penalty in certain cases. The punishment for violating these rules--or for more serious defilement of a sacred grove--depends on the offender's motives, the damage, and the druid's inclination. If a cruel wizard damaged a sacred grove with a *fireball* in an attack on the steward, the druid would think death a proper punishment--preferably death by fire. On the other hand, if a careless toddler did the same damage by accidentally setting fire to the grove, the druid seeks a more suitable punishment: kidnaping the child to raise as a druid. Thus the child devotes a lifetime to atonement.

Note that there is no law against folk entering the grove. While some druids keep visitors away, others welcome people and animals who come to admire the grove or worship, and even shelter needy travelers. Similarly, the steward may allow visitors to collect fallen deadwood, fruits, nuts, and berries. Since druids usually can speak with the animals, plants, and (sometimes) stones in their grove, they can determine easily how a person acquired suspicious bounty.

## Becoming a Steward

A druid player character can acquire stewardship of a sacred grove in four ways:

First, the keeper of a grove might nominate the PC to become the successor to the stewardship. This tactic allows the PC to take over when the existing steward dies, disappears, or decides not to care for the grove any longer. The successor must have the current steward's trust and respect, and usually has spent time worshiping in the grove and tending it under supervision. Most of all, the nominee must prove worthy to defend

the grove. If the grove has magic, the character should have reached at least 7th level to deserve consideration. However, young sacred groves lacking magic often receive the protection of lower-level druids.

Second, a player character can find an abandoned sacred grove and reclaim it. Sometimes a powerful monster or other foe eliminates both the steward of a sacred grove *and* the chosen successor. Such groves often are cursed, haunted by undead, or frequented by local monsters. But a druid who overcomes these obstacles and reclaims the grove proves worthy of the stewardship.

Third, a stewardship may come with a title, although this practice varies from circle to circle. For instance, a circle may award the responsibility for certain sacred groves to its archdruids or great druid, and--unlike a normal grove--this stewardship changes hands as new druids assume the high ranks. At the DM's discretion, the world might even hold a wondrous "high sacred grove"-- the responsibility of the Grand Druid.

Fourth, a PC can find a virgin grove site and sanctify it. Virgin groves match the physical requirements listed earlier for a sacred grove, but have no magical powers and have never been tended. Finding such a spot is simply a matter of the druid's knowledge of local geography. A virgin grove rarely has clear boundaries, so the druid may make "improvements," such as planting a circle of trees or erecting standing stones to mark the new grove's borders.

## Sanctifying and Awakening a Grove

Druids may wish to consecrate a sacred grove, perhaps awaken it to its magical properties. To this end, they must find a suitable natural site with the features described earlier.

After preparing a site, the druid performs a ritual to sanctify it. This ceremony, a blessing and invocation of Nature--takes a day of uninterrupted prayer. Once sanctified, a site becomes a sacred grove--a living shrine to Nature, where druids can perform their rites.

As druids worship there over the years, a sacred grove tends to absorb power from the rituals, becoming a holier place. If druids consistently venerate a grove, it may awaken to the magical powers described earlier. Venerating a grove means that druids (not necessarily just the one who sanctified it) pray and meditate there on a regular basis. Furthermore, the druid appointed the grove's steward must faithfully tend it.

A sanctified sacred grove actively visited and tended for seven years has a chance to gain magical powers. This time need not be contiguous--that is, a sacred grove can be active for five years, then abandoned, then active for another two years. After the seven years have passed, the DM begins rolling 1d10 each spring. On a roll of 10, the grove "awakens." Awakened groves gain the basic powers of a lesser sacred grove and a special ability (Table 3).

Sacred groves with a long history of druidic use become the most potent, their power slowly increasing over the ages as a result of continued exposure to druidic magic. For every seven years an awakened grove remains active, it has a further 10% chance of gaining additional powers, to a maximum of six powers. Roll on Table 3 at each success, rerolling duplicated powers.

A lesser magical sacred grove becomes a greater grove only through millennia of use

by druids or direct divine intervention. DMs may assume a 10% chance of gaining greater grove status (and 1d4 such powers) per thousand years of veneration by druids.

## Magical Sacred Groves

Not all sacred groves have magical powers, but many of them do. A grove may have been innately magical since the creation of the world or have gained its magic through an unusual event, such as a visit by a deity, the birth of a unicorn, or a dryad or nymph's long-time residence in the grove. Lesser Magical Groves

An enchanted lesser sacred grove always radiates magic, although never good or evil. It has the following properties:

- Druids entering the grove feel a watching presence and a sense of power. For every three rounds they spend within its boundaries they learn one power of the sacred grove, through a vision or intuition.
- All druids receive a +1 bonus to saving throws vs. spell, death magic, and wands while within a lesser magical grove. The grove's steward receives a +2 bonus.
- All in the grove are rendered immune to magical *fear* while within it.
- *Dig* spells never work within a grove.
- Natural (nonmagical) lightning never strikes trees or beings in the grove.
- Evil enchanted creatures cannot enter the grove unless it has been defiled. (See "Defiled and Cursed Groves" in this chapter.)

In addition to these abilities, lesser magical sacred groves may possess other powers. To quickly create a grove the PCs might stumble upon while adventuring, the DM first decides how many lesser powers the grove has (chooses or rolls 2d4-2). Then, the DM selects the powers from Table 3 or rolls 1d10 to pick from the table randomly. (Descriptions of the powers follow.)

**Table 3: Lesser Grove Powers**

| d10 | Power |
|---|---|
| 1 | Awakened plants |
| 2 | Bountiful |
| 3 | Control temperature |
| 4 | Faerie fire |
| 5 | Healing |
| 6 | Prophecy |
| 7 | Protective aura |
| 8 | Still winds |
| 9 | Sweet water |
| 10 | Special |

**Awakened Plants.** The grove's magic has "awakened" 1d3 10-foot-square patches of weeds, creepers, or bushes with semi-intelligence, 4 Hit Dice, AC 10, and the ability to attack as an *entangle* spell. They will act to protect themselves and defend the grove.

**Bountiful.** If the sacred grove contains plants that produce edible fruit, nuts, or berries, 3d6+20 enchanted examples sprout each spring along with the usual crop. The

magic fruit, nuts, or berries--the largest and most healthy of their species--confer the benefits of a *goodberry* spell's products on the characters who eat them. Once picked, no more will grow until the following year.

**Control Temperature.** Any Nature worshiper in the grove may make a grove's temperature rise or fall within 30 degrees. This ability, possible once per day, affects the entire grove. Arctic or desert groves commonly feature this power, which enables those in the grove to survive brief climatic extremes, especially combined with the power to still winds (below).

**Faerie Fire.** A Nature worshiper (even a nonpriest) may cause a *faerie fire* luminance to appear, centered on the character or upon any of the trees, rocks, or standing stones in the grove. The *faerie fire,* which lasts one turn per level of the caller, can be summoned once per person in a given day. *Faerie fire* that druids call endures for two turns per level of the druid and can flicker about the grove at will. When a druid casts a *faerie fire* spell within the grove, its duration triples.

**Healing.** Beings of neutral alignment or those allied to the druid may heal wounds at twice the rate of natural healing while in the magical sacred grove. Healing-related spells produce the maximum benefits; for instance, *cure light wounds* restores 8 points of damage.

**Prophecy.** A druid who spends the night sleeping in the grove may receive a magical portent in a dream concerning the past, present, or future. The nature of the prophecy remains the DM's decision, but it should never contain more information than would come to light using a properly cast *commune with nature* spell. The portent usually warns of danger or hints at a task Nature wishes the druid to perform.

**Protective Aura.** Any creature but a druid, dryad, or nymph who sees the grove must save vs. spell. Those who fail perceive the grove as nothing other than a normal clearing (or the like) until they are led into it. The sacred grove also generates a continual protective field similar to *protection from evil, 10' radius,* except it covers the entire grove and has the powers of both *protection from evil* and *protection from good* spells.

**Still Winds.** Worshipers of Nature in the sacred grove (even nonpriests) can cause winds to calm for up to one turn per level, as long as they concentrate on maintaining this power. Triple the duration when a druid invokes it. This power, possible once per day, is quite common in desert, mountain, and arctic groves, as it protects the sacred grove and those in it from sandstorms, tornadoes, or snowstorms, and the like.

**Sweet Water.** Water from a source within the grove or dew gathered from the grass in the area has the properties of *sweet water,* but loses these special properties as soon as it is removed from the site.

**Special.** The DM can create a power associated with the branch or kit of the druid that sanctified this grove. For instance, the grove of a Hivemaster might contain a wasp's nest or beehive from which a druid could call an *insect plague* once per day, while a swamp druid's grove could feature a patch of firm ground that turns suddenly to quicksandlike mud (as in a *rock to mud* spell).

### Greater Magical Groves

A greater magical sacred grove possesses exceptional enchantments. Each domain includes fewer than a score of such groves, most of which fall under the control of druids

of 12th or higher level.

A greater grove has all the basic powers of the lesser grove, mentioned earlier. In addition, druids who sleep overnight in the grove before praying for spells receive an extra spell. Thus, a druid who chooses two 1st- and one 2nd-level spell receives another 1st- or 2nd-level spell of the DM's choice.

A greater magical sacred grove has 2d4 lesser grove powers (rolled on Table 3) and 1d4 greater grove powers (rolled on Table 4). Descriptions of the greater powers follow.

**Table 4: Greater Grove Powers**

| d12 | Power |
|---|---|
| 1 | Awakened tree |
| 2 | Beast speech |
| 3 | Concealment |
| 4 | Earthpower |
| 5 | Know alignment |
| 6 | Peaceful |
| 7 | Reincarnation |
| 8 | Waters of life |
| 9 | Scrying pool |
| 10 | Magic fruit |
| 11 | Forbiddance |
| 12 | Special |

**Awakened Tree.** A large, ancient tree living in the grove gains Intelligence and Wisdom (2d6+6), the spellcasting ability of a 3rd-level druid, and the power of speech. It can use any two of its branches at once like arms. It speaks--in a deep, slow voice--in the secret language of the druids. In combat, treat it as a treant created by the *liveoak* spell. Roots bind it to the earth like a normal tree.

**Beast Speech.** Any normal or giant animal with an Intelligence score between animal and low can speak and understand the secret language of the druids for as long as it remains within the sacred grove. The animal's Intelligence does not increase. Also, casting *animal summoning* calls a 50% greater number (or Hit Dice) of animals than usual.

**Concealment.** All mobile beings (not normal plants) within the grove when this power is invoked become *invisible* for three turns per level of the druid or until they leave the grove. This power, possible once a day, ceases to conceal anyone who attacks.

**Earthpower.** When druids in the sacred grove cast a Plant or Earth Elemental sphere spell within its boundaries, they double the spell's duration, area of effect, and range.

**Know Alignment.** A druid may know the alignment of others in the sacred grove by concentrating one round. (The druid and subject must remain in the grove during this time.) This spell-like power can be used any number of times. Nonpriest worshipers of Nature can use this power after two rounds of concentration (and two successful Wisdom checks), but can make only one attempt.

**Peaceful.** Anyone entering this grove may notice odd sights, like predators and prey playing together. Those who make a successful attack against another within this grove

must make a saving throw vs. wands. Attackers who fail suffer all the damage themselves; the wounds they meant to inflict appear on their own bodies. If they save, they suffer only half damage.

**Reincarnation.** If a druid's ashes or remains are buried in the sacred grove, the character becomes *reincarnated* (per the priest spell). The new incarnation appears within a mile of the grove in 1d6 days.

**Waters of Life.** Any source of water within the grove has unusual healing properties. Anyone bathing in the water (maximum of once per day per person) gains the benefit of simultaneous *neutralize poison, cure disease*, and *cure serious wounds* spells. The water loses all special properties outside the grove's boundaries, however, so characters cannot use it as a *healing* potion.

**Scrying Pool.** A source of still water within the grove, such as a pool or well, may be used for divination. Once per day a druid can command the pool or well to act as a *reflecting pool* cast at the druid's level.

**Magic Fruit.** The grove has a tree whose fruit or berries have a magical effect when eaten. In a given year, 1d6 fruits ripen, each with a distinct appearance to set it apart from common fruit--lustrous golden apples, for example. The magic fruit's effects are equivalent to one of the following:

- *Potion of animal control*
- *Potion of heroism*
- *Potion of longevity*
- *Potion of treasure finding*
- *Philter of love*
- *Philter of glibness.*

**Forbiddance.** A druid can invoke the *forbiddance* power (per the spell) to cover the boundaries of the grove. The effects can be called up only once per day and, once called, last one hour per level of the druid.

**Special.** The DM should devise a power associated with the branch or kit of the first steward of the greater magical sacred grove.

## Defiled and Cursed Groves

Some sacred groves tell a tragic story: Their plants have been dug up, trees burned or chopped down, water sources fouled, or standing stones overturned and broken. Perhaps their clearings once served as altars to other priests in the worship of strange gods. Such groves have been defiled, stripped of all their powers until druids reclaim them (described below).

Other events may result in a still worse fate--a grove becoming cursed. For instance:

- A terrible event takes place within the grove's boundaries: Someone reads a cursed scroll, a deity's avatar passes through, a druid dies violently, or another highly charged event takes place.
- The grove is deliberately defiled but not destroyed. When plants begin to grow back, the grove may retain some twisted vestige of its original power.
- If the druid who sanctified the grove strays badly from the neutral alignment, abandons the Order, or takes up the path of the Lost Druids, the grove's beauty and powers may become warped--perhaps as a warning to the erring steward.

To determine what curse has struck a particular sacred grove, the DM may roll on Table 5. A druid who discovers a cursed grove nearly always tries to find a way to lift the curse and ultimately resanctify the land. Some typical curses are described below.

**Table 5: Properties of Cursed Groves**

| d6 | Property |
|---|---|
| 1 | Entrancing |
| 2 | Poisoned ground |
| 3 | Haunted |
| 4 | Perpetual season |
| 5 | Hungry trees |
| 6 | Special |

**Entrancing.** This curse can apply to any grove containing a source of water or plants bearing fruit, nuts, or berries. Those who eat natural fruits of the grove or drink its water must save vs. spell or become charmed: They refuse to leave the grove, claiming they must defend this beautiful place. They resist forcefully if anyone tries to harm the grove or take them from it. The charm is broken if those it has entranced leave the grove, or it can wear off, per the *charm person* spell.

**Poisoned Ground.** A terrible poison lives within the ground, although the plants in the grove are immune. Those who touch the vegetation (including grass) with bare skin must save vs. poison each round of contact or suffer 1d6 points of damage. Characters who eat fruits, etc., from the grove must save vs. poison or die.

**Haunted.** The life forces of people who die in a haunted grove or within a mile of its boundaries are drawn into one of the grove's trees or standing stones. The trunks of the trees or the surfaces of the stones contain twisted images of the dead trapped within. While trapped, these souls cannot be raised, resurrected, or reincarnated.

To defend itself, the grove can summon any of its prisoners' spirits as ghosts or banshees (described in the *Monstrous Manual* ™). Each summoning takes two rounds, but only one ghost or banshee can exist at any time. Resanctifying the grove (described below) ends the curse and frees the trapped spirits, who now may be reincarnated, raised, or resurrected. Destroying the grove before resanctifying releases all the trapped spirits as malevolent ghosts or banshees to haunt the region henceforth.

**Perpetual Season.** The grove, locked into a single season, never experiences a change in climate. Though a grove locked into winter isn't ever popular, a grove of perpetual spring or summer may seem like a blessing. While winter blizzards rage outside, the day is warm and sunny within a grove of perpetual summer; grass is always green, trees always leafy, and flowers ever blossoming. Nevertheless, druids consider this redundant setting horribly unnatural.

**Hungry Trees.** The trees in this grove have been animated by a hunger for flesh. Treat the 2d8 hungry trees of this cursed grove as evil treants. Masquerading as normal trees, they suddenly attack anyone entering the grove. They never cross its borders unless attacked from outside the grove, though; in that case, they re-enter the grove after defeating (and consuming) foes.

### Reclaiming Cursed or Defiled Groves

Druids whose sacred grove becomes defiled or destroyed must perform a ritual of atonement, plus find and punish the guilty party. Failing deprives druids of all granted powers and major access to priestly spheres.

The first step in reclaiming a defiled grove involves repairing any damage it has sustained: planting new trees, restoring damaged standing stones, and so on. Then, a druid must perform an uninterrupted daylong ceremony within the grove to ask for the renewed blessings of Nature.

Reclaiming a cursed grove poses additional difficulties. After performing the above steps, the druid must complete a task to balance the forces behind the curse. The nature of the task is up to the DM, but it usually involves a dangerous quest in a real or symbolic attempt to "undo" the curse, punish those who caused it, or make amends for the act that led to it. After concluding the task, the druid must return to the grove to invoke Nature and cast a *remove curse* spell.

## Standing Stones

Standing stones are large, shaped stones that rise from the ground to towering heights. In some cases, their presence in a forest, on a bleak moor, or atop a lonely hill automatically qualifies an area as a sacred grove, even if it lacks other natural beauty. Druids may have erected the standing stones, or they may mark a holy place that predates the druids' arrival in the area-- perhaps a site sacred to prehuman peoples (elves, for instance) or prehistoric tribes.

Though sometimes stones stand alone, they more often join together to form various arrangements. A single standing stone is called a *megalith*--either a shaped slab or a more natural, tapering *obelisk*. Two shaped stones placed upright with a third laid across their tops constitutes a *trilithon*. Several megaliths or trilithons frequently form patterns, usually circles or horseshoe shapes.

Individual stones may weigh 5 to 25 tons each and stand 10 to 30 feet tall. A large circle may take a generation to build, unless powerful earth magic or suitable monsters (treants, earth elementals, or giants) help in the construction. Because druids possess the necessary magic, they often create these monuments for their sacred groves.

Standing stones fall into one of two categories: magical and nonmagical.

### Nonmagical Standing Stones

Many standing stones have no innate magical properties, although they may have been built by magic. In "awakened" groves, these nonmagical stones may share in the general magic of the grove. The DM decides on the purpose, type, and number of stones.

**Boundary Markers.** Stones can simply mark the grove's borders, a common practice when a circle of trees is inappropriate. Mountain druids, in particular, use stone circles to mark borders.

**Natural Observatory.** The stones might serve as a primitive astronomical calculator (as in the case of Stonehenge), their positions marking eclipses, equinoxes, and other important solar and lunar dates whose exact times remain important for religious reasons

and for maintaining the agricultural calendar. Usually one such astronomical circle of stones exists in every major druidic domain. Creating such a circle requires two proficiencies: astrology and engineering. In some cases, these circles are relics left behind to mark the visits (and predict the eventual returns) of spelljamming space druids.

**Monuments.** The lives of particularly notable historical figures can merit great megalith memorials. Sometimes treasure or a body lies buried under the stone. In rare instances, although the stone has no magic, the body beneath it rests in magical suspended animation--think of King Arthur, waiting for Merlin to awaken him.

## Magical Standing Stones

Magical standing stones can serve any of the nonmagical variety's purposes. Lesser magical sacred groves containing standing stones possess a 10% chance of having one with magical powers. This chance increases to 20% for groves with five or more stones, and 30% for groves with 25 or more stones. Standing stones within greater groves have triple the chance of being magical.

Standing stones may become magical through association with druidic rites, divine intervention, or via the normal process used to create druidic magical items. DMs deciding that a stone has magic either pick its powers from those described below or roll on Table 6. Add a +1 bonus to rolls for standing stones that help form a trilithon.

**Table 6: Powers of Standing Stones**

| d4 | Power |
|---|---|
| 1 | Petrified entity |
| 2 | Stone guardian |
| 3 | Peaceful stones |
| 4 | Speaking stones |
| 5 | Trilithon gate |

**Petrified Entity.** The magical stone is actually a huge being--often a giant or titan--that has been so weathered and overgrown with moss or ivy over the years its original humanoid form is no longer discernable. It radiates magic and may return to life if a *dispel magic* or *stone to flesh* spell succeeds. Depending on its alignment and the reason it became petrified, the creature may feel either grateful or hostile to its rescuer. A petrified entity usually points to the work of dual-class wizard/druid.

**Stone Guardian.** Once per day, the steward of the grove can order the stone to come to life for one turn per level of the druid. The animated stone fights as a 16 HD earth elemental, but if it leaves the grove it reverts to a normal stone and may not be reanimated until returned to the grove--a herculean task, since it weighs several tons! If injured, the magical stone heals at a rate of 1 hit point per turn--within the grove only.

**Peaceful Stones.** The standing stones exert a calming influence on the earth. No *earthquake* spells may succeed within a radius that measures (in feet from the center of the stone or cluster) a distance equal to the number of stones in the circle. Since no earthquakes or volcanic eruptions occur in this area, peaceful stones often stand near volcanoes or faults. Removing them could spell disaster for nearby forests and towns!

**Speaking Stones.** Any druid can cause any standing stones in the grove to speak, per the stone tell spell. Characters can use this power as often as desired, but the stones speak for no more than three rounds per day. Stewards use this power to learn whether intruders have visited the grove while they were away; druids who find a strange grove could use it to become familiar with the grove's history and keepers (if any).

**Trilithon Gate.** Characters passing under the stones may emerge from any other sacred grove in the world that also has a trilithon gate, no matter how distant. Those who have a particular gate in mind reach it; otherwise, characters come through a random gate. Anyone can travel via trilithon gate only once per day; it is impossible to go through and return again immediately.

# Appendix A: AD&D® Original Edition Druids

*The following represents a summation of information on druids from the AD&D Original Edition* Player's Handbook *and the* Unearthed Arcana *reference book. Some of these rules may not coincide with the rules for druids in the AD&D 2nd Edition game.*

The druid is a subclass of the cleric, a neutral priest of nature who views good and evil, law and chaos, as necessary and vital balancing forces. Druids hold trees (especially ash and oak) sacred, venerate the sun(s) and the moon(s), and serve as protectors of forests, wild plants, crops, and--to a lesser extent--animals and the human followers of their religion. They never destroy woodlands or crops, no matter what the situation (although druids could act to change the *nature* of an evil enchanted wood, for instance, without destroying it). Similarly, they avoid slaying wild or domestic animals, except as necessary for self-preservation and sustenance. However, druids rarely risk their lives to prevent damage to woodlands or animals--instead, they favor retribution after the fact, in a manner, time, and place of their own choosing.

To become a druid, a character must have a minimum Wisdom of 12 and Charisma of 15; if both these scores exceed 15, the druid gains a 10% bonus on earned experience. Human, elven, half-elven, and halfling PCs may be druids, although halflings and some types of elves are subject to level restrictions.

Druids fight and save as clerics, but get a +2 bonus to save vs. fire or vs. electrical attacks. They can wear only leather armor and use only wooden shields. Their weapon options are limited to club, dagger, dart, hammer, khopesh, scimitar, scythe, sickle, sling, spear, and staff.

A druid can use those magical items permitted to clerics, except for written items (books and scrolls) and weapons and armor forbidden to their class.

## General Abilities

All druids speak their own secret language. Upon reaching 3rd level, and each level thereafter, a druid gains the language of one of the following creatures: centaur, dryad, elf, gnome, green dragon, hill giant, lizard man, manticore, nixie, pixie, satyr, sprite, treant.

Druids gain powers as they rise in level.

**At 3rd level:**

- Identify plant type.
- Identify animal type.
- Identify pure water.
- Pass through overgrown areas without leaving a trail and at the normal movement rate.

**At 7th level:** (in addition to above)

- Immune to *charm* spells.
- Shapechange into a bird, reptile, and animal, each form once per day.

**Table 7: Original Druid Experience Points**

| Experience Points | Experience Level | Accumulated hp | Qty./ Land | Level Title |
|---|---|---|---|---|
| 0-2,000 | 1 | 1 | any | Aspirant |
| 2,001-4,000 | 2 | 2 | any | Ovate |
| 4,001-7,500 | 3 | 3 | any | Initiate of the 1st circle |
| 7,501-12,500 | 4 | 4 | any | Initiate of the 2nd circle |
| 12,501-20,000 | 5 | 5 | any | Initiate of the 3rd circle |
| 20,001-35,000 | 6 | 6 | any | Initiate of the 4th circle |
| 35,001-60,000 | 7 | 7 | any | Initiate of the 5th circle |
| 60,001-90,000 | 8 | 8 | any | Initiate of the 6th circle |
| 90,001-125,000 | 9 | 9 | any | Initiate of the 7th circle |
| 125,001-200,000 | 10 | 10 | any | Initiate of the 8th circle |
| 200,001-300,000 | 11 | 11 | any | Initiate of the 9th circle |
| 300,001-750,000 | 12 | 12 | 9 | Druid |
| 750,001-1,500,000 | 13 | 13 | 3 | Archdruid |
| 1,500,001-3,000,000 | 14 | 14 | 1 | Great Druid |
| 3,000,001-3,500,000 | 15 | 15 | * | The Grand Druid |

* Only one Grand Druid governs all the lands of the world.

**Table 8: Original Hierophant Experience Points**

| Experience Points | Experience Level | Accumulated hp | Level Title |
|---|---|---|---|
| 1-500,000 | 16 | 15+1 | Hierophant Druid |
| 500,001-1,000,000 | 17 | 15+2 | Hierophant Initiate |
| 1,000,001-1,500,000 | 18 | 15+3 | Hierophant Adept |
| 1,500,001-2,000,000 | 19 | 15+4 | Hierophant Master |
| 2,000,001-2,500,000 | 20 | 15+5 | Numinous Hierophant |
| 2,500,001-3,000,000 | 21 | 15+6 | Mystic Hierophant |
| 3,000,001-3,500,000 | 22 | 15+7 | Arcane Hierophant |
| 3,500,001 and up | 23 | 15+8 | Hierophant of the Cabal |

## High-level Druids

The number of druids above 11th level in a given land is limited. (See Table 7.)

**Druid.** A land can have only nine 12th-level Druids; when druids earn enough experience to achieve 12th level, they gain this level's powers only if the land presently has fewer than nine 12th-level Druids. A character also could gain the level by defeating one of the land's nine Druids in magical or hand-to-hand combat. Losers that survive must drop just enough experience points to place them at the beginning of the next lower level (11th).

**Archdruid, Great Druid.** The same procedure applies when a 12th-level Druid gains enough experience to become an Archdruid, and when an Archdruid reaches Great Druid level. There are only three positions for Archdruids in a given region, and only one Great Druid.

**Grand Druid.** Ranking above the Great Druids stands a single Grand Druid, the ultimate overseer of all a world's druids. Besides knowing six spells of each level, the Grand Druid has the ability to cast up to six spell levels (as one additional spell or in any combination that totals six levels--one 6th-level spell, six 1st-level spells, one 4th- and one 2nd-level spell, etc.).

**Hierophant.** The Grand Druid has an essentially political job, and most adventurers eventually tire of it. After attaining 500,000 experience points as a Grand Druid, the character may appoint any worthy Great Druid with 1,500,001 or more experience points as the successor. The former Grand Druid then rises to the 16th experience level, becoming a Hierophant.

As a Hierophant, the character relinquishes the Grand Druid's six bonus spell levels and, furthermore, loses all but 1 experience point (yet remains at 16th level). The character then begins counting experience points again and progressing using Table 8 (next page).

**Attendants.** Each 12th- or higher-level druid acquires an entourage of devoted lower-level druids. The least experienced 12th-level druid has three 1st-level aspirants, the next has three 2nd-level ovates, and so on. The most experienced has as followers three initiates of the 7th circle. Three 10th-level initiates of the 8th circle always serve Archdruids, while three 11th-level initiates of the 9th circle attend the Great Druid.

The Grand Druid is attended by nine druids unattached to any specific land. Any character of at least Druid level may seek out the Grand Druid and offer service. Three of these servants, Archdruids, roam the world as the Grand Druid’s personal agents and messengers. Each has four additional spell levels, as explained above.

## Hierophant Abilities

No bonus spells are awarded to Hierophants (as above for the Grand Druid and attendants), but they do receive additional, cumulative spell-like powers.

At 16th level:

- Immune to all natural animal or vegetable poisons, including those of monsters, but not mineral or gaseous poisons.
- Blessed with extra longevity equal to experience level times 10 years. For instance, a 16th-level druid lives 160 extra years.
- Maintains vigorous health (prime of life) regardless of actual age.
- Alters appearance at will in only one-tenth of a round. Hierophants can alter their facial and body features to those of any human or humanoid, change their height

and weight by up to 50%, and alter their apparent age to anything from child to old. This nonmagical power cannot be detected except by *true seeing* or similar magic.

At 17th level:

- Hibernate for a number of years equal to experience level times 10. For instance, a 17th-level druid can hibernate 170 years in suspended animation (without aging).
- Enter the Plane of Elemental Earth.
- Conjure water elemental.

At 18th level:

- Enter the Plane of Elemental Fire.
- Conjure air elemental.

At 19th level:

- Enter the Plane of Elemental Water.
- Conjure magma/smoke para-elemental.

At 20th level:

- Enter the Plane of Elemental Air.
- Conjure ice/ooze para-elementals.

At 21st level:

- Enter the para-elemental planes.

At 22nd level:

- Enter the Plane of Shadow.

At 23rd level:

- Enter any of the Inner Planes.
- Roam the Inner Plane probability lines (the 7th dimension).
- Enter the Plane of Concordant Opposition.

**Entering Other Planes.** It takes the druid one round to shift into a plane (or back to the Prime Material Plane), but the character can stay there as long as desired. The ability to enter a plane also confers the ability to survive there. So, a druid who can enter the Plane of Elemental Water will not drown during the visit, one entering the Plane of Elemental Fire will not burn, etc.

**Conjuring Elementals.** This ability works like a *conjure fire elemental* spell, but it calls for a percentile dice roll when the druid makes a conjuration attempt. If the roll is equal to or less than the character's experience level, use Table 9 to choose which elemental creature appears. Otherwise, roll on Table 9 to see what the druid summoned.

**Table 9: Elemental Conjurings**

**Fire:**

| | |
|---|---|
| 01-85 | 16 HD fire elemental |
| 86-94 | 1d3+1 salamanders |
| 95-98 | efreeti |
| 99-00 | 21-24 HD fire elemental |

**Earth:**

| | |
|---|---|
| 01-85 | 16 HD earth elemental |

86-94 1d3+1 xorn
95-98 dao
99-00 21-24 HD earth elemental

**Water:**
01-85 16 HD water elemental
86-94 1d6+6 tritons (5th-8th level) riding hippocampi
95-98 marid
99-00 21-24 HD water elemental

**Air:**
01-85 16 HD air elemental
86-94 1d3+1 invisible stalkers
95-98 djinni
99-00 21-24 HD air elemental

**Para-elemental, any:**
01-85 16 HD para-elemental
86-95 Special*
96-00 21-24 HD para-elemental

* Special: Choose 1d4+4 lava children, 1d4+4 winter wolves, 1d4+20 mud-men, 1d4+20 vapor rats, or similar creatures associated with the appropriate para-element.

A single entity, when conjured, has as many extra hit points added to its total as the druid has levels; it may not exceed its maximum hit points, though.

All conjured creatures serve the Hierophant selflessly and obediently, regardless of their alignment and temperament.

**Table 10: Druidic Spells by Class and Level**

| **Druid Level** | **Spell Level** | | | | | | |
|---|---|---|---|---|---|---|---|
| | **1** | **2** | **3** | **4** | **5** | **6** | **7** |
| 1 | 2 | - | - | - | - | - | - |
| 2 | 2 | 1 | - | - | - | - | - |
| 3 | 3 | 2 | 1 | - | - | - | - |
| 4 | 4 | 2 | 2 | - | - | - | - |
| 5 | 4 | 3 | 2 | - | - | - | - |
| 6 | 4 | 3 | 2 | 1 | - | - | - |
| 7 | 4 | 4 | 3 | 1 | - | - | - |
| 8 | 4 | 4 | 3 | 2 | - | - | - |
| 9 | 5 | 4 | 3 | 2 | 1 | - | - |
| 10 | 5 | 4 | 3 | 3 | 2 | - | - |
| 11 | 5 | 5 | 3 | 3 | 2 | 1 | - |
| 12 | 5 | 5 | 4 | 4 | 3 | 2 | 1 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 13 | 6 | 5 | 5 | 5 | 4 | 3 | 2 |
| 14 | 6 | 6 | 6 | 6 | 5 | 4 | 3 |
| 15+ | 6 | 6 | 6 | 6 | 6 | 6 | 6 |

## Druidic Spells

Druids use mistletoe as their religious symbol when casting spells, though holly and oak leaves both hold lesser mystic power for them as well.

All druidic spells with a material component assume the caster uses greater mistletoe. Druids seek the mistletoe themselves on Midsummer's Eve, cut it with a gold or silver sickle, and catch the cuttings in a golden bowl before they touch the ground. Lesser mistletoe results when druids harvest the plant themselves in any other fashion. Borrowed mistletoe is any mistletoe not cut personally by the druid casting the spell.

If a druid does not use greater mistletoe, the effectiveness of the character's spell is reduced as follows:

- Lesser mistletoe: 75% duration*.
- Borrowed mistletoe: 75% range*, 50% duration**.
- Holly: 75% range*, 50% duration**, 75% area of effect*.
- Oak leaves: 50% range**, 50% duration**, 50% area of effect**.

* or +1 bonus to saving throw if category not applicable.
** or +2 bonus to saving throw if category not applicable.

1st-level spells: *Animal friendship, ceremony, detect balance, detect magic, detect poison, detect snares and pits, entangle, faerie fire, invisibility to animals, locate animals, pass without trace, precipitation, predict weather, purify water, shillelagh, speak with animals.*

2nd-level spells: *Barkskin, charm person or mammal, create water, cure light wounds, feign death, fire trap, flame blade, goodberry, heat metal, locate plants, obscurement, produce flame, reflecting pool, slow poison, trip, warp wood.*

3rd-level spells: *Call lightning, cloudburst, cure disease, hold animal, know alignment, neutralize poison, plant growth, protection from fire, pyrotechnics, snare, spike growth, starshine, stone shape, summon insects, tree, water breathing.*

4th-level spells: *Animal summoning I, call woodland beings, control temperature, 10' radius, cure serious wounds, dispel magic, hallucinatory forest, hold plant, plant door, produce fire, protection from lightning, repel insects, speak with plants.*

5th-level spells: *Animal growth, animal summoning II, anti-plant shell, commune with nature, control winds, insect plague, moonbeam, pass plant, spike stones, sticks to snakes, transmute rock to mud, wall of fire.*

6th-level spells: *Animal summoning III, anti-animal shell, conjure fire elemental, cure critical wounds, feeblemind, fire seeds, liveoak, transport via plants, transmute water to dust, turn wood, wall of thorns, weather summoning.*

7th-level spells: *Animate rock, changestaff, chariot of sustarre, confusion, conjure earth elemental, control weather, creeping doom, finger of death, fire storm, reincarnate, sunray, transmute metal to wood.*

# Appendix B

A good many works of modern fantasy fiction deal with druids or druidlike figures who act to magically preserve and protect Nature. Some of the best are listed below, but many more Arthurian (Merlin was a druid!) or Celtic-inspired fantasies await in bookstores and libraries.

## Novels and Series

*The Mists of Avalon*, Marion Zimmer Bradley. The story of King Arthur, Merlin, and Morgan le Fay told from Morgan's point of view. Beautifully written.

*The Dreamstone*, C. J. Cherryh. Arafel, the last of the Sidhe and immortal protectress of the wood, makes a good model for an eccentric Guardian druid. Sequel: *The Tree of Swords and Jewels.*

*Moonheart*, Charles De Lint. This novel has a modern setting, but its compelling tale of bards, druids, shamans, and the meeting of Celtic and Amerind magic has relevance to any fantasy campaign--as do most of De Lint's other novels (especially *Greenmantle*).

*The Chronicles of Thomas Covenant the Unbeliever* series, Steven R. Donaldson. An outcast from our world becomes drawn reluctantly into a struggle to save the magical Land from evil. The forces rallied in defense of the Land hold ideas usable in a druidic campaign. Also relevant is the theme of protecting a world against a corrupting evil.

*Moon of Gomrath*, Alan Garner. This tale, regarding the return of "wild magic" to England, contains useful enchantments.

*Mythago Wood*, Robert Holdstock. This award-winner full of powerful images brims with druidic magic and ancient mystery in England's woods. The Mythago Wood is the archetypal primal forest; mythagos themselves would make an exciting mystery encounter--and an interesting alternative to avatars. Sequel: *Lavondyss*.

*Druid*, Morgan Llywelyn. Clearly, this novel is superior historical fantasy.

*Nausicaa and the Valley of the Wind*, Hayao Miyazaki. Nausicaa, the heroine of this excellent science-fantasy comic (and movie), resembles a gray druid with the Hivemaster

kit.

*Moonshae and Druidhome trilogies*, Douglas Niles. These six books center around a druid who worships the Earthmother in the Forgotten Realms setting.

*The Forest of Forever*, Thomas Burnett Swann. This is one of several novels by Swann that focuses on sylvan folk, dryads, and the like within an ancient setting.

*Lord of the Rings*, J. R. R. Tolkein. The encounters with the Old Forest, Tom Bombadil, Radagast, and Treebeard contain many ideas usable within a druidic campaign. Some think Gandalf resembles a druid far more than a wizard.

*The Seedbearers* trilogy, Peter Valentine. This series postulates a druid migration to Great Britain following the sinking of Atlantis. Its action continues up to Rome's destruction of the druids.

## Game Supplements

*Halls of the High King* (FA1), Ed Greenwood. This Forgotten Realms adventure contains information on druidic groves in the Realms, including their unique "moonwells."

*Celts Campaign Sourcebook* (HR3), Graeme Davis. This book provides rules on how the very different Celtic druids of ancient Britain, Gaul, and Ireland can work within a historical fantasy AD&D game. It has a useful bibliography on historical druids.

# Introduction

The world of the thief is a world of darkness and stealth, hidden from the eyes of respectable folk, yet often under the scrutiny of the zealous enforcers of the law. It is a world of courage and fear, of bravado and cowardice, of violence and treachery.

Yet it is also a world of color and laughter, lively parties and bustling markets. The thief, more than any other character class, practices his arts among his fellow men (or halflings, or elves, or whatever). He seeks the gatherings of population, the confluence of wealth and avarice, where treasures are there for the taking.

To be sure, many a thief has proven his worth time and again in the darkest reaches of a forgotten dungeon, among the snowy peaks of the bleakest of wild vistas, or within the halls of a fortress or military camp. Quests into the wild contain as much appeal for the thief as they do for other characters. In fact, should the prospect of treasure appear significant enough, many a thief will lead the way in encouraging his companions to embark on such a mission.

But when the adventurers return to the sheltering walls of their homes, wherever these may be, and rejoin the population, the thief is best equipped to find adventure there. And when such adventure is discovered, it is thiefly skills that are most often called into play.

## The Purpose of the *Complete Thief's Handbook*

This book provides information of use to players of thief characters, and to DMs running campaigns including thieves. The emphasis lies heavily upon a campaign where many Pcs are thieves, but there is no reason provisions in this book cannot be employed by groups with but a single thief among them.

None of the information here changes any existing AD&D® 2nd Edition rule. Instead, the idea is to amplify and detail those rules for players who are interested in playing thief characters. Indeed, it is possible and in fact quite easy to play a thief character without the information herein.

However, the player who wishes to develop his player character thief in a unique fashion, or who seeks aid in deepening and broadening the character's personality, goals,

and motivations, will find helpful suggestions and ideas in the *Complete Thief's Handbook*.

But the book is a guide for DMs as well. Information on organizing thieves' guilds, for example, is essential to any ongoing thief campaign. If no guild is present, consistent information on other societal sanctions needs to be determined by the DM—and the information must be available to players as well.

Consequently, no portion of this book is prohibited to player viewing, nor is any part of it irrelevant to the activities of a good DM.

New rules and procedures only become official campaign rules in a campaign where the DM so declares. Players who wish to employ some of these materials can certainly ask the DM to use them, but as always, the Dungeon Master has the last word.

## The Role of the Thief

The skulking burglar pilfering through the night is perhaps the most common picture of the thief. Neither players nor Dungeon Masters should blind themselves to other possibilities, some of them more useful (and socially acceptable) than common theft.

The thief character kits introduced in Chapter 3 provide a variety of thief types. These are not new character classes by any means, but the kits can help players define thieves in one of several areas of specialty. Some of these include:

**The Spy**, long a noble practitioner of the thiefly skills. Indeed, lockpicking, moving silently, hiding in shadows, and the like are all skills of prime importance to the Spy.

**The Scout** can do for an adventuring party what skirmishing troops do for an army: he is a fast, lightly armored individual who can utilize stealth and speed to study terrain and watch for ambush. Thief-scouts and rangers in combination make splendid reconnaissance bands.

Other kits include the **Troubleshooter** (the dungeon-crawling thief**), Acrobats, Beggars, Bounty Hunters, Swindlers**, and many more.

Typical thiefly personalities are also provided, allowing players to create detailed PCs based upon these archetypes, but also providing useful pieces of imaginative roleplaying information for many long-lived, high-level PCs.

Chapter 2 describes additional nonweapon proficiencies of particular use to thief characters. New equipment types, both magical and mundane, are introduced in later chapters. And a few new rules cover areas of concern to thieves—lethal and non-lethal poisons, for example, and how to determine the quality of workmanship used to build a lock or trap.

A section on running a thief campaign provides players, and most particularly DMs, with suggestions and guidelines on ways to tailor the campaign toward the thief PCs' areas of interest and expertise.

Whatever area of the book yields the most use, players and DMs alike who wish to expand the domain of the thief in their campaign world should find many things of interest between these covers.

## Thieves and the Law

*Geraldor slipped through the alley, his black cloak masking his progress through the*

*filthy passage. Reassuring himself that he was not pursued, he stepped boldly onto the Golden Way. With a nervous gesture he smoothed his oily black hair and attempted to stroke his wispy mustache.*

*Sighing, Geraldor realized that any attempt to look like a gentleman was doomed to failure. He hoped his guildmaster's plan was intact.*

*And there before him was the Highgate! Geraldor's heart pounded as he examined the brawny men at arms, four in number, manning the post. As the only public route into the city's Golden Quarter—home of all the wealthiest merchants, most powerful lords, and influential ambassadors in all the land—the Highgate was usually guarded well.*

*But not tonight. Geraldor recognized the giant, hulking form of Morto, sergeant-at-arms of the city watch. As Geraldor had expected—nay, hoped—Morto commanded the detachment at the Highgate.*

*With a barely concealed nod of recognition, Geraldor stalked to the gate and stood impatiently as Morto made a pretense of examining his "pass." In reality, this crudely forged slip would fool no one with any capacity for comprehending script.*

*But Morto's reading ability was not the issue tonight. Instead, the guard's loyalty to the guildmaster was the force behind Morto's curt nod and his gesture ushering Geraldor through the Highgate. Geraldor fairly skipped through the great stone arch. He had entered the Golden Quarter!*

*Now his movements took on the shadowy aspect of the master thief at work. Though he remained alert, he knew that the major obstacle had been passed at the gate. The hefty bribes offered to Morto and his associates had paved the way to riches. It only remained for Geraldor to haul those riches away.*

*The wiry thief found the mansion that had been selected by the guildmaster. Family and servants all slept, and they had no dog. In a matter of minutes Geraldor had collected the lady's gems. He spent several more minutes seeking the strongbox, finally discovering it in a small, luxurious sitting room. He picked the lock and pulled out only the most valuable coinage, platinum and gold, before soundlessly slipping toward the exit.*

*In the house he saw magnificent silver candelabra, a huge and obviously enchanted sword, and other wonders. All of these he disdained as too bulky for his current mission. After all, Geraldor was a professional!*

*Scarcely suppressing an urge to whistle, Geraldor sauntered back along the Golden Way. He would pass through the Highgate again and immediately disappear into the clustered neighborhoods that crowded both banks of the muddy river.*

*He saw Morto at the guardpost and nodded casually, passing under the great stone arch again on his way out of the Golden Quarter. Only then did he notice something wrong: Morto stood mute, with his hands shackled before him.*

*At that same instant a heavy gauntlet fell upon Geraldor's shoulder and a massive arm propelled him into the stone wall of the gatehouse.*

*"What have we here?" growled an unfamiliar voice. Terrified, Geraldor saw that it issued from beneath the shiny cap of a watch captain.*

*"J-just going home, m-my lord!" he stammered, wriggling in a futile attempt to break away.*

*The captain laughed, having already found and discarded Geraldor's fake pass. The man's gloved hands continued to poke through Geraldor's clothes and pouches,*

*retrieving object after object, often with a low chuckle.*

*"The lady Allorana's diadem, I see—perhaps she loaned it to you!" The captain roared with hilarity, joined by the guffaws of a full company of guardsmen that Geraldor now saw in the shadows.*

*Then the captain's voice lowered as his hand tightened around Geraldor's throat. "Now, thief, you will find out what the laws are in our town. And you will have time to learn them while you rot in gaol!"*

From even before the time, thousands of years ago, when the Code of Hammurabi first defined the legal system of a body of government, and extending to the present day, societies have created procedures for defining personal possessions. An inherent part of this definition includes the penalties due those who violate these procedures. Odd as it may sound, thieves cannot exist without some kind of legal framework.

And from the time in any culture when personal possessions come into being, there have been those who seek to remove the possessions of others and make them their own. It is for players of characters who attempt this perilous exchange of wealth, and to their Dungeon Masters, that this tome is intended.

Of course, some thievery occurs under the guise of authority, and as such falls beyond the scope of this book. Tax collectors, for example, may steal from those who regard such claims as thievery. So do conquerors. But these are not AD&D® thieves. While they may approach the category of bandits, their "theft" demands more fighting skill and aggression than stealth.

By far the more common type of thievery, and the one that generally comes to mind when discussing the character type, is the furtive pilfering described in the incident above. Poor Geraldor has suffered the fate known to many of these wrongdoers as he is taken by the long arm of the law. But if that law did not exist, then Geraldor's task would become meaningless.

This point is one that should be well remembered by those who play thieves as well as those who run the campaigns. Regardless of how chaotic the setting, a structure at least vaguely approximating a legal system is necessary before the thief can really begin to ply his trade.

## Chapter 1:Role-Playing Thieves

Thieves are perhaps the most fascinating and diverse class of player-characters in the AD&D® game—or at least they can be, if played properly. The thief has a certain innate, charming flair, which the *Player's Handbook* describes: "Thieves are people who feel that the world (and everyone in it) somehow owes them a living. They get by day by day, living in the highest style they can afford and doing as little work as possible . . ."

This is an accurate description of many thieves, but not all; and there are many exceptions. You will find that the character—that is, the personality—of your thief character will be very important, vital to making the thief a living, breathing person. It makes them more fun to play, too.

Personality, then, is the topic of this chapter. It comes before the chapters of technical information on kits, new abilities and so forth, because we believe that when you are designing a thief character, perhaps even more so than with other classes, personality

considerations should come first. Who is this character? Where is he from? Why is he a thief—has he stolen bread crumbs all his life just to survive, or is he an idle fop who moonlights as a burglar just for thrills?

After asking yourself such questions, and answering them, you will then be better able to proceed into the technical details. Your character will exist in your mind, and the task will then be just a matter of translating that vision into working game terms.

There are three basic things to consider when putting together your thief's background and personality: setting, social background, and motivations.

## Setting

Where is the character from? This will have an effect on what sorts of skills the thief may have picked up. City, countryside, and wilderness are all possible settings; or the thief may have been a wanderer all of his life.

**City:** Any place where people gather in large numbers, there will be those who live off the sweat and toil of others. Besides politicians, thieves are often among this group. A city background will open many possibilities of specialization for your thief. Because a city is a complicated web of many people, each person tends to have more specialized functions. This is true for thieves as well as normal, respectable citizens.

Note that thieves in cities, especially those who have very specialized skills and abilities, are most likely connected with a thieves' guild; or, if they are not, they will surely run afoul of one sooner or later. If your thief hails from an urban center, be sure to figure out what his relationship to the local thieves' guild (or, in some places, guilds) is.

**Countryside:** A few thieves are able to make a living in a single populated, rural area. They tend to be quite different from their city-dwelling cousins—pickpocketing, for instance, is probably not going to be practiced much without the shelter and anonymity of the urban crowds. Extortion, banditry, burglary, and various similar thefts are more typical means of making a living from the peasants and their rulers in the countryside. Fences also may work the countryside, selling wares that may have been stolen in distant cities.

Thieves' guilds often have an active hand in populated rural regions, though it is not as firm as in the cities.

**Wilderness:** Thieves are, by definition, those who garner their living from others, so few are to be found making their permanent abode in the wilderness, far from human settlement. Those who do are usually bandits, with a stronghold set up somewhere secure, from which they can make raids on nearby settlements or trade routes. In AD&D fantasy settings, there are also innumerable possibilities for thieves who survive by taking liberties in their relationships with the local non-humans.

While few thieves' guilds would claim any wilderness as "territory," thieves from these regions are typically affiliated with one or another organized band of miscreants. These bandit groups don't have the organization or sophistication of the urban guilds, but they are still formidable, and their rivalries may run as deep as any among the big city guilds.

A great many demihuman thieves originally hail from a wilderness setting, although they do not necessarily fit the "bandit" mold common among humans. (See the section on demihumans, below, for more information.)

**Wandering:** Finally, some thieves have never called any place "home." They travel town and village, city and wilderness, wherever they think fortune might grant them better opportunities. Charlatans, those who make their living by duping others with all sorts of fraud, are often wanderers: They will stay in one place as long as there's money to be made, but they hope to be long gone, preying on others' gullibility, before their scams are uncovered.

## Social Background

After you have chosen a setting for your character, you should decide his social background. At the start this need only be done in a general way: select a poor (or unknown), middle, wealthy or noble class background. This background will have important effects on what resources are available to the character. Also be sure to consider how it relates to the thief's motivation (below).

**Poor/unknown:** Most thieves are from a poor background. Most people would just as well make an honest living, if they can. For some in the lower classes, however, there is simply no such opportunity, and so crime becomes a means of survival. The vast majority of such criminals spend their lives as petty thieves, picking pockets, mugging people foolish enough to walk the streets at night alone, perhaps even planning and executing a burglary. These poverty-born thieves form the backbone of most thieves' guilds. The guild regulates their activities as well as it can, and uses it as a pool, from which are drawn the most talented and promising. Because skill and cunning are the ultimate determining factors, many a famous thief—whether in esteem or power among guild comrades, or outside of the underworld—rose from the most humble beginnings.

An "unknown" background usually fits in with the poorer classes. This means the character was an orphan, and does not know his ancestry; his parents may have been criminals, middle-class artisans, or even wealthy merchants or nobles. Dickens' Oliver Twist is a classic example of a thief of unknown ancestry. For all practical purposes, the character is one of the poor people, like everyone with whom he grew up. However, a hook in the campaign may be the search for, or accidental discovery of, a character's ancestry.

Player characters from a poor background may, at the DM's option, have a smaller amount of starting money than they would otherwise (perhaps 2d4 x 10 gp). If a player character is part of a guild, however, he has probably been accepted as someone who shows promise, and the guild may provide standard equipment and money for its apprentice—the equivalent of the usual 2d6 x 10 gp.

**Middle:** A few thieves may hail from the middle classes, perhaps from families of artisans and petty merchants. Such characters are less likely to be stealing for survival, though desperate financial straits may bring people to seek illegal solutions, which could tie into a whole net of crime.

Imagine, for instance, a locksmith who needs money to support his ailing mother. The landlord threatens eviction, and so forth; in desperation, the locksmith turns to the thieves' guild for a quick, easy, high-interest loan. As the family gets more and more entangled by their debts, the guild decides to accept as partial payment the locksmith's daughter (and apprentice), to become an apprentice thief.

But greed is a more typical motivation. Many swindlers come from the middle class;

they decided that there are better profits to be made through dishonesty than hard work.

Thieves of middle-class origin usually have standard initial funds.

**Wealthy/Noble:** Still fewer thieves are from affluent families. This is partly because people with ample funds have little motivation to pick pockets; but even more, it is because thievery is very much socially unacceptable at this level. There are exceptions, of course. Wealthy privateers, raiding the trade lanes of rival nations for glory and plunder, may enjoy a high and respected profile for a time. And wealthy families of crime lords are a different matter entirely.

In any case, a thief from a wealthy family is expected to distinguish himself in some way or other—flamboyance, daring, audacity, charm—even if he hides his identity during his roguish endeavors. Otherwise, what is the point of risking life and reputation?

This question might be asked of any character, of course. And so we turn to the topic of motivations.

## Motivation

Why is the thief what he is? You can ask this question even before you know specifically what his area of expertise or technical interest is. A person primarily motivated by greed could be a troubleshooter or a cat burglar, for instance, provided the job pays well.

We suggest six basic motivations: fame (or infamy), greed, justice, loyalty, survival, and whim. These are of course generalizations, and any particular character probably has motivations more complex than one of these simple descriptions. Also, characters often have more than one motivation, and different motivations can apply to different situations.

This may sound so convoluted that you may wonder why we should even approach the issue. It is useful to choose a basic motivation, however, as the basis for role-playing. As you play the character, more motivations will arise—and old ones may vanish. In this way a character may come to life.

A character who starts with the greed motivation may, in the course of his adventures, encounter a great deal of injustice wrought by the rulers of the land. He may even trace his own selfishness to the perverted values of the rulers. As he organizes his activities to oppose the rulers, then, his motivation may subtly swing towards justice. It is unlikely, however, that he would be so "converted" as to lose entirely the greed that drove him for so long. New conflicts and role-playing opportunities may arise within the character between his greed and his new-found sense of justice.

Be sure to keep your character's motivations in mind when you select his alignment. The description below of each general motivation includes a word on appropriate, related alignments. Note also that as the character develops in play and motivation shifts, alignment too may undergo change. (For a thorough discussion of alignment changes, see the AD&D® 2nd Edition *Player's Handbook*, p. 49, and the *Dungeon Master's Guide*, pp. 28-29.)

The motivation description may also include suggestions on thief kits appropriate to this motivation. The thief kits are fully detailed in Chapter 3.

**Fame/Infamy:** The fabled charm of a thief's life attracts many an adventurer in search of glory. In our own real world, many thieves have achieved great fame, and in

literature even more such figures abound. Infamy surely accompanies the career of many a successful thief; for some it may even be their ultimate goal. If this is the case with your character, you must be certain to bring it out while role-playing. Every action should be considered in terms of how it may increase the world's knowledge of the thief's amazing exploits.

**Greed:** The simplest and perhaps most stereotypical motive behind the thief's life is greed. Combining greed with sloth, the thief shuns "real" work, and lightens his load by lightening others' purses. Or, the character simply loves wealth, but is unable to get it through acceptable channels.

Characters with greed as their primary motivation surely would not be of good alignment. Although even good thieves may have a certain element of greed, it would not be the biggest factor shaping their lives.

**Justice:** This is a rare and peculiar motivation, since thieves are generally considered to be anything but good. The classic example of the thief motivated by justice is Robin Hood—at least as popularly portrayed, if not in historical reality. Such a character must arise in a region or nation where injustice rules, though it need not do so officially. For instance, in one town the rulers may be blatantly evil and corrupt; a thief motivated by justice may devote himself to fighting those rulers.

Characters motivated by justice will probably be of good, lawful neutral, or true neutral alignments. Remember that each alignment has its own idea of what constitutes "justice"; to a true neutral thief, for instance, justice means maintaining the balances between good and evil, law and chaos.

**Loyalty:** Some connection in the character's past has drawn him onto the road of the thief, and he follows it faithfully out of loyalty or debt to that past. For instance, one character might have been born into a family of crimelords; he became a thief as a matter of family loyalty. Another thief may have been an orphan, sheltered and raised by the thieves' guild. Even though his moral sensibilities may lead him to question his benefactors' and even his own behavior, his loyalty and gratitude for the life and opportunity they gave him may (at least for the moment) outweigh his doubts.

Loyalty is most appropriate as the primary motivation of lawful characters. The conflicts of loyalty versus moral imperatives may lead to some very interesting role-playing.

**Survival:** Many thieves from the lower strata of society engage in theft and the like for the simple purpose of survival. Player-character adventurers are prone to garner more wealth than they need for mere survival, so (unless the Dungeon Master works diligently to keep them poor) they might need a new motivation after a few successful adventures. Probably a secondary motivation (such as greed, or even justice) would come to the fore and become primary.

Thieves who steal for survival usually don't have lawful alignments, though lawful evil is possible.

**Whim:** Some thieves engage in their activities for the sheer thrill of it. They can survive (materially) without it, they don't need or desire the money as such, and they are indifferent to fame. They simply desire to steal, to deceive people, to pull off the most impossible heist or scam—this grants them supreme pleasure. Whim-motivated thieves range from the ennui-stricken rich man's son to the compulsive shoplifter whose desire to steal may push him to the very edge of sanity.

This motivation is most appropriate for chaotic alignments.

## Sample Archetypes

By combining assorted settings, social backgrounds and motivations, you can create a worldful of distinct thieves. Another way of making a character is to start with a whole concept of what sort of thief he is, rather than building him from the individual blocks we described above.

But where do you get such a concept? History, folklore and literature all provide colorful examples of thieves. From these you can abstract a model, an archetype, on which you base your beginning character. Like the elements we described above, these archetypes are rough and general. Through effective role-playing you will expand your thief into a more detailed, interesting, and believable character.

Below are a number of sample archetypes that you may have encountered in books, movies, and so forth. Experienced role-players will probably find that thieves they've played in the past are similar to one of these archetypes, or are a fusion of two or more.

Remember that these archetypes, like the background options presented above, are meant to inspire role-playing, not to limit it. The personality you create should provide the basis of your character, but it would be wrong to define every possible choice beforehand. Part of the pleasure of role-playing is seeing your characters change and grow; like real people, they should be full of surprises, ready to adapt and change with new situations.

**The Artist:** This thief is searching for "the perfect crime." He chooses jobs for their challenge and aesthetic pleasure, not strictly for their payoff in wealth.

A drunken duke who is stumbling down an alley late at night, heavily laden with jewels and gold, would be of little interest as a target for the Artist. In fact, the Artist would be offended if someone were to suggest that he perform such a ludicrously easy theft, since it would be so far "below" the Artist's caliber.

However, the Artist might take advantage of the situation if it might play into a bigger, grander scheme. For instance, he might play the part of a "Good Samaritan," escorting the foolish noble to his residence, and thereby gaining the duke's confidence. This gives the Artist special privileges, not the least of which is the duke's unquestioning trust. (After all, how could the Artist have been a thief if he escorted the duke safely home, rather than mugging him?) From this position, then, the Artist may plan a truly exceptional theft, the sort that would stir up an extraordinary amount of public interest, but could go unsolved for decades.

The Artist is usually found in an urban setting or, less frequently, wandering. His family was surely above the poverty level, and probably even wealthy; theft for the Artist is chiefly a pastime, though it may have also become a source of livelihood. He is egotistical, motivated by whim or a desire for fame—if not fame for himself, than for his crimes, since he probably will remain anonymous.

**Desperado:** For some reason or another, this character is running from the law—or, perhaps even worse, the unwritten law of the underworld. In any case, he is ready and willing to do whatever is necessary, however drastic, to preserve his life—he knows all too well how soon its end may be. Delicacy and rational forethought are not the forte of the Desperado. This is the sort of character that, when discovered pickpocketing, might

knife his target, lest his face be identified.

The Desperado character may be of any social background, although poor is most likely. His motivation is simple survival, and he may be found in any setting. You must be certain that you know what circumstances have led to his desperation. Desperadoes are often short-lived; either whatever's chasing them catches up and gets them, or (rarely) they eliminate the threat and are able to shift to a less high-strung lifestyle. The Desperado either dies or changes to something else . . . though surely his old habits die hard.

**Folk Hero:** When the system itself is unjust, those labeled "criminals" are sometimes in fact the good guys. The Folk Hero will not sit idly by while tyrants rule. He musters all his charisma and roguish skills, and leads the fight to right wrongs and, if he can, topple the evil regime. Robin Hood is a Folk Hero of great fame. According to legend he stole from the wealthy nobles and clergy, and gave the money to the poor, overtaxed peasants.

Robin Hood was of noble lineage, and his band did their work in the countryside, but a Folk Hero could operate in any setting and be of any social background. Imagine, for instance, a thief from the lower classes who lives in a city ruled by an evil tyrant. He and his compatriots devote themselves to the freeing of maltreated slaves and falsely convicted prisoners, smuggling them to safety beyond the evil kingdom's borders. The chief motivation of the Folk Hero is, of course, justice (or at least so it must appear to the public eye).

**Kleptomaniac:** The kleptomaniac is a character with a compulsion, perhaps entirely uncontrollable, to steal. This compulsion might be at odds with the rest of the character's personality; interesting role-playing may arise as the character has an internal conflict between his driving desire to steal and a guilty conscience that never stops telling him how wrong and evil his actions are. This character may be of any background and setting. His motivation might be classified (very loosely) as whim, since it lacks a rational reason.

**Mobster:** This character was literally raised in crime. Perhaps he hails from a family of elite criminals, leaders of organized crime. Over the years they have developed their own codes of behavior and a twisted sense of honor. A mobster is found in the city, and may be of any background. (Crime families may have considerable wealth, but if their illegal activities are well known, or at least the topic for common rumors, they may have considerably lower esteem in the eyes of good citizens than those of comparable yet honestly-earned wealth.) His primary motivation is usually greed or loyalty, and his alignment is most often lawful neutral or lawful evil. Characters of this sort often make up the backbone of the more powerful thieves' guilds.

**The Professional:** Thievery is simply a job for this character. He is often aloof from other, "lesser" thieves: He has little tolerance for flamboyant fools, like the Artist and Trickster; Desperadoes and Kleptomaniacs, desperate and obsessed, are sloppy and crude in comparison to his refined talents and balanced temperament; Folk Heroes are just silly. The Vigilante is a dangerous foe for the Professional, in part because he is incomprehensible to him. The Mobster would seem to be the Professional's kindred spirit, but they are too tightly bound (in the Professional's opinion) by honor and family loyalty and such trash. The Professional is bound to no absolute codes, except perhaps a contract and a clean, efficient theft. He has honor and honesty inasmuch as it is necessary to maintain his reputation for dependability.

The Professional's motivation is hard to pinpoint. Clearly it is neither justice nor

loyalty; and he knows that greed, whim and the lust for fame can cloud judgement and lead to fatal sloppiness. Perhaps then "survival" would be the best description of the Professional's motive; though any Professional worth his salt does better than merely survive. Of all the archetypes, he is perhaps most likely to have a businesslike, middle-class background, though any of the others is possible. The Professional is usually based in a city, or wanders, and his services are usually for hire. He may be associated with a guild, but would prefer to be as independent as possible—other people's involvement in his work is more often hindrance than help.

**Street Urchin/Victim of Circumstances:** This thief grew up in an impoverished, harsh environment. There he learned that if you need something you have to take it, because no one will give it to you. People may tell him that stealing is wrong, but he cannot believe it—to him, stealing has always meant survival. He long ago lost any sense of regret for his actions. He was driven to a life of crime so long ago that it seems to him the only life possible.

This character invariably knows his setting (typically a city) inside and out, and probably has many useful connections. His social background is always lower class or unknown. Street Urchins that continue the thief's life may develop into a different archetype as they grow older; the Professional, for instance, may blossom from such a solitary young thief.

**Trickster:** This is a thrillseeker, a character who delights in pulling off the most outrageous and amazing scams. Deception and pranks are his food and drink; flirting with danger grants him an incomparable thrill. Thieves, such as Reynard the Fox, are often portrayed this way in fairy and folk tales.

In role-playing, you may wish to make a Trickster thief more complicated. Why does he seem so light and frivolous? Does he hide something beneath it all? Is he in fact driven, obsessed with proving himself the most clever of all? Such a character could even become dangerous to those around him if his insecurities were brought out and played upon. What if people are impressed by his antics? What if they manage to outwit his pranks, or don't find them amusing? Does he need attention, or is the thrill alone enough to satisfy him? Might the trickster be cowed into quiet humility, or pushed into rage or frustration?

**Vigilante:** The Vigilante is a loner, a curious sort of thief whose life is preoccupied with defeating the schemes of criminals. He finds the law too restrictive, or unenforced, and so he goes outside it to bring about his vision of justice. Ironically, the Vigilante trains himself in the very skills of the thieves he opposes; he comes to know their ways and their minds as though he were one of them.

Though he fights on the side of law, the law does not often appreciate the Vigilante. He is unsupervised, unpredictable—and therefore dangerous. This is especially true in the case of locales where the leadership is a bit on the shady side itself, perhaps riddled with bribery, graft, connections with crime, and other such corruption. The Vigilante leads a dangerous life, for he can have many powerful enemies.

On the other hand, the Vigilante may attain a revered status similar to that of a Folk Hero, if his successes become popular knowledge. Popularity might do little to ward off a powerful thieves' guild, but it can cow the more fearful of public officials into tacit approval of his extralegal exploits.

A Vigilante will, of course, not be part of a thieves' guild—that is his antithesis. He

may, however, be part of some secret society devoted to justice. Such a society may consist entirely of Vigilante-type thieves, or it could include adventurers of many diverse classes.

The Vigilante may be of any social background. He might work in any setting, but the city is most common. His primary motivation is usually justice, but one could imagine it being fame, loyalty (perhaps to comrades or relatives killed or ruined by criminals), or possibly even whim.

Some comic books do a great job of illustrating the complex psychologies found in characters of the Vigilante archetype. They make excellent inspirational reading.

## Demihumans

Another factor to consider when you create the personality of your thief is race. Thieves are one of the two AD&D® game classes that are open to any race (the other is fighter), so there's a great deal of racial diversity among the ranks.

Humans are assumed to be the norm throughout this book, but we'll include the occasional note when special conditions or rules apply to nonhuman thieves.

Below, for instance, we have some observations on the behavior of thieves of the various demihuman races. These suggestions are mere guidelines, generalizations; it is by no means required that PC thieves should conform to these models. PCs are exceptional in many ways, after all, not the least of which is personality. These predispositions, as you might call them, may nonetheless be useful as a starting point for conceptualizing your demihuman thief.

Reference is made below to the types of "thief kits" that the various races are likely to take; thief kits are fully explained in Chapter 3, starting on p. 22.

### Dwarf

Many dwarven thieves are not stealers, as such; but rather experts in mechanical things, such as locks, traps and so on, that are used to thwart thieves. The dwarven thief, then, is often an installer of such items, or an advisor on security matters. And, naturally, knowledge of how to put something together is also useful for taking it apart . . .

The kit most favored by dwarven thieves is, naturally, the troubleshooter. Here he can make use of his knowledge and skills without engaging in the dishonorable activity of genuine theft. If you want to check how secure your jewels actually are, or whether your prison is in fact inescapable, a dwarven troubleshooter is probably the best way to find out.

Bounty hunters also are found in the ranks of dwarven thieves. They may serve the kings under the mountains, bringing back scoundrels and criminals who have somehow escaped dwarven justice—and such characters are the only bounty hunters permitted to be of lawful alignment. Other dwarven bounty hunters specialize as repossessors. They use the full range of thieves' skills to recover stolen items; and they are careful to take nothing else, thereby keeping their honor and reputation impeccable.

It may be dangerous to call either of these sorts of dwarves a thief—a grave insult in dwarven culture, in which tradition absolutely prohibits one dwarf from stealing from another. Theft within a dwarven community is punishable by banishment at the very

least, and sometimes death.

The prohibition does not extend to stealing from other races, however (especially goblins), but stealing is still less than honorable and a known thief is usually viewed with caution and suspicion by his neighbors.

Dwarven thieves living outside the dwarven world either became tired of that suspicion, or were expelled from their homes for theft or another transgression. They still tend to retain a great deal of honor and the professional attitude characteristic of their race; a former criminal may even have learned from his crimes and youthful excesses, and could be a very reliable companion. A very dangerous few, however, have abandoned their racial legacy, and become treacherous and unpredictable.

Any dwarf found in a thieves' guild can be assumed to be an outcast from dwarven society.

## Elf

Elven thieves are sometimes characterized as eavesdroppers or spies. Elven culture has shown relatively little interest in personal, material property; with their incredibly long lifespans, they are more aware than most of the transitory nature of things.

But while material things come and go, knowledge is eternal, and it is what the elven thief covets above all. With their higher chances for finding secret doors, and superior senses in general, elves are excellent at gathering information. Of the various thief kits, they are most likely to become spies. An elf raised in a larger human community might be inclined to take the investigator kit, but this is a rare situation. The adventurer kit is also popular, especially for the elven thief who wishes to traverse the world in search of exotic knowledge. (Note that multi-class thieves cannot take a kit, however.)

Elves are careful with preparations; they can have patience that amazes other races. They like to do research before a mission is undertaken, whether it be a relatively simple burglary or a dive into a deep dungeon to track some precious artifact.

Because of their heritage, elves are more likely than other thieves to recognize the value of archaic or obscure items, such as books and artwork. (If you are using the nonweapon proficiency system, you might let an elf check information gathering or a similar proficiency to identify or estimate the value of such an object.) An elf is also more likely to know where to fence the item—although he would probably want to keep it for himself.

When elves do desire material goods, they are sure to be beautiful and innovative ones. Elves take a special interest in items that are long-lasting and of intellectual value (art, rare books, etc.).

Though enthralled by knowledge, elves are not overly secretive. They find information exciting, and may delight in sharing it with their friends.

Finally, elves are dependable. You can usually expect an elf to behave as a professional (though he might not be recognized as such) or a reliable guildsman (though elves prefer to be independent of such organizations).

## Gnome

"Prankster" and "thrillseeker" are words that best describe the gnomish thief. He takes

delight in stealing, not out of greed but because it is like an exciting game—a trial of puzzles and challenges, with a valuable prize if you succeed. Thievery is recreation rather than a profession—but the reader knows well how devoted and involved people can become with their games and recreation!

Gnomes are fond of burglary, though wall-climbing is difficult on account of their small stature. They may be infallible "box-men" (experts at lock-opening and trap-disarmament), having technical expertise comparable to dwarves', but being more willing to put it to larcenous use.

Some have compared gnomish thieves to pack rats: Show one something shiny and interesting, and he'll likely be so overcome by curiosity that he'll drop everything in eagerness to discover a way to put the object of interest in his own little paws.

Bulky treasures, such as coins or awkward items that must be fenced, are avoided by gnomes. They are collectors, hobbyists who like to admire their trophies: gems, jewelry and (perhaps favorite of all) fascinating magical devices.

Also, gnomes love to put their magic items to clever use. They delight more than any other race in practical jokes. They may make themselves a nuisance to fellow adventurers and thieving partners; but, though embarrassing or amusing, such pranks are harmless. And at heart, a gnome, well-treated, is a most loyal and reliable adventuring companion.

### Half-elf

Half-elves live between two worlds—and perhaps this gives them a special affinity for thievery, taking the best that both have to offer.

Some half-elves favor the world of one parent or the other, if raised and accepted by that parent's society. But many more are wanderers, never quite feeling at home or accepted in either society.

By seeing and understanding two diverse cultural viewpoints, half-elves are acutely aware of peoples' differences in point of view—and how to capitalize on those differences. This helps develop a well-honed ability to shade the truth and, combined with the elven affinity for knowledge, makes half-elves excellent swindlers. Targets are sometimes further impressed by a half-elf's exotic appearance (pointed ears, lithe build, and so forth).

It is very easy, for instance, for a half-elf to enter a new town, find a likely target, discover what that person needs or desires, and then appear at the target's doorstep with a fake for sale. A half-elf swindler will milk a town or area for however much it's worth, and move on when things get a little too hot. Between towns he may link up with adventurers for protection (and perhaps con *them*, too), but eventually he'll move on when he has found new territory.

Many half-elves are loners and wanderers, which is not conducive to guild affiliation. The ties of a half-elf thief to a guild are loose, at best, unless the character has been raised in the guild structure and well-indoctrinated into its mentality.

### Halfling

Sometimes portrayed as consummate burglars, halfling thieves are really motivated by curiosity. The average halfling is content to lead a simple, safe, comfortable life. But

the thief longs to see and experience the world beyond the hills and burrows of his home shire.

"Adventurer" is probably still too strong a word, for even halfling thieves have their race's characteristic shy caution, plus a healthy dislike for danger, discomfort, and uncertainty. Halflings make careful preparations whenever possible, and use their skills of self-concealment liberally. Careful scouting is always a must, and frontal assaults (whether in combat or robbery) anathema.

Many halflings have remarkably little interest in money, which can be burdensome (especially for a small person). They'll take a good amount of loot, certainly—at least enough for a pleasant period of ease and comfort before work is made mandatory—but they are hardly motivated by greed.

Of great puzzlement to sages is the question: Where do halflings get their extraordinary talent for thieves' skills? There is precious little locksmithing or metalwork found in their culture, and thievery amongst the halflings themselves is virtually unheard of—yet the halfling thief has an amazing knack for almost all thieves' skills.

Coupling this knack and the attitudes just described, plus a fierce loyalty for their friends, the halfling thief is understandably in high demand for adventuring expeditions.

## Other Nonhuman Races

As the *Dungeon Master's Guide* mentions (p. 15), it is possible to design new character races for your campaign. Some of these characters likely will end up joining the thief class.

The races most commonly adapted for characters are humanoid—ogres, orcs, and half-breeds of those races; goblins, kobolds, and possibly even hobgoblins or bugbears. As thieves, these characters favor the kits of highwaymen (that is, bandits) and thugs—they prefer armed robbery, where no great deal of finesse, delicacy, or dexterity is required.

## Demihumans, Cities and Guilds

The entries above describe demihumans who were raised among their own kind, and have picked up most of their race's cultural trappings. Some demihumans, however, are found in other settings, such as human cities. Most such demihumans still originally lived among their own people, but some campaigns may include second- or even third-generation displaced demihumans. This particularly happens in large cities, where there may be ghettoes of demihumans, or where thieves' guilds have purposely raised demihumans in their midst to take advantage of their races' special abilities and benefits, while suppressing natural and cultural inclinations (dwarven honor, halfling peacefulness, half-elven wanderlust, and so on).

Ghetto-born demihumans undoubtedly still exhibit some stamp of their "homeland," but the tendencies are weaker. In fact, a guild-raised demihuman's personality might hardly be recognized for what it is, if the conditioning was done well. (There could even be such oddities as a claustrophobic dwarf or a repressed elf.)

Interesting role-playing could arise from an alienated, city-born demihuman thief breaking away from the guild that was the only parent he knew, and trying to find himself

in the unfamiliar lands of his ancestors.

## Code of the Professional

*Do you think that a city, an army, or bandits, or thieves, or any other group that attempted any action in common, could accomplish anything if they wronged one another?*

*--Plato's Republic, Book I*

One of the things that distinguishes a "professional" thief from the more common, vulgar variety is his understanding, like Plato's, of the delicate balance of justice that even thieves must maintain among themselves to be successful.

Many thieves wish to be regarded as professionals. It is a privileged status, indicating success and the respect of the underworld. It can be an asset for business, bringing more and more lucrative jobs. Even in places not claimed as territory by guilds, there are circles of professional thieves, form the elite of the underworld.

The most basic qualification of a professional is that he is recognized as such by other professionals. This recognition is not easy to gain. A thief must build a reputation for excellence, reliability, and honor among his business partners.

A would-be professional also needs to hang out in the "right spots", taverns and such establishments, particular places where the professional clique gathers. There they relax, share information, and make contacts and arrangements for professional cooperation with other thieves.

Attitude is the first element to be adopted by the aspiring professional. The professional attitude says thieving is a business, and should be conducted as neither more nor less than one. The professional is not contemptuous of his victims; they simply failed to protect their property adequately, and suffered the economic consequences.

Professionals develop an unwritten code of conduct, guidelines for behavior. Its exact contents vary from place to place; the only universal rule seems to be the prohibition of "squealing." A typical "code" is as follows, with its elements listed in order of importance:

1. A professional thief does not "squeal": If captures by authorities in the course or as a consequence of a job, he must not reveal the identities of his partners, fences, informants, or other professional contacts.

2. A professional thief will honestly report how much money or valuables are taken in a job; he will not "burn" his partners.

3. A mob of professional thieves will share their score equally among themselves, or according to the contribution of each to the job, arranged and agreed upon beforehand.

4. A professional thief will share some of his earnings with other professional thieves who have been incarcerated (to help pay fines, bribe officials, etc.).

5. If a professional thief has valuable information (e.g., attractive targets, location of traps, and the activities of the town watch), he will share it with other professionals.

6. Professional thieves will help one another, even in spite of personal differences or enmity between them.

As stated above, not all of these rules are recognized in each circle of professional thieves; but some sense of honor is vital to the attitude and behavior that mark a professional and gain him the recognition as a "good burglar." The penalty for breaking the professional code can be at least as severe as breaking the law. A few transgression may be overlooked by the criminal community, but a pattern of consistent disregard for the code will cause a character's reputation to deteriorate. Other thiees will not invite the character to be a partner in jobs; silence and cold stares will greet him at his favorite social establishments; and fences may even refuse to purchase the goods he acquires. He also runs the risk of former associates squealing on him.

In the worst situation—say, a thief burns his partners, squeals on them, and then skips town for some foreign port—the offending thief could not only be expect his professional reputation to be ruined, but he had better keep an eye over his shoulder, watching for assassins and bounty hunters hired by his former associates, or by their friends or families.

On the other hand, there are considerable benefits for the thief who adheres to the code. He will gain the respect and trust of his associates. He is not immune from dishonorable thieves, who may try to burn him or squeal on him; but he will have the support and approval of others in exacting revenge on those who wrong him. Also, if he is captured and imprisoned by authorities, he can expect the privilege of the fix; the guild contacts (or less formal contacts) may arrange his release through bribes or favors. Even if the professional does not have access to the money needed, other thieves, knowing that he'd do the same for them, will pitch in until the necessary amount has been gathered.

# Chapter 2: Proficiencies

The use of nonweapon proficiencies in your campaign is highly recommended, especially if you are going to make use of the thief kits that we present in this book. Proficiencies are the best way to quantify the various talents that distinguish one thief kit from another.

This chapter is entirely devoted to nonweapon proficiencies. It includes a reference table with a complete list of proficiencies available to thieves, including several that are new. The new proficiencies are described below.

**Table 1: NONWEAPON PROFICIENCIES—THIEVES**

| GENERAL **PROFICIENCIES*** | THIEF **PROFICIENCIES*** | NEW THIEF **PROFICIENCIES**** |
|---|---|---|
| Agriculture | Ancient History | Alertness*** |
| Animal Handling | Appraising | Animal Noise |

| | | |
|---|---|---|
| Animal Training | Blind-fighting | Astrology |
| Artistic Ability | Disguise | Begging |
| Blacksmithing | Forgery | Boating*** |
| Brewing | Gaming | Endurance |
| Carpentry | Gem Cutting | Fast-talking |
| Cobbling | Juggling | Fortune Telling |
| Cooking | Jumping | Herbalism |
| Dancing | Local History | Hunting |
| Direction Sense | Musical Instrument | Information Gathering |
| Etiquette | Reading Lips | Intimidation |
| Fire-building | Set Snares | Locksmithing |
| Fishing | Tightrope Walking | Looting |
| Heraldry | Tumbling | Navigation |
| Languages, Modern | Ventriloquism | Observation*** |
| Leatherworking | Reading/Writing | |
| Mining | Religion | |
| Pottery | Survival | |
| Riding, Airborne | Tracking | |
| Riding, Land-based | Trailing | |
| Rope Use | Voice Mimicry | |
| Seamanship | | |
| Seamstress/Tailor | | |
| Singing | | |
| Stonemasonry | | |
| Swimming | | |
| Weather Sense | | |
| Weaving | | |

* Proficiencies listed in this column are fully described in the AD&D® 2nd Edition *Player's Handbook*, pp. 56-65.

** These new proficiencies for thieves are described in the text of this chapter.

*** If the DM so wishes, these may be considered general proficiencies, available to characters of any class without additional nonweapon proficiency slot cost.

## New Proficiencies

Each description below starts with the following information: the name of the proficiency, the number of slots required for its selection, the relevant character statistic (e.g., Intelligence), the check modifier for using the proficiency, and the thief kit(s) for which this proficiency is appropriate (i.e., required or recommended).

Thieves of any kit may choose any of these new proficiencies. However, if the kit is not listed as appropriate in the proficiency's description, then an additional proficiency slot beyond the number listed is required, just as if the proficiency were restricted to another class (cf. *Player's Handbook*, p. 54). This is why a "# of slots required" is always

listed, even though a given proficiency may not cost any slots to thieves who take certain kits.

**Alertness**

1 slot, Wisdom, +1 modifier.
*Required:* Burglar.
*Recommended:* All.

A character with this proficiency is able to instinctively notice and recognize signs of a disturbance in the immediate vicinity, reducing by 1 in 6 the character's chance of being surprised whenever he makes a successful proficiency check.

**Animal Noise**

1 slot, Wisdom, -1 modifier.
*Recommended:* Bandit, Bounty Hunter, Smuggler.

A character with this proficiency is capable of imitating noises made by various animals. A successful proficiency check means that only magic can distinguish the noise from that of the actual animal being imitated. A failed die roll means that the sound varies from the correct noise in some slight way.

If the die roll fails, this does not mean that all creatures hearing the noise know that the sound is fake. While creatures and humanoids that are very familiar with the noise know this automatically, other creatures or characters in earshot may require Wisdom checks to determine if they detect the fake.

Bandits and Smugglers often use this ability for communication on the job, almost as a variant dialect of thieves' cant.

**Begging**
1 slot, Charisma, special modifiers.
*Required:* Beggar.
*Recommended:* Assassin, Bounty Hunter, Burglar, Cutpurse, Spy.

This proficiency serves two functions. First, it allows the character to pose convincingly as a beggar; success is automatic, so no proficiency check needs to be made. This function is used most by Assassins, Bounty Hunters and Spies in the pursuit of their assignments.

A character can also use begging to procure a very minimal daily income. (Many Cutpurses are in fact beggars who aren't getting enough—and vice versa.) Success requires first that there be people to beg from—people with money to give. A character in an abandoned castle or a recently pillaged village are virtually assured of failure.

The following modifiers are suggested to the DM as guidelines. They do not consider the wealth of a locale, just the population density. Impoverished regions might have greater negative modifiers—but then, so might affluent areas with traditions of stinginess.

**Table 2: SUGGESTED BEGGING MODIFIERS**

| Locale | Modifier |
|---|---|
| Uninhabited/ Wilderness | Automatic Failure |
| Countryside | -7 |
| Hamlet, Village | -5 |
| Town | -2 |
| City | 0 |

If a proficiency check is successful, then a character is able to panhandle enough money, goods or services that day to meet his basic needs (a little food and drink, a place to sleep).

The DM may also use the proficiency check for specific single actions—e.g., a character in disguise as a beggar accosts a specific NPC.

The begging proficiency may not be used to force player characters to give money away; players are always free to decide if and how generous their characters are in response to supplications.

**Boating**
1 slot, Wisdom, +1 modifier.
*Recommended:* Adventurer, Bounty Hunter, Smuggler.

A character with boating proficiency is needed to guide a boat down a rapid stream or to reduce the dangers of capsizing a canoe or kayak. In addition, a character with boating proficiency can insure that a boat is propelled at its maximum speed.

Note that this proficiency is distinct from Navigation and Seamanship, which apply to ships on oceans, seas, or at least large lakes, rather than small craft on smaller lakes and rivers.

**Endurance**
2 slots, Constitution, 0 modifier.
*Recommended:* Thug.

This proficiency is normally restricted to warriors. Its description is on p. 58 of the *Player's Handbook*.

**Fast-Talking**
1 slot, Charisma, special modifier.
*Required:* Swindler.
*Recommended:* Acrobat, Adventurer, Fence, Investigator, Smuggler, Troubleshooter.

Fast-talk is the art of distraction and conning. If a successful proficiency check is made, the fast-talker is able to get away with whatever scam he is attempting. Modifiers are based on the Intelligence and Wisdom of the target, as shown on Table 3. The DM may also introduce modifiers according to the difficulty or plausibility of what the character is attempting.

**Table 3: FAST-TALKING MODIFIERS**

| Target's Intel. | Modifier | Target's Wisdom | Modifier |
|---|---|---|---|
| 3 or less | n/a | 3 | -5 |
| 4-5 | -3 | 4-5 | -3 |
| 6-8 | -1 | 6-8 | -1 |
| 9-12 | 0 | 9-12 | 0 |
| 13-15 | +1 | 13-15 | +1 |
| 16-17 | +2 | 16-17 | +3 |
| 18 | +3 | 18 | +5 |
| 19 | +5 | 19+ | n/a |
| 20 | n/a | | |

Modifiers are cumulative. Targets of Intelligence 3 or less are so dim that attempts to fast-talk them fail automatically because they can't follow what's being said. (Creatures that are so stupid are easy to fool in other ways, however.) Targets with Intelligence of 20 or more or Wisdom of 19 or more are impervious to fast-talking.

*Example:* Julina the Silent, spy extraordinaire, is discovered by guards as she sneaks around the emperor's palace. She quickly decides to fast-talk them into believing that she is the mistress of the Steward of the palace and she just got lost in the labyrinthine halls. Unknown to Julina, the Steward is an elderly, faithfully and happily-married gentleman; and it is possible that the guards know of this reputation. The DM assumes the guards to have average Intelligence and Wisdom (no modifier), but he adds a -3 modifier because Julina's story contradicts the Steward's reputation. A 1d20 roll of 7 is less than 10 (Julina's Charisma of 13, with the -3 modifier), so she succeeds. The guards buy her story, and suggest that she go where she belongs immediately. If she failed they would call her bluff—and perhaps escort her straight to the door of the Steward and his wife!

**Fortune Telling**
2 slots, Charisma, +2 modifier (see below).
*Recommended:* Swindler.

This nonweapon proficiency covers knowledge of a variety of methods of divination—all of them fake. The thief with Fortune Telling is familiar with numerous devices and methods, such as tarot cards, palm reading, interpreting the flight of sparrows or the arrangement of a sacrificed animal's entrails, and so forth—or at least the thief is familiar enough with these practices to make it appear that he's an authentic soothsayer. (If fortune telling can make accurate predictions in the DM's campaign, this proficiency does not necessarily enable the thief to do so; it confers no magical powers.) The thief makes up the prediction he wishes to tell.

A successful proficiency check indicates that the thief's customer or client believes the fortune he was told to be authentic. If the check fails, the sham is discovered in some way, or the prediction is simply not believed. If the DM wishes, the same modifiers described for fast-talking (above) may be used, based on the Intelligence and Wisdom of the subject and the believability of the fortune predicted.

*Optional Rule:* If a natural 1 (or another number secretly chosen by the Dungeon Master before the die is rolled) comes up, the event that the thief predicted actually comes true!

**Herbalism**
2 slots, Intelligence, -2 modifier.
*Recommended:* Assassin, Bounty Hunter.

A knowledge of herbs, particularly those with poisonous qualities, is of value to Assassins and Bounty Hunters. And Scouts often learn the types and properties of plants in their wilderness journeys. This proficiency is normally restricted to priests and wizards. Its description is on p. 59 of the *Player's Handbook*. See also p. 26 of this book for information on the use of this proficiency with the assassin thief kit.

**Hunting**
1 slot, Wisdom, -1 modifier.
*Recommended:* Bounty Hunter.

This proficiency is normally restricted to warriors. Its description is on p. 59 of the *Player's Handbook.*

**Information Gathering**
1 slot, Intelligence, special modifiers.
*Required:* Beggar, Fence, Investigator, Spy.
*Recommended:* Adventurer, Assassin, Bounty Hunter, Burglar, Cutpurse, Smuggler, Swindler, Troubleshooter.

This proficiency represents the ability to gather information from the underworld, most commonly about roguish "jobs" and characters. A character with this proficiency, in appropriate circumstances, will be aware of any major rumors circulating among the lowlife of an area; and with a successful proficiency check, specific information about a person or place can be gathered. (The DM must decide how specific the information is.)

The following modifiers may adjust the proficiency check:

Characters' reaction adjustments (based on Charisma) should benefit or penalize the roll, assuming contact with people is involved in the search.

Thieves' guild members receive a bonus of +2, because they are assumed to have more and better-informed contacts than freelancers. Also, their "territory" (below) is considered to be that of the guild, not just their own area of operation.

Since this proficiency depends on a network of informants and contacts, the thief will be at a disadvantage trying to use it in an area other than his own territory. "Territory" refers to his regular base of operations—a town, one neighborhood of a city, or even a whole province or countryside. Outside this territory the thief does not hear rumors automatically (a normal proficiency roll is required), and gathering specific information suffers a penalty of at least -3. The DM may make it greater in truly foreign areas (e.g., a thief of Waterdeep trying to gather information in Calimshan), due to great differences in language, culture or race.

Finally, any time a proficiency check is required for information gathering, a small investment of money for drinks, bribes, and so forth must be made, or an additional penalty of -3 is imposed. A total of 1d10 gp is typical, and it is lost whether or not the desired information is found. (If the information is still unknown, the character can continue his search the next day, spending more money and making another proficiency check.) The DM is free to increase the cost of using this proficiency if it suits the campaign.

*Examples:*

1. Urlar is hanging around the local tavern in his neighborhood when he hears rumors of a dragon to the north, recently slain as it raided a village. The dragon's cave and treasures are as yet undiscovered. But some bragging adventurers are said to have found a map to them. Urlar's contacts provide this information to him automatically, while another PC would need to approach people, talk with them, and probably buy them several drinks in order to learn of the map and treasure.

2. His greed sparked, Urlar wants to know who these adventurers are, so that he can steal their map and find the dragon's hoard for himself. This requires a couple of drinks (a 2 gp investment); and the proficiency check has a -1 penalty because of Urlar's low Charisma (7). Urlar's Intelligence is 10, so he needs to roll a 9 or lower to find out who the adventurers are. If they are not very well known, he may need to make additional checks to track them down (find where they are staying, what temples they visit, or whatever).

3. Julina the Silent is hired as a spy to infiltrate the emperor's palace. She needs to find an easy way in—a sewer, service exit, or the like. She has an expense account from her employers for bribes. Her Intelligence is 14 and her modifiers are: +1 (for Charisma 13 reaction adjustment), +2 (thieves' guild member), and -3 (for this not being her home territory); so she must roll 14 or lower on 1d20 to get the information she needs.

It's best to role-play information searches whenever possible.

**Intimidation**

1 slot, ability special, special modifier.
*Required:* Thug.
*Recommended:* Bandit, Bounty Hunter, Buccaneer.

This is a talent for bending people to your will by scaring the living daylights out of them. NPCs who are intimidated are quite likely to do what they're told, out of fear. On the negative side, they are also very likely to harbor much resentment against the character that intimidates them. The NPCs will keep their resentment hidden—until the first chance to avenge their pride arises.

Intimidation may be attempted with one of two abilities: Strength or Charisma. If Strength is used, the thief is threatening immediate, personal bodily harm. If Charisma is used, the intimidation consists of more subtle threats, which need not be physical. If successful, the NPC is convinced that the thief is ready and capable of making his life miserable—if not immediately, then in the near future.

Player characters are never forced to submit to intimidation, as this would detract from the players' freedom to role-play.

**Locksmithing**
1 slot, Dexterity, 0 modifier.
*Recommended:* Troubleshooter, dwarf and gnome thieves.

This is the specialized skill of making locks. It is treated like other "craft" proficiencies when checking for success. Also, thieves with this proficiency gain a 10% bonus to their lockpicking skill, because they are intimately familiar with the internal structure and working of so many locks.

Besides troubleshooters, dwarf and gnome thieves of any kit can take the locksmithing proficiency to fill one slot, because of the tradition of craftsmanship and mechanical things in their cultural heritages.

**Looting**
1 slot, Dexterity, 0 modifier.
*Required:* Burglar.
*Recommended:* Adventurer, Bandit, Buccaneer, Thug.

This proficiency represents a knack for grabbing the best loot in the shortest time. For instance, a cat burglar breaks into a room in a wealthy mansion. He has about two minutes to fill his backpack, so that he can escape before guards are summoned by magical alarms. If his proficiency check succeeds, he is able to recognize and stuff into his pack the most valuable combination of items that is feasible, given his limitations of time and space.

**Navigation**
1 slot, Intelligence, -2 modifier.
*Required:* Buccaneer.
*Recommended:* Smuggler.

This proficiency is normally restricted to priests, warriors, and wizards. Its description is on p. 61 of the *Player's Handbook*.

**Observation**
1 slot, Intelligence, 0 modifier.
*Required:* Beggar, Cutpurse, Investigator, Spy, Swindler, Troubleshooter.
*Recommended:* Assassin, Bounty Hunter, Burglar, Fence, Smuggler.

Characters with this proficiency have cultivated exceptionally acute powers of observation. The DM may ask for a proficiency check (or secretly roll it himself) anytime there is something subtly askew; he may also allow characters with observation to increase their chance of finding secret or concealed doors by 1 in 6. The proficiency covers all the senses.

*Example:* Julina is questioning a man who claims to be a craftsman who has worked on the palace; she is searching for the most discreet entrance. The DM secretly rolls an observation proficiency check; it is successful. "You notice," he tells her, "that his hands are in beautiful condition, entirely lacking callouses." From this observation, Julina may

deduce that the man is actually just posing as a craftsman; he may be a con man taking advantage of a few free drinks or coins, or he could even be a spy for her enemies.

**Reading/Writing**
1 slot, Intelligence, +1 modifier.
*Recommended:* Investigator, Spy.

This proficiency is normally restricted to priests and wizards. Its description is on p. 61 of the *Player's Handbook.*

**Survival**
2 slots, Intelligence, 0 modifier.
*Required:* Bandit.
*Recommended:* Bounty Hunter.

This proficiency is normally restricted to warriors. Its description is on p. 63 of the *Player's Handbook.*

**Tracking**
2 slots, Wisdom, 0 modifier.
*Required:* Bounty Hunter.
*Recommended:* Assassin.

This proficiency is normally restricted to warriors. Its description is on p. 64 of the *Player's Handbook.*

**Trailing**
1 slot, Dexterity, special modifiers.
*Required:* Assassin, Cutpurse.
*Recommended:* Beggar, Bounty Hunter, Investigator, Spy, Thug, Troubleshooter.

Trailing resembles tracking, except tracking is associated chiefly with the wilderness, and trailing typically is used in major urban centers (i.e., cities and large towns). It is the talent of tailing someone—of keeping a certain distance or even catching up to them, though they may be attempting to blend into a crowd, or at least get lost in the confusion of a street full of people.

A proficiency check is first made to see if the thief is able to trail without being noticed. If the person followed has the alertness proficiency, then the thief suffers a -5 penalty.

If the thief is noticed, the person being followed may attempt to evade. To keep from losing the trail, the thief must make another proficiency check. A modifier from -3 to +3 (varying from first time in a foreign city to the thief's home neighborhood) may be used, if the DM so chooses, to reflect how well the thief knows the area. Warn the player beforehand if you will apply modifiers (though you needn't tell exactly what they are).

The DM should feel free to use situational modifiers on these rolls. For example, if a

street is relatively clear, the thief should get -1 or -2 on an attempt to follow unnoticed, but +1 or +2 if he has been seen and is chasing after his subject. The opposite numbers could be used for exceptionally crowded situations, or at night.

For any Trailing proficiency roll, a -3 penalty applies if the person followed has the Trailing proficiency as well (and, presumably, knows better how to foil the tricks of his own trade).

*Example:* Julina is trailing an NPC through the Imperial capital, because she suspects that he is spying for a rival employer and has information that would be valuable for her. It is nighttime, on a nearly deserted street. The DM informs Julina of this, and says that she'll have trouble going unnoticed (-2 modifier on her first roll, he rules, but does not tell her); but if her quarry does spot her, he'll be easier to chase (+2). The DM also decides that Julina has been in the capital on this job long enough that she's fairly familiar with the streets and alleys, so she will not suffer a penalty on that account. However, unbeknownst to Julina, the spy she follows has both alertness (-5 modifier) and trailing proficiencies (-3 modifier). This means that her first roll has an adjustment of -10; if it fails, the second will have an adjustment of -6. Julina's Dexterity is 17. She needs to roll 7 or lower on her first roll, but gets a 13 and fails. "The man has spotted you," says the Dungeon Master. "He speeds up and ducks around a corner, into an alley." Julina follows; to keep from losing him, she needs to get an 11 or lower. She rolls an 11, just barely making it. "The alley is empty—you are about to rush through to the next street, but through a window you spot a flash of red, like the man's coat, and hear footsteps up a staircase in the building to your right."

**Voice Mimicry**
2 slots, Charisma, special modifiers.
*Recommended:* Assassin, Spy.

Voice mimicry is the art of convincingly imitating the voices of other people. It is a very demanding skill, needing intense training of and practice with the vocal cords. For this reason it requires two nonweapon proficiency slots.

A character with voice mimicry is able to imitate any accent he has heard. Success is automatic unless people who themselves speak in that accent are his listeners; in such a case, a proficiency roll is required (with a +2 modifier).

More difficult is the imitation of a specific person's voice. To do this, the thief must, of course, be familiar with the voice. A proficiency check is needed to determine if the imitation is detected; modifiers depend on how well the listeners know the voice that is being mimicked. Success is of course certain if the listener is a stranger, someone who has never heard the original voice. To fool an acquaintance, there is no modifier; while fooling a friend of the subject is at -2, a close friend -5, and someone extremely close (e.g., parent or spouse—someone who has had close contact with the person for years) is at -7.

This ability is often used in conjunction with the disguise proficiency. Which proficiency must be checked first depends on whether the character is seen or heard. If the disguise first is successful, there is a +5 modifier to the voice mimicry—the listeners have already accepted the appearance, so they are less likely to doubt the voice. If the disguise fails, it doesn't matter how good the voice imitation is. If the voice is

successfully mimicked first, it gives a +1 modifier to the disguise check.

## Demihumans and Nonweapon Proficiencies

Each demihuman race has its own culture and crafts, and these may be quantified by nonweapon proficiencies. Below is listed each nonhuman AD&D® character race, along with the nonweapon proficiencies that are most highly recommended because they reflect the demihumans' heritage.

Note that these proficiencies are merely recommended, for the sake of characterization. Players are not required to choose from these lists for their demihuman thieves; nor do they receive any as bonus nonweapon proficiencies. If a proficiency is not recommended for the demihuman thief's kit or class, it costs another proficiency slot, just as it would for any other character.

*Optional Rule:* A demihuman using a recommended proficiency may get a bonus of +1 on any proficiency check he may be required to roll.

Nonweapon proficiency recommendations are listed by category (General, Thief, etc.).

### Dwarves

*General:* Artistic Ability, Blacksmithing, Brewing, Direction Sense, Fire-Building, Mining, Pottery, Rope Use, Stonemasonry.

*Thief:* Ancient History, Appraising, Blind-fighting, Gem Cutting, Set Snares.

*Priest:* Engineering.

*Warrior:* Armorer, Endurance, Mountaineering, Survival (Hills, Mountains), Weaponsmith.

*New:* Intimidation, Locksmithing.

### Elves and Half-Elves

*General:* Animal Handling, Artistic Ability, Dancing, Direction Sense, Etiquette, Leatherworking, Rope Use, Seamstress/Tailor, Singing, Weather Sense, Weaving.

*Thief:* Ancient History, Gaming, Jumping, Local History, Musical Instrument, Set Snares, Tightrope Walking, Tumbling.

*Priest:* Healing.

*Warrior:* Animal Lore, Bowyer/Fletcher, Hunting, Survival (Woodland), Tracking.

*Wizard:* Ancient Languages, Astrology, Herbalism, Reading/Writing, Spellcraft.

*New:* Alertness, Animal Noise, Observation.

Because of their mixed heritage, half-elves may have the full diversity of their human parent, or they may be inclined to take proficiencies like those of other elves (above). It probably depends on who raised the half-elf thief and where. If the optional demi-human proficiency bonus for recommended proficiencies is used, half-elves should receive it when they use the elven-recommended proficiencies listed above, regardless of where they were raised.

**Gnomes**

*General:* Artistic Ability, Blacksmithing, Brewing, Carpentry, Cobbling, Mining, Pottery, Rope Use, Stonemasonry.
*Thief:* Ancient History, Appraising, Disguise, Forgery, Gaming, Gem Cutting, Juggling, Local History, Set Snares, Ventriloquism.
*Priest:* Ancient Languages, Engineering, Herbalism.
*Warrior:* Survival (hills, woodlands).
*Wizard:* Spellcraft.
*New:* Animal Noise, Locksmithing.

**Halflings**

*General:* Agriculture, Brewing, Carpentry, Cobbling, Cooking, Leatherworking, Pottery, Seamstress/Tailor, Weaving.
*Thief:* Forgery, Gaming, Juggling, Local History, Musical Instrument, Set Snares, Tumbling.
*Priest:* Healing, Herbalism.
*Warrior:* Bowyer/Fletcher.
*New:* Alertness, Animal Noise, Begging, Fast-Talking, Fortune Telling, Observation, Trailing.

# Chapter 3: Thief Kits

Are you tired of playing plain, old, pick-a-few-pockets-and-open-a-few-locks thieves, even if AD&D® 2nd Edition makes them slightly more interesting than their predecessors? Do you want still more interest, more variety—but don't want to worry about working out all the details yourself? Then the thief kits may be just the thing for you.

Here we will show you how to create and play all sorts of thieves. They are presented in kits. Each kit defines a particular type of thief—his characteristics, abilities, and limitations. You are also invited to design your own kits, and we include suggestions on how you might do this.

## Kits and Thief Types

Each type of thief described in this chapter is defined by means of a kit. A kit is made up of the following elements, following the style of the warrior kits in the AD&D® 2nd Edition *Complete Fighter's Manual:*

*Description:* The kit explains the thief type, describing the typical appearance, manner, cultural background, and use of the character in a campaign. It also lists any requirements necessary for a character to take the kit.

*Role:* Many of these thief types arise in particular social contexts. A Fence, for instance, exists because other thieves need to market stolen goods. The kit will therefore

describe the role of the Fence in his society, and may suggest how he might function in relation to the rest of the fantasy adventure campaign.

Under "Role" you will also find notes on the personalities or backgrounds typical for thieves of this kit. This reflects our earlier discussion of "role-playing thieves," where we examined setting, social background and motivations, and presented a few thief archetypes.

*Secondary Skills:* If you have chosen to use the Secondary Skills rules from AD&D® 2nd Edition (see *Player's Handbook*, p. 53), then your kit may require your thief to take a specific skill, or choose from a limited range of choices. You might not be able to choose or roll randomly from among all the secondary skills listed in the *Player's Handbook*.

*Weapon Proficiencies:* If you're using the weapon proficiency rules from AD&D® 2nd Edition, then your kit could require your thief to take specific weapon proficiencies. Or, he might have to choose one from a limited range; the Bandit, for instance, is required to take one bludgeoning weapon.

Some kits (Assassins, for example) are permitted a wider range of weapons than normal thieves. This, too, is noted under weapon proficiencies.

Unlike nonweapon proficiencies, below, weapon proficiencies required for a thief kit are NOT bonuses unless otherwise specified. They must be taken to fill the weapon proficiency slots normally given to a first level thief.

*Nonweapon Proficiencies:* If you have chosen to use the nonweapon proficiency rules from AD&D® 2nd Edition, then you will find useful the information in each kit on what proficiencies are required or recommended for that sort of thief. The Bounty Hunter, for instance, is required to take the tracking proficiency; and a number of other proficiencies related to wilderness survival and tracking down people are recommended.

Note that required proficiencies are bonuses, given in addition to the nonweapon proficiency choices that you may make as usual. Sometimes a bonus proficiency will come from a group other than the General or Thief groups, but (since it is a bonus anyway) it doesn't matter how many extra slots it would otherwise be required to occupy.

When a proficiency is only recommended in a thief kit, it is not given automatically to the character. If the character decides to take a recommended nonweapon proficiency, it is chosen to fill one of the thief's open slots. Beginning thieves should have no more than one nonweapon proficiency that is not among those recommended or required for their kit.

So let us suppose we have a bounty hunter named Baltrin. As a first level thief, Baltrin starts with three nonweapon proficiency slots. In addition, for choosing the Bounty Hunter kit, he gets Tracking as a bonus proficiency. Two of his three nonweapon proficiency slots must be spent on proficiencies that are recommended for his kit; he chooses alertness and riding (land-based). His final slot may be filled with any one-slot proficiency that he desires. The player chooses carpentry, deciding that Baltrin came from a family of carpenters.

A number of new nonweapon proficiencies are mentioned in these kits. See Chapter 2, "Proficiencies," for a complete listing of thief nonweapon proficiencies and complete descriptions of those which are new.

It is not recommended that you use both secondary skills and nonweapon proficiencies. We strongly recommend that you use the nonweapon proficiency rules if you are going to use these new guidelines for thief types; they give the thieves much more color and definition, and make for a more interesting and versatile campaign.

*Skill Progression:* This section of each thief kit suggests which of the traditional thieves' skills (picking pockets, etc.) are most valuable to that sort of thief. It is recommended that characters rise fastest in those skills, since they are the ones that are likely to get the most practice. These are meant as suggestions—the choice of how to allot skill improvements ought to remain in the hands of the player.

*Equipment:* Some thief types tend to make use of certain forms of equipment, either from preference or need; or they may be limited in what equipment they can carry. We will note such situations. A Beggar, for instance, can't beg very well if he's dressed in resplendent finery, with gilded armor and bejeweled weapons.

These equipment listings aren't really restrictions. Rather, they reflect what time and trial have proven to be most advantageous for a thief of this or that variety. If the character is fulfilling his role, the equipment will make sense; and the DM is encouraged to assist in pointing out the value of the suggested equipment when a character experiments with other things.

*Special Benefits:* Most thief types have some special benefits that the others don't. These may be straightforward special abilities. Often, however, they reflect the thief's relationship to his society; they may be defined as special reaction bonuses, special privileges in certain cultures or regions, and so forth. A Fence, for instance, gets better reactions from other thieves (especially if they want him as a business partner), and also has less trouble than other characters in finding thieves willing to hire out their skills.

*Special Hindrances:* Similarly, each thief type has certain disadvantages which hinder him, such as the reaction penalties of Beggars.

*Races:* In the previous chapter we discussed nonhuman thieves in general. Each kit was written with the human character in mind. In a sense, demihuman thieves of each race are a kit unto themselves, because of their nonhuman heritage. However, it is certainly possible for demihumans to take one of these kits (pending the Dungeon Master's approval, of course). Before putting too much effort into a non-human character, be sure to approve the race/kit mix with your DM. He might not appreciate dwarf pirates, for instance.

Under the heading "Races", we note in each kit special considerations for nonhuman thieves: races recommended (or the opposite) for that kit, and any special modifications that might apply if a nonhuman character is used.

## An Important Note

In the following sections, several thief kits include reaction bonuses and penalties as part of their special benefits and special hindrances. A word of caution needs to

accompany them.

In the AD&D® game, when a character is very charismatic, he gets what is called a "reaction adjustment." (See the *Player's Handbook*, p. 18.) When the character has a high Charisma and receives a bonus, it's expressed as a plus; +2, for instance. When he has a low Charisma and receives a penalty, it's expressed as a minus; -3, for example.

However, when you roll the 2d10 for encounter reactions (see the *Dungeon Master's Guide*, p. 103), don't add the bonus (+) or subtract the penalty (-) from the die roll. Do it the other way around. If the character has a Charisma of 16, and thus gets a +5 reaction adjustment, you subtract that number from the 2d10 roll. (Otherwise the NPCs would be reacting even more badly because the character was charismatic!)

## Kits and the Thief Classes

These thief kits are designed to accompany the thief class; although, as you will see, they stretch the definition of what a "thief" is. They are not appropriate for bards.

### Kits and Character Creation

There are three rules governing the thief kits:

1. A character may only take one thief kit.

2. You can only take a thief kit for your character when you first create that character.

(This rule has one exception: If DM and players decide to integrate these rules with an existing campaign, and both DM and players can agree on which thief kit would be appropriate for each existing character, then you may use these rules to add a thief kit to existing characters.)

3. Once you've selected a thief kit, you cannot change it.

(Note, however, that with the flexible way that thieves advance, you can do a lot to make your thief look as if its kit has been changed. For instance, a Fence may be stuck in the wilderness and not be able to follow his "vocation" for years. But even so, he could not switch to a new kit, such as Scout.)

Before choosing a thief kit, you will already have determined the character's: ability scores (AD&D *Player's Handbook*, Chapter 1), race (Chapter 2), class (presumably thief), and alignment (Chapter 4). You might also have decided upon a host of background factors, as discussed elsewhere in this book.

You are then ready to choose your thief kit. In fleshing your character out along with the thief kit, you will probably encounter the various other stages of character creation, such as proficiencies (Chapter 5 of the *Player's Handbook*, and Chapter 2 of this volume), money and equipment (*Player's Handbook*, Chapter 6), and so forth.

## The Thief Kits

Following are several types of thieves represented by thief kits. Before allowing his players to choose kits for their characters, the DM should review each kit and make notes for himself about them.

For each thief kit, the DM must determine:

1. If he will even allow this kit in his campaign.

2. What additional information he needs to give the players about each kit.

3. What changes he might wish to make to each kit.

Let's take the Beggar kit as an example. In most fantasy campaigns this kit would be acceptable, at least in concept; although it is not inconceivable that one state might be so benign as to provide for all its needy—or so harsh as to keep them off the streets forcibly.

Assuming the DM says that yes, the Beggar kit will exist in his campaign, he needs to decide which details are specific to the Beggars of his world. What causes people to be Beggars? In a predominantly lawful evil society, for example, there may be a class of people that is systematically oppressed. (This sort of society, by the way, is a perfect setting for thief player characters, whose campaign goal can be to overthrow the oppressive system.) The DM should inform the players of all these details specific to his campaign.

Finally, after the DM has decided on all the details, he should go back through the thief kits as they are presented here and adjust them as he sees fit.

## Thief Kits and Thieving Skills (Optional Rules)

Because of their specializations, thieves of the various kits differ in their aptitudes for various standard thieves' skills. A Spy, for instance, would need to be better (or at least would have more practice) at detecting noise than a Fence. To reflect the predispositions of the various kits, use Table 4 for beginning thieves. This table is just like Tables 27 and 28 (Thieving Skill Racial Adjustments and Thieving Skill Dexterity Adjustments) in the *Player's Handbook*, and is cumulative with any bonuses or penalties derived from those tables.

After the adjustments have been totaled, the thief may distribute his discretionary points. There normally are 60 discretionary points to distribute (see *Player's Handbook*, p. 38). Some thief kits may not have as many discretionary points to distribute as beginning characters. The Assassin, for instance, gets only 40 points instead of 60.

**Table 4: THIEVING SKILL THIEF KIT ADJUSTMENTS**

| | Ability | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **Thief Kit** | **Pick Pockets**[1] | **Open Locks** | **F/R Traps**[2] | **Move Sil.** | **Hide in Shadows** | **Detect Noise** | **Climb Walls** | **Read Lang.** |
| Acrobat | +5% | -5% | -5% | +5% | — | — | +5% | — |
| Adventure | — | — | — | — | — | — | — | — |
| Assassin | —[3] | — | +5% | — | — | — | — | -5% |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Bandit | -5% | — | +10% | —[4] | +5% | — | -5% | -5% |
| Beggar | +10% | -5% | -5% | — | +5% | — | — | -5% |
| Bounty Hunter | —[3] | — | +5% | — | — | — | -5% | — |
| Buccaneer | -5% | — | — | — | — | — | — | +5% |
| Burglar | -5% | +5% | — | — | — | — | +5% | -5% |
| Cutpurse | +10% | — | — | — | — | — | -5% | -5% |
| Fence | — | +5% | +5% | -5% | -5% | — | -5% | +5% |
| Investigator | -5% | — | — | — | — | +5% | — | — |
| Smuggler | -5% | -5% | — | +5% | +5% | +5% | -5% | — |
| Spy | — | — | — | — | — | — | — | — |
| Swindler | — | -5% | — | — | — | — | — | 5% |
| Thug | — | — | — | — | — | — | — | — |
| Trouble-shooter | -10% | +5% | +5% | — | — | — | — | — |

**NOTES TO TABLE 4**

1. Includes similar feats of manual dexterity, such as legerdemain and slipping poison (see also note 3, below).

2. This ability may also be used in the placement of traps.

3. Assassins and Bounty Hunters are adept at slipping foreign substances (poison, sedative, etc.) into the food or drink of their targets. Success in such a feat of manual dexterity is determined by a pick pockets roll, and the Assassin or Bounty Hunter gets +5% on the roll. This special bonus does not apply, however, to pickpocketing or other tasks covered by this ability.

4. In the wilderness, the bandit gets +5% to this ability.

*Example:* Urlar is a beginning gnome thief with a Dexterity of 17. He decides to adopt the Burglar kit. Using Tables 26, 27 and 28 from the *Player's Handbook* and Table 4, above, Urlar computes his skills as shown in Table 5.

**Table 5: URLAR'S SKILL ADJUSTMENTS**

| Skill | Base Score | Racial Adj. | Dexterity Adj. | Kit Adj. | TOTAL BASE SKILL |
|---|---|---|---|---|---|
| Pick Pockets | 15% | 0% | +5% | -5% | 15% |
| Open Locks | 10% | +5% | +10% | +5% | 30% |
| Find/Remove Traps | 5% | +10% | 0% | 0% | 15% |
| Move Silently | 10% | +5% | +5% | 0% | 20% |
| Hide in Shadows | 5% | +5% | +5% | 0% | 15% |
| Detect Noise | 15% | +10% | 0% | 0% | 25% |
| Climb Walls | 60% | -15% | 0% | +5% | 50% |
| Read Languages | 0% | 0% | 0% | -5% | -5% |

Urlar now may distribute an additional 60 discretionary percentage points among the

total base scores, with no more than 30 such points being assigned to any single skill, as explained in Chapter Three of the *Player's Handbook*.

**Acrobat**

*Description:* Acrobats are related to bards, as both ostensibly have the profession of entertaining others. Some would say they do this to avoid "real" work. And both characters are wont to support themselves by unorthodox means when there's a slump in their "regular" business.

Because of the physical demands of their vocation, Acrobats must have minimum scores of 12 in Strength and 14 in Dexterity.

*Role:* Even Acrobats who are not inclined toward larcenous behavior are rarely looked up to by the rest of their society. People who become Acrobats or actors often were born into the middle class, though their status actually becomes lower. The middle class delights most in the entertainments. The lower classes are usually too busy struggling to survive, and may be tied to their land or profession in the manner of serfs. The nobility and wealthy people are "above" the crude entertainment of the crowd; and even if they might see a circus on occasion, it would be socially impermissible to join it.

Except in unusual circumstances, then, Acrobats will come from the middle class. A player character might be different, if a player wishes, but he will need a plausible explanation of the situation. Because of the social disgrace, it is likely that any entertainer from wealthy or noble class will be disowned.

But then, many people who seek employment as entertainers didn't leave their previous lives out of choice, anyway. A noble-born Acrobat was probably disowned (or worse) before he took up that profession, and might even have assumed a new identity. Acrobats from other backgrounds may have histories, too —things to hide, and enemies to fear. One thing they like about the circus is that nobody presumes to remove anyone else's mask or make-up.

The circus may indeed get its own history. Run by a competent swindler, a circus may make piles of money from gullible spectators. It could bring in even more by having its own Cutpurses, who are permitted to work the crowds so long as they give a percentage of their take to the circus management.

Acrobats are almost always wanderers. A small town quickly tires of its entertainers, so they must move on to the next, where their tricks and displays may be considered new and impressive.

*Secondary Skills:* Any.

*Weapon Proficiencies:* Acrobats may use any weapon normally permitted to thieves. Note, however, that they will usually avoid those that are heavy and cumbersome (see "Equipment" below).

*Nonweapon Proficiencies:* Required: None. Recommended: Alertness, Disguise, Fast-Talking, Juggling, Musical Instrument, Riding, Rope Use, Ventriloquism.

*Skill Progression:* Among the basic thieves' skills, climbing walls is the one most applicable to the Acrobat's overt profession. Their lightness of step leads to excellence in moving silently, so this skill also is likely to improve rapidly. Finally, many an Acrobat supplements his circus income by picking the pockets of the audience when he is not actually performing.

*Equipment:* In order to make use of their Acrobatic skills, Acrobats favor the least and lightest equipment possible. If the optional encumbrance rules (*Player's Handbook*, pp. 76-79) are used, Acrobats should not be permitted more than light encumbrance. Acrobats may encumber themselves more in special situations (e.g., carrying a wounded comrade to safety, hauling a great hoard of treasure), but they will invariably seek to divest themselves of the excess weight at the first opportunity.

*Special Benefits:* The abilities of jumping, tumbling, and tightrope walking are so crucial to this kit that the Acrobat should be able to have them as special abilities even if the DM has chosen not to use the nonweapon proficiency system. Further, because of their intense training with these skills, Acrobats should get a bonus of +1 whenever a proficiency check is required. This bonus is +2 if the Acrobat is wearing no armor (and, under the optional encumbrance rules, is unencumbered).

*Special Hindrances:* None.

*Races:* The shorter races—halflings, gnomes, and particularly dwarves—often have difficulty with Acrobatic feats, on account of their body size and build. Dwarves, in addition, rarely have a temperament that would endear them to a circus show; though one can easily imagine cheerful halflings and mischievous gnomes entertaining a crowd.

Dwarf characters, then, ought not to take this kit. Halflings and gnomes may, if they so desire, but they do not gain the bonuses listed under "Special Benefits" for jumping and tightrope walking. (They do receive the tumbling bonus.)

**Adventurer**

*Description:* The Adventurer is the jack-of-all-trades, the prototypical dungeon-delving thief. The Adventurer is not so much a thief as a character who takes advantage of the general thiefly skills on professional adventures into dungeon and wilderness. The Adventurer thief kit has no requirements beyond those of the thief class itself.

*Role:* Adventurer-kit thieves usually serve in parties of brave adventurers of various classes. Their special skills are vital in supporting any successful expedition into wilderness or dungeon. The professional Adventurer is, furthermore, preferred by many adventuring parties, because he is much less likely than other thieves to betray or steal from his own companions. The successful Adventurer knows the value of trust and cooperation, while many a "street thief" has been raised on duplicity and (sometimes literal) backstabbing.

Many Adventurers are neutral or lawful. Few are evil, and almost none that are chaotic evil can survive for long, let alone prosper in his ways.

Adventurers may be part of a thieves' guild for easy access to equipment and training. They tend to be independent, however, and dislike guilds that have demands beyond a simple membership fee.

*Secondary Skills:* Any.

*Weapon Proficiencies:* Any.

*Nonweapon Proficiencies:* Required: None. Recommended: Player's choice; among those that may be selected are Alertness, Boating, Fast-talking, Gather Intelligence, and Looting.

*Skill Progression*: Adventurer thieves tend to spread their skill improvements as evenly as possible, to allow them to deal with the many different challenges the

adventuring life presents. If there is any concentration, it is usually on opening locks or finding and removing traps, since these skills are probably used most often.

*Equipment:* Adventurers are typically very gadget-oriented, delighting in new ways to bypass monsters and raid their lairs. They also may have a good bit of money, from successful ventures, to reinvest in equipment.

*Special Benefits:* None.

*Special Hindrances:* None.

*Races:* Any.

**Assassin**

*Description:* In any reasonably corrupt culture, there are those who wish to eliminate someone whose very existence stands in the way of their plans. To serve them there are Assassins: trained killers whose services are for hire.

In the AD&D® 2nd Edition *Players' Handbook*, the idea of an assassin, a hired killer, has been divorced from any particular character class. Indeed, a character can be any class and still be an assassin; this thief kit simply shows how a thief can be converted into an efficient, discreet killer. Characters of other classes still can (and often will) be assassins, so it would be best not to let down one's guard . . .

Assassins must have the following minimum ability scores: Strength 12, Dexterity 12, and Intelligence 11.

*Role:* Thugs and Bounty Hunters may be seen as close relatives of the Assassin. It is important, then, to understand their differences, and what makes their roles distinct. Thugs typically serve as crude muscle, using bullying and intimidation. The Assassin, on the other hand, thrives on anonymity, on surprise—on his victim not even realizing that he is a target until it is much too late. A clever Assassin might never be seen by his victim. Here, too, the Assassin differs from the Bounty Hunter, for the hunter often seeks his quarry alive, and typically must bring back his prey (or the corpse thereof) as proof of his project's success.

Most Assassins are of evil alignment. However, it is conceivable that one might be of a neutral (but not good) alignment. Player-character Assassins, if they are permitted in the campaign, best fit this rare neutral description. A PC might be the agent of some monarch, paid to arrange the discreet demise of those who threaten the kingdom's safety. While this certainly is not good (in the moral sense), the character might regard it as a justifiable evil because of the deaths the action prevents by obstructing rebellion, invasion, or whatever.

Many Assassin thieves belong to guilds. The guilds use them to serve their own needs, and act as an intermediary for outsiders who wish to take out a contract on someone's life.

*Secondary Skills:* Any.

*Weapon Proficiencies:* Because of their specialization in the art of killing, Assassins, unlike thieves of other kits, are permitted the use of any weapon. An Assassin often selects one favored weapon, such as a garotte or serrated dagger (or even something exotic, such as blowgun darts with an exotic insect poison from a distant jungle), to use for his killings. If the Assassin achieves infamy, the marks of this weapon may become known as a sort of "calling card."

*Nonweapon Proficiencies:* Required: Trailing, Disguise. Recommended: Alertness, Begging, Gather Intelligence, Herbalism, Land-Based Riding, Observation, Tracking, Voice Mimicry.

*Skill Progression:* Assassins favor the skills of move silently, hide in shadows, detect noise and climb walls. They also make occasional use of the pick pockets skill—not for lifting purses, but for similarly delicate tasks, such as slipping poison unnoticed into a target's goblet of wine.

*Equipment:* Assassins are familiar with and make frequent use of a wide array of deadly devices. See Chapter 5 (page 90) for details on all sorts of special items, such as blade boots, death knives, folding bows, and so forth. Equipment to help their preferred skills (see "Skill Progression" above), such as clawed shoes and gloves and camouflaged clothing, is also popular.

If the DM permits, poison is also available and frequently used by the Assassin. The Assassin may purchase poison (expensive and usually illegal), or attempt to manufacture or extract it himself (which can be dangerous as well; see the special section on poison in Chapter 7 for more information).

*Special Benefits:* Because of their training and experience with the use of poisons, Assassins also can identify poisons used by others. The base chance of doing so is the Assassin's level multiplied by 5%.

Assassins with intelligence of 13-15 get a +5% bonus on the attempt; 16-17, a +10% bonus; and 18, +15%. Further adjustments depend on how the Assassin attempts the identification: sight, smell, taste, or symptoms.

Sight means examination of the poison or poisoned article. Many poisons have a distinctive appearance, or they may have a corrosive or discoloring effect on metals, foods, etc. Identification by sight has a -20% modifier. Its advantage is that the Assassin needn't worry about poisoning himself in the process.

A poison may also be identified by its odor. This carries a -15% penalty. Furthermore, if it is an ingested or contact poison, there is a 10% chance that the Assassin will be affected by the poison, though at half strength (i.e., no effect if the saving throw is successful, and if it's not, normal save damage is applied—see the *Dungeon Master's Guide*, p. 73).

Taste is a fairly reliable, if dangerous, method of identifying a poison. It carries a -5% penalty. After dabbing a tiny bit on his tongue, the Assassin spits it out. There is still a chance that the poison will affect the Assassin: 25% for injected poison, 75% for ingested, and 100% for contact. The poison's effects, if any, are half strength (see above).

The most certain way of identifying a poison is by its symptom (no penalty on the attempt). The drawback of this method is of course that you need a poisoned character to examine.

An Assassin with herbalism proficiency gets a +5% identification bonus because of his knowledge of toxins extracted from plants. An Assassin with healing proficiency gets a +10% bonus in any case. These bonuses are not cumulative.

An attempt to identify a poison takes one round; be sure to keep track of time elapsed and the onset time of the poison. If one method of identification fails, the next may be tried. If none of the four produce an answer then the poison will remain a mystery to that Assassin. (The Assassin could attempt identification again after he's gained an experience level, but this is not normally of any help.)

Identification of a poison also means knowledge of its antidote (if one exists); it does not mean that the antidote is available, however. An Assassin with herbalism proficiency may attempt to make an antidote from scratch (see special rules, p. 113).

*Special Hindrances:* Because of the time they spend on weapons and poisons, Assassins advance more slowly in thieves' skills than thieves of other kits. They start with only 40 discretionary points to allocate at 1st level, and with each level gained they receive only 20 points to distribute among the skills.

Assassins are generally feared and shunned. Therefore an Assassin suffers a -4 reaction penalty with non-evil NPCs who are aware of his profession.

*Races:* In theory, any race could have Assassins. The DM may wish to forbid elven, gnome and halfling Assassins, however, since this profession is quite antithetical to their cultures.

**Bandit**

*Description:* Travel is rarely a safe affair in the medieval fantasy setting, whether one traverses the forbidding wilderness or the pastoral countryside. Beside the dangers of nature and fantastic menaces, such as dragons and giants, there are humans who prey on their journeying kin. Almost every stretch of road near civilization is claimed by one or more bands of highwaymen, and even the far wilderness may hide the strongholds of robbers.

Bandits must be strong and hardy to withstand the harsh forces of nature, the people who seek their destruction, and even each other. Thieves must have minimum scores of 10, then, in both Strength and Constitution to be eligible for the Bandit kit.

*Role:* Bandits are often vicious characters, desperate, cunning, and cruel. They are prone to fight or even betray each other, but two things keep them bound in groups: the utter necessity of cooperation in order to survive the perils of the wilderness (let alone to be successful robbers), and the strength of whoever has established himself as leader among them by force and cunning.

Some leaders manage to weld together very large groups of Bandits. In some AD&D® worlds, such as the WORLD OF GREYHAWK® Fantasy Setting, there are even kingdoms of Bandits. Such things are rare, however, since few leaders have the Strength or Charisma to bind many of these thieves; or even if they do, the mob will rarely stay together beyond the leader's demise.

Bandits do not belong to guilds, as such. A large group of them, or a network of cooperating groups, may be considered analogous to a guild, however—providing some training, intimidating nonmembers who operate in their "territory" (including humanoids and the like), and so forth. A few Bandit groups may actually have connections to a big city guild, though such ties would probably be very loose (perhaps occasional cooperation, rather than subservience).

Bandits rarely have pleasant reasons for pursuing their lifestyles. Most have a history better left behind, and many have a price (or three) on their heads in some place or another. The average Bandit would be better off outside the wilderness, but with enemies and authorities elsewhere, it is the closest available thing to a sanctuary.

Bandits can expect less than mercy at the hands of the law. As if Banditry itself wasn't punishable, most of these thieves already have a few major crimes under their belt.

But, like a city guild, Bandits can work out arrangements with local military and civilian authorities. In exchange for bribes and a cut of the take, Bandits may garner information on rich targets and how best to avoid the punitive expeditions that may periodically be sent against them.

*Secondary Skills:* Bowyer/Fletcher, Farmer, Fisher, Forester, Gambler, Groom, Hunter, Leather worker, Tailor/Weaver, Teamster/Freighter, Trader/Barterer, Trapper/Furrier, Weaponsmith, Woodworker/Carpenter.

*Skill Progression:* The skills favored by Bandits are those useful for scouting and preparing ambushes—specifically, climb walls (for tree-climbing), move silently, and hide in shadows. Find/remove traps also tends to develop with a Bandit's knowledge of snares, pits and so forth, which may be employed on occasion to waylay travelers.

*Weapon Proficiencies*: Bandits are particularly partial to heavy, brutal, bludgeoning weapons. For this reason they may use the following cudgel-like weapons in addition to those normally permitted to thieves: flail, mace, morning star and warhammer. At least one of the Bandit's initial weapon proficiency slots must be filled by a bludgeoning weapon. Bandits must also take proficiency in the knife. They not only use this for fighting (some among them regard knife-fighting as a spectator sport), but as practical equipment for wilderness survival. Since this fills the two weapon proficiencies open to a thief, the Bandit is granted a third initial weapon proficiency slot, to fill with the weapon of his choice (from among those permitted to thieves).

*Nonweapon Proficiencies:* Required: Survival (choose appropriate terrain). Recommended: Alertness, Animal Handling/Training, Animal Noise, Fire-building, Intimidation, Looting, Riding, Rope Use, Set Snares, Swimming.

*Equipment:* A Bandit should be well-equipped for wilderness survival. Vital items include provisions, backpack and pouches, flint and steel (which are more reliable than a magnifying glass for starting fires—especially at night!), tinder, a blanket, and a knife.

Less vital, but often of use, are climbing equipment (crampons, pitons, etc.), fishing gear (hooks, line, net), light sources (candle, lantern, torch), rope, sewing needle and thread, sacks for loot, a signal whistle, spyglass, small tent, thieves' picks, and a whetstone (so you can sharpen your knife when there's nothing else to do).

Some Bandits, finally, like to have trained animals (dogs, falcons, pigeons) for hunting or message-carrying. To make effective use of such an animal, animal handling proficiency is needed.

*Special Benefits*: Because of their adeptness at ambushing, Bandits gain +1 on their attempt to surprise in a wilderness setting.

*Special Hindrances*: Bandits are generally despised by other characters: Normal people hate and fear highwaymen, and other types of thieves tend to look at them with scorn, as outcasts and crude robbers. For this reason, any Bandit who is recognized as such suffers a -2 reaction penalty among non-Bandit NPCs.

*Races:* Bandits are a motley group, and any race may be found among them—even races with a tradition of antipathy, although such characters are likely to fight each other as much as the band's targets. Humanoid and part-humanoid characters in particular favor the Bandit kit. Demihuman characters who join Bandit groups with other races are probably outcasts from among their own people.

**Beggar**

*Description:* Circumstances have reduced some unfortunates to such a level of poverty and helplessness that the only possible way that they can survive is by imploring their fellow beings to give them whatever meager scraps can be spared. At least, so the Beggar would wish it to appear.

For a great many Beggars this is the truth; misfortune or disability have dealt them sore blows, and they must rely on the charity of individuals and a few institutions, such as beneficent churches, for subsistence.

But there is another class of Beggar, which is really a particularly insidious variety of swindler or con artist. This character is usually perfectly able-bodied, but has taken up begging as a career, supplemented by minor theft (pickpocketing and the like) and the gathering and selling of information to interested parties. It is with this sort of Beggar that this kit is chiefly concerned.

The Beggar has no requirements beyond those of the thief class.

*Role:* Thieves of this kit, professional Beggars, were usually raised into their role. This of course means a lower (indeed, lowest in many places!) class background, and meager financial resources at best. The Beggar has other resources, however: connections, street smarts, a sharp eye, and diverse skills for cajoling passers-by out of their spare cash.

Effective begging requires consummate skills of acting and disguise, so that the Beggar can present himself in the manner most likely to garner the sympathy and cash of the people he accosts.

As a matter of survival, the Beggar needs diverse sources of income. Few can avoid starvation solely by the charity of strangers in the street. They are also dealers in gossip and information (such as the movement and activities of wealthy personages), with ears ever open for any tidbit of knowledge that may help fill their stomachs with food. Beggars will also gladly hire themselves out as messengers or spies.

Beggars also are known to cooperate with other varieties of thieves, especially Cutpurses. A favorite ruse is for one or more Beggars to accost a wealthy-looking person. While they distract him with their pitiful (and more often than not, futile) pleas for assistance, a slick Cutpurse relieves the victim of his purse. Shares of the score are divided among Beggars and Cutpurse.

Many Beggars are affiliates of the local thieves' guild, surprisingly enough. The guild makes use of them as messengers and informants. It also may have a sort of protection racket going with them: Beggars must share their score with the local guild in exchange for protection from thieves of the guild itself, as well as "freelancers" and rival guildsmen. Guild-affiliated Beggars also may gain some measure of protection from the local constabulary—a useful thing if local law prohibits panhandling.

*Secondary Skills: Usually* (90%) none; begging itself is assumed to have been the character's trade or profession. If a Beggar does have any secondary skills, it should be assumed that for some reason or other he lost his means of employment. He may have been thrown out of his trade guild, for instance; or could have been maimed so that he could no longer perform tasks as he did in the past.

*Weapon Proficiencies:* Beggars begin with familiarity only with simple, inexpensive weapons. The knife is a favorite, being inexpensive, easy to use, and easy to conceal. Beginning thieves with the Beggar kit should select their two proficient weapons from

among the following: club, dagger, dart, knife, sling, or staff.

*Nonweapon Proficiencies:* Required: Begging, Disguise, Information Gathering, Observation. Recommended: Alertness, Singing, Trailing. As mentioned under Secondary Skills, above, a Beggar with marketable skills (e.g., crafts or trades) should have some reason in his background why he is no longer able to support himself through them.

*Skill Progression:* Beggars become most proficient in picking pockets (to supplement begging income), and moving silently, hiding in shadows, and detecting noise (useful for gathering information and tailing people). They tend to be worst at opening locks and finding or removing traps, since these skills require technical training that is not easily available.

*Equipment:* The basic equipment of a Beggar is a wooden bowl or cup in which passers-by may place alms. More sophisticated Beggars have false crutches, make-up and the like to make themselves seem as desperate and poverty-stricken as possible.

Some Beggars have children with them (rented from the true parents, or borrowed in return for a share of the day's income, if they are not the Beggar's own) to arouse still more sympathy.

A more sophisticated sort of Beggar offers a service of some kind—singing a song, or playing a simple instrument—in exchange for food, drink, or a few coins.

Few Beggars can afford to purchase armor; and even if they could, they would not want to wear it, since it would suggest that they are wealthier than they would like to appear.

Beggars who rise above their circumstances may of course equip themselves as they see fit, although then they will no longer be accepted by other Beggars as one of their kind. A Beggar who appears well-off could suffer penalties, at the DM's discretion, at the following proficiencies: begging (because the character doesn't look impoverished), information gathering (because other Beggars will distrust him), and even trailing (because the thief might not blend in as well with the city's masses).

*Special Benefits:* The most valuable benefits of the Beggar kit are the large number of bonus nonweapon proficiencies. These should be granted to a character even if the campaign at large does not make use of nonweapon proficiency rules.

*Special Hindrances:* Beggars are scorned by most of society. Even characters who share their wealth with Beggars tend to feel a sort of disgust or condescension, though they may try to hide it. Other thieves, however, recognize the talents and value of Beggars. For this reason, Beggars suffer -2 on reaction rolls with NPCs who aren't thieves.

Furthermore, because of their impoverished background, Beggars start the game with only 3d4 gold pieces.

*Races:* Beggars may be of any race. In regions with a lot of bigotry, where demihumans have difficulty finding legitimate employment, Beggars are commonly demihuman. Most nonhuman Beggars were forced into their position by unfortunate circumstances—they were not born into it.

**Bounty Hunter**

*Description:* The Bounty Hunter is a ruthless mercenary, worshipping little besides

the price on his target's head, recognizing few laws save the contractual distinction between "kill" and "capture." He may be found serving the state, capturing criminals and bringing them to justice; or he may serve the shadowy lords of the underworld, avenging the twisted honor found among thieves and criminals. Pursuit of his quarry may take him through a thousand hostile environments, to foreign lands, even to alien planes. He is a hunter of men.

The Bounty Hunter's vocation is rigorous and demanding at every level: physical, psychological, even moral. It requires a sure hand and a stable mind. To be a Bounty Hunter, a thief must have minimum scores of 11 in every ability except Charisma. One thing that doesn't really matter to a tough, independent thief like this is whether or not people like him.

A further requirement is that the Bounty Hunter be of a non-lawful alignment. The reasons for this are discussed below.

*Role:* It is important to draw a distinction between the Bounty Hunter and the Assassin, for their vocations are similar.

The Assassin is most often part of a larger network or organization—either a society of Assassins for hire, or a guild or crime family, or even a government. The Assassin is retained by that organization to discreetly eliminate its enemies; he is strictly a killer. The Assassin also is a predominantly urban figure, though his missions may take him out of that setting on occasion. Most organizations that have Assassins would deny their existence, because of the highly illegal and unpopular nature of their activities.

The Bounty Hunter, by contrast, is a loner. He may be solicited directly by an employer, but more often he simply learns of a price offered for the body (living or dead) of some person and goes after him.

While the Assassin requires secrecy and anonymity, the Bounty Hunter thrives on infamy. Fear leads his prey to make mistakes, and each such mistake brings the Bounty Hunter one step closer to success. While an Assassin is often hired to kill relatively normal, often unsuspecting people, the Bounty Hunter is tracking fugitives—people who know who's after them, and are therefore exceptionally desperate and dangerous.

Pursuit of such people may lead the Bounty Hunter to literally any place, even to other planes of existence (if the prospective reward will make the venture worthwhile), and so the Bounty Hunter becomes adept at survival and tracking in all manner of hostile environments.

Bounty Hunters do not track only fugitives. They may be hired to perform such tasks as kidnapping, freeing kidnapped persons, or (especially at lower levels, when they are still developing their skills) recovering stolen property.

The law and authorities do not always look kindly upon Bounty Hunters, though they will permit their existence so that they, too, may benefit from the manhunters' expertise. For the same reason, thieves' guilds tolerate the Bounty Hunters, despite the fact that almost no Hunter would ever join their ranks.

*Secondary Skills:* Any.

*Weapon Proficiencies:* The Bounty Hunter is permitted the use of any weapon. As part of his persona and fearsome public image, a Bounty Hunter will often gain proficiency in a rare or bizarre weapon, such as the khopesh sword or man-catcher. Non-thief weapons take up two of the Bounty Hunter's weapon proficiency slots, but he is granted a bonus slot at 1st level.

*Example:* Borg Tartan takes the Bounty Hunter thief kit. This means he has 3 initial weapon proficiency slots. Two he fills with a nonthief weapon, two-handed sword, and in the third he takes the hand crossbow.

*Nonweapon Proficiencies:* Required: Tracking. Recommended: Alertness, Animal Handling/Training, Animal Noise, Boating, Direction Sense, Fire-building, Gather Intelligence, Herbalism, Hunting, Intimidation, Observation, Riding, Set Snares, Survival, Trailing.

*Skill Progression:* Bounty Hunters make frequent use of almost all thief skills, except perhaps pick pockets.

Note that "pick pockets" includes all sorts of delicate feats of manual dexterity, such as slipping poison or a "mickey" into a drink. Deadly poisoning is more frequently the province of the Assassin, but a carefully placed, powerful sedative may save a Bounty Hunter a great deal of trouble. (To have access to sedatives or understand their use, a Bounty Hunter must have herbalism proficiency.)

*Equipment:* Besides the usual range of thiefly equipment, Bounty Hunters take interest in items for killing and capturing their prey. Special items from the equipment chapter, such as blade boots, death knives, folding bows, and the like, are sometimes taken as favorite weapons. A rope for holding live prisoners is, of course, vital, and it may also be used for setting snares. Blinding powder and incapacitating poisons (paralytic ones or those that make their victim ill and helpless) may also have value.

Bounty Hunters make little use of deadly poisons—that is more the province of the stealthy Assassin. If a Bounty Hunter is out to kill a fugitive, he probably won't be worrying about how messy it will be.

*Special Benefits:* None.

*Special Hindrances:* None.

*Races:* Members of any race could become Bounty Hunters. Among the nonhumans, however, those of mixed blood (e.g., half-elves) favor it most, since they are often outsiders, loners not accepted by either side of their ancestry.

**Buccaneer**

*Description:* Buccaneers are thieves of the high seas, plying the trade lanes in search of prey. They intermix with and complement their piratical warrior cousins...to the extent that any of these scoundrels can be said to complement anything.

A hardy Constitution (no less than 10) is required to survive long months at sea and be a Buccaneer.

*Role:* Buccaneers closely resemble their land-dwelling cousins, Bandits. They, too, are desperate and cruel, fiendishly cunning, and likely to have a lot of internal squabbles.

Like Bandits, Buccaneers cooperate for survival and success. They also have sordid pasts—pasts which will often bind them together. Many a pirate ship used to be put to legitimate use, but its crew rose in mutiny, took the ship, killed everyone not party to the act, and turned to piracy.

Mutiny and piracy are both punishable by death, and on the high seas the warship or merchantman of any state will gladly carry out that sentence, if given a chance. Buccaneers will therefore fight to the death, against all odds, rather than face capture and inevitable summary execution.

Buccaneers do not belong to guilds; although, like Bandits, a ship of them may be considered a nonstandard guild of sorts. Sometimes groups of pirate and Buccaneer ships will even make alliances, and cooperate to raid richly-laden (and therefore well-defended) merchantmen. There may also be rivalry among pirate groups—especially when one of them carries a healthy cargo of booty that has not yet been hidden in a safe sanctuary.

Buccaneers like to have secret sanctuaries, probably in a secret cove or on a tiny island. There they rest between raids, store treasure and provisions, and plan their activities. Such sanctuaries will have the best protection available to the Buccaneers, possibly including magical defenses.

Related to but distinct from Buccaneers are Privateers. These are "legitimate" Buccaneers. Privateers have received the sanction of some nation to practice piracy on the merchantmen of another nation. Well known historical examples of this include the Privateers of Elizabethan England, captained by such illustrious personages as Sir Francis Drake. These daring "sea dogs" raided gold-laden Spanish galleons as they returned from the New World.

While Privateers are sanctioned by one nation, those on whom they prey certainly regard them as pirates and will treat them as such if they are captured.

A group of NPC Buccaneers should include not just thieves but a healthy number of warriors with the pirate kit, and perhaps a swashbuckler or two as well. Even a renegade mage might be found among them. (Privateers are even more likely to have the services of a wizard, especially one with talents in the manipulation of water and wind.)

*Secondary Skills:* Gambler, Limner/Painter, Navigator, Sailor, Shipwright, Tailor/Weaver, Teamster/Freighter, Trader/Barterer, Woodworker/Carpenter.

*Skill Progression:* Buccaneers make much less use of the traditional thief skills than thieves of other kits. Climbing around the rigging of their ships requires some wall-climbing skill, and the delicate step needed to work high above the deck may carry over into excellence at moving silently. Finally, Buccaneers favor the read languages skill—they like to be extraordinarily adept at deciphering the strange, secret codes adorning maps, codes that may tell a sly captain the location of a rival's buried treasure.

*Weapon Proficiencies:* The DM may wish to make classic Buccaneer weapons, such as the cutlass, available to thieves of this kit.

*Nonweapon Proficiencies:* Required: Navigation, Seamanship, Swimming. Recommended: Alertness, Direction Sense, Fishing, Gambling, Intimidation, Looting, Rope Use, Tightrope Walking, Weather Sense.

*Equipment:* Buccaneers dress themselves as sailors (with weapons, of course), and carry about the same equipment when at sea. Also, like sailors, they will avoid armor—it gets in the way of climbing around the rigging (double penalties on climbing rolls), and also presents a problem for someone unfortunate enough to find himself overboard.

*Special Benefits:* Because of their familiarity with ropes, much used in the nautical arts, Buccaneers gain a bonus of +5% on climbing rolls if ropes are involved—+10% if they are ropes on a ship. (Note that the total chance of success with a thief skill, including all positive and negative modifiers, cannot exceed 95%.)

Always be sure to consider the various climbing modifiers, explained on pp. 122-123 of the *Player's Handbook*.

Buccaneers also can fight from a rope (usually on a ship), so long as the feet and one

hand can grasp it, and they are much better at this than other types of characters. They get +1 on attack and saving throw rolls in rope combat, +2 on such rolls in shipboard rope combat. Note that these adjustments should be added to all the other modifiers—which are usually negative. For instance, a climbing character would normally get a -2 penalty on attacks; so the Buccaneer's +2 bonus merely negates this.

Use common sense when applying the saving throw bonus for a Buccaneer in rope combat; while it would apply to dodging a lightning bolt, it would not apply to saving against a charm or hold spell.

For more information on shipboard combat, see "Learning the Ropes" below.

Special Hindrances: As their expertise lies in rope-climbing, Buccaneers suffer a penalty of -10% when they attempt to climb without one.

*Races:* Almost all Buccaneers are human, since few demihumans and humanoids are known as seafarers. The occasional half-elf might be found among a Buccaneer crew, or, even more rarely, a half-breed or full-blooded aquatic elf. For such an elf to leave his own people would indicate a turbulent past indeed.

## Learning the Ropes (Optional Rules)

Buccaneers often find themselves fighting among the ropes and masts of their ships. This section of optional rules is intended to help simulate the difficulty and excitement of such a scenario. It may also be used in other situations of rope combat.

The basic modifiers in climbing combat are as follows:

* A climbing character loses all Armor Class bonuses for Dexterity and shield.
* A climbing character suffers a -2 penalty on attack, damage, and saving throw rolls.
* A character attacking from above gains a +2 bonus on his attack roll.
* A character attacking from below suffers a -2 penalty on his attack roll.

Other modifiers that often come into play are:

* An off-balance defender is attacked with a bonus of +2. See below for more information on balance and rope combat.
* A rear attack (e.g., against a character trying to climb up a rope—but NOT a Buccaneer climbing and dodging at the same time, as explained below) gains a +2 bonus.

Buccaneers additionally gain a +1 on rope combat attacks (+2 if shipboard), and may be given the option of dodging (explained below), thanks to their facility and frequent practice with rope climbing.

NPC sailors, also familiar with seaborne rope climbing, should, for the purpose of these rules, have a base climbing percentage of 65%. This percentage does NOT apply to other sorts of climbing (walls, mountains, etc.); in such areas a sailor is assumed to be untrained and should be treated as such.

Remember that modifiers are cumulative!

### Losing and Regaining Balance

Any character engaged in combat on ropes runs the risk of losing his balance.

A character who is struck by a weapon, or attempts to climb in the course of combat, must make a climbing check or lose his balance.

Lost balance means that the next round the character must either fall voluntarily or

attempt to regain his balance. In either case, the character can perform no other action. A successful climbing check means that the character has regained his balance. A failure means the character has fallen (and, of course, may suffer falling damage). Don't forget, all attacks against an off-balance character are at +2.

**Optional Rule: Dodging**

Thieves with the Buccaneer kit may choose to spend a round in rope combat dodging. When doing so, the thief may not attack, but he may move at half his normal rope-climbing speed. If a successful climbing check is made, the Buccaneer is able to add his Dexterity bonus to his Armor Class for that round of combat. If unsuccessful, the thief will be off-balance the next round; he must spend it regaining his balance (see below), and attacks against him are at +2.

*Example:* While plying the sea lanes, a ship carrying the Buccaneer Daljo assaults a merchantman whose crew refuses the Buccaneers' demand for their cargo and puts up a surprising amount of resistance. Daljo and his men board the vessel, and he finds himself fighting high above the deck, facing an ugly sailor armed with a long, curved dagger. Daljo himself wields a cutlass. Neither combatant is wearing armor.

The modifiers for this melee are as follows: Neither gets a Dexterity bonus; since they are both unarmored, they both have AC 10. The sailor's attack modifiers are -2 for climbing, but +2 for attacking from above, so they balance out to zero. Daljo has -2 for climbing, +3 for being a Buccaneer climbing ropes on a ship, and -2 for attacking from below, for a total penalty of -1.

In one round of combat, suppose Daljo is struck by the sailor's knife. He must roll his climbing percentage to avoid losing his balance. His base percentage is 75%; but thanks to his kit and the situation he gets a +10% bonus. If an 85 or lower is rolled, Daljo hangs on in spite of the situation.

But suppose he is unsuccessful: Daljo has lost his balance. The next round his action is to attempt to regain it (the only alternative is to drop to the deck), which he succeeds in doing, while the sailor strikes with a +2 bonus. If Daljo is struck again, he will have to make another climbing check lest he lose another round of attacks or even plummet to the deck below.

If the combat continues to go poorly, Daljo should probably dodge blows while retreating down the rope. The sailor has the advantage when above him, but once Daljo has returned safely to the deck, he can fight on an even footing again. If the sailor does not follow him down, however, he should not go too far—lest the sailor try to cut the rope above him!

**Burglar**

*Description:* The consummate Burglar is an expert at breaking and entering the most difficult buildings, bypassing walls, locks, traps and guardians, grabbing the best loot, and escaping unnoticed as stealthily as he arrived.

The cat Burglar requires a minimum Strength of 10 and Dexterity of 13.

*Role:* In many ways, the cat Burglar is the stereotypical professional thief. He probably uses more of the traditional thief skills, and more frequently, than any other kit.

Even within the ranks of Burglars, thieves often specialize even further. Some specialize by skills. A "box-man," for instance, is an expert at opening locks, especially safes and well-protected chests. A cat Burglar or second-story thief specializes in climbing walls (which can be a remarkably effective protection, especially if ground-level entrances have people around them). Teams of Burglars who specialize by skill often find the most success.

Other Burglars specialize by target. Jewel thieves in particular are the elite among Burglars; the protection found around the objects of their attention demands that their skills and cleverness be honed to perfection.

Burglars of any background may be found. Even thrillseekers of the privileged classes may take up jewel Burglary as a challenging, profitable, and exciting pastime.

Almost all successful Burglars have some sort of guild affiliation. In order to get rid of the loot they take, they of course need a fence (especially if their score is distinctive—e.g., fabulous gems, valuable artwork). Guilds provide the Burglar with innumerable benefits: fencing of even the most distinctive items, connections with potential "business" partners, access to specialized equipment, and, not least of all, protection. A guild can arrange the fix (to free an imprisoned Burglar), and provide deterrence, protecting its Burglars from other guilds and powerful criminals—people who don't take kindly to being robbed themselves, and are more likely to make hasty decisions about a suspect character's guilt or innocence.

*Secondary Skills:* Any.

*Weapon Proficiencies:* Better Burglars do not bring weapons with them on a job; it only means more serious penalties if they are caught—either legal penalties, or more immediate ones like a jumpy victim panicking and attacking them. On some jobs, however (e.g., stealing from dangerous criminals) a Burglar is wise to have means of self-defense. Small, quiet, concealable weapons are naturally favored, though a Burglar may choose proficiency in any weapon among those normally permitted to thieves.

*Nonweapon Proficiencies:* Required: Alertness, Looting. Recommended: Begging, Gather Intelligence, Jumping, Observation, Rope Use, Tightrope Walking, Tumbling.

*Skill Progression: The* vital skills of a Burglar are open locks, find/remove traps, move silently, hide in shadows, detect noise and climb walls. As mentioned before, a Burglar may concentrate particularly on one of these, but he would probably then want to be as evenly excellent as possible in the others.

*Equipment:* Burglars love to use specialized hardware to increase their chances of success. For a thorough examination of some specialty items available, and their effects on thief skills, consult the equipment chapter later in this book.

*Special Benefits:* None.

*Special Hindrances:* None.

*Races:* Members of any race may be Burglars, and it is a favorite kit. Non-human thieves often specialize in areas that offer excellent racial bonuses. For instance, dwarves may specialize in lockpicking and trap detection. And elves may specialize in reconnaissance (they sneak around and report on the presence and nature of obstacles).

**The Specialist Burglar**

A broad, general range of skills is often what adventurers choose, but for the urban

Burglar, specialization is the way to go. There are a number of reasons for this.

A specialized thief is simply more marketable. People in the underworld want someone excellent for a job. That may mean a high-level generalized thief, one who has been in the business long enough to be good at everything. But it's not easy for a thief to reach that level. Therefore, by concentrating on one skill, a relatively low-level thief may compete with a thief many levels higher for jobs of a certain type.

Suppose, for instance, we have a "box-man"—actually a woman—named Annelise. By concentrating as many points as possible in her open locks skill, she can have a score of 85% at only 4th level (this does not include modifiers for race, Dexterity, armor or kit). Since she can put no more than half of what she earns at each level into any one skill, she distributes her remaining points more or less evenly among the other skills. She would probably neglect pick pockets and read languages, however, since they usually are not useful to a Burglar.

Compare this to a "generalist" thief, which adventurers tend to be: On Table 19 of the *Dungeon Master's Guide* (Thief Average Ability Table), you can see that Annelise's level of lockpicking skill would not be attained before 14th level.

Now imagine that a mob of jewel thieves is preparing for a job. They have diverse skills—except that they are lousy at lock-picking. They need to bring a box-man into their mob. Who would they choose? Well, first off, a 14th-level thief is pretty bloody rare.

And even if one were available and willing to work with less-experienced thieves, he would probably demand a larger share of the take. Otherwise it would not be worth his time: He has uniformly good skills, and could probably commit this robbery on his own. A job with which he would need assistance is probably well out of the range of these thieves.

Annelise, then, is a pretty attractive option. She might be able to climb little better than a fish, but that's the cat Burglar's expertise; after he's mounted the building, he can lower a rope for the less sure-footed. By offering Annelise a reasonable share of the loot, the other Burglars are almost assured that their difficult lock will be opened.

**Cutpurse**

*Description:* This is probably the most common sort of thief—the pickpocket or shoplifter who engages in small-time larceny, usually at a level of meager subsistence. He often supplements his income by working as an informant for the powerful figures of the underworld (or anyone else who's willing to pay).

The Cutpurse has no requirements beyond those of the thief class.

*Role:* The Cutpurse is near the bottom of the underworld hierarchy. His activities are not as risky as those of other thieves, but are they are not as profitable either.

Many Cutpurses are "freelancers," not associated with any thieves' guild. Guilds, normally harsh on non-member thieves who operate in their territory, pay little attention to Cutpurses. The profit and benefits that would accrue from their membership would not outweigh the trouble of trying to bring them into line. For this reason many chaotic thieves, who may dislike the structure and limitations of guild membership, choose the Cutpurse kit.

Cutpurses are not always uncooperative, however. Some do join guilds, which they

serve primarily as informants and tipsters, ears on the streets, catching gossip and scoping out prospective targets that can then be assigned to other thieves.

Cutpurses who don't belong to a guild often form their own little mob. Such a small mob usually develops a standard modus operandi (way of operating), and they use the same scam on every target. They may also design special, elaborate plans for lifting a particularly heavy purse. Cutpurses also may enlist the assistance of thieves of other kits in their operations (see the Beggar kit, above, for an example).

Suppose, for instance, that one thief has the job of accosting an affluent-looking stranger, whom the Cutpurses have guessed to be an out-of-town merchant. This first thief presents himself as a street-vendor. While he tries to sell the merchant a hot pastry, a second thief comes by carrying a large load (perhaps a basket full of dirty sheets), which he "accidentally" drops on or around the merchant. In the chaos that ensues, the first two thieves appear to help the merchant, picking up the fallen items and apologizing profusely; while a third Cutpurse does the actual job of relieving the merchant of his cash.

Like beggars, most Cutpurses are of lower-class background and are born into their station.

*Secondary Skills:* Usually (90%) none.

*Weapon Proficiencies:* Small, concealable weapons are ideal for Cutpurses, though they are not formally restricted any more than thieves in general.

*Nonweapon Proficiencies:* Required: Observation, Trailing, Recommended: Alertness, Begging, Gather Intelligence, Trailing.

*Skill Progression:* Cutpurses naturally specialize in picking pockets. Beyond this, they typically favor moving silently and hiding in shadows, as these may increase their pickpocketing talents.

*Equipment:* A few special items to aid in picking pockets are noted in the equipment chapter (p. 90). If thieves have connections, they may be able to purchase such items.

*Special Benefits:* The effective pickpocket is one who can choose his target carefully. He must learn to ascertain the nature of a prospective victim. How dangerous will the attempt be? What could the target do in response? And does the chance of financial reward out weigh the risks involved?

In game terms, this means that the Cutpurse has the ability to guess the class and level of another character. If the pickpocket makes a successful observation proficiency check, he can accurately determine the target's character class.

Another proficiency check can be made to determine the approximate level of the character. The DM should roll this check secretly. If the check fails, the difference between the number rolled and the number needed for success is how far off the character's estimate is.

Sometimes a Cutpurse will "check out" a character who is in disguise. When this happens, the Cutpurse suffers a penalty of -5 on his proficiency check.

*Example:* Gorgar the Cutpurse is eyeing an opulent-looking foreigner. Gorgar succeeds in his first observation check, and determines that the man is a wizard. This could be dangerous, he thinks, and he tries to guess how powerful the wizard is.

Gorgar needs to roll a 13 or lower for a successful observation check. The DM rolls the dice secretly for him, and gets a 16. This means that Gorgar's estimate will be 3 levels off.

The wizard is in fact 4th level. The DM decides that, because of the mage's rich dress, Gorgar overestimates the character's level. "You guess that the wizard is around 7th level," says the DM. (Note that characters don't speak in terms of character levels; the thief would have information in less precise terms; but speaking about levels is clearer for communication among players.)

If the DM wished, he could have determined randomly if Gorgar over- or underestimated (e.g., roll 1d6; 1-3: over, 4-6 under).

*Special Hindrances:* The main hindrance to Cutpurses is that thieves of other kits look down on them, considering them small-time thieves, just half a step above Beggars. This is something the DM should bring out in role-playing—Cutpurse thieves will have difficulty commanding a lot of respect in the underworld.

*Races:* Cutpurses may come from any race. Half-elves and halflings particularly favor this kit; as do, to a lesser extent, elves.

**Fence**

*Description:* The Fence is a black marketeer, a seller of stolen or otherwise illegal goods. He is almost always found in a city setting, where there are large numbers of people to serve as customers as well as prey for the thieves who supply him.

A good Fence needs a sharp mind to appraise people as well as goods, and to stay ahead of the law. To take this kit, therefore, a thief needs a minimum Intelligence of 12.

*Role:* The Fence is the linchpin in the complicated web of the black market. Thieves sell their illicit acquisitions to the Fence, for some amount of money below their actual value. The Fence then resells the "hot" goods on the black market. If the city in which he operates is large and the goods are minor enough (not the crown jewels of the local royalty), they may be sold directly to local buyers. If the Fence thinks they're "too hot," though, he will probably arrange to have them smuggled and sold elsewhere.

Power for Fences is rarely measured in terms of character level. Instead, it is a matter of the breadth of the Fence's network and the reliability of his contacts. Of course, to acquire or retain an extensive network, a Fence needs much cunning and experience—which may coincidentally result in a high character level.

The most powerful Fences keep their identities secret, and may never see their clients, neither thieves nor buyers. They coordinate things from behind the scenes, and have minor Fences to serve as intermediaries. Even a close contact may never have seen the face of a great Fence—at least, not knowingly. A Fence may secretly play the role of an underling in his own network—or even that of a rival or freelancer!

This may all start to sound familiar to those who know something about thieves' guilds. The networks of a powerful Fence look increasingly like the structure of a thieves' guild. This is no coincidence. Those who are knowledgeable in these matters speculate that the thieves' guild was originally, and in many respects still is, a black market network made into a formal entity.

Fences may be of any social background, though wealthy and noble Fences are rare. Certainly those that do exist diligently keep their identities well-hidden, for obvious reasons. The stakes must be high to claim the attention of the socially and financially elevated.

For example, a rich merchant may deal with stolen jewelry on the side. Or a baron

may be the secret mastermind behind a network of thieves smuggling and selling contraband. The real world offers other examples—such as petty dictators who do not only accept bribes and turn a blind eye to drug smugglers but are in fact a drug lord themselves!

The black market network transfers information as well as goods. Fences are probably the best-informed figures of the underworld. For this reason they gain "gather intelligence" as a bonus nonweapon proficiency. (They also receive "appraising" as a bonus proficiency, since it is vital to their vocation.)

*Secondary Skills:* Gambler, Jeweler, Scribe, Teamster/Freighter, Trader/Barterer.

*Weapon Proficiencies:* Any.

*Nonweapon Proficiencies:* Required: Appraising, Gather Intelligence. Recommended: Alertness, Fast-talking, Forgery, Gem Cutting, Local History, Observation.

*Skill Progression:* Less powerful Fences (that is, those lower in the network hierarchy, with fewer contacts) may need to make use of thiefly skills. Picking pockets may provide a little income when business is slow; its use for sleight-of-hand may also have value (though it is dangerous to cheat clients). Opening locks and finding and removing traps are useful skills for inspecting merchandise. It is not unknown for Burglars, unable to open a strongbox, to simply cart off the whole thing and hope their Fence can get it open. Read languages is also sometimes useful in examining merchandise. The stealth skills (move silently, etc.) have some value on the street; Fences who have direct contact with their clients may put some time into cultivating them, but more powerful Fences often neglect them.

*Equipment:* Most Fences own equipment for examining merchandise, to determine if the goods are counterfeit or what their value might be. A magnifying lens, for instance, may be of use here.

*Special Benefits:* Because of his contacts, a Fence is probably the best person for locating and hiring thieves and smugglers, especially in territory not claimed by a guild.

Also, Fences generally command a lot of respect from the underworld in their home territory. Unless a thief has a serious vendetta, he will probably court a Fence's favor for business reasons. Fences receive a bonus of +3 on reactions with NPC thieves if their profession is recognized.

*Special Hindrances:* Fences are relatively prominent in the underworld. And, unlike freelance burglars and smugglers who can move from place to place, the Fences' black market network requires a stable home locale, so that they can stay in touch with their contacts. (The DM may wish to keep PCs from being active Fences because of this; the Fence's life is much more business than adventure.) This also means that the local authorities may be aware of a Fence's identity and activities. These authorities may periodically harass a minor Fence, or demand bribes, or may shake him up for information every once in a while.

*Races:* Fences may be of any race. Some demihuman Fences prefer to deal only in certain goods. Dwarf and gnome Fences, for instance, are known as shrewd appraisers of stolen gems and jewelry.

**Investigator**

*Description:* Though Investigators are listed as thieves, they are usually in fact the

antithesis of criminals. Investigators are enforcers of law and order, the people who know the skills of the thief intimately so that they can combat him.

*Role:* Investigators can play a number of roles. They may be private, their services for sale. Or they may be employed by a government or organization. In each case their skills and activities are similar, but their roles and attitudes may be divergent.

An Investigator may be a vigilante, obsessed with uncovering crime wherever it may be hiding, and stopping it. Or he may be the "private eye," a mercenary sort, or retained by an individual or organization, and may be willing to sidestep laws to better serve his client.

Some Investigators are of course in the employ of some government. This does not necessarily identify them as good, however. An Investigator may be portrayed as a sort of "good guy cop," if it suits the campaign. But if the players are running thieves (especially folk hero types), the Investigator could be sinister and evil, a perfect foil to the PC thieves' capers.

The relationship between Investigator thieves and guilds is not usually that of allies. An Investigator might be employed by a guild, however; though usually a Spy, or perhaps a Troubleshooter, would do the guild's "investigating."

In fact, an Investigator might not even realize that he is employed by a guild, if his ostensible employer is a "front" business. Interesting cloak-and-dagger-style adventures could be built around an Investigator discovering, in the course of his work, that the shadow he is following actually lurks behind his own employer.

And of course, Investigators ostensibly employed by the government, like other magistrates and officials, sometimes "go bad," and are bought off by a guild, either for information, or in exchange for a blind eye turned toward guild activities.

*Secondary Skills: Any* are possible, though it is not unusual for an Investigator to have spent his entire adult life in this profession. Among the most useful secondary skills for this kit are armorer, gambler, jeweler, limner/painter, scribe, trader/barterer, and weaponsmith.

*Weapon Proficiencies:* Investigators are permitted the normal range of weapons open to thieves. They will normally carry two weapons, at least one of them concealed (knife, dagger, or something similarly small, perhaps in a wrist sheath).

*Nonweapon Proficiencies:* Required: Information Gathering, Observation. Recommended: Alertness, Appraising, Disguise, Fast-Talking, Heraldry, Intimidation, Local History, Modern Languages, Reading Lips, Religion, Trailing.

*Skill Progression:* A balance of generalized skills serves Investigators well. Picking pockets is less important, of course, although you must remember that it may be useful for sleight-of-hand, which may serve an Investigator. Read language skills are a must for deciphering clues; some criminals write important information in obscure languages or secret codes, and being able to decipher it may mean success or failure for the Investigator. Other skills (lockpicking, trap detection and disarmament, and so on) are useful for penetrating and examining the hideouts and houses of suspects.

*Equipment:* A lot of the technological devices available to the modern Investigator (such as fingerprinting techniques, searches of computer databases for information, and so forth) would of course not be available in the medieval fantasy setting. Still, it may be possible to duplicate some of the effects of such devices with magical items; or the DM can make liberal use of anachronism. Suppose Investigators are able to dust for

fingerprints, for example. A magical device that identifies fingerprints might also exist, allowing the Investigator to learn whose prints he has dusted.

*Special Benefits:* None.

*Special Hindrances:* None.

*Races:* Investigators may be of any race, though they probably should be of the dominant race in their area of operation. A dwarf would probably be best at doing investigative work in the dwarf-dominated quarter of a large city, for instance. This means that most Investigators would be human (a reasonable enough assumption, since human governments would be the ones to use them most frequently). Operations that investigate guilds with many nonhuman members could of course make much use of nonhuman Investigators.

**Scout**

*Description:* A Scout is a thief, usually solitary, who operates in a wilderness setting. Besides working as a guide, spy, or saboteur for hire in the wilderness, many Scouts are involved in such illicit activities as poaching.

The Scout kit has no requirements beyond those of the thief class.

*Role:* One might say that Scouts are to thieves as rangers are to fighters—but they avoid the strict "silly ethics" of the ranger class. Scouts are not prohibited from being good—and in fact they are, on the whole, a good deal more dependable than thieves in general—but they have a cutthroat streak that can be dangerous and unpredictable. However, their rugged individualism and harsh practical judgement often endears them to adventurers, and many are found among such steadfast, daring companions.

Unlike Bandits (who also operate chiefly in the wilderness), the Scout usually shuns the company of other thieves, including guilds. The guilds, in turn, care little about Scouts. Their poaching and small-time thievery is seen as insignificant in the eyes of the great crime figures, especially when compared to the trouble and expense that would be required to identify and to track down the elusive Scouts, to punish them or force them to join guild ranks. If a Scout is a guild member, either it is a voluntary arrangement (whereby the Scout benefits from access to special equipment and training) or he has spent enough "professional time" in the city or other explicitly guild-controlled territory that he was "persuaded" to join.

Of the many Scouts not belonging to a guild, some have a single, consistent employer. The rest are freelance or mercenary, serving themselves or whatever employers may come along, taking the best pay they can find. Or, if there's nothing else, they steal and poach to support themselves.

Several organizations employ Scouts regularly, sometimes on a permanent basis. The military, in particular, does so; reliable Scouts, trained for reconnaissance and sabotage, are vital to any successful military operation. And the key to having reliable Scouts is to have well-trained and (most of all) happy Scouts. A common grunt soldier can be bullied into line and, if need be, forced out into battle by the spearheads of the rank behind him—but the Scout's modus operandi is to explore alone. Maltreated Scouts have more opportunities to desert or, worse yet, betray vital information to the enemy than anyone else in an army.

Military Scouts are carefully nurtured and well-nourished. They get decent pay,

excellent equipment, and the best training available for their special and important activities. The training of military Scouts is at least as intense and comprehensive as that of a thieves' guild. (Sometimes, after retiring from the army, military Scouts go on to become the most illustrious and prosperous burglars and assassins of the underworld.)

A few other groups that may employ Scouts are secret societies and other paramilitary groups, thieves' guilds that have operations across the wilderness (Scouts may bolster the ranks of a smuggling party, for example), and agencies that are set up to connect clients with guides. Such agencies are normally found on the edge of vast wilderness areas that are being colonized; such areas, with frequent exploration by people unfamiliar with the region, have enough demand for guides that an agency can prosper on its percentage of the guide's fee.

As mentioned before, poaching is also an activity typical of the Scout. Animals may be protected by royal decree, written law, or the monopoly of a hunters' or furriers' guild. In medieval times, for instance, hunting was typically reserved for the noble classes. A commoner caught slaying one of "the king's deer" could be punished by death.

But when demand exceeds supply, there may be great incentive for the criminal killing and capture of animals. They may be sought for their meat, valuable pelts, ivory, feathers, magical purposes (e.g., eye of newt), or other esoteric ends. Thousands of animals in our world have been killed because some body part was believed to be an aphrodisiac. In the fantasy milieu, there may be real magical qualities, and the hunter or poacher's quarry may be fantastic. The horn of the unicorns, for instance, may be ground into powder and administered with liquid as a poison antidote.

*Secondary Skills:* Bowyer/Fletcher, Farmer, Fisher, Forester, Gambler, Groom, Hunter, Teamster/Freighter, Trader/Barterer, Trapper/Furrier, Woodworker/Carpenter.

*Weapon Proficiencies:* Scouts have the normal range of weapon proficiencies permitted to thieves.

*Nonweapon Proficiencies:* Required: Alertness, Direction Sense, Tracking. Recommended: Alertness, Animal Handling/Training, Animal Lore, Animal Noise, Boating, Fire-building, Fishing, Heraldry, Herbalism, Hunting, Mountaineering, Observation, Riding, Rope Use, Set Snares, Survival, Swimming, Weather Sense.

*Skill Progression:* Stealth skills are those favored most by the Scout, and members of this kit have highly trained senses. Therefore it would make sense for these skills to improve most rapidly: move silently, hide in shadows, and hear noise. Climb walls also may see considerable use (though not from climbing walls, per se, but trees, cliffs, and so forth).

*Equipment:* No self-respecting Scout will permit himself to go without a basic assortment of wilderness survival gear: adequate clothing, rations, fire-starting materials, etc. Special gear to assist climbing, hiding, and moving undetected are also favored, as well as devices for hindering or diverting pursuers. (What worth is a Scout's knowledge if he never reports back to his employer?) For a full array of items, refer to Chapter 5, "Tools of the Trade."

*Special Benefits:* Due to their extensive wilderness experience and expertise, Scouts gain +10% on two thief skills when in the wilderness: silent movement and hiding in shadows. Scouts also have an increased chance (1 in 6 better) to surprise opponents in the wilderness, because of their stealthiness and careful attunement with their environment.

*Special Hindrances:* While Scouts are intimately familiar with the wilderness, they

are not so comfortable in urban settings. In the city, consequently, the Scout suffers a -5% penalty on all thieves' skills.

*Races:* The Scout kit is a good choice for many demihuman rogues, since those races often already have an aptitude for wilderness adventuring. You may wish to give demihuman Scouts a particular orientation according to their race. Elves for instance, as natural forest dwellers, may have +15% when hiding in shadows and moving silently in forested wilderness, and +5% in other wilderness settings. For a dwarf, the special bonus may apply to hills or mountains, and so forth.

**Smuggler**

*Description:* A Smuggler is a specialist in the illicit movement of goods, either goods that are themselves illegal (e.g., stolen) or whose movement is illegal (in some countries, for example, it may be illegal to move gold bullion; or a Smuggler might secretly move cargo to avoid paying taxes on it). The Smuggler needs a host of practical skills to evade authorities, as well as connections in diverse places to acquire and unload his merchandise on the black market.

*Role:* The Smuggler plays a vital role in the underworld, moving goods from place to place. Without the Smuggler, Fences could only sell to local buyers, which would mean they couldn't deal in exceptionally valuable goods. This would greatly cut the profitability of theft. Guilds themselves might not even be able to function, at least not on a large scale.

There are two general methods of protecting contraband from discovery: Either you hide the goods within the transportation, or you hide the means of transportation itself. An example of the former would be a wagon or boat built with a false floor, beneath which the cargo is hidden. Hidden transportation would include sneaking oneself over the city wall late at night, with a pack full of stolen loot to be taken to a distant Fence; or, perhaps, a simple boat traveling late at night.

Plans for hidden transportation may become elaborate. The trick is to be small and fast. Small makes it more difficult to find you; fast makes it likely that you can get through or, at least, get away, even if you are discovered. Sometimes the best smuggling routes go through treacherous territory or difficult terrain. This means that a Smuggler must be flexible. For instance, he may arrange to bring a canoe or even smaller craft to traverse a swamp or area of many small lakes and streams, portaging when necessary and leaving the canoe behind (and hidden, of course) when he has passed the natural obstacles.

If the Smugglers will pass through dangerous territory (plagued by bandits, humanoids or monsters, for instance), it is best to work out some means of protection: Either bring along a couple of thugs or mercenaries for the difficult parts, or pay "protection money" to the dangerous parties. Most bandits or humanoids, and even intelligent monsters, would be perfectly happy to let Smugglers through in return for a cut of their merchandise.

Or they may tell the Smugglers that they can pass safely through, and then renege on the deal.

For such a situation, it is best for the Smuggler to have some powerful muscle behind him—like a guild. A great many Smugglers are part of guilds. Guilds that operate in

more than one urban center, or in the countryside, usually employ a number of Smugglers just to move people and items within their own networks. They may also have Smugglers who specialize in dealing with other guilds; such Smugglers should have a high Charisma, because they must serve as diplomats as well as businessmen. Finally, there are freelance Smugglers. They may operate between guilds, between guilds and freelance fences, or, on rare occasion, solely among freelance fences.

Remember that a Smuggler operates between fences; he rarely, if ever, deals directly with thieves or non-"wholesale" customers. The fence or guild works out deals with prospective buyer fences, and then hires the Smuggler to make the delivery.

*Secondary Skills:* Farmer, Fisher, Forester, Gambler, Groom, Hunter, Jeweler, Navigator, Sailor, Teamster/Freighter, Trader/Barterer, Trapper/Furrier.

*Weapon Proficiencies:* Smugglers have the normal range of weapons open to thieves, and are not required to take proficiences with any in particular.

*Nonweapon Proficiencies:* Required: None. Recommended: Alertness, Animal Handling/Training, Animal Noise, Appraising, Boating, Direction Sense, Disguise, Fast-talking, Forgery, Gather Intelligence, Navigation, Observation, Rope Use, Seamanship, Swimming.

*Skill Progression:* Detecting noise is probably the most useful of the traditional thieves' skills for the Smuggler. After that, hiding in shadows and silent movement probably see a lot of use. Pickpocketing would be least utilized in smuggling.

*Equipment:* Two items are essential to the Smuggler's vocation: means of transportation, and means of protecting the contraband from discovery.

Transportation is usually very basic: wagon or horse for land, boat for water, and so forth. More elaborate smuggling plans in the fantasy setting may include air transportation—imagine a Smuggler who secrets stolen gems out of a city, late on moonless nights, by griffon!

Items from the "Evasions" section of the chapter on equipment (p. 90) are of great use to the Smuggler. Marbles (if the surface is right) or caltrops can do much to hamper pursuers, and aniseed or dog pepper can throw dogs off the trail.

*Special Benefits:* Smugglers must be exceptionally alert; they therefore get a +1 bonus to their surprise roll.

*Special Hindrances:* None.

*Races:* While demihumans are not prohibited from being smugglers, there are few that have any reason to be. Any player who wishes to have a demi-human smuggler should be sure to detail his character background so as to justify the kit.

**Spy**

*Description:* The Spy is a gatherer of information. At the lowest level, he is a common informant, an eavesdropper with his ears open for salable information. The expert Spy is hired by guilds and governments to infiltrate opponents' buildings and ranks to find vital, secret knowledge.

To take the Spy kit, a thief must have a minimum Intelligence of 11.

*Role:* Spies are vital in supporting any large organization such as a guild or government. Information is the key to success, whether thieves are preparing for a burglary or a nation is preparing for war, and the Spy's role is to provide that information.

Most Spies are in the permanent service of one such organization. A small number may be double (or triple) agents, but that is very risky. A few are freelance, and their main problem is this: to find employment, they must be known; but if they're known, they have difficulty being successful.

Spies may come from any background. A large percentage, in fact, are from the lower classes, close in touch with the word on the street and all the secret channels of society. A smaller number of elite Spies exist, either in permanent positions (e.g., a count who reports word on his liege's troop movements to a rival kingdom, or a treacherous castle steward). Most of these characters would not be of the Spy rogue kit, since spying is secondary; the focus of their life is (or at least was) something else.

But there are also talented individuals ready to go anywhere, risk any danger, and encounter a lot of excitement on the way to finding the knowledge they seek. They excel at infiltration, in finding information, not just in selling what they know. Exciting Spies, and player characters, are usually of this sort.

The standard penalty for spying (if the crime is beyond the low levels of spreading rumors, eavesdropping, and scoping out potential burglary targets) is death, and Spies from one nation to another can hardly expect anything in the line of "diplomatic immunity."

*Secondary Skills:* Any.

*Weapon Proficiencies:* The normal range of weapons open for thieves' proficiencies applies to Spies as well, and they are not required to take any in particular. A Spy can use nonthief weapons (for the purpose of disguises), but cannot take proficiency in them.

*Example:* To help impersonate a castle guard, a Spy carries a halberd. He could use it combat, but he would suffer a nonproficiency penalty. To increase his chances of success, he would probably switch to a different, familiar weapon—even a dagger or knife—unless circumstances prohibit it (e.g., people around him would be surprised to see him not using the halberd, and might thereby see through the disguise).

*Nonweapon Proficiencies:* Required: Disguise, Gather Intelligence, Observation. Recommended: Alertness, Begging, Etiquette, Forgery, Heraldry, Local History, Reading/Writing, Reading Lips, Trailing.

*Skill Progression:* An effective Spy usually needs a fairly even distribution of thief skills, since his vocation can bring him into any number of diverse situations.

*Equipment:* Spies in the medieval setting don't have all the fancy gadgetry of their modern counterparts. They may equip themselves liberally with what is available, however, such as boots with hidden compartments in the soles, thieves' equipment, and so forth. See the later chapter on equipment for a host of ideas.

*Special Benefits:* None.

*Special Hindrances:* None.

*Races:* Elves and half-elves, with their love for knowledge, are especially predisposed toward this kit. However, the problem that all demihuman Spies face is the difficulty of appearing disguised as a member of another race. They therefore risk having a rather limited range of professional assignments.

**Swashbuckler**

*Description:* Part acrobat, part swordsman, part wit, and entirely roguish —this is the

Swashbuckler. He is a sophisticated city-dweller, the epitome of charm and grace.

Both the warrior and thief classes have Swashbucklers (see the *Complete Fighter's Handbook* for details on the warrior Swashbuckler), but they have certain differences. These differences serve, among other purposes, as an example of how the Dungeon Master may modify appropriate kits from one class and apply them to another.

To be a Swashbuckler, a thief must have minimum scores of 13 in Strength, Dexterity, Intelligence and Charisma.

*Role:* This is a happy-go-lucky thief, with ready wit and flashing rapier. His home is the city, where he can shine amidst the squalor. He is generally less interested than his warrior counterpart in poking people with his rapier, and is more involved and concerned with his wild theatrics and amazing displays of acrobatic skills. More often than not he also finds himself, justly or not, on the wrong side of the law.

The Swashbuckler is almost never aligned with thieves' guilds; he prefers to be "freelance." Swashbucklers who journey outside the cities may align themselves with bandits or pirates, however, and with their charisma and skill, they frequently assume leadership. Such responsibility ill suits the Swashbuckler, however; the details of organizing and leading a large group will invariably set him packing in short order.

Most Swashbucklers come from a wealthy or aristocratic background. Their skills of stealth and acrobatics came not from survival needs, but whim. This motivation typically remains the driving force behind the Swashbuckler's career. Most of these young rakes retire when they get older and must assume responsibilities in the communities (family, noble title, business, and so forth). Many a Swashbuckler has kept up his activities, however, in secret; his moonlighting may even be developed (usually purposely) to a point of distinguishable alter-egos. The daytime character may be a foppish dandy, gruff businessman, or airhead noblewoman. At night the Swashbuckler emerges: a cunning, dashing, adventurous character.

What are the goals of the Swashbuckler? For the young ones, it is usually just thrills: a chance to break into the impenetrable castle, to replace the Queen's necklace with a fake, to outwit the guildmaster of thieves . . . A few have more serious goals (and these are the ones who tend to keep up their habit). A Swashbuckler may be a vigilante, charming and witty, but driven by an obsession for justice. His enemies may be criminals or, in an unjust society (where the aristocratic Swashbuckler's alter-ego may be an unwilling part of the apparatus of oppression), the authorities themselves.

*Secondary Skills:* Most often (80% of the time, say) a Swashbuckler has no secondary skills, since he usually is from a rich, foppish background. Perhaps he has the skills of gambler or groom (aristocratic animals, of course), or hunter (again, aristocratic hunting, not survival; a Swashbuckler may know a great deal about fox hunting, for instance, but not how to catch a rabbit, let alone skin one). Scribe would also be possible as a secondary skill—to indicate literacy and some general education, not a profession.

*Weapon Proficiencies:* The Swashbuckler receives an extra weapon proficiency slot which must be devoted to a weapon among the following: stiletto, main-gauche, rapier, and sabre. (These new weapons are described in the equipment chapter.) With this, the Swashbuckler's "weapon of choice," the thief is able to fight with the THACO of a fighter of his experience level. Throughout his career, he must devote half of his weapon proficiencies to these weapons, until he has mastered the use of (i.e., gained proficiency in) every one.

*Nonweapon Proficiencies:* Required: Etiquette, Tumbling. Recommended: Alertness, Blind-fighting, Disguise, Fast-talking, Intimidation, Jumping, Navigation (if seaborne; costs 2 slots), Riding, Tightrope walking, Trailing.

*Skill Progression:* Swashbucklers would tend to have fairly balanced thief skills. This includes pickpocketing, though that talent is more often utilized in the form of sleight of hand.

*Equipment:* The Swashbuckler must buy his weapon of choice, but other than that may spend his gold however he pleases.

*Special Benefits:* The Swashbuckler is permitted a special combat maneuver when using his weapon of choice: disarmament. To disarm an opponent, the Swashbuckler must declare his intention to do so before initiative is rolled. He then suffers a +1 penalty to his initiative roll, and a -4 penalty on his roll to hit.

If the Swashbuckler's attack is successful, he will (normally) cause his enemy's weapon to go flying out of his hand.

Roll 2d6. The number rolled is the number of feet away the weapon landed. Another roll of 1d6 determines the direction the weapon goes, relative to the disarmed character:

1—Straight ahead
2—Ahead, right
3—Behind, right
4—Straight behind
5—Behind, left
6—Behind, right

Besides weapons, disarmament can be attempted against magic wands or other such devices held in one hand.

Items worn (like jewelry) or held in two hands (including two-handed weapons) may not be affected by a thief Swashbuckler with the disarm maneuver.

Finally, being such a romantic figure, the Swashbuckler gains, as an additional special benefit, a +2 reaction adjustment with members of the opposite sex.

*Special Hindrances:* Trouble seeks out the Swashbuckler. This is something that the DM will have to play very carefully if the Swashbuckler is to be balanced with the other thief kits. When there's another Swashbuckler around—thief or warrior—intent on proving that he is the finest swordsman in the world, it's the PC Swashbuckler he seeks out and challenges (often in the middle of some illicit activities). When there is a lovely lady (or handsome young man, as appropriate) in distress, she or he will naturally cross the Swashbuckler's path, and pull him into the tangle. When the thief is practicing burglary on his uncle's mansion, the old man decides to return early from his journey. Life conspires to make things difficult for the Swashbuckler, and the DM should always throw just a little more good-natured bad luck at this thief type than at any other.

*Races:* Any demihuman who'd look elegant in foppish dress, wielding a narrow blade, will work fine as a Swashbuckler, especially elves, half-elves and halflings (half-elves most of all). Dwarves and gnomes are not entirely inappropriate, but are likely to have to defend their honor (with duels) in the face of numerous jokes about their curious looks.

**Swindler**

*Description:* This is the master of deception; while burglars and pickpockets profit through stealth, and bandits and thugs garner their earnings through force, the Swindler relies on his wits. Other thieves take their booty; the Swindler cons his victim into giving it freely.

A minimum Charisma of 12 is required of a thief to take this kit.

*Role:* There are numerous names for the Swindler—confidence artist, con man, mountebank, quack, etc.—and the scams he employs are even greater in number.

Each con artist is unique, and develops his own mode of operation. One will specialize in selling bogus items, like medicines; while another may prepare long, elaborate scams to net the wealth of the affluent.

Swindlers must either operate in a large city, where there are many potential victims (and even then they usually target visitors to the city, especially foreigners); or they must be wanderers, ready to move on to a new place when they've made too many enemies or too much of the local populous has gotten wise to their devices.

For this and other reasons, Swindlers do not usually join thieves' guilds on a permanent basis. Out of wise deference to the "local boys," however, a Swindler that begins to operate in guild territory will make friendly overtures to it, and perhaps offer a share in his take. A most daring Swindler may even try to con the guild . . .

*Secondary Skills:* Any. Most often Gambler or Trader/Barterer.

*Weapon Proficiencies:* The Swindler is permitted the normal range of weapons open to thieves.

*Nonweapon Proficiencies:* Required: Fast-talking. Recommended: Alertness, Appraising, Artistic Ability, Dancing, Disguise, Etiquette, Forgery, Fortune Telling, Gaming, Local History, Observation, Singing, Ventriloquism.

*Skill Progression:* The thieves' skills of a Swindler usually are used in preparation for a con. It is often handy for the Swindler to do some secret scouting, for instance, to observe his victim's habits. For all of this, the stealth skills (move silently, etc.) are invaluable. Reading languages is also of more use to the Swindler than to thieves of many other kits.

*Equipment:* A Swindler may use special equipment as props for his scams (e.g., tarot cards for a sham fortune teller; pen, ink and paper for forgery; and so forth), but the specific needs vary among characters, according to their plans and objectives.

*Special Benefits:* None.

*Special Hindrances:* None.

*Races:* Half-elves make particularly good Swindlers. Other demi-humans may be Swindlers as well, though they are not found as frequently.

**Thug**

*Description:* The Thug is the most violent sort of thief. Assassins are killers, certainly, but they depend on refinement and subtlety. Bounty hunters also are willing to use violence, but are relatively restrained as well. The Thug, on the other hand, comes as close to the warrior class as any Thief Kit.

Because of the kit's emphasis on physique and physical prowess, a Thug must have a

minimum ability scores of 12 in strength and constitution. In designing the character's description, a Thug should be as physically imposing as possible. Furthermore, his intelligence may be no higher than 12.

Thugs are usually male, but this may be otherwise in your campaign (particularly if your world sports an Amazon tradition).

*Role:* Historically, the "Thugee" were actually a cult group of murderers found in India. The term "Thug" has come to mean, however, any brutal sort of thief, such as an armed robber, hijacker, or goon (the latter specifically indicating a guild-associated Thug, an enforcer), or perhaps a kidnapper (though bounty hunters are probably better at that activity).

If one compared a guild to the human body, surely Thugs would be the muscle—the large, powerful muscles. Thugs function as enforcers, intimidating common people (especially in racketeering schemes), bodyguarding important guildsmen, and carrying out the guild's threats of violence often enough to keep people suitably afraid.

In fact, outside of the thieves' guild, the Thug really does not have a place. Most Thugs haven't the wit to become accomplished burglars or even pickpockets on their own, let alone swindlers, spies or fences. Even begging might be denied them on account of their imposing physique: A plea for alms from a huge, muscular man tends to look more like a demand backed up by a thinly-veiled threat. The guild pays them well and gives them a satisfying job: They usually need just to scare the living daylights out of people, and not even face real combat.

The few Thugs who are not guild-affiliated will be found as armed robbers or (if they are more intelligent) kidnappers or hijackers.

*Secondary skills:* Most often none (the ultimate "unskilled" labor, or perhaps Sailor.

*Weapon Proficiencies:* Thugs are permitted an extra weapon proficiency slot at first level. They may choose non-thief weapons, but to gain proficiency in one requires an extra slot.

*Nonweapon Proficiencies:* Required: Intimidation. Recommended: Player's choice; among those that may be selected are Alertness, Endurance, Looting and Trailing.

*Skill Progression:* There is no uniform preference among Thugs for the distribution of points among their thieves' skills. Note, however, that they start out with fewer points to distribute than other rogues (see Special Hindrances, below).

*Equipment:* The Thug's equipment usually consists of the biggest, most intimidating weapon available. Otherwise, it's a matter of common sense according to the job. A kidnapper, for example, could make good use of a rope to bind his victim.

*Special Benefits:* Because they are better trained in combat than other thieves, Thugs receive +1 on their "to hit" rolls.

*Special Hindrances:* Thugs spend much of their early career learning about weapons and their use, and their initial training in the traditional thief skills suffers as a consequence. To compensate for the extra weapon proficiency slot and combat bonus, a thief of the Thug kit has only 40 points to distribute initially among his thief skills (although he can still put up to 30 of them in a single ability, if he so chooses).

*Races:* Humanoids and half-humanoids are particularly fond of this kit, as it emphasizes force over stealth. One has more difficulty imagining demi-human Thugs; dwarves might have the temperament, but the Thug personality doesn't suit their culture, and their small stature would might make them look somewhat silly as guild enforcers

(which is not to say that they would be ineffective—they'd simply bash anyone who made thoughtless or snide comments about their height).

**Troubleshooter**

*Description:* The Troubleshooter, like the investigator, is often aligned against other thieves. He has all the skills of the thief, but puts them to a different use: He works chiefly as a security consultant, playing the part of the thief in order to test the worthiness of his clients' defenses.

*Role:* The Troubleshooter's professional role is rather narrowly defined, but this is to the rogues' liking. More than one has been known to moonlight in other, possibly illicit activities. They may range from legitimate recovery of stolen goods through genuine burglary.

As a "security consultant," a thief of this sort has a legitimate reason for his thieving skills and equipment; and the temptation for many is to use them. For this reason, officials often keep a suspicious eye on well-known Troubleshooters. More sophisticated governments may even require that they have some sort of license.

Troubleshooters are rarely guild members, naturally enough, unless they have been bought off in exchange for information on the clients they've served. Of course, few such Troubleshooters will survive long; if they give a place's security their "seal of approval," and then it is broken into with ease, the Troubleshooter's reputation will be shot, and he can expect to have more than a little suspicion placed on his shoulders.

*Secondary Skills:* Any. Often has technical or engineering-type skills, however, such as Armorer, Mason, Miner, Navigator, Weaponsmith, or Woodworker/Carpenter.

*Weapon Proficiencies:* Troubleshooters are permitted the normal weapons open to thieves.

*Nonweapon Proficiencies:* Required: Observation. Recommended: Player's choice; among those that may be selected are Alertness, Fast-talking, Gather Intelligence, Locksmithing, and Trailing.

*Skill Progression:* Picking pockets and reading languages are not of much value to the Troubleshooter, but he will probably seek a fairly even distribution among the other thief skills.

*Equipment:* Any Troubleshooter worth his wages will augment his thiefly talents with the best available equipment. Remember, he wants to try his absolute best to break down his client's defense—as does his client—so he'll use whatever devices will increase his chances. Also, a wealthy client could even be persuaded to help the Troubleshooter acquire hard-to-find thief equipment.

*Special Benefits and Hindrances:* Troubleshooters have an uncanny knack for . . . well, for troubleshooting. If there's a glitch somewhere in a security system, the Troubleshooter always seems to run into it.

In a way, the Troubleshooter is a living manifestation of "Murphy's Law": "If anything can go wrong, it will." The Troubleshooter thief, of course, capitalizes on this professionally. His job is to find everything that can go wrong, so it can be fixed.

While everything going wrong has its ironic professional advantage, the downside is of course that the things that go wrong often do so to the Troubleshooter's personal disadvantage.

This is difficult to quantify, to define as a game mechanic. Instead, the DM is encouraged to bring it in at his discretion during play, for maximum excitement and role-playing fun. Fill the character's life with astronomically improbable events and bizarre coincidences.

The DM is by and large left on his own to "wing it" with this special benefit/hindrance, but there are two questions for him to ask himself before he brings it into play: Would this further the plot of the adventure? Would it be fun? At least the second question should be answered "yes," and it is best if both are.

Furthermore, the rule to follow in deciding the specifics is: Everything should be balanced. For every freakish mishap that works in the Troubleshooter's favor, there should be a complementary one that works to his disadvantage.

*Races:* Dwarves, with their affinity for the mechanical and their lawful tendencies (and their dour stoicism in the face of all misfortune, however ludicrous), are the demi-humans most inclined to take this kit.

Some gnomes also may be found as Troubleshooters; the special benefit/hindrance of this kit suits the pranksters well—but their employers would best be on guard for practical jokes perpetrated in the course of the assignment. The goal of any gnome Troubleshooter should be to turn all his mishaps into assets or amusement, if not both.

## Recording Kits on the Character Sheet

It's really no problem to record your Thief Kit on your character record sheet. Where you normally write down the character's class, add also his Thief Kit name. For instance, if your thief takes the cutpurse kit, you would write "Thief/Cutpurse."

Where you normally write his nonweapon proficiencies, add the ones (if any) you got free from the Thief Kit, and designate them with asterisks to indicate their bonus status. Wherever you have space for notes, mark down the character's special benefits, hindrances, and other facts you want to remember.

## Thief Types and Multi-Class Characters

The Advanced Thief Types options are designed to add depth to a thief character. But if the character is already multi-classed (as are many demi-humans; e.g., a halfling fighter/thief), he doesn't really need any more depth. Therefore only single-class thieves can take one of the Thief Kits described above.

However, with the flexibility available to thieves in the 2nd edition AD&D® game, especially with nonweapon proficiency rules, you can very closely simulate a kit by carefully choosing proficiencies and allotting points among thief skills. The character won't get the special benefits of the kit (e.g., the bonus nonweapon proficiencies), but to outward appearances, the character will be that type of thief.

For instance, suppose a halfling fighter/thief wishes to be a fence. If the Secondary Skills system is being used, he should take one of those listed in the fence kit—Trader/Barterer, let's say.

As a first level thief, he receives 4 nonweapon proficiencies (if they are used) and selects them from the required and recommended proficiencies of the kit. The required ones are Appraising and Information Gathering. Note that these proficiencies are NOT

bonuses, because the halfling is not actually taking the kit. His other two slots should be filled from the recommended list; fast-talking and observation proficiencies, perhaps.

If you do all this, and have your DM's permission, within the context of your campaign this halfling will be considered a fence. That is, he fills the role of a fence in the campaign world, and is regarded as such by other figures of the underworld. Only you and the DM know that he doesn't have all the benefits of a true fence.

## Thief Types and Dual-Class Characters

The same is not true of dual-class characters.

If a human character starts off as a thief, he may take any of the Thief Kits above. If, later, he decides to change classes according to the normal Dual-Class Benefits and Restrictions rules, he doesn't lose any of the benefits or hindrances of the kit he chose; he is still that sort of thief.

If a character starts off as some other character class and then, later, switches to one of the thief classes, he can choose a Thief Kit at that time, though the DM may insist that certain campaign events take place in order to allow him to do this.

For instance, let us suppose that a human fighter decides, later in life, to become a thief, and he wants to be an Acrobat. There's nothing wrong with that, but the DM should insist that the next several adventures deal with the transformation. The character could join a circus, perhaps, where he could be taught the tricks of the trade. Adventures should be built around this setting, and should somehow involve other player-characters in the campaign as well.

To better simulate the wait involved for the character to learn his new trade, the DM is within his rights to insist that the character not receive his Thief Kit until he's reached second experience level in his new class.

## Creating New Kits

If there's a special type of thief that the DM would like to have in his world, he can design a new Thief Kit for that thief-type.

To design a Thief Kit, you must answer the following questions about this sort of thief and its role in your campaign.

*Description:* What is this thief type? What literary, mythological or historical source is he drawn from? What special requirements are there if a character wishes to be one?

*Role:* What is this thief type to be in the campaign? How does his culture regard him? How does his subculture, the underworld, regard him? Is there a special sort of outlook he needs to have to belong to this thief type? And what does this thief tend to do in a campaign? Reading the earlier chapter on role-playing thieves may give you some more ideas for this section.

*Legal Issues:* What legal penalties, if any, are there in your campaign for the activities with which this sort of thief is involved? A little bit of historical or literary research may help you get ideas, or you can just make things up to suit your campaign.

*Secondary Skills:* If you're using the Secondary Skills system, you need to determine if this thief type requires such a skill. If no one secondary skill, or limited range of secondary skills, should be common to all thieves of this type, then don't require a

secondary skill. But if all members of a thief type seem to have a particular skill or one of a small number of skills, then you should limit the choice of characters who select the kit to that skill or skills.

*Weapon Proficiencies:* Some thief types gravitate toward specific weapon types, or are more open-ended than other thieves in the range of weapons that they may choose. If this is the case with the thief type you are simulating, then make note of it in the kit.

*Nonweapon Proficiencies:* Most thief types seem to have certain skills in common. It would be silly to have an Acrobat without jumping, tumbling and tightrope walking, for example. So you may assign up to two proficiency slots to be given free to the character. If it's appropriate, the proficiencies may come from listings not appropriate to thieves (the Priest, Warrior and Wizard listings). Though normally the cost in slots for non-thief proficiencies would be higher, it doesn't matter if the proficiencies are being given for free. See the chapter on Proficiencies for more information and new proficiencies from which to choose.

*Skill Progression:* Which of the traditional thieves' skills are most important to this sort of character, such that the character should concentrate his experience on them?

*Equipment:* If a thief type is known for having specific types of equipment, require of the thief that he have such equipment when he enters the campaign. If a thief seems to prefer a specific type of equipment, but it's not so widespread a choice that you don't feel like requiring it of the character, simply list the types of equipment that the thief prefers and recommend the character take them.

*Special Benefits:* Every thief type could have some special benefit, but it's not absolutely necessary. It's up to you to choose what that benefit is, but it should fit in with the way this thief appears to function in fiction, folklore, or wherever he comes from. Types of benefits include: Bonuses to reaction rolls (especially from certain categories of people), bonuses on thief skill use (especially in certain situation), and special abilities.

*Special Hindrances:* You should also provide a special hindrance (or hindrances) which limit the character about as much as his benefits help him, especially if you have given him a Special Benefit. Such hindrances can include: Penalties to reaction rolls (especially from certain categories of people), inability to learn specific weapon or nonweapon proficiencies; special vulnerabilities in combat or to certain magic; or special restrictions in the culture in which the character normally lives.

*Races:* If there are variations to the kit based on the character's race, note them here. Some races can't take a specific kit; some will have different proficiencies, benefits and hindrances attached to them.

*Notes:* If you have any additional notes about the Thief Kits pertinent to your campaign (such as which players you'd prefer for specific kits, for example), put them here.

## The Thief Kit Creation Sheet

Following is the Thief Kit Creation Sheet. If you wish to design a new thief kit, just photocopy the sheet and design your new kit upon it. When you're showing the Thief Kits above to your players, also include the new kits that you have designed yourself.

## The "Lone Wolf":

## Unique Thieves

Most thieves go through a period of training and apprenticeship, as do legitimate tradesmen. They are taught by an established, experienced thief, who was taught by a thief before him. This goes back untold generations, to the earliest thieves who developed skills on their own and then shared them with partners and apprentices. Over the years the skills and techniques have been formalized and perfected, especially under the normalizing influence of the large and powerful guilds that have arisen.

But not every thief is molded in this way. There are always others, known as "lone wolves," who developed outside the "system" of the established underworld. They discovered and developed their larcenous abilities without the aid of a mentor.

Many lone wolves resemble normal thieves so closely that they may be treated as the very same thing, as far as class, abilities and restrictions go.

However, in some cases a lone wolf may turn out very different—perhaps different enough to be considered a class unto himself. To design such a character, you may use the optional rules, "Creating a New Class," in Chapter Three of the *Dungeon Master's Guide*.

The emphasis of such a character should still be on thieve's skills, but it may be that not all of the traditional skills are present. And the character may have other unusual abilities as well, cultivated to assist in his roguish endeavors.

Imagine, for instance, a self-taught pickpocket. He may have Pick Pockets, Move Silently and Hide in Shadows, and perhaps Climb Walls (to help get himself over fences or whatever when he is pursued by an observant and angry victim). But he could have no other thief skills; for his thieving lifestyle there was no need for them.

Note how this would be different from a traditional thief specialized in pickpocketing (as in, for example, the cutpurse kit): Even though he specializes in the course of his career, the cutpurse received a core training that included all the thief traditional skills—a liberal arts education in larceny, if you will.

Lone wolves often lead dangerous lives. They must be very self-reliant, and they have to find their own contacts for scoping out jobs and fencing stolen goods. As "freelancers" they run a constant and most serious risk of running afoul of monopolistic thieves' guilds.

Guilds are often wary of lone wolves, who are more likely than "established" thieves, with trusted contacts and reliable references, to be spies for authorities or rival guilds. The lone wolf is also regarded by guildsmen with a mix of curiosity and contempt—and sometimes even admiration, if his odd mix of abilities proves particularly useful "in the field."

A lone wolf, as we said, may be a character class unto himself. Most such classes never have more than one member, and when he dies his unique combination of skills is forgotten; the class ceases to be. On rare occasion a lone wolf may take an apprentice or two, and the class may be perpetuated in this manner. (If you are using the 1st edition AD&D® game, you may suppose that the Assassin class arose in this manner.)

Guilds who have accepted lone wolves into their ranks may ask the thief to take on apprentices—but two things usually prevent this: One, conservative guildmembers typically see the lone wolf's unorthodox methods as a threat (because they are not understood), or as inferior to the traditional way of doing things; and two, lone wolves, used to doing things by themselves, are reluctant to share their secrets. An example

follows:

**"Bluehand" Ajathar, Lone Wolf**

This is an example of a "lone wolf" thief, created with the character creation system in Chapter Three of the *Dungeon Master's Guide*.

Ajathar was originally apprenticed to an illusionist. He never completed his formal training, however. His master, Zalabom the Magnificent, was outspoken on a number of religious and political issues. One day his words went too far against the popular grain, and a mob dragged him from his tower, stoned him to death, and set fire to the building after looting it. Young Ajathar narrowly escaped with his life and a couple of texts of illusion magic.

Homeless and hungry, Ajathar had to steal for a living. Assisted by what few illusions he could muster, he became a burglar—and a surprisingly proficient one, considering that he was self-taught. As his burglary skills improved, so did his understanding of the magical arts of deception.

He took as his symbol, his trademark to be left at each "job," an illusionary blue hand. The illusion would fade after a few days—but its discovery came to invariably bring panic to the heart of anyone who discovered it in his house. Sometimes Ajathar would not take a thing, but only leave the hand as a warning, a taunt, a mockery of a house's easily-penetrated defenses.

Eventually Ajathar moved on. His native town, where Zalabom was killed, was neither affluent nor an exciting place for a daring young entrepreneur. "Bluehand" may therefore be found anywhere that the DM should wish to relocate him.

One peculiarity of Ajathar's character is his strict adherence to the alignment of True Neutrality. The lesson he gained from Zalabom's death is that extremism and fanaticism in any form are dangerous and to be avoided. Both the illusionist and the bloodthirsty crowd are, to Ajathar's mind in hindsight, repulsive. Any apprentice that Bluehand might train would have to be True Neutral as well.

Following are the elements of unique class, along with the multiplier of each (see DMG, Tables Eleven to Eighteen): Fight as thief (-1); Saving throws as thief (0); 1d4 hit dice type (+0.5); No armor permitted—interferes with spellcasting as well as thief skills (-1); Weapons: any (0); +1 hp per level beyond 9th (+0.5); 6 initial proficiency slots (+1.5), select as if a normal thief of the cat burglar kit; Climb walls (+1); Find/remove traps (+1); Open locks (+1); Move silently (+1); Hide in shadows (+1); Use Illusion/Phantasm mage spells (+3); Must be of True Neutral alignment (-1); TOTAL MODIFIER: +7.5.

**Table 6: AJATHAR'S EXPERIENCE TABLE & SPELLS**

**Illusion/Phantasm Spells**

| Level | Experience | Hit Dice | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 2 | 1,500 | 2d4 | 2 | | | | | | | | |
| 3 | 3,000 | 3d4 | 2 | 1 | | | | | | | |
| 4 | 6,000 | 4d4 | 2 | 2 | | | | | | | |
| 5 | 15,000 | 5d4 | 3 | 2 | | | | | | | |
| 6 | 30,000 | 6d4 | 3 | 2 | 1 | | | | | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 7 | 60,000 | 7d4 | 3 | 2 | 2 | | |
| 8 | 112,500 | 8d4 | 3 | 3 | 2 | | |
| 9 | 210,000 | 9d4 | 3 | 3 | 2 | 1 | |
| 10 | 435,000 | 9d4+1 | 3 | 3 | 2 | 2 | |
| 11 | 660,000 | 9d4+2 | 3 | 3 | 3 | 2 | |
| 12 | 885,000 | 9d4+3 | 3 | 3 | 3 | 2 | 1 |

+225,000 XP per level thereafter
+1 hp per level thereafter
Spell progression continues with the same pattern, up to a maximum of three spells per level, up to 9th level (if the character's intelligence permits it).

*Thief Skills:* Bluehand has the skills Climb Walls, Find/Remove Traps, Open Locks, Move Silently and Hide in Shadows. His base chance of success with any of these abilities is determined by Table 19, Thief Average Ability Table, in the *Dungeon Master's Guide*.

*Spell Casting:* Without a regular mentor, Bluehand's development of his illusionist talent was stunted. He advances in spell use much more slowly than a true mage of comparable level, and may only use spells from the Illusion/Phantasm school of magic. He must check to see if he can learn a spell, and must study spells in order to cast them, just like a mage. He does not receive spells automatically when he gains a new level; he must find or steal books or scrolls with new spells, or must hire an illusionist to share them with him.

### Adventure Suggestion

A mysterious lone wolf, freelance thief has struck the characters' neighborhood, leaving his trademark blue hand symbol at the scene of each crime. He is very successful, and has overshadowed many of the local guild's best thieves, on their own territory. The player characters (presumably connected with the guild) are commanded by their guildmaster to track down this unauthorized thief, either to coerce him to join the guild or to leave the city, or if necessary, eliminate him.

The thief is, of course, "Bluehand" Ajathar. The characters may be very surprised to find themselves up against this strange, illusion-casting thief. Ajathar's description and level should be fleshed out suitably to challenge the character party.

## Glossary of Thief Slang

*Box-Man:* Strictly speaking, a thief specialized in cracking safes.

*Burn:* To underreport the take in a job to one's partners. "Luigi burned us. He told us there were only three diamonds, and kept two for himself."

*Cannon:* Pickpocket, cutpurse.

*Contraband:* Illegal goods (stolen or prohibited by local law).

*Fencing:* Selling stolen goods. "We stole the duke's jewels and fenced them later the same night."

*The Fix:* Ties with corrupt officials to have criminal charges "fixed"—that is, thrown out. This will usually require bribes or favors.

*General Subscription:* Money collected from the local underworld to free a captured thief by bribing officials.

*Hit Man:* Assassin; an "executioner" for crime bosses, paid to kill their enemies.

*Lone Wolf:* A solitary, independent thief. He is probably self-taught and not allied with a guild.

*Made-Guy:* A burglar who is in good standing with the local thieves' guild; a guildsman.

*Mark:* The target of a confidence game. "We have to bring the mark to the Burnt Goose Tavern."

*Mob:* A group of thieves.

*Pennyweighter:* a thief who operates by replacing valuable items (especially jewelry) with worthless ones.

*Piece Man:* Someone who trades knowledge on where stolen property can be sold.

*Pigeon:*Victim of a con or swindle.

*Pigeon Plucker:* swindler, con artist.

*Racket:* Any sort of larceny, from pickpocketing and burglary through embezzlement.

*Rootin':* Committing crimes.

*Roper:* Someone who pulls in a mark for a con.

*Rounder:* A good, professional burglar.

*Score:* Loot from a theft. "We got a good score from the duke."

*Squeal:* To identify one's partners to the local authorities, usually in return for a lighter penalty for one's own crimes.

*Tipster:* Someone who has knowledge to share with burglars about good targets.

# Chapter 4: Thieves' Guild

## What is a Thieves' Guild anyway?

This is going to be answered in heaps of useful detail in this section. But it's useful to have a basic working idea to start with. A thieves' guild is a grouping of thieves who agree to work together, in at least some ways. Often because of external threat and danger, it makes better sense for them to cooperate a little. This group typically has a leader—a guildmaster—or maybe a small ruling council. It has laws by which members must abide; there can be many of these, or few. A guild will usually only exist in a reasonably-sized town or city, where there is enough work for thieves. It will usually also have a central meeting-place, almost always secret; this is usually referred to as the guild house. Finally, it's also usually true that the large majority of these thieves are not of good alignment—they tend towards neutrality at least, if not towards actual evil.

## Developing the Thieves' Guild

This chapter sets out to understand first what benefits a PC thief will derive from membership in a thieves' guild, and what responsibilities and duties he will have in return. This is a good place to start, for two reasons. First, it briefs the DM on luring the PC into guild membership so that instead of being onerous, it becomes interesting and rewarding. Dragooning a PC thief into guild membership isn't as good as the lure of the

carrot (with the threat of the stick in the background . . .). Second, in looking at the "rights and responsibilities" guild members have, many of the functions of the thieves' guild—its *raisons d'etre*—become clear in the process. This helps to show why such guilds exist.

This matter—what thieves' guilds do—is developed further in the next major section. The activities of the guild are divided into core functions—what almost all guilds will do—and secondary ones. Secondary functions may be carried out or wholly avoided, depending on the guild in question. These various activities are laid out for the DM here to make guild-designing easier later on. Players may also get ideas for sneaky and nefarious behaviors for their PCs here. Many "secondary functions" will relate to the specialized thief kits presented earlier. This section does not make explicit use of these kits, since different DMs will wish to handle these differently. However, developing specialist NPCs to fulfill these specialized activities is greatly facilitated by using the kits.

Next, the relation of a thieves' guild with other groups is considered. These can vary from minimal to very highly organized indeed. The DM is briefed on major associations (with merchants, the law, other guilds) and the general social background to thief activities.

Immediately before the section on designing guilds, there is the crucial issue of the power at the top of the guild. This is usually the Guildmaster—or maybe a small group of dominant thieves, a ruling council. The personalities involved here will have a major effect on the personality of the guild, and need careful design by the DM.

An extensive design section, complete with play-aid record sheets, is then provided to enable the DM to develop a thieves' guild for the major urban setting(s) in his campaign. This section uses a flexible approach to guild design. That is, there are tables which can be used for random determination of aspects of guilds, and dice-rolling alone will generate workable guild structures. However, the DM is encouraged to use a guided-semirandom approach, tailoring or omitting certain dice rolls and choosing design options which produce the most suitable and pleasing overall picture. This also covers the possibility that there is no formal thieves' guild, with design options for very loose affiliations or even relative anarchy!

An example, the thieves' guild of Mallain, shows how to use the design system. This example takes an apparently contradictory set of dice rolls, and shows how to resolve them; the result is that the intrigues and tensions in the resulting Guild structure can be a focus for adventures for any PCs. The Guild becomes far more than just an anonymous body a thief PC pays dues to!

A short section on unusual thieves' guilds (travellers on the road and others such) is followed by a valuable DM resource, a section on handling PC Guildmasters. The straightforward system laid out here handles guild income, hassles, arrests, trials and tribulations, followers arriving and leaving, morale, and the day-to-day business of running a thieves' guild. This should make life a lot easier for the DM!

A small number of selected "blueprint profiles" for major NPCs within a guild follow; the DM can use these unchanged in game play or modify them as he wishes.

## Benefits of Guild Membership

"What do I get out of it?" is a reasonable enough query from a player with a PC thief when told his character must join a guild, or if it is strongly suggested as a wise option by the DM. By answering the question, many of the functions of the thieves' guild which benefit its members become clear. Below are detailed the most common benefits gained, although these will vary from guild to guild, with an example of one additional benefit typical only of membership in a certain kind of guild—a highly organized and resourceful one!

It is not the case that every guild will provide all the benefits listed below, but certainly almost all guilds will provide training, access to necessary equipment, and the like.

**Training**

The *Dungeon Master's Guide* gives training (to gain experience levels) as an option for DMs. There is much to recommend training as a necessity for level gains. Having a PC train with a master, mentor, or tutor—probably with others of his profession around—allows many, many things to happen naturally without their obviously being spoonfed by the DM. Rumors and news can be caught up on. Hints and tips (e.g., concerning the usefulness of some of the new equipment items reviewed elsewhere) can be exchanged. New friends and contacts can be made. Intrigues and scams can be plotted, gossiped about, and initiated; employment can be offered; schisms and factions within the guild can become a focus for adventuring. All this is just for starters. Training is a natural way for the DM to enrich the game in all sorts of ways.

Second, while certain skill gains can be seen as the result of practice, this does not apply to all the advances experience brings. New weapon and nonweapon proficiencies are the most obvious example. How can a thief who has never used a short sword, for example (because he has not previously been proficient with it), suddenly develop a proficiency in its use without training? This is obviously wholly unrealistic. How can a thief learn an Etiquette proficiency, enabling him to pull scams on the rich and haughty more easily, without a tutor to coach him in upper-crust, high society ways? He sure can't learn Etiquette from a dungeon crawl or wilderness hike! Likewise, if the player chooses to pile most of the 30 ``skill points'' gained for a level into one or two skills only, the PC could well need a specialist tutor to coach him in these skills—a good way to bring in one or two of the specialist thief kits as NPCs, too.

So, training is an important element of the game, and the thieves' guild is the place where the PC thief will have the best chance of finding a tutor to train him. He may have to wait a week or two, or maybe a little longer if the DM wishes this, but by and large the guild will go to some lengths to make tutors available.

**Equipment**

This is a major advantage for a thieves' guild member. It goes without saying that many items of use to a thief are hardly available on the open market in almost any society! Armor and weapons can be had, and likewise straightforward items such as ropes, iron spikes, crowbars, and the like. But where does the thief get lockpicks, tiger's claws, razor rings, silenced armor, and suchlike? From the thieves' guild, of course.

In addition to being a source of equipment for sale (and possibly even for loan), here is an obvious chance for role-playing possibilities. The "blueprint profile" for the Thieves Quartermaster (later in this chapter) shows how a simple trip to buy some new lockpicks at the guild can be turned into an encounter with a very resourceful and entertaining NPC, one the player of the thief PC won't forget!

In some powerful guilds, magical items may be available for exchange (for other magical items, obviously ones of superior value!) or even possibly for loan (with a fat deposit securing the item). Loaning allows thief PCs to enjoy having a magical item without the DM letting them have it permanently! It should go without saying that absconding with the item will lead to relentless and murderous pursuits until the item is returned.

**Information**

The thieves' guild will make it its business to know about many things which are of interest to its members, and that can mean just about anything, so a few examples are given here:

*Security:* The blueprints for sewer networks (allowing ingress and egress through manhole covers), times of changing guards at major guarded buildings (the Treasury, the Mint, etc.), times of watch patrols (in rich residential areas), the nature and positions of guards (warriors, dogs, etc.) and traps in key buildings, and the like.

*Commercial:* Who is richer than he looks (and why and how), arrivals and departures of valuable cargoes and items, where certain valuables are cached, hidden, disguised; and more in this vein.

*Friends and Enemies:* This will depend in a big way on the relationship of the guild with other associations, dealt with later. Sometimes such information will be given to a novice thief for obvious reasons; "do not rob merchants X, Y, Z or else. Understand?" (reasons—X and Y pay protection money and Z is actually Deputy Guildmaster; the novice might be told some of this). But other possibilities include which corrupt officers of the law are in the pockets of the guild (and therefore should not be dealt with too harshly during a robbery), which servants of the rich are very happy to talk for what magnitude of bribe, which barmen in the rough taverns in the docks will help thieves (e.g., by putting a little something in someone's drink so they can be "helped home" by the thief later), and so on.

*General Information:* This is a catch-all category. To take but one possible illustrative example: a guild might keep records of legal punishments for various thiefly crimes in neighboring (maybe even distant) locations ("Over there? Not if you value your hands, brother!"). These may not always be accurate and up-to-date, of course.

What the guild knows, who within the guild knows it, and whether they will tell what they know obviously depends on how "hot" the information is, the seniority of the person inquiring, and other factors. These complications don't need our attention now; the important thing is the basic idea here, that the guild is a vital information source. And, to anticipate the responsibilities guild members have to the guild, this is a two-way process. The thief will be expected to report certain information to the guild seniors! This is dealt

with later.

**Fencing**

This is an often-overlooked aspect of the thieves' guild. A PC thief may steal all kinds of things which he hasn't any idea about, so far as their price goes. He didn't find the hidden safe in the merchant's house, so out he comes with a bag containing a jade statuette of a cat (actually imitation jade so it's mostly worthless), a crystal vase (exceptional elfin work, worth a fair sum), a crude wooden idol (an antique, and thus worth far more than the thief thinks), and more . . . Indeed, in the absence of any special nonweapon proficiencies (such as Gem-cutting and the like) the thief may often have little idea how much nonmonetary treasures he has stolen are worth. Even with the Appraising proficiency, the thief's estimates may often be wrong, and a fair proportion of items too unusual or singular for the thief to be sure anyway. This is one area where the fence can help the thief.

A resourceful thieves' guild will have members who can accurately value different sorts of items, and will also have contacts with certain specialists who aren't actually thieves but who also aren't terribly ethical either. They can handle real rarities. The Fence thief kit gives a basic design option for fences, and the blueprint profile section (later in this chapter) also details a highly experienced and versatile fence who can be used straight off the page (as it were) or developed by the DM for use in his campaign.

A special case is that of magical treasure. A simple *detect magic* spell from a mage-thief specialist in the guild, working with the fence, can tell a thief that the nice gold signet ring he filched from the drunk fighter is a magic item, worth far, far more than its value as gold. The same NPC can tell the thief (from an *identify* spell) that the ring is a *ring of protection +2*, worth thousands. This only needs a 1st-level magic-user with the fence, but it's a priceless service for the thief!

The other role for the fence, obviously, is that the thief gets "hot" property off his hands quickly. It will probably be out of town very fast, to be sold in some distant location where its illicit nature will not be suspected. Obviously, fences never pay more than a fraction of the market price for goods; but a fraction may still be a fair sum, and the thief runs no risk of being apprehended.

**Specialist Help**

Obviously, the fence is a form of specialist help, but the guild can also act to put members in touch with specialists to help them with certain ventures in more direct ways.

First, certain guild members will be specialists in themselves—expert lockpickers with exceptional Open Locks skill levels and others such. Multi-class thieves are also important people for many jobs—a mage-thief with such spells as *invisibility, levitate,* and *knock* (to consider but second-level spells) is of obvious value. Having one accompany a thief on a robbery increases the chances for success considerably, but even if this isn't possible, a simple *invisibility* spell precast on the hopeful robber gives an important edge for sneaking past guards and the like.

Then again, other adventurers might be called upon. Depending on the guild's relations with other bodies, a cleric (with *find traps,* among other spells) would be a most

useful accomplice for many tasks. If the DM's campaign world has a deity which is an obvious patron for thieves (such as Olidammara of Oerth, or Mask of the Forgotten Realms), clerics of such a deity might well have very cordial relations with a thieves' guild. This is considered in more detail below.

The guild can thus act as a clearing-house, with names and meeting places to assist a PC thief hoping to pull a job but needing help. Again, whether these contacts actually agree to help will depend on many things—notably the reputation of the PC thief! However, the fact that they are there at all can be helpful for the PC thief, possibly for his friends as well, and can be very useful indeed if the thief PC wants to pull some job away from the rest of his usual adventuring group, when he must have some such extra help for success.

Of course, a thief may simply need the assistance of others of his own kind for some job he has planned. This may be a simple decoy person to help with pickpocketing in the streets, or an eagle-eyed lookout for a warehouse job. Either way, the guildhouse may be a better bet than hanging around dubious taverns and hostelries. The flipside of this, of course, is that an impoverished PC can hang around the guildhouse touting for offers of work himself!

Finally, a well-organized guild will even be able to help its members if they get into serious difficulties. A jailer may be bribed, a magistrate bribed or blackmailed, a man of law paid to plead the thief's case in the courts (if the judge or magistrate cannot be bribed). If the captured thief is very senior in the Guild, even a commando-style "liberation" may be possible! Such actions will leave the thief indebted to his guild for some time to come . . .

So, these are the main functions of the thieves' guild, as far as a PC thief entering the guild can see them. There are certainly other things the guild will do, and we'll look at them in due course. Before that, let's look at the other side of the coin—the responsibilities the thief has to the guild. For all the advantages, what does the guildmember have to pay one way or another?

## Responsibilities of Guild Membership

### Guild Dues

The most obvious responsibility is that the guild member must pay dues to the guild. These will be variable. One guild may include training costs in the basic dues, which will then be fairly high; another guild might not, charging for training as and when the guild member needs it, so their basic dues will be that much lower. Of course, if the DM doesn't use training rules in his game then this element will be absent. When the DM comes to design a thieves' guild using the system outlined later, this is a important element to consider!

In addition to a basic membership due, the guild may insist on taking a certain percentage cut of the rewards the guild member gains from his thieving activities. Here, it is likely that there will be a ``basic rate" for normal operations, with guild seniors considering special cases individually. For example, if the guild provided the thief with certain important information which made a big difference (and indeed without which a robbery would have been unsuccessful), the guild may take a larger slice of the goodies

than normal. What cut the guild takes will again be variable. Some guilds may discount the yearly dues (possibly in part) from later cuts from income.

**Secrecy**

This is just as important as paying dues. The guild member will be expected to keep the identity of the guildmaster (if he knows it), the guildhouse, and planned guild activities secret from outsiders. He must never inform on a guild member.

In a guild dominated by a lawfully-aligned guildmaster or group, secrecy may be the most important of all commitments the guildmember has to make. Some form of oath of loyalty is very likely to be demanded of the novice in almost any thieves' guild.

**Providing Information**

There are two quite specific ways in which a thief will be expected to supply his seniors within the guild with information. First, information concerning his own plans; second, general information possibly of value to guild members.

A thief will be expected to keep the guild informed about important ventures he has planned. This does not include dungeon-bashing, wilderness adventures, and the like! Rather, robberies and break-ins which may net particularly good rewards or strike at "sensitive" targets (such as a temple, or the warehouse of a notable merchant), particularly nefarious crimes such as kidnapping, and major scams are examples of crimes which a thief will always be expected to notify the guild seniors or guildmaster of. Many guilds will insist that such major crimes can only be committed with the guildmaster's permission. This is especially likely to be true with a strong guild, and in a lawful or repressive society where such actions may stir up a hornet's nest of trouble for the guild.

Feeding back general information to the guild will also keep a thief in good standing with his fellows. A thief casing a joint for a later break-in might see an unusual number of guards around in the courtyard of an adjacent building as some crates are being taken inside from a wagon, and one crate splits slightly at the top revealing the glint of gold or ivory in the bright sun . . . The thief knows that he cannot organize a robbery over there as well as in the place he's casing already, so he reports the pleasant view to the guild. Doing so will certainly keep the thief in good favor. The thief will be expected to provide such information should he come across it, but the guildmaster might well reward particularly helpful guild members, mark them for promotion, give them a sinecure role in some other guild job, pay a small percentage of the guild take to the helpful informant, and the like.

*Snitches:* These can be of special importance to a thieves' guild. Basically, a snitch is someone paid to provide "inside information." A snitch can be a corrupt officer of the law, a valet or servant of a rich man (or at a club of some kind), a nightwatchman, and so on.

A few guilds might insist that only the very senior guild members can have their own snitches; juniors must turn over promising contacts who could be developed into snitches to the guild. More likely, though, is that individual members can have their own snitches who are regarded as sacrosanct by other guild members. A guildsman does not tamper

with another thief's pet snitch! This is obviously going to be easiest if the identities of the snitches are actually commonly known within the guild—how can you not poach a snitch if you don't know who is one, after all? But, because some thieves may be very nervous about this, the identity of certain really important snitches may be kept secret. The guild will protect them by warning thieves away from the key snitches indirectly (e.g., with an edict that no one is to try to "make friends" with the staff of such-and-such an establishment). This does not make the identity of the snitch known, but serves to warn other thieves away.

**Limited Territory**

The thief will almost certainly be told that certain areas and activities are definitely off-limits. This is likeliest to apply to major crimes and big heists when junior thieves are the hopeful plotters (the guild is unlikely to allow such inexperienced people the chance to bring the wrath of the law down on everyone's head). But territorial restrictions may be just as important.

The simplest form of this is that certain thieves will have their "own patch". Pickpockets are the most clear-cut example. A notably busy thoroughfare, one where merchants and (especially) foreigners throng, is a patch which a skilled group of pickpockets will fight determinedly to keep as their own, exclusive territory. Protection rackets are another obvious case of a demarcated territory where other guild members do not stick their noses in. These will include warehouses and offices and homes which are off-limits to burglars, because their owners pay a sum to the guild to avoid being robbed.

A more complex example of this is where sub-guilds control definite sections of a city and expect that only their own people are usually allowed any activity at all within that section. Exceptions are allowed only after careful consideration by the leader(s) of this group. This situation may happen if a guildmaster is weak and the second-rankers start carving out territory for themselves, but it might arise for simple reasons of historical accident (in a walled city with major internal divisions, gates between town quarters, and so on—the City of Greyhawk is an example). At its most extreme, a city might in effect (if not in name) have several thieves' guilds, each controlling one section or quarter of the city, with the boss of each splinter faction meeting with the others at regular times to try to co-ordinate efforts and defuse tensions.

**Other Duties**

Depending on the individual guild, the thief may have other responsibilities. These can vary considerably, but some of the more common cases are detailed here.

*Training*: The thief may only be allowed to train apprentices of his own with the knowledge and permission of the guild, and the guild will probably want a cut of the training fee. Some guilds will regulate the allocating of apprentices to trainers. In busy times when the guild is expanding, middling-level thieves may have to give up a certain amount of time, demanded by the guild, to train new apprentices.

*Legwork:* Especially with apprentices and low-level thieves, the guild may require them to do some of the tedious day-to-day legwork, at least as backup reserves. This can involve collecting money from the victims of protection rackets, collecting and carrying

bags of small change from illegal street gambling, acting as a messenger boy, keeping a part-watch on a warehouse, and so on. This shouldn't be too oppressive, but a sudden need for extra help on the part of the guild is a nice plot device for keeping a thief PC in town and maybe having him see things, and meet people, that widen the scope of his future adventuring.

### The Recalcitrant PC Thief

A player may decide that he doesn't want to have his thief PC join any guild; this may be especially likely with Chaotic characters (and Chaotic players!). It's best not to pressure the player in this case, but as his thief PC gains experience he will inevitably tread on the toes of the thieves' guild (e.g., by robbing someone they have an "understanding" with). The guild will sooner or later have to take action against the PC thief. They will warn him first, and stress the benefits of joining (as explained above). Eventually he will have to join up, or ship out. There is also the matter of training, of course; if he doesn't get this from the guild, where else can he come by it?

Some players may worry that their thief PCs may have their freedom of action massively curtailed, or their alignment may be compromised (especially if the PC is of Good alignment), or their PC may simply be ripped off. These are legitimate worries, and some players may want to be reassured about them. The DM should be able to lure all but the most uncooperative player into guild membership without any strong-arm tactics, and then the full plethora of the guild's nefarious activities can be unfolded . . .

## Activities of Thieves' Guilds

There are certain obvious core activities of thieves which will always be a staple of guild goings-on, but there are also more uncommon activities which not all guilds will have dealings with. Looking at the range of possible guild activities is done here for two reasons. First, it is a useful precursor to guild design, to come later. Second, it is a natural lead-in to the issue of relations which exist between thieves' guilds and other groups. Since these are often based on mutual interests and spheres of activity, it makes sense to consider these interests and activities first, to make sense of the associations to be reviewed later!

Importantly, the activities reviewed here do not involve all the thieves of the Guild. If PC Guildmembers find some activities run by a guild objectionable (e.g., because they are good-aligned), they shouldn't be forced to do so. The idea here is simply to give an idea of the range of activities which guilds may be involved with on more than an occasional basis.

### Core Activities

These are the bread-and-butter activities of thieves. Virtually any guild will have these as everyday activities. That is, guild members will regularly indulge in them and they will provide much of the "bread and butter" income for most thieves (especially lower-level thieves).

Pickpocketing, burglary, robbery, street theft, street gambling, and mugging are the

most obvious core activities. There's little need to say much more about them here. Almost all players will have had their thieves indulge in such behaviors, and will be familiar with them. Standard AD&D® game rules, and many equipment items and Thief Kits presented in this volume, give exhaustive detail about them.

### Other Activities

The DM can look upon the listing here as a menu from which choices can be made later on when designing a thieves' guild. The list isn't exhaustive; devious DMs can no doubt add to it for unusual guilds in a campaign setting. The activities here are ones which will involve the guild as a body, or many of its members, on a systematic basis. In turn, this will affect the nature of the guild significantly. Obviously, many of the activities listed below may involve specialists, and the thieves' kits outlined earlier can be very useful in many cases.

### Protection Rackets

Thieves and merchants may possibly come to some negotiated understanding, in certain cities and towns. The thieves will agree not to burgle particular establishments (warehouses and private homes)—that is, those which belong to the merchants who pay a fee for this privilege. Merchants who don't pay will be fair game for future robbery, and may be specifically targeted.

This kind of agreement will always be negotiated by the guild seniors, and guild members will be told in no uncertain terms that certain places are strictly off-limits in the future. Such agreements are most likely in places where the thieves' guild is strong, the rule of law is fairly weak (or corrupt), and where the guildmaster is a lawful-aligned individual.

A notable consequence of such agreements is that if a freelance thief burgles a property which is owned by a merchant who pays the local thieves' guild, that thief can expect the thieves' guild of the town to make determined efforts to find him and administer summary justice. This may be harsher than the penalties prescribed by the law! Also, the traditional meaning of the term "protection racket"—"pay up or we break your legs"—is not exactly what is implied here, although thieves denied payment by a merchant might resort to the threat of violence to drive away the merchant's customers, staff, and the like. Only a guild dominated by evil and top-heavy with thugs will be likely to use actual violence, in most cases.

### Smuggling

This is most likely to be an organized activity in a port, or possibly in a major inland trade city built on a nexus of trade roads. In the case of a port, there is a possibility that thieves might also be allied with pirates, both through smuggling and through getting messages to the pirates regarding the sailing times, cargoes, and protection of sailing vessels leaving the port. The smuggling can be of any prohibited item or items, and in troubled lands the smuggling of weapons can be particularly lucrative.

Subtle variants on this theme are possible. Consider a thieves' guild which has good

connections with the rulers, in a weak country ruled by evil. The country might officially outlaw slavery (for fear of offending neighboring countries which are not ruled by evil), while the thieves actually carry this on as a subterfuge activity, smuggling slaves into and perhaps through the country. This is done with the full knowledge and connivance of the rulers, who take a percentage of the profits. Selling the slaves to another, more distant, evil land could raise plenty of funds for the thieves and the rulers. In time, this evil land could flourish and become strong on the profits of its wicked trade.

**Forgery and Coin Clipping**

A strong thieves' guild may regulate the activities of forgers and "clippers", to keep the proportion of forgeries and clippings within reasonable limits. If there are too many forgeries floating around, the value of coin will sharply deteriorate, to no one's benefit (including the thieves). Clipping is simply the art of shaving fine slivers from the edges of coins and using the salvaged metal for subsequent coin-forging or for other purposes. A shaved-off margin of some 5% from the original is usually fairly undetectable, but coins may be clipped several times during their lifetime! In advanced societies in the campaign world, the dies used to make coins may have milled or marked edges to prevent clipping.

**Entertainments**

This is a catchall term for a fairly wide range of dubious behavior. Some examples of systematic operations which a thieves' guild might run are listed below.

*Gambling:* Thieves might well run casinos and similar establishments. These provide a source of income, a good meeting-place for underworld people, and the opportunity to rip off large sums of money from patrons who are rich, drunk, stupid or usually all three. Organized crime will be strongly involved in these operations.

*Good Time Girls:* Nothing much needs to be said about this, save that thieves often act as the "gentleman companions" of these girls. There is a much shorter word to describe this, of course.

*Bawds:* A bawd is a character who knows the seamier side of life, and makes an in-demand "tourist guide" for the rich and bored (or the foreigner) who seek to stimulate their jaded appetites in the seedy parts of town. Bawds will often be freelancers, but they may hand over a certain percentage of their clients to muggers and other thieves. This type of activity might well involve the thieves' guild, even though the bawds themselves do their own work independently, and will frequently be Chaotic Evil in alignment.

**Lawful Operations**

A thieves' guild might actually turn to actions which do not conflict with the rule of law for several reasons. First, it might have many lawful members (this is implausible except in a very lawful society). Second, it might have strong contacts with some outside group which makes some lawful operation a special case—having good relations with merchants could lead to the protection scenario detailed below. Third, it might just be good public relations. The guild does some "legal work" to maintain a veneer of public

respectability while blaming its really nefarious activities (kidnapping, drug smuggling, etc.) on rogue elements outside the guild. It might also be a temporary diversion to keep the heat off when the guild has over-reached itself or been blamed for some particularly spectacular heist or wicked crime. Surprisingly, there are lots of reasons why poachers may turn gamekeeper for a while. Two examples are:

*Security testing:* Thieves might be employed to test defenses of a secure area. Who better, after all? Gemcutters and jewelers, pawnbrokers, and rich merchants who keep a lot of money around are obvious potential customers. Equally obviously, they won't approach the thieves' guild unless they already have some understanding with them. They will also top up the defenses after the thieves have tested the first set, even if the thieves say the defenses are very sound (or maybe especially if they claim this!).

Of course, if freelance good-aligned (or lawful-aligned) specialists in such work are available as independents, they will be the most likely to carry out this work. A thieves' guild is likely to go to great lengths to get these people to join the guild, or else to eliminate them!

*Transportation:* Sometimes, someone wishes to move something (a fabulously valuable gem, a religious icon, etc.) from one place to another by normal means (e.g., not teleporting) and is fearful that it may be stolen en route. Thieves are employed to create decoys and diversions and to smuggle the object in secrecy. Since thieves are masters of concealment, and also know a thing or two about stealing things in transit, their skills will be put to good use here. In the case of a really important item being transported, a thief might be asked to submit to a spell such as quest/geas to ensure his cooperation.

## Thieves' Guilds in the Campaign World

A thieves' guild doesn't exist in a vacuum. It will be strongly influenced by the society which it is part of. Considering this is an important backdrop to the more specific matter of how a thieves' guild gets on with other associations and groups.

### Size and Wealth of Communities

A first simple point is that a thieves' guild has to have enough work to support it! A small hamlet of 50 or so peasant farmers, most of whom are desperately poor, wouldn't support a single cutpurse, let alone a thieves' guild. A busy working town along a trade route, though, might well attract several thieves, even if the actual population was fairly low. If the village relied on monies passing through the place (coaching inns, hospitality, markets, etc.), it would be much richer in terms of money available for the thieves to filch than a place with the same population but dependent on the turnip harvest! In the design process, some specific rules for determining how many thieves various communities can support are given.

### Social Alignment

The other factor which will always be of importance in determining the nature of a thieves' guild is the dominant social alignment (see the *Dungeon Master's Guide*, Chapter Four). Usually this will be reflected in the alignment of the rulers too, but this may not

always be so: the possibility of a "divided alignment" society is discussed after the social alignments have been considered. Also, the following descriptions are tendencies, not absolutes. The final paragraphs on Special Social Factors shows how, for example, two Lawful Good societies dominated by different religions could have a very different view on thieves!

**Lawful Good**

Thievery will be strongly disapproved of—thieving is by definition unlawful, and few thieves are good. The penalties for thievery will be harsh, but will usually involve banishment, confiscation of goods, and long sentences of socially useful labor rather than death, mutilation (e.g., amputation of a hand) or such other cruel treatment. Lawful good rulers may go to some lengths to extirpate thieves' guilds, and lawful good people will certainly inform on thieves. There will be a strong sense of civic duty among such people to report any observations suggestive of thievery to the authorities. Tip for thieves: Find somewhere else.

**Neutral Good**

Thievery will not be disapproved of in the same way as in a lawful society, but thieves are rarely good, and neutral good societies are unlikely to have much regard for them. However, punishment for thievery may not be so severe, and the rulers may feel there are better things to do, and more important social priorities, than persecuting thieves. Assassins, for example, will be rated a much more important target for the authorities.

However, while the authorities (and society generally) may tolerate a certain level of thievery, there is likely to be a "threshold level" above which thieving will no longer be tolerated. Over-powerful thieves may be deemed a major social evil, and neutral good societies may be less fussy about the means (neutral) taken to achieve the ends (good). Do not forget that a viable interpretation of the neutral good philosophy is "war on evil without remittance or mercy," such that only direly evil ends will be eschewed in the prosecution of good! Certainly, plants, spies, moles within guilds—all may be used by the authorities against over-powerful thieves. Tip for thieves: Keep a low profile and you can get away with it, but otherwise—watch out!

**Chaotic Good**

Such societies do not often have effective, strong law enforcement, because the people prize personal freedom as a primary virtue. For this reason, thieves' guilds can grow strong in a Chaotic Good society. Even if the will is there to do something about the thieves, the means may not be adequate to the task.

The attitudes of ordinary people will be complex here. Some may regard thieves in a heroic light, as individualists and nonconformists, and be positively disposed to them. Others will regard thieves as taking the fruits of the labors of others away, and that this curtails personal freedoms—the undeservedly poor have not the freedom they should have. Reactions will tend to be individualistic (as with most Chaotic societies) and

somewhat unpredictable. Tip for thieves: Stick around!

**Lawful Neutral**

This may be the most intolerant of all societies. Thievery is the very antithesis of law, and punishments for transgression are likely to be harsher and more cruel and unforgiving (e.g., amputation of a hand, a long sentence of forced labor) than in a Lawful Good society. Lawful Neutral rulers are likely to be rather stern, and worst of all, law enforcers are likely to be as numerous and unbribable here as anywhere. The only bonus for the thief is that Lawful Neutral societies are appallingly bureaucratic and its civil servants lacking in imagination and initiative.

Lawful Neutral citizens will snitch on a thief at the drop of a hat and, moreover, will do so out of a sense of real civic duty. Tip for the thief: Very dangerous, but definitely outsmartable. Faked papers and the like go a long way, and fast talking helps a great deal.

**Neutral**

Absolute Neutral rulers tend to be rare, except in countries which border on extreme alignment societies. Here, performing some kind of balancing act may be the only way to survive. Such rulers will probably ignore thievery unless it gets out of hand; they will have too much else to worry about. When it does get out of hand, their instinct will be to take whatever steps are necessary to restore the balance—more militia, more watch, more nightwatchmen and lamplighters in the streets, and so on. They will be highly pragmatic in their response.

While pure Neutral rulers may be rare, ordinary people will often be of this alignment. This reflects the fact that they aren't clearly of any other alignment: They're just pragmatic, doing what they need to get by day to day. Most medieval societies were hardly rich; even the "middle class" (until the 15th century in Europe) had a standard of living which could barely be termed comfortable. Survival is the name of the game, and clearly demarcated principles often go to the wall under such circumstances. The resulting blurred alignment can often be summarized as Neutral. Neutrals will tend to regard thievery as something they can't do a great deal about; thieves are mysterious, dangerous people with secret organizations. Neutrals look the other way; they don't want to get involved. Corruption can operate on a wide scale—it can even become a staple of commercial exchange. Tip for thieves: Good pickings!

**Chaotic Neutral**

Almost no societies, save for disorganized anarchies and some frontier lands, are dominated by this alignment. A Chaotic Neutral ruler is unlikely to survive for any time at all—ruled by whim and caprice, his subjects will likely rise up to put an end to such arbitrary rule.

Such societies, or ones comprised of Chaotic Neutral people, will likely not care a fig about thievery. Gambling, corruption, bawdery, muggings, and lowlife are likely to flourish in such societies, and thieves may grow very strong organizing such activities. Tip for thieves: Excellent pickings, and a strong guild can effectively rule such a society

behind the scenes.

### Lawful Evil

While, like all Lawful societies, Lawful Evil will not care for unlawful acts, Lawful Evil accepts what is necessary to maintain the strong in power. Fear rules here. If a Lawful Evil ruler uses thieves to backstab (literally!) his enemies, so be it. The ordinary people will cower if a thief swaggers around—providing that thief has the muscle to back any threats he makes. Thieves' guilds in such lands may be very strong, but they must have an emphasis on the brutal and thuggish to survive. Assassins will be stronger than thieves here, and the two may work closely together. Tip for thieves: Walk loudly and carry a big stick.

### Neutral Evil

Neutral Evil is uncaring and unconcerned. Such people—rulers or ordinary folk—are out for what they can get. How one gets what one has in life doesn't matter at all. Neutral Evil folk are often cleverer than Lawful Evil ones, being more flexible and less respecting of a dumb "superior" just because he is in a position to push people around. They are also better organized by far than Chaotic Evil people. Neutral Evil is a flexible, smart, highly dangerous alignment.

Thieves have excellent chances here, but they will have to watch their own backs more than in any other society. Rival thieves' guilds may be particularly likely here. Since there is no stricture other than "don't get caught", competing guilds and gang wars are highly likely. Tip for thieves: Good prospects for the pragmatic amoralist.

### Chaotic Evil

Such societies are likely always to be in ferment, since the arbitrary cruelty of the rulers will drive even a passive population to revolt before long. Only Chaotic Evil societies with a powerful clerical group, demonic presence, etc., will have the sheer force needed to tyrannize for any length of time.

At all levels of a Chaotic Evil society, backstabbing and intrigue, treachery and betrayal, is the basic coin of exchange. The strong take what they want however they like, and the rest are ground into the dirt. Since organization and cooperation are minimal, a thieves' guild where the members don't spend all their time backstabbing each other can grow to dominate behind the scenes very swiftly. Tip for thieves: Trust nobody, sell your granny into slavery, and have magic items allowing a fast exit.

## Special Social Factors

There are many possible unusual social factors which will be an important backdrop to the role of thieves and their guilds in society. A few examples only are given here, since the possibilities are almost infinite.

### Divided Alignments

Some societies exist where the alignment of the ruler(s) is sharply different from the general social alignment. For example, a lawful evil dictator might rule over a society mostly comprised of freedom-loving chaotics, enslaved by military might. Here, while the agents of law enforcement would have a very punitive attitude towards thieves, the common population might regard them as heroes, possibly giving shelter to a thief on the run, or at the least not giving the thief away.

**Racial Divisions**

Possibly the strongest antipathy between the races in many AD&D® campaigns is between elves and dwarves. This can strongly affect guild structures. In the worst case, a city might have an elven guild and a dwarven guild, both vying for humans to join their side, and with other races tending to ally one way or the other (gnomes might join dwarves, and halflings side with elves, for example). The antipathy of the two might override even alignment factors. This could break out into open warfare between the factions, or a long-running guerilla war could be the result.

**Religious Factors**

Not all societies with the same dominant alignment need have the same attitude toward thieves. One Lawful Good society might be dominated by priests of a god stressing mercy, forgiveness, and humility; another might be dominated by priests of a stern warrior god stressing protection, strength, and the need for justice to prevail in all circumstances. Their attitudes to thieves would be significantly different, to say the least!

**Historical Factors**

Thieves may be especially notorious (or maybe especially famous!) in a society for some unique historical reason. The people may speak of how brave Edrain the master thief backstabbed the wicked tyrant Baron Higsel and brought about the downfall of an evil tyranny. Hence thieves are somewhat better tolerated than elsewhere. Or they may speak of how evil Edrain the treacherous backstabber foully slew the greatly loved and wise Baron Higsel, the best ruler in the history of the land, and since this time thieves are deemed especially wicked, base, treacherous fellows and death is an automatic punishment for them! These are extremes, but the DM can easily envisage many variants on this kind of unique background.

All these general social backgrounds can easily merge into personal obsessions or idiosyncracies of rulers, in dictatorial countries. There are many idiosyncratic reasons why a particular leader might have an especially punitive or lenient (less likely!) attitude to thieves than the general social alignment might suggest, but there should always be a good reason why. For example, a paladin ruler of a city-state might be unusually lenient toward thieves because a (Neutral Good) thief companion saved his life more than once in their adventuring days. Unlikely, admittedly, but possible! Such oddities should be thought up individually by the DM so that they fit with the campaign setting and history.

## Thieves' Guilds and Other Groups

Here, we'll look at the general pattern of relationships which can hold between the thieves' guild and other social groups of importance—the law, merchants and their fellows, other guilds, and the like. The important word is "general." The broad patterns outlined will be used later in the guild design section. They are presented now for the DM to think about in advance.

The two most important relationships thieves' guilds have will be with the people they steal most from (merchants) and the people doing their best to stop them (the officers of the law). Several possible types of relationships are outlined with each group. These are dominating themes only; checking the Complex/Mix entry at the end of each group will suggest many variations on the dominant themes.

### Thieves and the Law

The alignment of the rulers of society will have a dominating effect on this relationship. However, there will be other factors of importance, too. Here is a simple example: A lawful good state is at war with a powerful, evil neighbor. Almost all of the country's resources will go into the war effort—and able-bodied men and women who might otherwise be law enforcers putting down thieves will be fighting in battles instead. Thus, thieves will find life much easier than usual in such a land. From the patterns below, some will obviously tend to align with certain alignments, and this will be reflected in the guild design process later. But nothing is ever cut and dried, and 100% predictable!

#### Persecution

Typical of lawful and non-good societies, officers of the law are vigilant against thieves and their guilds. They are not easily bribeable, and there may be rewards (money, medals, etc.) for watch officers arresting many thieves or busting a guild. Penalties for thievery are usually harsh. There will be very few corrupt officers of the law. Busting a captured thief from prison will be very difficult—prisons and gaols will be strongly built, heavily guarded, and tough to get into (cue for an exciting adventure here!).

#### Hassle

The law comes down fairly heavily on thieves, and penalties for thievery are moderately harsh. However, officers of the law may feel they have better things to do than deal with thieves (e.g., in a rough-and-tumble port city), and with petty thievery in particular, a thief may get away with handing over the spoils, paying a spot fine, and getting a gauntleted hand across the back of the head. In an odd way, the thieves may even have a sneaking regard for the law: the law is firm, but fair and not arbitrary or excessively harsh, and the thieves feel they are up against an enemy worthy of their skills.

#### Opposition

This is perhaps the commonest state of affairs. The officers of the law do their best to prosecute the law. However, a small number are corrupt, they don't have enough manpower, they know their chances of recovering stolen property are very low and this adversely affects morale and motivation, and so on. The lawmen aren't uncaring, they're just somewhat disillusioned and their morale isn't so good. They will perk up and make a determined effort to find out who has pulled a big heist when one takes place, and if thieves resort to real violence they will really come looking for them. Otherwise, they just go through the motions. One or two bright and enthusiastic younger officers may resent the cynicism and world-weariness of their elders, but not for long; they soon capitulate to the prevailing attitudes.

Many thieves with experience in such places have a proverb which (there are several versions) runs along the lines of, "if you get round the corner you're a free man"—that is, get away from any watch officer in the street with your pilfered gains and you won't exactly be chased with real determination.

**Tolerance**

The picture here might seem to be similar to opposition, but the law is still weaker in dealing with thieves. This may be for a variety of reasons. Under-funding and under-manning may be especially important. Significant corruption may be present (especially higher up the scale). The society may be chaotic or anarchic. There may be a reason why thievery is not a major worry (a weak thieves' guild, major external threats to a city-state so that most able-bodied men are in a fighting militia, a very rough port where serious assaults and worse are a much bigger headache than thieves, etc.).

In such situations, the law not only doesn't do anything about all but the most serious thiefly crimes, but officers of the law may even get testy and irritated with people who complain about them too much, especially if they are foreigners!

**Corruption**

Here, bribes and backhanders are paid to officers of the law on a regular and major basis. Not all lawmen may be corrupt, but a thief with serious financial resources can manage to avoid being charged with almost anything. If somehow he ends up in prison, he will be smuggled out somehow. Law officers may actually be members of the thieves' guild, cooperating with smuggling, protection rackets, and the like.

There is a tendency to overplay this, and to make it too obvious to PCs. Corrupt law enforcers aren't going to advertise the fact, even in a corrupt society, save for the most stupidly sociopathic. Corruption may be extensive, but will still be significantly behind the scenes, making it more deadly for the unfortunate outsider who blunders into it. Lawfully-aligned PCs can arouse the ire (and even the violent attentions) of corrupt officers of the law they attempt to "assist" with their work!

**Complex/Mix**

This covers a variety of more detailed or subtle relationships. An obvious example is

an opposition within the forces of law, which can be exploited by thief PCs (or by a DM with lawful PCs too). For example, in one city the dominant relationship between thieves and law officers is corruption. Senior officers, and many of the watchmen, are corrupt, and readily take bribes. A small number of decent but disillusioned juniors have tried to get firm evidence to nail their superiors and try to eradicate the corruption, but they haven't been able to manage this yet. Objective evidence hasn't been accumulated, and witnesses are too scared to talk. There is concern that even some of the judges and magistrates are in the pockets of criminal bosses or the Guildmaster of thieves. Cue for lawful and/or good PCs to help out in a dangerous urban jungle of intrigue and treachery...

Relationships may also be mixed. Thus, in one city ward, the commander of the ward watch may be an iron-willed, ultra-lawful, dominating man who drills his men to persecute thieves night and day. In another, richer ward at the far end of the city, the inexperienced new junior leader is a follower of a kindly, somewhat impractical faith, and does not think that crime deserves stern punishment unless violence is involved. His men don't respect him, though, because of his inexperience. Morale is falling, and an increasing number of watchmen leave public service or else just don't care about enforcing the law any more. One city, two radically different sets of possibilities for thieves. There may be major tensions within a guild, as the thieves from the "tough end" of town start trying their luck uptown!

Many possibilities exist in the Complex/Mix end of the spectrum. The other themes can be mixed and varied to create many possibilities themselves. The only limit is the DM's imagination.

## Thieves and Merchants

The overall wealth of a society will have an important influence on this relationship. In a poor society, merchants will not be likely to be rich, and they will not be able to afford any regular thievery. They will not be able to bear such losses without going bankrupt. Here, merchants will fight tooth and nail to minimize the depredations of thieves. In richer lands, a little "stock loss" (among other things) can be tolerated rather better.

Alignment will somewhat modify this. In chaotic and/or evil societies which are rich, merchants may be very greedy, and may take many measures against thieves out of a love of money, not out of a need to survive. There may also be an important element of pride in a society which stresses individualism (chaotic) rather than one where merchants form groups, ally with each other, and try to regulate business practices (lawful). Over-proud merchants may resent monies or goods being stolen not primarily because of the loss of value—it may be negligible—but because of the loss of face. This can be an important factor in merchants putting pressure on authorities to suppress thieves, and in their hiring PCs for sums which exceed the value of their stolen goods!

### Warfare

The merchants hate and fear the thieves. They go to extreme lengths to protect their property, and many able-bodied folk get jobs as nightwatchmen. Even ordinary

warehouses have traps and many secret hidey-holes, wall safes and the like, and some have magical traps as well. Merchants often have bodyguards, and they won't pay protection monies. They may even band together to form mutual "insurance policies" to help each other. The merchants exert all their political clout to get the authorities to suppress thieves. Even small-scale pilferage will result in an offender being dragged off to face the sternest justice the merchant's advocate can plead for.

Under these circumstances, the thieves' guild may react in a number of ways. It may turn to other forms of crime. It may turn to imported help to crack the merchants (more thugs for protection racketeering, more thieves for daring robberies recruited from a friendly guild from a nearby town). It may use methods such as abductions and blackmail to force its way back into a position of strength. A really powerful guild will effectively "declare war" on the merchants if it thinks that forcing a few to cave in will lead to other merchants giving in also. Many options exist. This situation is a real struggle of wills, and the life of a thief will be dangerous—but never dull.

**Opposition**

Somewhat like the state of affairs described above, but the merchants don't go to such lengths to protect themselves or keep thieves off their backs. They don't like thieves, they don't accept them as a part of society or a tolerable evil, but they don't go overboard about them either. Such merchants are fairly stoutly resistant to any attempt at coercion or blackmail, and they use their influence with the powers-that-be to keep life tough for thieves.

**Standoff**

This is a fairly common state of affairs. The merchants don't like thieves, but they are somewhat fatalistic about them. A strong element of pragmatism influences their attitudes. If it loses them less to pay protection money than to suffer the thievery they would otherwise have to tolerate, they will pay up. This is a major difference from the oppositional state, where merchants will actually suffer extra loss rather than connive with thieves.

Merchants in a standoff will do what they can to get by. Unless thievery gets wildly out of hand, they won't get up in arms, and they will pay off thieves, or accept a certain level of theft, as they must.

**Submission**

This is a rare case. Here, the merchants are running scared. Coercion is rife; merchants pay a lot of money to avoid being robbed or having their homes burned down. Their profits may be almost all eaten away by this. The law is of little help, usually because it is corrupt, maybe because it is ineffectual. Thieves will have many spies in the midst of the merchants. This is an unstable state of affairs; it cannot persist long. Either the commercial life of the society falls apart, or the picture changes—often to Infiltration as described below.

### Infiltration

Here, thieves have so many dealings with merchants that they actually start to get involved in commerce directly. This often happens as a natural evolution from either a standoff or a submission relationship. Thieves start to become merchants. They may have been spies in merchants employ before, they may "take over" the businesses of merchants they have bankrupted or driven off, or they may enter businesses their talents suit them for (e.g., as locksmiths, gem-cutters, moneylenders, pawnbrokers, and the like).

This has several attractions for the thief. First, additional income can be produced. Second, the business can be a simple exploitation of a skill or proficiency the thief already has. Third, it can provide a good cover for a thief. Fourth, there may be a more nefarious motive or two ("Ah, sir wants a combination lock which will be absolutely thief-proof! I have just the thing . . ."; why shouldn't a locksmith have the best lockpicks in town when apprehended by the constables down a dark alleyway at night?

At its most extreme, thieves can actually come to dominate commercial life, or at least to play a major role in it. Organized crime becomes big business. The thieves may even become important figures in society, and have political power. The City of Greyhawk is one notable example of this.

### Complex/Mix

Again, examples of complicated or tense, oppositional relationships can easily be developed by the DM from the examples above. One group of merchants could be trying desperately to fend off thievery, while a second faction argues for accommodating thieves and paying them off. This leads to a major schism, with the more principled merchants accusing the pragmatists of collusion with crime; insults start to fly, then a few fists, then somebody's warehouse suffers a small fire . . . Involving the PCs in what will fast become a triangular conflict (two sets of merchants at each other's throats with the thieves gleefully picking up the spoils from anyone they can get at) leads to endless adventure possibilities.

## Thieves and Other Guilds

There are two guilds which are most important here: Assassins and beggars. These are dealt with separately below, as are bards. All the other guilds are dealt with in groups, below.

### Craft Guilds

These are the myriad guilds of gemcutters, barbers and dentists, butchers and bakers, and so on. Thieves will not have dealings of note with many of them, but there are one or two exceptions. Pawnbrokers are an obvious possible "front" for thieves and fences, likewise moneylenders (with their safes and secure chests and the like). Thieves may thus cooperate with many such, and minimize robberies of the rest! Guilds which take young apprentices may be paid small sums for handing over to the thieves youngsters who seem to be highly dexterous and capable of developing into thieves, given suitable training. In

special instances (e.g., thieves allied with seafaring smugglers), other alliances (e.g., with the seamen's guild) may be of note.

If there are unusual thief-craftsmen alliances (or oppositions), the DM should script them individually; they will need individual rationales, which should be explained and noted!

**Adventuring Guilds**

In some cases there may be an unusual reason why thieves are strongly opposed to (or allied with) an adventuring guild (including temples, etc.) in a city. The most notable example is a cordial alliance with clerics of a deity favoring thieves (e.g., Erevan Ilesere for half-elven and elven thieves, or Olidamarra, in Oerth; or Mask in Faerun). If some particular type of multi-class thief is common in a city for some reason, then there will obviously tend to be a stronger link between the two relevant guilds than usual. For example, if mage-thieves are common, then the Guild of Wizardry will take a definite interest in the activities of thieves. Under such conditions, the mages will probably not attract unwanted attention from light-fingered thieves (although few sane thieves try stealing from mages anyway).

But other possibilities exist. Consider a burgeoning frontier town, which is close to wild hills and forests with bountiful resources. Furs, gold from prospectors, meat from hunted animals, even some gems from a small mine; all these and more pour into the town, which grows rich and attracts many new settlers. Unfortunately, it attracts humanoids and bandits (as external threats) and many thugs and foreign cut-throats and evil thieves (as opposed to the neutral-aligned indigenous thieves). The rulers of the town grow fearful . . .

A twin alliance springs up to defend the town by stealth and cunning. Rangers patrol the distant countryside to give advance warning of marauding humanoids or bandits. Within the city, the thieves use their skills to tip off the powers-that-be about unsavory types arriving from outside, conspiring robbers and thugs, and the like (and may deal with a few of them themselves). Bandits beyond the town have spies inside it; the thieves tip the rangers off about this, and pass on intercepted messages. The thieves trade a magical shield (which they cannot use) they got from one of the thugs they dealt with to the rangers (who can use it). The rangers hand over a magical shortsword they took from a hobgoblin leader in return. Half-elven thieves and rangers share a drink together in an elven tavern, sharing the latest dwarf jokes. The two groups then save money by a joint bulk purchase of leather armor, and so it goes on . . .

Having an unusual, unexpected alliance like this spices up any adventure locale. It's well worth a DM's time to devise such a backdrop, to make a town or city unusual and particularly memorable.

**Thieves and Assassins**

Assassins are not a separate character class (in AD&D® 2nd Edition rules). They are simply people who are awfully good at killing other people. But the skills of the thief are valuable for this, above the natural skills of any other character class, because they are skills of stealth and sneaking about undetected. Many assassins will be thieves, multi-

class thieves, or characters who began their adventuring life as thieves but then changed to another character class.

The assassin kit earlier in this volume adds detail to this natural affinity. Going further, the multi-class thief is probably the strongest option for assassins. Combining the skills of the thief with spells such as *invisibility, jump, knock, levitate, rope trick*, and *sleep*, just to consider a few low-level spells, makes for a potent assassin indeed. The fighter/mage/thief has all these advantages, of course, plus the bonus of additional hit points, and is thus an especially attractive option, although progress is slow.

So, given that many assassins are likely to be thieves, there will always be a fairly strong link between the two guilds. Cool relationships are possible if the thieves have "gone respectable" (become merchants themselves, etc.), or if the assassins are especially evil, ruthless sorts under a truly heinous guildmaster. Not unusually, though, the two will have at least moderately friendly relations. Information is quite likely to be exchanged between the two guilds, the guild seniors may meet occasionally to fraternize and discuss prospects, thieves may be paid to do spying groundwork for an assassin setting up a kill, apprentices of one guild who may be suited better to the tasks of the other may be exchanged; there are many ways the guilds can cooperate.

**Thieves and Beggars**

Beggars can be excellent spies. Their presence anywhere outside of the higher-class areas of cities and towns will go unmentioned, if they are seen at all. Beggars ply their trade everywhere, and some of them may just be sleeping off the effects of drink. If one is hunched up against packing boxes by a warehouse, so what? Anyway, no one wants to get too close to beggars. They have an unpleasant range of startlingly contagious diseases, and approaching them is an open invitation to lice to infest your person—just for starters. And, of course, beggars are harmless (in the sense that they are too feeble, dim-witted, drunk, etc., to cause anyone any harm). For all these reasons, well-trained beggars are a real boon to the enterprising thief. They can get into places where other people would look suspicious, they often go unnoticed, and they don't have a lot to do apart from keep their eyes peeled. Just the people to have hanging around the places a thief intends to rob. After the job, the grateful beggars can be given a little percentage of the take.

Beggary can even be semi-professional, in large cities in particular. Dominant beggars control lucrative patches of territory, where they know that pickings are richest. Fit and able-bodied people, their senses undulled by illness or drink, can pose as beggars for a better living (in a rich city) than they can make by honest means (e.g., as farm laborers). Such people would make excellent spies. A Guild of Beggars is by no means unlikely in many city settings. And, since children make very appealing beggars as they look soulfully up from their sad little eyes and beg for a penny for a poor orphan, such a guild will find and train such rapscallions. The more talented (dexterous and/or intelligent) ones may well be sold on to the thieves' guild, for a consideration, to become apprentice thieves.

**Thieves and Bards**

Although thieves and bards are both rogues, they have no need of extensive contacts. While bardic colleges train bards in some rogue skills which thieves also possess, this is really to be seen as part of the jack-of-all-trades range of talents the bard possesses. Bards don't think like thieves, and they don't behave like them. Perhaps the closest these two groups come to direct dealings is when a neutral evil bard becomes an assassin and the assassins' guild has good relations with the thieves' guild!

## Guildmasters and Guild Structures

How a thieves' guild is organized, and how it is led, is crucial to the success of thieves in any town or city. Usually, unless there is at least some honor among thieves, life will be very hard for them!

### Guild Organizations

Five basic patterns are suggested here. These will be used in later guild design. They aren't exhaustive, and some clearly shade into others. But these patterns are perhaps the commonest, and any DM can develop them to suit his campaign. One factor which isn't considered here, but which will be looked at in guild design, is how many solo operators, non-guild members, are around. This will affect the strength of the guild, but won't affect its style of organization so much.

How a guild is actually led will be dealt with straight after this section, but for now we'll assume that all guilds are led/ruled by a guildmaster. This won't always be so, but using this convention saves a lot of tediously repeated qualifiers.

#### Centralist

This is a strongly organized guild, where all guild members have a powerful primary loyalty to the guildmaster. Loyalty is mostly high, the guildmaster is usually a powerful and dominant figure, and the guild house is a major meeting place. Thieves from such a guild will work with a notable degree of co-ordination.

#### Cohesive

Again, there is a fairly strong central organization and authority. The guild is a unified body and its rules are readily accepted by all. However, there is room for some "local latitude." This may take the form of senior thieves below the guildmaster being able to make a few important decisions about affairs on their own patch (own quarter of the city, etc.), or the central rulership deliberately restricting the use of its authority in some cases, and so on.

#### Fractionated

In this case, there is a central thieves' guild still. However, individual figures within the guild have taken power unto themselves in important ways. Local thief leaders may insist on almost complete discretion to do what they want in their areas, while agreeing

not to intrude on other local leaders' territory. Power struggles within the guild will be commonplace under these circumstances.

### Oppositional

The guild has been burst asunder by tensions within it, and there may well be several competing guilds in the same town or city. This can happen because the guildmaster is weak, because of ambitious young Turks seceding from the guild, or for special reasons of many sorts (e.g., racial enmity between a guild of dwarven thieves, and one of elven and half-elven thieves, in the same town).

Relations between the different sub-guilds can vary considerably. If there is still the shell of a central guild, then the different guilds may be on fair terms still. However, at another extreme, the tensions and oppositions can degenerate into street warfare and gang assaults.

If there are, in effect, several guilds, then the DM will have to determine the organization and leadership of each one separately.

### Anarchic

There is no guild organization to speak of, although there may be the remnants of a once-strong guild or perhaps a young, slowly developing guild. However, the large majority of thieves work as unregulated individuals. This may lead to a dog-eat-dog outlook with lots of backstabbing, both metaphorical and literal. However, it's equally possible that thieves get by with individual one-to-one agreements, helping each other out as and when the need arises (this may be especially likely in a Chaotic Good society with an anarchic guild, for example). Anarchy doesn't preclude enlightened self-interest and cooperation; it just tends to preclude this happening on a systematic and organized basis.

### Complex/Mix

As usual, this covers a range of options. There may be a facade of one organization, whereas behind the scenes a quite different organization presides. It may seem that anarchy rules among the thieves of one town, but many are secretly organized behind the scenes. Or, a guild might seem to be centralist whereas in fact local leaders are hiding much of their activity from others, so that the guild is in reality fractionated. A complex situation could exist whereby the guild looks centralist at first sight, then looks fractionated (as above), and then is seen to be part of each (a couple of the strongest local leaders are secretly allied to carve up more territory while other leaders are fractionated)—a really complex option. Ample scope for DMs to develop intrigues and onion-skin puzzles here!

## Guild Leaders

Clearly, how a guild is organized will influence how it is ruled (and vice versa). This is taken into account in the rules for designing and developing guilds. At this stage, we'll just consider the commonest patterns of leadership, which again can be developed by the

DM as he wishes.

**Guildmaster**

This is by far the commonest style of leadership; the single leader. His style of leadership may vary considerably, of course. He may be a stern, harsh despot, ruling by force and fear. He can also be a kindly despot, a firm but wise ruler. He might also be a weak, querulous, but kindly leader—rather ineffectual, having lost his old strength and daring, but still smart enough to eliminate young pretenders to his rulership when he sees them preparing a bid for power. Styles of leadership will be looked at right after this section.

**Council**

The guild is ruled by a number of individuals, usually fairly small, who act as a central conclave, Praesidium, ruling council, or under any one of a variety of titles. This is often the equivalent of an oligarchy in government—a self-perpetuating elite, who appoint replacements from senior ranks as and when necessary to maintain or expand their number.

**Democracy**

Rather unusually, the rulers of the guild are elected by the guild members. This does not mean that these rulers need be weaklings, or afraid of using their powers sternly and firmly when they need to (imagine a ruler elected for a 10-year term for example!). The "elections" may be the source of notable corruption, bribery, fixing, and vote-rigging of all sorts. The devious DM can imagine dozens of ways of embroiling PCs in the kind of scandals and scams such a state of affairs will throw up!

**Leaderless**

This is mostly a temporary state of affairs, when the guildmaster has just died, the ruling council been arrested, and the like. However, in a very few guilds this may be a permanent state of affairs. Here, the guild will carry on only a few of the usual functions, and will primarily act only as a practical resource. Thus, the guild house will be somewhere to find a trainer, buy equipment, and gossip with fellow thieves. Guild dues will not be excessive, and they will be paid for reasons of pragmatism. However, regulation of thiefly activities will be minimal or non-existent.

A leaderless guild is ripe for a coup, of course, and again this be a good option for the DM!

**Complex/Mix**

In this context, this means some kind of power struggle in most cases. A guildmaster may have had an ultimatum put to him by powerful seniors within the guild—accept a ruling council or else. Likewise, an ambitious and smart thief may be trying to take over a

democratic guild and install himself as the undisputed leader.

**Special**

Because the ruler(s) of the guild are of such major importance, many DMs will be prepared to put some extra effort into designing them in some detail. For those who don't want to have to go to the trouble, the blueprint profiles (later in this chapter) can be used for guildmasters. For the more industrious, why settle for the usual option of (say) a human or half-elf guildmaster with the usual high skills and appropriate magic items, or the sourpuss old dwarf with his smelly leather armor who is the secret behind-the-scenes master thief? Guild design does include such natural racial possibilities, but there are other, more exotic, options.

The DM will always want to design these cases individually, but a few examples won't go amiss—these can be ripped off with or without DM development, or used as a spur to DM imagination.

*Dragon:* A dragon makes an excellent guildmaster. Some can *polymorph self* into human (half-elf, etc.) form as a natural ability, others can use the spell of the same name, others still might have a magical item permitting this change of appearance. Dragons are vain and love treasure, so what more natural than a stream of junior thieves bringing pretty treasures to the "guildmaster" as a tithe? The guildmaster can also, of course, have many charmed servants from *charm person* spells.

*Deepearth Creature:* Drow and Illithid are the best candidates. Appearance can be disguised with an illusion spell, the use of a mask (imagine cowled, masked thieves protecting their identities in a council meeting—a very sensible set of precautions), a *hat of disguise*, or in other ways. The guildmaster could aim at gaining wealth, power, information, all for nefarious purposes which PCs should want to stop. Combatting such a guildmaster (or even a ruling council) is an excellent introduction to deepearthing, a pleasure no player should be denied.

*Extraplanar Creature:* Denizens from evil planes make excellent guildmasters. They like having power, gaining information, and wealth isn't something they are wholly indifferent to. Plus they have lots of time on their hands to indulge themselves by being a thieves' guildmaster. Their powers of disguise and concealment make it easy to maintain the pretense of humanoid form.

*Intelligent Monster:* A troll as guildmaster is not terribly likely. But how about a beholder? efreet? rakshasa (a particularly good choice)? a faerie dragon using its many spells? There are many possibilities!

If the DM decides on a special guild ruler, there are several questions which he needs to consider:

* Can the ruler pass itself off as a normal race? This will usually be important for retaining the loyalties of guildmembers. A spell, magical item, innate power, or plausible reason for seclusion will be needed.

* How did the creature get to the top? Either it must have thief skills, or be able to simulate these (with spells, magical items such as *gauntlets of dexterity*, etc.), if it has worked its way up through the ranks. Or, it must have been able to replace someone at the top of the guild (through assassination, etc.).

* Why does this creature want to be guildmaster? The possible reasons are money (tithes), information (thief spy reports), power, amusing itself (a faerie dragon, or an evil denizen with a few decades to kill), and the like.

If the DM is prepared to think through such issues, then a special ruler type can be great fun.

## Guild Rulership

It's vital to know what style of rulership the guildmaster brings to the guild. This section covers styles of rulership, and can be applied to guilds which are ruled in other ways (by councils, etc.).

### Weak/Strong

This is an obvious distinction. A guildmaster can be strong and authoritative, so that his commands and rules are obeyed (willingly or otherwise). Or he may be weak, with his edicts increasingly challenged by his underlings. Factors such as Charisma, experience level, notable achievements, age, and the like will affect the guildmaster's perceived strength. The most important, however, is likely to be the general perception of the force the guildmaster has up his sleeve.

### Cruel/Just

This is of most importance within the guild. The guildmaster may be cruel, handing down stiff (and sometimes arbitrary) punishments for infringements of guild rules. He may punish any signs of over-ambition among juniors very sternly. A cruel guildmaster rules his guild by fear of what he does—this is crucially different from a strong guildmaster, who may rule in part by fear of what he could do if opposed. A just guildmaster is the opposite of this, but is not weak. That is, he is known to act swiftly and decisively to oppose any enemies within the guild, and to enforce important guild rules and rulings. However, his punishments are seen as fair and justified ("he's harsh but he's fair"). While the opposite of cruel would, strictly, be "kindly," nice guys do not get to be guildmasters.

### Despotic/Populist

This is a rather high-sounding term for a simple dichotomy. A despotic guildmaster is one who decides on rules, punishments, policies, and important guild matters for himself. He does not consult others (much), and while he may listen to advice from his juniors he doesn't take any notice of it—he listens, he does not attend. However, this does not mean that the guildmaster is a tyrant, nor that he is cruel or even necessarily strong (a weak despot is in real trouble, however). It means that the guildmaster thinks that he knows best, and this doesn't imply wickedness or cruelty. The guildmaster may be very intelligent, wise, and far-seeing. Also, just because the guildmaster is a despot doesn't mean that the guildmembers don't like this state of affairs—a truly smart guildmaster will gain the loyalty of the guildmembers through his wisdom and the way his rulings clearly

benefit the guild.

A populist guildmaster is one who goes to some lengths to listen to all (or most) opinions within the guild. He is ready to listen to advice, and may delegate some of his authority and decision-making to others within the guild. Again, this need not necessarily make the guildmaster popular. A common problem for a populist guildmaster is that he will be perceived as weak, especially if the affairs of the guild are not in good order. He may leave himself wide open to backstabbing (quite literally).

These styles of guildmaster rulership can be combined to generate individual styles, such as strong-cruel-despotic and (at the other extreme) weak-fair-populist, and all points inbetween. Combining these should be fairly straightforward for the DM, but the developed case of The Thieves' Guild of Mallain (page 76) gives an example of how to combine these different elements into an overall picture for a guildmaster's style of leadership.

## Designing a Thieves' Guild

### Introduction

This section covers the design of a thieves' guild. As you flesh out the details of your own guild, you'll want to record them on paper for reference during play. Following the details of the system, a worked-out example is given to show how to build up a well-detailed, atmospheric guild from the bare bones of the tables.

This section is also not just for the DM. Players can be asked by a DM to do some work for him! A player can roll up a guild for the DM to use in some other setting, or some distant city (which the PCs will visit some time later after the DM has tweaked the players' dice rolls a little!). Also, a DM can allow a player to roll up details of a guild which the PC is about to take over as guildmaster, if he trusts the player enough! There is also a special section on PC guildmasters later on.

### Using the Tables

There are quite a lot of tables on the following pages. This shouldn't be intimidating; the system is detailed, not overly complicated.

Using the tables which follow can be done in more than one way. Random dice-rolling is OK, and will not give silly combinations of results. Sometimes odd-appearing combinations result, but these can often be a spur to DM creativity and generate the most interesting guilds! The DM may also ignore the dice-rolling and deliberately select results from the tables which he feels will fit his campaign needs.

The system which follows is detailed, as noted. This for DMs who like lots of detail! For those who don't, the best bet may be to combine the dice-roll and deliberate-design approaches; use dice rolls, and alter one or two when the DM especially wants some result or wants to maximize consistency. Or can't be bothered to do all the dice-rolling! Also, a few sections of design do not use tables.

Lastly, the tables mostly have suggested modifiers for basic d20 rolls. For example, the attitude of the law is determined on a d20 roll which is modified by social alignment (more hostile for Lawful societies, etc.). It is quite impossible to list all the possible

modifiers for each table. This would eat up masses of space and no system can foresee all possible modifiers anyway, so only the key modifiers have been listed in each instance. The DM can easily add further modifiers as he sees fit, to reflect special circumstances.

## What Isn't Covered

Some of the idiosyncratic guild details aren't covered here. For example, any oaths of fealty the thief may have to pledge, and the exact rules and constitution (if one exists) of the guild isn't covered here. If a DM wants this kind of depth of detail, he will surely want to write such details for himself.

Also, infrequent reference is made to any of the kits, proficiencies, or magic items introduced in this book. This is deliberate, ensuring that DMs who wish to be cautious about introducing such new elements are not prevented from being able to use the design system.

In summary, all the really important stuff you are going to need is here, and for any frills you want to add—go ahead!

## Guild Background

First, we need to establish the background of the guild. Such details of the guild as size, rulership, and the like will be affected by social factors, alignment, and so on. Therefore, this background is developed first. In this way, later dice rolls for aspects of the guild can be given modifiers for previously established background.

Many of the tables to follow will refer to background elements already detailed in the previous section, so the DM will know what brief entries mean. This obviously aids the process of DM selection, if dice-rolling is not being used.

### Social Alignment

This is an optional step. In some game settings, communities will have definite dominant social alignments (see WORLD OF GREYHAWK® Fantasy Game Setting). Sometimes, while a specific alignment cannot be stated, a general trend (for example, to good rather than evil) can be given. Social alignment along the good-neutral-evil, and lawful-neutral-chaotic axes, should be recorded if the DM is happy that he knows them.

If the alignment is divided, the alignment of the rulers should be used for later dice roll modifiers, but the fact that the common people are different should also be noted.

### Special Social Factors

These include racial divisions, religious persecution of thieves, unique historical factors, and the like. The DM should note any of these which are important. Since such factors will always be unique, there is no way the design system here can accommodate them. The DM will have to ascribe modifiers to certain dice rolls for these factors as he sees fit!

### Size of Community

The DM should have a reasonable idea of how many people live in the town or city where the thieves' guild is located. Most sourcepacks give such figures, and if the DM has designed his own campaign world then he should ascribe a suitable figure. For DMs uncertain about this, in medieval times only capital cities in Europe had a six-figure total of inhabitants, and many villages and hamlets had but a few score. Prosperous major towns would have in the order of 4-10,000 or so, and important cities perhaps 20-60,000 (depending on which century is taken for reference). There is no need for the DM to be ultra-accurate, but population will greatly affect the number of thieves in the guild, so the DM should record this.

**Wealth of Community**

No absolute figures are given here, because different DMs will work on different absolute scales—some campaigns are money-poor, others almost swim in gold. So, Table 7 uses relative divisions of wealth. A simple d20 roll on this table will determine the effective wealth of the community the guild is located in. There are many modifiers to this dice roll, and these are shown directly below the table.

**Table 7:**
**WEALTH OF COMMUNITY WITH THIEVES' GUILD**

| **d20 Rol** | **Relative Wealth of Community** |
|---|---|
| 1 | Very Poor (subsistence)* |
| 2-5 | Poor |
| 6-9 | Fair |
| 10-14 | Average |
| 15-17 | Comfortable |
| 18-19 | Wealthy |
| 20+ | Rich |

* Maximum population around 1,000.

Modifiers to d20 Roll:
Capital City: +5, never less than Average
Major Town: +3
Port: +3
On Major Inland Trade Route: +2
Purely Agricultural Economy: -2
Population of 500 or Below: -1

What is important to remember here is that this dice roll does not actually indicate how wealthy the average citizen is. What the dice roll indicates is how much money is whizzing about which is up for grabs (literally). Thus, in a port a lot of trade passes

through, much money changes hands, and the passing-through trade (and wealthy merchants) makes the city much richer in effect than the average income would suggest. The effective wealth level is another important factor in determining how many thieves will be guildmembers in the city.

**Attitudes of the Law**

This is a major factor affecting any thieves' guild. Roll d20 on Table 8 to determine the attitude of the militia, watch, police force, etc., in the city or town where the thieves' guild is located. Modifiers to this d20 roll are listed below the table as before.

**Table 8:**
**LEGAL ATTITUDES**

| **d20 Roll** | **Attitudes of the Law** |
|---|---|
| 1-3 | Persecution |
| 4-7 | Hassle |
| 8-11 | Opposition |
| 12-13 | Complex/Mix |
| 14-17 | Tolerance |
| 18-20 | Corruption |

Modifiers to d20 Roll:
Lawful social alignment: -2
Chaotic social alignment: +2
Good social alignment: Reroll 1s and 20s
Evil social alignment: -1

**Relationship with Merchants**

This will also have a slight effect on the number of thieves in the guild; the easier it is to extort the goodies from merchants, the more light-fingered thugs will sign up to be part of the organization responsible for extracting the shiny gold stuff from them! Roll on Table 9 to determine the relationship the thieves have with the merchants.

**Table 9:**
**MERCHANTS' ATTITUDES TOWARD THIEVES**

| **d20 Roll** | **Merchants' dominant attitude to thieves** |
|---|---|
| 1-2 | Warfare |
| 3-6 | Opposition |
| 7-13 | Standoff |
| 14-15 | Complex/Mix |
| 16 | Submission |

17-19 Infiltration
20 Submission

Modifiers to d20 Roll:
Lawful social alignment: -2
Chaotic social alignment: +1
Society is Poor (or worse): -4
Society is Wealthy: +1
Society is Rich: +2 (but a roll of 1 still means Warfare!)
Law is tolerant of thieves: +1
Law is corrupt: +2

**Relationships with other Guilds**

Table 10 is provided for DMs who need for some reason to determine, at random, the relationship between thieves and the guilds they are most likely to cooperate with: assassins, beggars, and bards. It is strongly suggested to the DM that these relationships should be scripted, rather than dice-rolled, but if a DM needs to develop a guild and its background quickly a dice roll will do the job. Separate d20 rolls should be used for each guild.

**Table 10:**
**THIEVES AND OTHER GUILDS**

| **d20 Roll** | **Relationship of Thieves Guild with** | | |
|---|---|---|---|
| | **Assassins** | **Beggars** | **Bards** |
| 1-2 | Hostile | Hostile | Hostile |
| 3-4 | Indifferent | Hostile | Indifferent |
| 5-6 | Indifferent | Indifferent | Indifferent |
| 7-8 | Indifferent | Neutral | Indifferent |
| 9-10 | Neutral | Neutral | Indifferent |
| 11-12 | Neutral | Favorable | Neutral |
| 13-14 | Neutral | Favorable | Neutral |
| 15-16 | Favorable | Co-operative | Neutral |
| 17-18 | Favorable | Co-operative | Neutral |
| 19 | Co-operative | Close | Favorable |
| 20 | Close | Close | Co-operative |

Modifiers to d20 Rolls:
Law attitude is persecutory or hassling: +1 to assassins/beggars
Social alignment is good: -2 to assassins, +1 to beggars
Social alignment is evil: +2 to assassins

A Hostile result doesn't mean open aggression unless the DM wants a running feud as a storyline! For example, if hostility exists between thieves and assassins this is most

unlikely to explode into open aggression (unless, say, an assassin has slain the thieves' guildmaster). Indifferent means the groups have few dealings; Neutral differs in that the two groups have more dealings, maybe for practical reasons, although they have neither fondness nor enmity for each other. Favorable means that the two guilds get on well enough, though they may not always trust each other too well! Cooperative means that the groups enjoy a good relationship, may plan together, and that a fair level of trust exists between guildmembers. Close means that the two guilds work closely together, exchanging information, helping with common-interest tasks, with one guild even prepared to help the other if it is under threat or attack (at least until the bodies start to drop!).

## Details of the Guild

Having established these background details, it's down to the nitty-gritty. The first, crucial, determination is how many thieves there are in the city or town where the guild is. This is not necessarily the same number as are in the guild, but working out how many light-fingered gents (or ladies) are about town is a necessary precursor to that.

Table 11 does not use a d20 roll. Instead, it is a matrix from which the DM only needs to read off one figure. If the DM knows the population of the town/city, and the wealth level, a single read-off gives the range for the number of thieves. After each dice roll indicated in a column, a bracketed figure is given—this is a (rounded) average which the DM can use if he hasn't the time to roll dice on the table.

Totals from Table 11 are not cumulative, save for populations of over 10,000 (where the "per extra . . ." number, or a multiple, is added to the "5,001-10,000" number).

We now know how many thieves there are in the town or city, but how many are actually in the guild? This depends in large part on the rulership of the guild, which should now be determined.

**Table 11:**
**THIEVES IN TOWNS AND CITIES**

| **Population** | **Economic Level** | | | | | | |
|---|---|---|---|---|---|---|---|
| | **Very Poor** | **Poor** | **Fair** | **Average** | **Comfortable** | **Wealthy** | **Rich** |
| Up to 5000 | 0 | 1d2-1(1) | 1d2-1(1) | 1d2-1(1) | 1d3-1(1) | 1d3-1 | 1d3 |
| 501-1000 | 1d2-1(1) | 1d3-1(1) | 1d3-1(1) | 1d3(2) | 1d3(2) | 1d4(3) | 1d4+1(4) |
| 1001-2000 | n/a | 1d3(2) | 1d4(3) | 1d3+1(3) | 1d4+1(4) | 1d3+2(4) | 1d4+1(5) |
| 2001-5000 | n/a | 1d4+1(4) | 1d6+1(5) | 1d6+2(6) | 1d6+3(7) | 1d8+3(8) | 2d6+2(9) |
| 5001-10,000 | n/a | 1d6+2(6) | 1d10+2(8) | 2d6+2(9) | 2d8+2(11) | 2d10+2(13) | 4d6+2(15) |
| Per extra 5,000* | n/a | 1d4+1(4) | 1d6+1(5) | 1d6+2(6) | 1d6+3(7) | 1d8+3(8) | 2d6+2(9) |

*Modifiers to totals rolled*. Add the following percentages to the total rolled, rounding fractions over one-half upward:

Social alignment is chaotic: +10%
Attitude of law is tolerant or corrupt: +10%
Merchants are infiltrated or in submission: +10%

* Or fraction above 2,000.

**Guild Rulership**

A roll on Table 12 determines the nature of rulership of the guild. The DM wishing to select, rather than roll, this rulership might want to look through the following section to look at the effects of rulership on the guild before making his choice.

**Table 12: GUILD RULERSHIP**

| **d20 Roll** | **Guild Leadership** |
|---|---|
| 1-13 | Guildmaster |
| 14 | Complex/Mix |
| 15 | Democracy |
| 16-19 | Council (d3+2 members) |
| 20* | Reroll on Table 13 |

*Natural 20 (regardless of modifiers) only.

Modifiers to die roll:
Social alignment is lawful: -1
Social alignment is chaotic: +2

**Table 13:**
**UNUSUAL GUILD RULERSHIP**

| **d20 RollGuild** | **Leadership** |
|---|---|
| 1-2 | Leaderless |
| 3-8 | Complex/mix |
| 9-10 | Special Guildmaster (dragon,etc.) |
| 11-12 | Special Council (concealed Drow, etc.) |
| 13-20 | Reroll on Table 12, ignoring any roll of 20 |

At this stage, the DM can also determine the rulership style of the ruler(s). Table 14 can be used for all cases in which the guild has a guildmaster, and also for council leadership. It is not suitable for democratic guilds, where there is no real rulership as such. On Table 14, three d20 rolls are needed.

**Table 14: RULERSHIP STYLE**

| **Strong-Weak** | | **Cruel-Just** | **Despotic-Populist** | | |
|---|---|---|---|---|---|
| **d20 Roll** | **Rulership** | **d20 Roll** | **Rulership** | **d20 Roll** | **Rulership** |
| **1-5** | **Strong** | **1-4** | **Cruel** | **1-4** | **Despotic** |
| **6-12** | **Fairly Strong** | **5-11** | **Fairly Cruel** | **5-10** | **Fairly Despotic** |
| **13-17** | **Fairly Weak** | **12-16** | **Fairly Just** | **11-16** | **Fairly Populist** |
| **18-20** | **Weak** | **17-20** | **Just** | **17-20** | **Populist** |
| **Modifiers to die roll** | | **Modifiers to die roll** | | **Modifiers to die roll** | |

–1 if social alignment lawful
-1 if social alignment lawful
+1 if social alignment lawful
+2 if social alignment chaotic
+1 if social alignment chaotic
-2 if social alignment evil+1 if social alignment good
-1 if wealth level poor or fair
+2 if social alignment good
-1 if socia1 alignment evil
-1 if rulership style weak
-1 if rulership style strong
-4 (-2) if rulership style cruel (fairly cruel)

The final step is to determine guild organization, and this is done with a single d20 roll on Table 15. Some of the results from this table may need particularly careful thought, because some odd-looking results can emerge. The DM can crop out such oddities if he wishes.

**Table 15: GUILD ORGANIZATION**

| **d20 Roll** | **Guild Organization** |
|---|---|
| 1-6 | Centralist |
| 7-12 | Cohesive |
| 13 | Complex/Mix |
| 14-17 | Fractionated |
| 18-19 | Oppositional |
| 20 | Anarchic |

Modifiers to dice roll:
-2 if social alignment lawful
+1 if social alignment chaotic
+2 (+1) if Guild rulership is weak (fairly weak)
-1 if Guild rulership is strong
+2 if Guild is Leaderless

A major shake-up of what the DM has rolled may be indicated if a dice roll indicating Oppositional or Anarchic guild organization is rolled on this table. Oppositional means there are competing, small guilds (and Fractionated means there are sub-guilds within the guild); Anarchic, that there is no real guild at all. The worked example later shows that the combination of such results that at first seem at-odds (e.g., guild rulership by a single guildmaster) is actually workable, although the overall picture which emerges may be a strange one!

Some results may need re-rolling, however. The one notable case is the Oppositional structure if the absolute number of thieves in town is small. You can't really have a plausible collection of competing guilds with only six thieves in town, for example (but maybe two very small gangs could exist, after all . . .)

The final step is to determine how many of the thieves in the town or city are actually members of the guild.

## Guildmembers and The Rest

The base percentage of thieves who will be members of the thieves' guild is 75%. The following modifiers are applied to this number:

+10% if social alignment is lawful
-20% is social alignment is chaotic
+10% if the attitude of law is persecutory
+10% if merchants are submissive or infiltrated
+10% (+5%) if guild rulership is strong (fairly strong)
-10% (-5%) if guild rulership is weak
(fairly weak)

What of the other thieves (assuming there are any)? What is the attitude of the guild to the residual freelancers? Table 16 gives a die roll for determining this attitude, which may also be taken to reflect the guild's attitude to outsiders who stray onto its patch. Thus, a guild which is punitive to indigenous non-guildmembers ("join up or we'll cut your hands off") will likely be hostile to outsiders as well.

**Table 16: GUILD ATTITUDES TOWARDS GUILDLESS THIEVES**

| **d20 Roll** | **Dominant attitude** |
|---|---|
| 1-5 | Hostility and persecution |
| 6-10 | Hostility |
| 11-15 | Neutrality |
| 16-18 | Co-operation |
| 19-20 | Special relationship |

Hostility means that the guildmembers will make it very clear to a non-guildmember working in the guild's territory that he isn't welcome. They may rough up the offender, send him threatening messages, play an unpleasant and only half-joking practical joke on him, and the like. The message is, join up (or get out of town), or else. If Persecution is added to this, the offender will be given an even starker choice: Join up or die. Neutrality means that the guildmembers may try to persuade non-guildmembers to join up, but they will tend to stress the benefits to all concerned rather than using threats. A determined freelancer will probably be left to go his own way by such thieves, but they will certainly not assist him or have any fellow-feeling for him. The guild will not sell equipment or offer training to the freelancer, except perhaps at exorbitant prices. If a guild is neutral to foreign thieves, it may allow them to work on the guild's patch providing that only small-scale operations are involved and a fee is paid to the guild.

Cooperation suggests that freelancers may work with the guildmembers, maybe on a special-case basis. The guild may take the attitude that if these people won't join, it's better to keep them friendly. Equipment and training is charged at a premium, though. Special Relationship suggests some unusually close link between guildmembers and outsiders. The example of the Thieves' Guild of Mallain gives an example of how this can be scripted by the DM.

## Experience Levels of Thieves

Table 17 below shows the experience-level ranges of thieves as a function of how many there are in a guild. More populous guilds, which will always tend to be in major cities and towns, and rich places, are the ones which will attract more experienced thieves to them.

Table 17 should be used as follows. In the left-hand column is shown the number of thieves (this is the total number in town, not just in the guild). The next five columns show dice rolls which need to be made for the five highest-level thieves in town. The following column shows numbers, and levels, for the middle-echelon thieves; those above the level of apprentice, but not members of the senior ranks. All remaining thieves will be first-level apprentices.

The seniors should be taken as the top echelon of the guild. The highest level rolled will be the guildmaster (if there is one), or the most powerful guild-affiliated thief. The other seniors can be used to make up a ruling council (if there is one), or used for key positions such as accountant, quartermaster, deputy guildmaster, subguild-master (for one quarter of town), or others. The number of seniors can be slightly increased (at the lowest experience level) for really sizeable guilds. Freelancers will come equally from the middle-echelon and apprentice levels. If the DM wants any middle—to high-level freelancers, these should be scripted as individualized NPCs and not the result of any dice roll! It is important to separate out guildmembers and freelancers at this stage in the thief listing the DM makes.

## Experience Levels: A Note

The levels from Table 17 will be low to medium, except for guildmasters of major guilds. This is designed to be suitable for campaigns which are not top-heavy with over-powered, high-level characters. If you have PCs running around at 15th level, or even higher, and you want a thieves' guild as a source of enemies, you will need to up the levels somewhat. You could always consider resting these PCs and playing at more reasonable levels, of course.

**Table 17: EXPERIENCE LEVELS OF THIEVES**

| No. of | Seniors | | | | | Middle Echelon |
|---|---|---|---|---|---|---|
| **Thieves** | **A** | **B** | **C** | **D** | **E** | |
| 1-5* | 1d3 | 1d2 | 1d2 | — | — | n/a |
| 6-10 | d4+1 | d4 | d4 | — | — | 2xd2 |
| 11-15 | d4+2 | d3+1 | d3+1 | d2+1 | d2+1 | 3xd2 |
| 16-20 | d4+3 | d3+2 | d3+2 | d3+2 | d2+2 | 2x(d2+1),5xd2 |
| 21-25 | d6+3 | d4+2 | d4+2 | d4+1 | d2+2 | 5xd3, 5xd2 |
| 26-30 | d8+3 | d6+3 | d4+3 | d4+2 | d4+1 | 4x(d3+1), 4xd3, 6xd2 |
| 31-40 | d6+5 | d6+4 | d4+4 | d6+2 | d4+2 | 4x(d4+1), 5x(d3+1), 8xd2 |
| 41-50 | d6+6 | d6+4 | d6+4 | d4+4 | d6+2 | 6x(d4+1), 8x(d3+1), 12xd2 |
| 51-75 | d6+8 | d6+6 | d6+5 | d6+4 | d6+3 | 8x(d4+1), 12x(d3+1), 15xd2 |
| 76-100 | d8+8 | d6+7 | d6+5 | d6+4 | d6+3 | 15x(d4 +1), 20xd4, 30xd3 |

| | | | | | | |
|---|---|---|---|---|---|---|
| 101+ | d10+8 | d6+8 | d6+6 | d6+5 | d6+4 | 10% are d6+1, 10% are d4+1, 25% are d4, 25% are d3 |

**Multi-classed thieves**

Table 17 will do for determining single-classed thieves, but dwarves and elves in particular may be likely to be multi-classed. To determine this, the DM needs to know how many thieves are nonhuman.

Rolling on Table 18 will determine the race of each thief in the guild. One roll is made for each thief (freelancers can be determined at this stage too). This table is a generic one, and assumes a definite human dominance (which most campaign locations will have). However, this is obviously unsuitable for determining, say, the composition of the thieves' guild of the core community of an elven heartland, where virtually all the thieves will be elves or half-elves. In such cases, the DM can bypass Table 18 and just decide race on a per-capita basis. For example, if 70% of the inhabitants are elves, then for each thief a roll of 1-7 on d10 will indicate that he is an elf. Modifiers can also be used; for example, if elves dominate dwarves in a mixed society, a dice roll modifier of -5 could be applied to the dice roll on Table 18.

**Table 18: THIEF RACES**

| **d100 Roll** | **Thief Race** |
|---|---|
| 01-06 | Elf |
| 07-14 | Half-elf |
| 15-44 | Human |
| 45-50 | Gnome |
| 51-58 | Halfling |
| 59-62 | Human, dual-class |
| 63-93 | Human |
| 94-99 | Dwarf |
| 00 | Special (natural 00 only)* |

Table 19 contains sub-tables which can be used to determine whether the thief is multi-classed (nonhuman) or if the thief is dual-classed (human).

Given the race and possible multi-class nature of each thief, the final step is to adjust the levels from Table 17 for multi-and dual-class thieves.

For multi-classed nonhuman thieves, reduce the thief level by 1d2 from the original dice roll from Table 17 if the character has two classes, and by 1d2+1 levels if the character is a triple-classed fighter/mage/thief. No reductions can take an NPC below 1st level, of course. The character will have the same level in his other classes, if this is possible (in some cases it may not be; e.g., a multi-class character cannot usually be a 2nd-level thief/2nd-level mage. Check the XPs needed for progress in each class!).

With dual-class human characters, experience gained in the "old" class will be 1d4 levels lower than that gained as a thief (but never below 2nd level). The thief level rolled from Table 17 is not adjusted in this case.

This all looks fairly horrendous. In fact, it is fairly simple, albeit a little time-

consuming (but if you want a complete picture of a guild, it does take time). The example of the Thieves' Guild of Mallain (later in this chapter) shows that rolling up thieves is a fairly simple business, despite all these tables!

**Table 19: THIEF CLASSES**

**Dwarves**

| **d20 Roll** | **Character Classes** |
|---|---|
| 1-8 | Fighter/thief |
| 9-20 | Thief only |

**Elves**

| **d20 Roll** | **Character Classes** |
|---|---|
| 1-6 | Mage/thief |
| 7-8 | Fighter/thief |
| 9-10 | Fighter/mage/thief |
| 11-20 | Thief only |

**Half-elves**

| **d20 Roll** | **Character Classes** |
|---|---|
| 1-4 | Mage/thief |
| 5-7 | Fighter/thief |
| 8-10 | Fighter/mage/thief |
| 11-20 | Thief only |

**Gnomes**

| **d20 Roll** | **Character Classes** |
|---|---|
| 1-4 | Fighter/thief |
| 5-8 | Illusionist/thief |
| 9-20 | Thief only |

**Halflings**

| **d20 Roll** | **Character Classes** |
|---|---|
| 1-5 | Fighter/thief |
| 6-20 | Thief only |

**Humans**

| **d20 Roll** | **Previous Character Class** |
|---|---|
| 1-12 | Fighter |
| 13 | Ranger |

| | |
|---|---|
| 14-15 | Mage |
| 16 | Specialist wizard |
| 17-18 | Cleric |
| 19-20 | Bard |

For humans, some classes are not included as options for previous experience. It is inconceivable that a fallen paladin could demean himself to thievery, likewise that an ex-druid could so totally alter his entire framework of thought. If the DM wants such an exotic possibility, there would have to be a truly extraordinary reason for it.

**Non-Thief Guildmembers**

The guild may well have very close affiliations with a small number of NPCs—especially tough fighters—who may be honorary "guildmembers." These men may guard the guildhouse, go on planned jobs as look-outs and muscle, provide the muscle to enforce protection rackets, act as bodyguards, and the like. However, they will not usually be full members of the guild. The DM should design such NPCs as the need arises.

**Fleshing out Guildmembers**

You now have a bare-bones list of guildmembers and other thieves in the town. How far you go beyond this point depends on how much extra information you need for the campaign.

**Alignment**

This is worth determining for all thieves in the guild, because it will have a powerful effect on the way the guild operates, on guild intrigues, and so on. The alignment of the guildmaster and the top senior thieves should always be selected by the DM to fit the needs of the campaign. The rulership style dice rolls should be strongly suggestive of certain options in any event. A fairly strong, cruel, and fairly despotic guildmaster looks like a good candidate for neutral evil, whereas a fairly strong, just, and populist member of a ruling council would be closer to chaotic good.

For other thieves (juniors and members of the middle echelons) a dice roll on Table 20 can be used to determine alignment. This table is biased away from lawfulness and towards neutrality, which is probably an accurate reflection of most thieves. However, if the DM wants more goody-goody types or lawfuls then these options can be fudged into the table in place of (or via) the "Dominant social alignment" entry.

**Table 20: NPC THIEF ALIGNMENTS**

| **d20 Roll** | **Thief Alignment** |
|---|---|
| 1 | Neutral Good |
| 2-3 | Chaotic Good |
| 4 | Lawful Neutral |

| | |
|---|---|
| 5-10 | Neutral |
| 11-12 | Dominant social alignment |
| 13-14 | Chaotic Neutral |
| 15-16 | Lawful Evil |
| 17-19 | Neutral Evil |
| 20 | Chaotic Evil |

Modifiers to dice roll:
+2 if social alignment is evil
-2 if social alignment is good (But a natural roll of "20" still means Chaotic Evil)

**Note:** For "dominant social alignment," if the DM is uncertain, take neutral. If dominant social alignment is lawful good, take neutral good (1-4 on 1d6) or lawful neutral (5-6 on d6) instead.

**Prime Requisite**

All thieves will have Dexterity of at least 9. You can roll NPC thief Dexterity on 8+1d10, adding +1 for characters of 4th or higher level and +2 for characters of 8th or higher level. Elves and halflings gain +1 to Dexterity scores. It is strongly recommended that no scores above 18 be allowed, and certainly absurd scores like 20+ should be reduced to 18. Other ability scores are discussed below. Dexterity scores should be recorded for all thieves, since it affects AC and their skills.

**Senior Thieves**

Such thieves—including the guildmaster!—should be designed with a little more detail. The following points can e kept in mind when adding some detail to their basic profiles:

*Physical Factors:* Simple details like age, height, weight, and appearance can be determined. Senior thieves can be taken to be 25+1d20 years if a random determination is needed. Sex can be determined randomly also.

*Exceptional Ability Scores:* Thieves of high or medium level should have fair abilities to have survived so long. Allow a flat 1-in-4 chance for each non-Dex ability to be rolled on 2d4+10 and record exceptional (15+) scores.

*Magic Items:* Senior thieves will certainly have magic items suitable for thieves. Different campaigns vary hugely in the amount of magic knocking around. A good guide is to sneak a look at thief PCs (and NPCs) in campaigns you think are well-run, and/or the blueprint profiles given later, and take hints from these about the nature and number of magic items possessed. When in doubt, always be stingy. Magic can be added to a magic-weak campaign; it's hard to retrieve it when too much is floating about.

*Guild Position:* Non-guildmasters will still likely be important and occupy key positions (especially if council members). A shrewd guildmaster, for example, will keep the second-rankers happy with important things to do. Quartermaster, deputy guildmaster, chief of blackmail, chief of espionage, liaison officer (with other guilds), and many other options can be written in here.

*Other Stuff:* Personal idiosyncrasies are always a nice, characterizing touch. Cover identities are also important; what face does the thief present to the public? Does he have a trade, is he a merchant, is he perhaps the Constable of the Watch or a trusted tax official?

The most important case, obviously, is the guildmaster himself (or the ruling council). Such an NPC must be individually designed by the DM to suit the campaign. The blueprint profiles which follow the guild design section give a couple of examples of fully fleshed-out mid-to-high-level guildmasters, and these can be used by the DM as they are or as an indication of how to go about designing a guildmaster NPC.

### Junior Thieves

These will not need the kind of detailing the seniors will, unless the DM is determined to have complete details of everything! Race, class, prime requisite, and level will be sufficient to begin with, especially for mere 1st- or 2nd-level apprentice types. The addition of names should round off these basic details.

### A Final Record

Now that the initial die rolls for numbers and levels of thieves have been rounded off (and modified) by race, and dual/multi-class options, the basic details for the guild thieves can be determined—summaries of guild seniors, minor magic items for juniors, the odd exceptional ability score, hit points if the DM has rolled these up, and the like.

## Cash and Carry

Having populated the guild, the final step is to take care of a few practical details.

### Guild Dues

Guildmembers have to pay fees to belong to the guild, and they may also have to pay cuts of their take on jobs which are "licensed by" the guild. The DM should fix these levels to suit his campaign. For guild dues, a sum equal to about one month's living expenses for the thief PC is reasonable. This sum will increase with the gaining of experience levels, which is reasonable. Guildmembers get cheaper training, and training is longer and more expensive at higher levels, so higher dues reflect this. Fixing a cut needs to be done on a case-by-case basis. If the guild has tipped off the thief with a lot of information important to pulling a robbery, it could well ask for a quarter or even a third or more of the take, for example.

The dues and other payments due should be recorded by the DM, together with a brief note on what the PC thief gets in the way of special benefits for his dues.

### Normal Resources

A roll on Table 21 can be used to determine the availability of standard, non-magical equipment items. This reflects how well the Guild is equipped with illegal items, or

equipment which is of dubious legality (and which may be illegal in highly lawful societies). Add +1 to the dice roll for every 10 thieves in the guild to a maximum of +4 for a guild with 40 or more thieves.

**Table 21:**
**AVAILABILITY OF RESOURCES**

| **d20 Roll** | **Equipment Availability** |
|---|---|
| 1-5 | Poor |
| 6-10 | Fair |
| 11-17 | Average |
| 18-20 | Good |

A roll indicating Poor means that illegal items (as shown in Table 31) cost 50-80% (40+{d4x10}) more than usual, and are at least 50% likely not to be available at any given time. Items which are noted in Table 31 as being rare will be almost impossible to obtain. A thief wanting an illegal item which is "out of stock" can only try again after a gap of 2 weeks to see if fresh supplies have been obtained. If the availability of resources is Fair, the item costs 10-40% more than usual and there is a 30% chance that it is unavailable, but the thief can make a weekly check.

A roll indicating Average allows items to be had for the usual price, with only a 15% chance that an item is unavailable (a check for fresh deliveries being made weekly). If the roll shows Good availability, prices are 10% below normal, and items are only 5% likely to be unavailable at any time (check for fresh deliveries weekly).

These rules, especially on availability, can be readily tweaked by the DM as desired. If the DM wishes to deny the thief some equipment item, then it simply isn't there, for example. Conversely, the DM may wish to rule that there are always lockpicks available, since these are so essential for very basic thief skills (picking locks, and maybe finding and removing certain types of traps).

### Special Resources

No table is given for randomly determining these special resources, because they require careful attention and thought on the part of the DM. From the list below, the DM should select a small number (or none, for a small guild) which will suit the campaign. This list is only a partial one, and the DM can add similar special resources:

*Tame Mage:* The guild has a helpful mage on tap, who casts spells to help thieves (but doesn't take risks). If the guild has a mage/thief or two, this mage is of higher level, and may train these mage/thieves.

*Tame Cleric:* A rarer instance, but possible if the cleric is very chaotic, a renegade, etc. In some specific mythoi this might not be a rare case at all (for example, clerics of Mask in Faerun).

*Expert Fence:* The guild works regularly with, or has, a fence with truly exceptional knowledge, information networks, and/or the ability to ship hot goods out of the country fast.

*Government Snitch:* The guild's man in City Hall. Very helpful in telling the Guild

about the shipment of government goods, the Mint, secrets of political NPCs for blackmail, and lots more.

*Merchant Snitch:* The guild's man in the warehouses, docks, etc. Not a nightwatchman, but someone much more important—a harbormaster, Commander of the Night Watch, etc. Can supply the guild with watch hours, incoming and stored cargo lists, and much more.

*A Friend at Court:* A person with the ear of the King/Queen/Baron/Royal Physician/Courtesan/Bimbo Princess. Subtly different from a government snitch, and more suited to a swashbuckling rogue campaign or guild.

*Friends in other Guild(s):* The guild has very cordial relations with the thieves' guild in a major city, even the capital, for reasons of blood relation, old friendships and co-adventuring, etc.

These special resources clearly open up all kinds of adventure possibilities. Getting a message to the important NPC is a standard option, obtaining a reward for them is another (e.g., the tame mage wants that nice wand of lightning his enemy has and could the guild steal it for him?), rescuing them from imprisonment is a third. Subtler possibilities could include finding out who has found out about the guild's Government Snitch and is blackmailing him for a fortune, and the like.

**Major Activities**

Here, the DM should determine and make a record of the secondary activities which are important to the guild. These include (but aren't limited to) protection rackets, smuggling, kidnapping, slavery, forgery, clipping, "entertainments," and similar fun and games reviewed earlier. The DM should determine which activities the guild is strongly involved with to suit the social alignment, the campaign, and the nature of the guild rulers. For example, a strong-cruel-despotic neutral evil guildmaster is a lot more likely to get the guild involved with slavery and kidnapping than a just, populist good-aligned guildmaster. Some DMs may also wish to exclude certain activities such as slavery or kidnapping because players of good-aligned thieves might not want their characters part of such activities. However, it is up to the PCs to do something about such evil goings-on if they cannot accept them—a spur to their creativity and scheming.

**The Guildhouse**

This is going to be of major importance to almost all thieves' guilds, and there are four important points relating to it:

*Location and Cover:* Where is the guildhouse, and what does it look like upfront? The DM must choose a location and cover suitable to the town or city, and the nature of the guild. It could be a fortified large building among warehouses or down by the docks, an underground cellar complex below the private home of a senior thief, entered via the sewers, or the basements and cellars of a tavern in a shady part of town. A small guild may only meet in the back room of a shady tavern, of course, but any significant guild needs somewhere fairly secret and strong.

*Contents:* What's in the guildhouse? Is equipment kept hidden there or does the quartermaster carry it with him (unlikely unless he has a bag of holding)? Are there

hidey-holes? How many exits are there (there will usually be several)?

*Guards:* Who protects the guildhouse? Can reinforcements be summoned quickly? If there is a building which is a front for the place (e.g., a tavern above the cellars of the guildhouse below), can extra help (hefty fighters) be had quickly?

*Traps and Protections:* The guildhouse will almost certainly have magical and mechanical traps—the entrance may be a very strong door, with a couple of locks (and only guildmembers have keys). Down a passage, a secret door may be placed to allow entrance—following the passage leads into very unpleasant traps. Magical traps may have been paid for, or placed by mage/thieves. Mechanical traps will be of many kinds, but will often use disabling/paralyzing attacks just in case a novice makes a mistake and takes the wrong turn somewhere!

Bearing all these points in mind, the DM should design the guildhouse, drawing floorplans and maps.

## The Thieves' Guild of Mallain

### An Example of Guild Design

Our DM is scripting the thieves' guild for the large town (or small city) of Mallain. The DM knows some basic social facts about this place, having placed it on the map in his campaign world, and records these facts for future reference. The issue of weak rulership is something the DM had decided in advance, likewise the fact that Mallain is in a civilized area of the country, and on a major inland trade route. The DM determines the population at somewhere around 17,000 (not too large, not too small!) and decides that 5% are halflings and 5% are half-elves; there are no full elves, and a smattering of dwarves and gnomes. The DM considers that there is a slight tendency toward lawfulness in the community, but not a strong one, so the overall social alignment is recorded as neutral.

How wealthy is Mallain? The DM rolls a 7 on Table 7. To this is added +2, because the town is on a major trade route. The DM adds a further +2, since Mallain is a large town, if not a major one. This gives an adjusted total of 11, so the wealth level is average.

The attitude of the law is resolved on Table 8, and a dice roll of 17 indicates tolerance. Why? One clear reason sticks out a mile: under-manning. The DM has already recorded that the ruler of the land is weak, and his militia is small in this safe, secure land. There simply isn't the manpower to go around chasing the thieves.

The attitude of merchants is resolved on Table 9. A roll of 14, modified to 15 by the tolerance of the law, indicates a complex/mix. The DM isn't sure enough of how to script a complexity here; he isn't clear enough in his own mind about the details of Mallain. So he opts for a mix, and makes two more dice rolls on the same table to see what the mix is (adding +1 to each roll for the tolerance of the law). He rolls 12 (13, with a +1), which indicates a standoff; his second roll is 1, and even with a +1 modifier this indicates warfare! How to synthesize this into a whole? The DM reasons that most merchants are described by a standoff—they put up with the thieves in a fairly resigned way. A minority, though, are furious about thieving for some reason; maybe they have suffered particularly heavy losses. This place isn't rich, after all. They try hard to persuade the ineffectual militia to do something about the thieves.

Deciding on thieves and other guilds, the DM does not roll on Table 10 for assassins and beggars. The DM isn't happy handling assassins, so he decides there aren't any in town, obviating the need for a dice roll. With beggars, the DM wants to choose Close Cooperation, details of which he records. This is a plot element he wants to exploit later on. If the beggars spy on the merchants, facilitating robberies in a place of only average wealth, it could help explain why some of the merchants are at the end of their tether, too. Matters are beginning to come together fairly nicely, but there is lots still to do. How about bards? The DM rolls a 1, hostility! Very odd, and at this stage the DM just records this without thinking about why. He decides to come back to this problem later.

From Table 11, the DM makes an initial recording of how many thieves live and work in Mallain. The population is 17,000. The DM rolls in the "5001-10,000" row, and twice in the "Per extra 5,000" row, in the Average (wealth) column. These rolls are 2d6+2, and 1d6+2 (twice) respectively—a total of 4d6+6. This is rolled as a total of 19, but the DM adds 10% to this because the law is tolerant, for a total of 21. They need not all be guildmembers, of course; the DM needs to know about the guild rulership to determine this. Recording the figure of 21, the DM moves on.

A roll of 5 on Table 12 shows that the guild is ruled by a guildmaster. From Table 14, the die rolls produce a picture of what this guildmaster is like. A first roll of 18 shows he is weak. A second roll of 12, reduced to 11 because of this weakness, makes him fairly cruel. A final roll of 12, reduced to 10 because of this cruelty, makes him fairly despotic. In summary: Weak, fairly cruel, fairly despotic. A rather pathetic creature, all told. This comes to the rescue of the DM when he rolls on Table 15 and comes up with a 20—Anarchy!

The DM is taken aback. There is a guild here, with a guildmaster, and now he is plunged into a real complication. He is about to re-roll the dice, but spends a minute or two in imaginative reverie. Perhaps, after all, this is workable. An old, feeble, weak, guildmaster has lost his authority. He has resorted to cruelty and despotism to try to hold on to his guildmaster status, but lacks the strength even to do this effectively. Guildmembers have drifted away in open contempt, but have not yet formed a separate guild (that would be Opposition, not Anarchy). They don't have the heart to kill the old thief, either (guildmasters appoint their own successors, the DM decides, so he'd have to be killed).

The DM rolls on Table 16 before all this has sunk in—if there isn't a guild, how can it have relations with outsiders and freelancers? But the roll of 19, Special Relationship, stimulates some further thoughts in the DM's head.

The DM decides that the guildmaster has managed to hang on to a small rump of the guild—1d6, he decides, and rolls just 4. Later on, he will select these as being primarily senior and compatible with the guildmaster's alignment. There is no need for the standard percentile roll to determine the percentage in the guild, because this is a special and very unusual circumstance. The other 16 thieves all work independently, maybe allying with each other in small groups for the odd job now and then. Perhaps a lack of coordination among them means that some targets are hit too often, which wouldn't happen if the guild was coordinating matters properly. Maybe this is why some merchants are so desperate that they want warfare declared on the thieves—this makes very good sense. It also explains why the law is tolerant—they know it's going to be hard to track down and deal with any central organization which really cuts the mustard in Mallain, and the DM adds

this detail to his notes.

The "Special Relationship" is that holding between the rump of the guild, and the freelancers still in town. To complete the picture, though, the DM rolls another d20—giving a result of 6, hostility. This is the attitude of all the thieves of Mallain (or most of them!) to outsiders from beyond the town, to complete the picture.

The DM now has to determine the levels of the thieves in Mallain. There are 21 thieves in the town, and from Table 17 the DM determines the levels of the seniors as 8th, 6th, 4th (two), and 3rd. From the 5xd3 and 5xd2 rolls, another two 3rd-level and four 2nd-level are added. The remaining 10 thieves will all be apprentices. The DM records these figures on some rough paper.

From Tables 18, 19, and 20 the DM makes die rolls to detail these thieves. There are 5% half-elves and 5% halflings in Mallain, but no full elves or gnomes, so the DM decides in advance to replace any elf rolled up with a half-elf, and any gnome with a halfling. Two thieves were not rolled randomly; the 8th-level human guildmaster, and the 6th-level half-elven thief the DM wants to use as a plot element to advance the theme of anarchy within the guild.

The half-elf is a dashing, romantic rogue-figure who is the focus of the opposition to the ailing old guildmaster. He has musicianship skills, and a brother who is a bard—hence one reason for the guildmaster's hostility to bards (this detail is added to the record sheet). This DM sees this character as very chaotic, and one who doesn't wish to be guildmaster. But the old guildmaster hates his charisma, youthfulness, and character, and has always blocked his progress. Now he sees him as the enemy who has drawn away the other thieves—a special relationship indeed, a very tempestuous and intrigue-ridden state of affairs. Added to this is the fact that the half-elf doesn't want to be guildmaster, but the juniors who have deserted the guild are begging him to lead them in a coup against the old guard. He alone has the experience and charisma to do this. The DM has been watching a few Errol Flynn movies of late. However, while Evlarel the half-elf is chaotic good, the old guildmaster is Neutral—it is too obvious and unsubtle to make him evil, which would submerge many of the intrigues into a simplistic good-versus-evil battle. But most of those staying loyal are evil—if they have to be eliminated, the DM prefers them to be evil than to encourage his PCs to attack and kill neutrals.

After this flight of fancy the DM comes back to earth. The guild is in a state of uproar and anarchy, but there are still some practical details to attend to. Guild dues still have to be decided—these will be the old rates, which applied when the guild was not torn asunder, but they are useful as a guide to what the reformed guild (if it does reform) will accept. (The DM notes them in brackets.) A similar consideration applies to normal resources, but the DM also notes the present availability (poor) by way of an update. Special resources are important—the DM determines that the thieves' guild has a government snitch, a personal friend of the guildmaster, and this stool-pigeon is used to prime the military to arrest the hapless half-elf, driving him further underground, and making him an even more elusive and mysterious figure. The war between old Halradur and Evlarel gets hotter by the moment.

As for major activities, the DM decides that in such a fairly boring town as Mallain there is no scope for anything especially unusual. The declining guildmaster would not have had the strength of will to maintain any really nefarious activities. Individual thieves may kidnap, but the guild doesn't organize such actions. The guildhouse is located in the

cellars of a local tavern, the DM decides; the Baron of Beef, run by one of the few thieves left who stays loyal to Halradur. This isn't a particularly creative design element, but the DM knows that matters are likely to be all-change in Mallain soon, and so can't be bothered to think up anything especially unusual. The tavern will make a good location for a final shoot-out in any event.

What began as a short exercise in rolling up a thieves' guild has now turned into a powerful intrigue which could cast a long shadow over most aspects of life in this town. The central struggle between an old guildmaster, with a small evil coterie, and desperate young thieves looking to a reluctant new leader is going to enmesh the unwary PCs as soon as they enter the place!

## Unusual Guilds

The guild design system gives a wealth of detail on the traditional (in the AD&D® game) town or city thieves' guild. However, there are other possible guild structures which can be used by the DM in the campaign world. These are unlikely to be suitable for PC thieves (in most cases), but they add diversity and spice to any campaign.

### The Traveling Guild

A group of traveling thieves, who work as a body and are effectively a guild on the road, makes an interesting encounter. Three variants on this theme include:

*Gypsy Folk:* This group travels in horse-drawn wagons. The community is just that—complete with many sniffling children, goats, snarling dogs, a few chickens kept for eggs, and lots else. In towns, the gypsies sell dried herbs and pressed flowers, and the wise woman of the group may read fortunes (using the Fortune Telling/Astrology proficiencies if appropriate). The gypsies will be extremely loyal to each other, and will usually be of Neutral (or chaotic neutral) alignment. If such folk are a common sight on the roads of the land, then the gypsy people may have extended clans related by intermarriage, so that if any violence is done to one of them an entire horde can be assembled to track down and punish the offender.

*River Folk:* A variant on the gypsy theme is to have a group (or groups) of traveling folk who work the waterways of the country. These people will almost certainly have merchant interests, or convey cargoes for others; thieving would not be an adequate income for them. They will supplement their income with thievery in and around the rougher ports, usually inland or estuarine. They are significantly more likely to be of evil alignments than are road-travelers. In the campaign world of Oerth (Greyhawk), the Rhennee folk are a good example of such river folk.

*The Circus:* This is a somewhat hackneyed theme, but should always be used in a campaign at some time. Thieves can make up the bulk of a traveling circus, which comes to towns and cities and cheerfully robs them. If the circus has monsters on show, then there is a rationale for having other character classes along for the ride who help the thieves and give the NPC band some diversity. Thus, clerics can be on hand to *snake charm* and *speak with animals* while mages could *charm monsters* or *speak with monsters* (if of high enough level; arguably a 12th-level mage has lots better to do than traipse around with a circus). Thieves with specialist skills such as acrobats, cat burglars,

etc., will fit well into such a group.

Players with any degree of gaming experience will have learned to keep well away from circuses. Old tricks such as having evil, high-level NPCs *polymorphed* into monsters or animals are well-known to such devotees of the game. So, it may be more enterprising to use some other group of entertainers, such as a traveling troupe of actors and musicians. They can perform the equivalent of passion plays, act and sing charming ethnic curiosities (especially elves), sing madrigals, and the like. A group of light-fingered expert thief choir elves could make for a lot of fun (they look so sweet and innocent, how could anyone suspect them?).

**Piratical Guilds**

Also travelers in some fashion, a guild of thieves who spend most of their time engaged in piracy is a complex and shifting structure requiring careful thought by the DM. There will obviously not be any form of guildhouse for such thieves, although a small number of secret guild hidey-holes (caves in the cliffs, deserted coves, desolate gull-haunted islands) could exist where spare equipment and vital emergency supplies might be placed at strategic locations. guildmasters could exist, but much more likely is a loosely-affiliated structure where several senior thieves, maintaining their positions by force in most cases, are equipotent. They might well all call themselves guildmaster! Such a guild would have a very strong tendency towards chaotic alignments, and a nearly-equal tendency towards evil.

Some type of organization and regularity would have to be imposed to make this a guild at all. Meetings half-yearly, with a quorum for votes and decisions to have any binding quality at all, would be a possibility. These could take place in the major piratical port, perhaps a town or city of unparalleled iniquity (what a place to send some PCs to track down the wicked pirates and stop their evil trade in pressganging/slavery/drug smuggling, etc.). Certainly, some mechanism for obtaining equipment and training (at the least) must exist.

For a notably more structured and stable rulership of a piratical-type operation (slaving), see the adventure module *A1-4, Scourge of the Slavelords*.

**The Guild of Honorable Gentlemen**

As a really unusual guild, which could exist in parallel with the established thieves guild in a large city, this is a splendid option.

The members are aristocrats, men of learning, education, and exalted social position (preferably by birth). They are refined, dignified gentlemen of impeccable manners and superior Charisma. They are a small group, and they thieve for the excitement of it all. They are bored with their life of sybaritic self-indulgent possibilities, easy comforts, and gold-digging members of the opposite sex. They steal for the thrill of it.

What motivates these people is a challenge to their skill. They steal things not because they are valuable or important, but because they are there to be stolen (which doesn't mean that they are valueless or banal—they usually aren't). The Emerald of Kummkqvaat will be stolen by such a thief not because it's worth a fortune, but because it is believed to be impossible to steal it.

Such thieves will usually be of notably high level, and they will tend to have exceptional Intelligence and Charisma scores. They will very rarely be Evil, and will also tend away from Chaotic alignment. For these reasons, they can become excellent mentors for a PC thief if this is appropriate to the campaign—for example, a PC thief can come across one of them at work, or find evidence of the person's true identity as a renowned master thief.

### The Good-Aligned Guild

This is a rarity. It has to be. Remember the *Player's Handbook* definition of a rogue; someone who feels "that the world (and everyone in it) owes them a living." Thieves are "the epitome of roguishness." Most thieves want to do as little work as possible and live as well as possible off the efforts of others. This is not exactly a definition of good alignment. The major problem with a good-aligned guild is simple: The large majority of thieves are not of good alignment. If a good-aligned guild comes into being (e.g., a good-aligned guildmaster comes to power) then many, if not most, thieves will actively seek a non-good (preferably neutral) guild if the guildmaster seeks to impose the values of good on them.

What the intelligent good-aligned guildmaster will do is not to impose or accentuate the values of good within the guild. Rather, he will quietly squeeze evil thieves out, put them at risk, and try to make sure that evil activities (slavery, etc.) are downgraded or made to fail. Eliminating evil is much smarter than trying to establish good.

However some good-aligned guilds can certainly exist in the campaign world. A classic example is the "freedom fighter" guild, a guild which stresses the values of chaotic good, in a Lawful Evil country or state. Such a guild will attract thieves of CG, NG, and CN alignments, and pure Neutrals will go along as usual. Even chaotic evil thieves might join, hating the repressive lawfulness of the state (especially if the guild rulers have the sense to play up Chaos and freedom in their pitch). Such a guild is one with the classic Robin Hood (robbin' hoods?) spirit. It could exist "underground" in an evil land such as the Scarlet Brotherhood lands (in Oerth) or Thay in the Forgotten Realms (FR6, *Dreams of the Red Wizards*), a secret urban organization with underground, hidden meeting-places and fearful helpers in high places—a superb setting for intrigue. A rural equivalent, with scout-type thieves allied with tough rangers and others combining their skills to chip at the edges of a strong evil state, is another example, more suited to players who like lots of combat and tactical skirmish gaming than political intrigues and tense urban chases and the like.

Other good-aligned guild possibilities exist, certainly, but require more careful thought by the DM. They are possible in a fractionated or oppositional guild structure, in a country where the good/evil division mirrors or parallels some other (e.g., good-aligned elves and predominantly evil-aligned humans), and possibly in super-goody-goody nations where they exist as security consultants and the like (but how do they accumulate their experience points for practicing their skills in earnest?).

## Player-Character Guildmasters

This section is for DMs who have a PC in a campaign who has become a Guildmaster

of Thieves. Holding a similar position (e.g., the most powerful member of a ruling council) can be handled with minor modifications of the system outlined here for determining guild numbers, activities, economics, brushes with the law, and similar events in the everyday story of thieving folk.

**Determining Guildmembers**

This can be done in three ways. First, the tables in the *Player's Handbook* can be used (with tweaking to reduce the proportion of non-humans if this is too large for your campaign). Second, you can use tables (71, 12, 13) earlier in this book (the 11-15 row is suggested from Table 17). Or you can use one of the systems, and introduce a few pet, individually scripted NPC thieves of your own into the results from the dice rolls. In particular, you may wish to design the deputy (assistant) guildmaster since this will be an NPC the PC will need to lean on a lot.

**Guild Income**

Table 22 below lists economic modifiers for societies of different wealth. These modifiers should be applied to all monetary sums referred to later—guild dues, cuts from planned jobs, and the like.

**Table 22:**
**MODIFIERS TO GUILD INCOME**

| Social Wealth | Modifier |
|---|---|
| Very Poor | x 0.25 |
| Poor | x 0.5 |
| Fair | x 0.75 |
| Average | none |
| Comfortable | x 1.2 |
| Wealthy | x 1.5 |
| Rich | x 2.0 |

The income the guild receives will come from two sources; guild dues, and the cut the guild takes from planned robberies, burglaries, heists, and the like. The system given here is a simple one for calculating month-by-month income; some optional extras are documented later.

*Dues:* These will be fixed as a yearly sum, payable anywhere from monthly to semi-annually (the thieves will prefer the latter). A reasonable base sum to work from is 30 gp per level as a yearly due, to a maximum of around 300 gp/year (for thieves of 10th or higher level). The guildmaster can take 5% of these dues as a personal fee, and his assistant will take the same (these two do not pay fees, nor do members of a ruling council unless democratically elected). The guildmaster can take up to 15%, but for every 1% above the 5% standard the morale of the guildmembers drops by -1. Extorting over 15% leads to immediate revolt! The rest of the income goes to the expenses of running the guild (bribes, buying equipment, paying fines, etc.).

*Cuts: The* guild is entitled to exact a levy on robberies and burglaries which it has

some role in planning. The guildmaster doesn't have to plan these activities; his right- (and left-) hand men take the leading role in this. The levy can be taken as a base 10% (this is pretty much standardized. If a PC guildmaster wants to extort more, every extra 1% leads to a decline of -1 in morale; over -10 leads to immediate revolt). Of this 10%, the guildmaster gets 10%, as does his assistant—that is, 1% of the gross.

Table 23 shows how much money is gained per 10 thief-levels by a guild from this kind of guild-guided activity. The standard economic multiplier is used, and the dice roll result is multiplied by the total number of experience levels of guild operatives, divided by 10 (the guildmaster and his assistant, and any guildmembers not actively thieving, are excluded). So, a guild with six 3rd-level, six 2nd-level, and eight 1st-level thieves gets 4 dice rolls (total levels= 18 + 12 + 8 = 38. Fractions below one-half are rounded down, others up). Table 23 gives the gross; the guild gets 8% of this, the guildmaster and his assistant 1% each.

**Table 23:**
**GUILD MONTHLY INCOME**
**d20**

| Roll | Income per 10 Thief-levels |
|---|---|
| 1-2 | 5d6 gp |
| 3-5 | 5d8 gp |
| 6-9 | 5d10 gp |
| 10-11 | 8d10 gp |
| 12-15 | 2d6 x 10 gp |
| 16-18 | 3d6 x 10 gp |
| 19 | 4d6 x 10 gp |
| 20 | 6d6 x 10 gp |
| 21 | 6d10 x 10 gp |
| 22 | 10d10 x 10 gp |
| 23+ | 12d12 x 10 gp |

**Modifiers to Dice Roll**

-2 if the attitude of the law is persecutory
-1 if the attitude of the law is hassling
+1 if the law is corrupt or tolerant
-1 if the merchants attitude is one of warfare
+2 if the merchants are submissive or infiltrated

**Income Multipliers (see below)**

Easygoing operations: x 0.5
Routine operations: x 0.8
Average operations: x 1.0
Pushy operations: x 1.5
Aggressive operations: x 2.0

**Levels of Operations**

These are referred to in the multipliers following Table 23, above. They refer to the

following instructions given by the guildmaster:

*Easygoing:* Guildmembers take life very easy. No morale modifiers.

*Routine:* Guildmembers take life fairly easy, but keep their hands in. A +1 modifier applies to morale for the first month (after this some of them get bored and touchy).

*Average:* The standard level of operations, no effects on morale.

*Pushy:* The guildmembers are pushed into doing some extra jobs here and there, and grand, ambitious activities are eagerly pursued. This gives +1 to morale for the first month (excitement), but -1 per month after the first if sustained, cumulative to a maximum of -4).

*Aggressive:* Guildmembers are told by the guildmaster to steal anything which isn't bolted to the floor. This has an immediate effect on morale of -2, to which -1 is added per month (cumulative) to a maximum of -10; at this point, a revolt is automatically triggered.

The more active the guild is, the more likely thieves are to be apprehended by the law, however!

The sums of money gained by the guildmaster this way will not be great, unless the guild is a large one, the community is rich, and/or the guildmaster uses aggressive thieving tactics. This is likely to be ale money for guildmaster-level thieves, so other activities must be used to generate income. These will need planning by the player in consultation with the DM. Reference should be made to the *Player's Handbook* when considering the money side—how much shopkeepers can afford to pay as protection money, for example. These sums are usually lower than most players think! Making sure the target one strikes at is rich is a shrewd step in any thiefly activity.

**The Long Arm of the Law**

A monthly roll is made on Table 24 to determine whether there has been a confrontation with the law.

**Table 24:**
**CONFRONTATIONS WITH THE LAW I**

| **d20 Roll** | **Result** |
|---|---|
| 1-16 | No confrontation |
| 17-20 | Confrontation |

**Modifiers to Dice Roll**

+4 if attitude of law is persecutory
+2 if attitude of law is hassling
-2 if attitude of law is tolerant
-4 if attitude of law is corrupt
-3 if activity of guild is easygoing
-1 if activity of guild is routine
+2 if activity of guild is pushy

+5 if activity of guild is aggressive
+1 for each group of 10 thieves (round up) past the first 10 (maximum modifier +5)

Note that when rolling on the table above, a roll of natural 20 means a confrontation with the law, no matter what the modifiers may be.

If a confrontation arises, roll on Table 25 to determine the nature of the confrontation. Apply the same modifiers to the dice roll as for Table 24, except for the last one (the number of thieves modifier). Also, natural rolls of 1 and 20 are not subjected to modifiers on Table 25.

**Table 25:**
**CONFRONTATIONS WITH**
**THE LAW II**

**d20**

| **Roll** | **Result** |
|---|---|
| 1 | Arrest of 1 thief (1st-level apprentice) |
| 2-5 | Arrest of 1 thief (level 1d2) |
| 6-9 | Arrest of 1d2 thieves (1st-level apprentices) |
| 10-15 | Arrest of 1d2 thieves (level 1d2) |
| 16-18 | Arrest of 1d2+1 thieves (levels 1d3) |
| 19 | Arrest of 1d3+1 thieves (levels 1d3) |
| 20 | Reroll, but thieves are killed |
| 21-23 | Arrest of 1d2+3 thieves, rolled at random from the active guildmember list |
| 24+ | As above, but there is a 50% chance for each thief of being killed |

Any arrest of three or more thieves will reduce the morale of guildmembers by -1.

Clearly, it is useful if a guild can manage to corrupt the law somewhere along the line. It is up to the player of a PC guildmaster to set about corrupting the law, if it isn't corrupt already, and up to the DM to determine at what point the corruption has gone far enough to apply dice modifiers in the tables above.

*Arrested Thieves:* Different campaign worlds, and countries within the same campaign world, have very different legal systems and degrees of punishment. If the guildmaster wants to try and get his followers back by paying their fine, this is acceptable unless the DM rules otherwise (e.g., the country is Lawful Neutral and very punitive, the attitude of the law is persecutory or hassling, etc.). The fine payable is variable. The base fine is 30 gp, but modifiers can readily be applied. If the thief is of 3rd or higher level, double the fine (he probably has a record). If the guild's activity level was pushy, double the fine. If the guild's activity level was aggressive, multiply the fine by five. Finally, roll 1d4 and multiply the fine by this figure to get a final sum.

This is a fair shorthand rule which many DMs will want to detail further for themselves, but for an averagely active guild in an average sort of game milieu (if there is such a thing) an average fine of 75 gp, or 150 gp for a seasoned criminal, is not so much to pay. The guild can afford to pay half the fine (part of running expenses) up to 250gp, but the guildmaster has to fork out the rest from his personal wealth. A guildmaster who gets a thief out of jail by paying the fine, or by busting him out, gains the confidence of his followers, who add +1 to their morale for the next month. On the other hand, if the

guild suffers a loss of several (3 or more) members there may be a morale drop of -1 or more (but the DM may waive this for large guilds).

**Guild Morale**

Unless there are special reasons to the contrary, the base morale for guildmembers will be 15 to begin with. If morale falls below this level, a morale check is called for. Failing the check means that 1d2 thieves leave the guild, to become freelancers elsewhere. This number can be modified. For each 2 points that morale falls below 14, add 1 extra deserter. If the 2d10 roll is 19 or 20 (natural; this is but a 3% chance), add an extra 1d4 deserters. Do not add alignment modifiers (for the PC) to these morale checks; standard morale checks (Table 16, *Player's Handbook*) give bonuses for being lawful/good and this is extremely implausible with thieves!

As an alternative, rather than leaving the guild, the thieves may put their grievances to the guildmaster, if a secret check against the guildmaster's Charisma is successful. They may ask for lower dues or cuts from their income, more resources from the guild, or as the DM determines. This is a fair step, if morale has fallen due to ill-fortune (arrests and other problems) rather than to the guildmaster having been reckless or careless.

If morale falls to 5 or lower, however, the guildmaster will be the subject of an open revolt and attempted putsch (and, at the DM's discretion, this may happen sooner if the PC is being cruel, arbitrary, reckless, or otherwise abusing his position).

**New Followers**

New followers may arrive, and a monthly check should be made for this. The chance is 10% for each 10 (or part thereof) thieves already in the guild—for example, a guild with 27 thieves has a 30% chance each month of attracting a new follower. Modifiers to this base percentage chance are shown in Table 26.

**Table 26:**
**MODIFIERS TO FOLLOWERS DICE ROLL**

Morale, per point above 15: +10%
Morale, per point below 10: -10%
Guildmaster's Charisma: +2% per point above 12
Society is Rich: +10%
Society is Wealthy: +5%
Society is Poor: -5%
Society is Very Poor: -20%

Whatever the final percentage chances, no more than two new thieves will arrive in any single month. New arrivals are 1st-level apprentices, with the usual chance for being nonhuman and possibly multi-classed. The DM may allow greater chances for new recruits if the guildmaster goes on a recruiting drive after the guild has been weakened by arrests or some similar misfortune.

**Special Events and Occurrences**

These are the annoying unforeseen happenings which make life far from boring for any guildmaster. Allow a flat 1 in 6 chance per month of one event (rolled from Table 27) to take place. The DM must be prepared to do some necessary work fleshing out the event, and may add his own occurrences to those in the table. If an event is irrelevant, then no special event occurs that month.

**Table 27:**
**SPECIAL EVENTS IN THIEVES' GUILDS**

| d20 Roll | Special Event |
|---|---|
| 1 | Senior Thief from next town defects to your guild, asking for protection, brings minor magic item gift |
| 2 | Randomly selected guildmember kidnapped by evil adventurers, ransom note dispatched |
| 3 | Freak success with burglary: Guild gets extra income (d6 x 100 gp) but a good fence is needed |
| 4 | Junior thief manages to acquire a "Police Snitch" |
| 5 | Deputy Guildmaster is diseased/ cursed/kidnapped/caught by the authorities |
| 6 | 1d3 dumb thugs offer services to the guild for a "retainer"; these fighters may be loyal, or are they stool-pigeons for some other organization? |
| 7 | Powerful NPC (a mage, perhaps) commissions tough break-in and burglary from the guild |
| 8 | Guildhouse is located by the authorities; 50% chance a junior thief finds this out before the raid. DM must do much work here! |
| 9 | Local assassins guild requests simple manpower help with a "little job" (that turns out to not so little . . .) |
| 10 | NPC specialist of some kind (mage/ thief, quartermaster, brilliant cat burglar) arrives and applies for guild membership |

| | |
|---|---|
| 11 | Randomly selected junior guildmember suffers accident which leaves him unable to thieve |
| 12 | Guildhouse is burgled!!! Brilliant NPC outsider gets away with valuables (as recorded)! |
| 13 | A mid-level thief, plus an apprentice, disappear; have they been kidnapped (no ransom), murdered, eaten by alligators in the sewers, *polymorphed*, plane shifted or suffered some worse fate? |
| 14 | Failed assassination attempt is made against guildmaster—by whom? |
| 15 | Thieves accidentally (or in panic) kill guards when committing robbery—attitude of the law will be persecutory (maybe gaining reinforcements) for next month |
| 16 | Novice thief leaves guild (family moving, marries girl/boy from next village, etc.) |
| 17 | Relations with Beggars' guild worsen (if good) or improve (if bad)—actions of junior thieves (as determined by DM) are instrumental in this |
| 18 | Burglary turns up magic item unusable by any guildmaster (for example, a clerical item)—the guild needs to trade it to get its value (with a temple) |
| 19 | 1d3 thieves beaten up and robbed returning from a burglary, reduce guild income by 25% this month |
| 20 | PC's identity as guildmaster is known to an outsider, who attempts to blackmail the PC (he has some physical evidence to back his blackmailing) |

## Blueprint Profiles

It's time to meet a select body of august personages from diverse thieves' guilds. The NPCs here are presented with fine-grain detail, and they can be used in several ways. They can be used by any DM as "off the rack" NPCs ready for play, they can be slightly

modified to suit the DM's ongoing campaign, or they can be used as an inspiration for the DM to devise his own NPCs along the same lines. These NPCs are also characters who will hold dominant positions in any thieves guild.

To give these NPCs a rounded, full character, each has been given a history and location within one of TSR's game worlds; Oerth, the world of Greyhawk, or Faerun, also known as the Forgotten Realms. If the DM does not wish to use these histories and locations, he can change them as he wishes, relocating the NPCs as desired.

*Stats:* Thief skill values listed include all bonuses from dexterity, race, non-use of armor, and magical items, as appropriate.

### Guildmaster Septien Selfareine, the "White Lily"

AC 1 (*cloak of displacement, ring of protection +3, boots of striding and springing*); T 10/ M 9; hp 32; #AT 1; Dmg by weapon type; Str 9, Int 17, Wis 16, Dex 17, Con 9, Cha 16; THAC0 see below; AL CG; SA quadruple damage on backstab, thief skills, *sword of dancing*, spells; SD thief skills, magical items (listed below), spells. Languages spoken: Common, no align languages, elven, gnome, halfling, thieves cant. Thief skills: PP 60, OL 80, FRT 75, MS 85, HS 80, DN 40, CW 70, RL 30. Experience Point Total: 212,465 (in each class).

**Spells usually memorized:** *charm person, feather fall, protection from evil, sleep, forget, invisibility, knock, dispel magic, fly, spectral force, dimension door, wizard eye, teleport*.

**Weapon Proficiencies:** dagger, longsword, short bow, shortsword.

**Nonweapon Proficiencies:** artistic ability (Wis; composition), disguise (Cha; double proficiency, checks at +1), etiquette (Cha), musicianship (Dex; stringed keyboard instruments).

**Combat Stats:** Melee: Base THAC0 16. Uses *shortsword +2, +4 versus dwarves* (THAC0 13/11, Dmg 1d6+2 (+4)/ 1d8+2). Also has *longsword of dancing*, THAC0 14 if hand-held, 16 if used in nondominant hand, 15 descending to 12 if used as a dancing weapon; Dmg 1d8 +1 to +4/1d12 +1 to +4.

**Combat Stats:** Missiles: Base THAC0 14. Uses *shortbow +1* (THAC0 12, ROF 2, Dmg 1d6+1) and has 15 *arrows +2* (THAC0 10, Dmg 1d6+3).

**Additional Magic Items:** *amulet of proof versus detection and location, periapt of proof versus poison +4, Nolzur's marvellous pigments (6 jars), rings of chameleon power and water walking, wand of secret door and trap location (52 charges).*

**Physical Details:** Age 37 (human equivalent approximately 28), height 5'11", weight 131 lbs, silver-blond hair, light blue eyes, very clear and somewhat pale skin, high cheekbones, long and slender limbs.

**Key Idiosyncrasies:** Septien has an infamous "ego signature," as explained below. He also has a real loathing of dwarves, and his shortsword is his most treasured magical item. He does not attempt to expel dwarves from his guild, but they do not advance easily, and Septien has even shopped one or two to the law by anonymous tip-offs.

**Cover:** Septien is a well-known and appreciated musician who gives well-attended public performances of his playing on harpsichord-like instruments.

**Guild and Leadership:** The Gryrax Guild has a complex/mix structure; the guildmaster co-rules with a ruling council of three. Septien's style of guildmastering is slightly weak (he shares power), just, and fairly populist (the council attends to general feelings within the guild and Septien listens to them).

**History:** Septien Selfareine is Guildmaster in Gryrax of the Principality of Ulek, of Oerth (in the World of Greyhawk). His identity as guildmaster is known only to the three members of the ruling council of this guild; he is known to everyone else as "White Lily." This pseudonym comes from a weakness he has for leaving a fresh white lily at the scene of his audacious burglaries.

Septien was born the illegitimate son of a minor female elven noble in Celene, where such a birth is no stigma. The half-elf's quick wits and skill soon brought him private training in magic from his doting mother, and he began adventuring early in life. The evils of the Pomarj, so close to Celene, offered ample opportunity for a mage to gain experience and prosper. But Septien's light-fingered talents found employment in the tolerant, liberal capital of Celene as well.

Septien made happy progress as mage and thief, all the while cultivating his social graces and musicianship. It took the ravages of a broken love affair with a haughty grey elf ballerina to drive Septien first to drink and then to exile. Septien grew lazy, fat, and depressed in the lands of Ulek, until the day his second love entered his life—the White Lily Diamond. Found in the Kron Hills, bought by the Prince of Ulek and exhibited at the Gryrax Palace of Culture, the heavily-guarded diamond was irresistible. Septien brought off a daring robbery, and left a flower behind; the origins of his name. He privately sold the gem back to the Prince for 25,000 gp, a fraction of its value, later. Septien does not want riches. He does not steal for the wealth. He steals for the joy of being skilled and smart enough to get away with it.

Septien avoided joining the thieves' guild for some years, but bumped into the acting guildmaster when the two decided to rob the same place at the same time. Septien was just putting his flower in place when the second thief arrived! The old guildmaster had just died, and to have the famous White Lily as guildmaster was a decision which unified the squabbling and divided membership and ruling council. Septien was drafted in, and somewhat regrets this. In truth, there is little burden on him, since the council makes all the day-to-day decisions and his freedom of action is little curtailed. But Septien regrets the day his identity was discovered. On the other hand, his increasing success as a musician (he is much in demand for concerts and as an accompanist) brings him good fees, public acclaim, and a steady rate of arrival of hopeful females at his secluded town house. There is word of his being made a Court Companion, the formal title given to an adviser to the Prince, who is thought to seek his views on elven and cultural affairs.

**Septien in Game Play:** As "White Lily," Septien is the classic mystery figure. PCs may have a wild range of adventures trying to find him, stop his robberies, foil his schemes, etc. Putting PCs up against an enemy who will only wish to outsmart them, and will never kill unless he is forced to, will make a nice change of atmosphere. A medium-level thief needing training in Ulek might find that only Septien can train him, and part of the guildmaster's terms might be that the PC will have to find him first! Given his concerts, his liking for female company, and his activity as a mage (although he is not a member of the Mages guild of Ulek), there are several ways in which PCs can meet Septien while, at the same time, hunting the infamous White Lily!

**Tactical Notes:** With his amulet, Septien is almost impossible to scry. Adding his *ring of chameleon* power to his thief skills makes this no easier. His major advantage is his amazing ability to get into and out of places, and with spells such as *wizard eye* he does his best to scry places in advance. *Nolzur's marvellous pigments* are ideal for getting into places (hey presto! a door!) if Septien's half-elf skill and wand don't find the secret doors.

Septien does not use aggressive, damaging evocation-type spells and the like if at all possible. He prefers subtlety and guile, and a spell such as *spectral force* to cover his escapes (using *teleport* to his villa in dire necessity). Septien is not strong and has few hit points, and so he will avoid melee combat if possible. If he must fight, unleashing his *longsword of dancing* while he fights with his magical shortsword can make him quite formidable. However, his *cloak of displacement* makes it virtually certain that he will be able to escape at least a first blow in melee, and he often takes advantage of this to *teleport* (or *dimension door* if he has this spell memorized, having scried in advance with *wizard eye*) away. His magical boots also enable him to make fast escapes.

**Guildmaster Tulmara**
**Zir Bharann,**
**"Cruelty's Mask"**

AC -5 (*bracers of defense AC3, ring of protection +2, cloak of the bat*); MV 12 (15 as bat); T 16; hp 62; #AT 1; Dmg by weapon type (+6 with *gauntlets of ogre* power in melee); Str 9 (18[00] with *gauntlets of ogre power*), Int 16, Wis 12, Dex 18, Con 15, Cha 15; THAC0 see below; AL NE; SA quintuple damage on backstab, thief abilities, *cloak of the bat*; SD thief skills, *necklace of adaptation, cloak of the bat, rod of alertness, ring of free action*. Languages spoken: Common, Thieves Cant. Thief skills: PP 25, OL 95, FRT 95, MS 95, HS 95, DN 90, CW 95, RL 65. Experience Point Total: 1,432,155.

**Weapon Proficiencies:** dagger, hand crossbow, longsword, quarterstaff, short bow, short sword.

**Nonweapon Proficiencies:** Appraising (Int), Disguise (Cha), Jumping (Str), Lip Reading (Int; double proficiency, +1 to checks), Rope Use (Dex), Tightrope Walking (Dex).

**Combat Stats:** Melee: Base THAC0 13. Usually uses gauntlets of ogre power together with longsword +2, +4 versus Good-aligned creatures in dominant (right) hand; gives THAC0 8, 6 versus Good enemies; Dmg 1d8+8 (+10)/ 1d12+8 (+10). Also possesses dagger of venom used in secondary hand; THAC0 11**,** dmg 1d4+7 (+9)/1d3+7 (+9) plus special (lethal poison).

**Combat** Stats: Missiles: Base THAC0 10; uses *short bow +1* (THAC0 9; ROF 2; ranges 5/10/15; Dmg 1d6+1) and also has normal hand crossbow (THAC0 10, ROF 1; ranges 2/4/ 6; Dmg 1d3/ 1d2).

**Additional Magic Items:** *Bag of holding (250 cu. ft. capacity), censer of summoning hostile air elementals, oil of etherealness*, other minor magical potions (*ESP, healing*, etc.) as desired by the DM.

**Physical Details:** Age 38, height 5'5", weight 107 lbs., short-cut curly black hair, very dark brown eyes, tanned olive skin, dark complexion, ear-lobes virtually absent.

**Key Idiosyncrasies:** Tulmara suffers periodic blackouts, about once a month, each

lasting 1d8 hours. She is wholly amnesic for what happens during this time. In her conscious personality, her most striking feature is her dead-eyed, emotionless mask of a face when listening to others.

**Cover:** Tulmara is well-known as a merchant, dealing in staple commodities. Cloths, foodstuffs, and livestock are her major business interests. She has many people working for her and is rarely seen herself; this is not unusual in her homeland.

**Guild and Leadership:** The Zazesspur thieves' guild has a traditional single-guildmaster leadership. Tulmara's rule is strong, cruel, and despotic.

**History:** Tulmara Zir Bharann is Guildmaster of thieves in the city of Zazesspur, one of the "Big Four" cities of Tethyr in Faerun (see FR3, *Empires of the Sands*, for some further details on Zazesspur). She rules tyrannically over a large guild in this trade city, with some 140 thieves who are full-time members of the guild.

Tulmara was born into opulence. The Bharann family is one of the older, more important ones in Zazesspur, and Tulmara received an extensive training in commerce and merchant life when young. Her naturally greedy and selfish temperament was exacerbated by being spoiled as an only child, and made more strident by this early coaching in personal greed. Her physical brutality, however, is something of an oddball characteristic, perhaps a throwback to her great-great-grandfather. Old Sulmair Bharann suffered fits of maniacal violence, but Tulmara's brutishness is more coldly controlled. Her gauntlets of ogre power aid her considerably in this respect; if she strikes or flails someone, they know they've been hit! Importantly, Tulmara has never picked a pocket in her life. Such vulgar street crime is beneath her.

Soon after poisoning her parents to advance her inheritance, Tulmara began thieving. From her commercial work, she learned of the activities of other merchants, and began to plan and execute robberies of their premises. Expanding into blackmail and kidnapping, she was recruited into the thieves' guild by an early paramour, Arkail Rhassan. These two became rising stars in the guild, arranging for the old guildmaster to have an "accident" and then taking over the Guild themselves. The Guild prospered, and became wealthy; the junior thieves and apprentices, subjected to harsh discipline, could accept it if the rewards were good. And they were.

Arkail was killed, murdered by an assassin; Tulmara has not been able to find out why (it was on the orders of the Shadow Thieves of Amn, who feared the rise of the Zazesspur Guild). Since this time, Tulmara has become more withdrawn and harsh, more cruel and evil, and more paranoid; the killing destroyed what little humanity remained in her. Now she strengthens the guild, and indulges herself in a few big heists, to pass the time; her heart is empty, her zest for life almost wholly gone. Her odd nickname in certain quarters—"Cruelty's Mask"—comes from a middling-rank guild member who knew of her cult sympathies (see below), contrasting them with the lifeless persona and deadpan facial expression of his Guildmaster.

Tulmara is a devotee of Loviatar, and attends secret ceremonies and rituals of that faith. She rules her guild absolutely, and she rules it through fear. She respects only force and power in other people; intelligence, wisdom, and other gentler qualities are held for nothing. She has the force to back her cruel edicts, and while the Guild juniors suffer—and no few flee the land—the fear of her is so widespread that she stays in control of her guild, at least for the time being.

In Zazesspur, there are some notable political intrigues involving royalists of various

persuasion (see *Empires of the Sands*). Tulmara doesn't get involved in this; and allied with her guild's predominant preying on outsiders and foreigners, this has allowed the Zazesspur guild (and Tulmara) to grow strong and powerful without the authorities getting too fearful.

**Tulmara in Game Play:** Tulmara makes for excellent intrigue adventures, and is a good nemesis figure if crossed (paranoids always fit the bill on this count). It may take the PCs many adventures even to realize she is at the center of activities they are fighting against. It should be very hard to find her, even harder to pin her down and overcome her. PCs might be terrorized by Tulmara's servants, hired to recover someone kidnapped by her, paid to act as bodyguards or couriers who are later attacked by thieves instructed by Tulmara, and the like. Tulmara strikes ruthlessly at those who thwart her, and since the scope of her operations is very wide, she can be thwarted in many ways!

The key element is always to make PCs work hard to get closer to the identity of their nemesis. Tulmara's identity as guildmaster is known to few, and the familiar working up the ladder from apprentices or thugs, to middle-rank people, and then closing in on the heart of the operation should be the PCs' goal. Even then, gaining any proof of Tulmara's activities should be very difficult.

**Tactical Notes:** Tulmara's own lair is protected by her *rod of alertness* (used as a magical alarm) and by her *censer of summoning hostile air elementals* which is used as a trap (opening a certain door causes a lever to fall, oil to pour along a narrow channel and be set alight, and then the oil runs into the censer, lighting it). Other magical alarms (*magic mouths* and the like) and numerous mechanical traps are present. A permanent *stinking cloud* in a corridor leading direct to her personal chamber can be bypassed by her with the magical necklace she wears, but could be a problem for PCs! Tulmara favors the use of many secret doors in her personal lair, below her private villa.

In combat, Tulmara always uses the sneak backstab when she can, but is not scared to slug it out toe-to-toe even with a plate-clad warrior. With her armor class and her magical gauntlets, she is a fearsome fighter. Her escape routes (notably *oil of etherealness* and her magical cloak) are important, likewise her protections against certain attack forms (the *ring of free action* makes her immune to *hold* spells, the *necklace of adaptation* protects against gases, and so on). Tulmara often spies on people in the form of a bat, and the powerful webs she can cast from her cloak of the bat don't affect her (*ring of free action*). Tulmara has a fortune stashed away in various business premises, and can summon up a bunch of thugs to attack her enemies at very short notice, both guildmembers and hired mercenaries.

### Quartermaster
### Marmel Raveiz

AC 7 (unarmored) or 4 (*leather armor +1*); MV 12; M 4/ T 8; hp 26; #AT 1; Dmg by weapon type -1 (usually 1d4+1/ 1d3+1 with dagger +2); Str 7, Int 17, Wis 14, Dex 17, Con 11, Cha 10; THAC0 18 (16 with *dagger +2*); AL N; SA triple damage on backstab, thief skills, spells; SD thief skills, *ring of blinking, ring of immunity to enchantment* (see below), spells. Languages spoken: Common, thieves cant. Thief skills: PP 45, OL 45, FRT 30, MS 40, HS 40, DN 45, CW 70, RL 70 (skill values not adjusted for armorless state). Experience Point Total: 12,045 (as mage), 94,130 (as thief).

**Spell books** (usually memorized spells in bold): *cantrip, charm person, **detect magic**, friends, **hypnotism, identify**, message, protection from evil, spider climb, unseen servant; alter self, detect invisibility, **ESP**, forget, invisibility, **know alignment**, magic mouth, rope trick, scare, wizard lock.*

**Weapon Proficiencies:** dagger, longsword, quarterstaff, one unlearned.

**Nonweapon Proficiencies:** Appraising (Int; triple proficiency, all checks at +2), forgery (Dex; DM may use Int for detecting other people's forgeries), heraldry.

**Additional Magic Items:** *bags of holding (2 x 250 cu. ft., one of 150 cu. ft., one of 70 cu. ft.), wand of identification with 44 charges* (see below).

**Physical Details:** Age 41, height 5'8", weight 132 lbs., long and lank stringy fair hair, green-blue eyes, weathered pale skin, slightly hooked nose, long fingers with knobby, large knuckles.

**Key Idiosyncrasies:** Marmel has a paranoid belief pertaining to servants of a long-dead master seeking him out to kill him, as explained below. More mundanely, he has an inordinate fondness for humbugs and will cheerfully suck his way through a large bag of them given the chance. As a result, most of his teeth have fallen out, and his speech contains many breezily gumless sibilants.

**Cover:** None; Marmel spends his time in hiding; see below.

**Guild and Leadership:** The Monmurg thieves' guild has a complex/mix structure—specifically, it has a ruling council (of 4) elected by allegedly democratic elections from the guild membership for 7-year terms. The leadership style of this council is strong, just, and populist. Marmel isn't much affected by all this, because he doesn't get involved in guild politics and council members (of whatever persuasion) appreciate his loyalty and usefulness to the guild.

**History:** Marmel Raveiz is quartermaster of the thieves' guild in Monmurg, capital city of the Hold of the Sea Princes in Oerth (see World of Greyhawk for some additional details). He keeps the magical items the guild possesses as a group, stocks of specialist thief equipment, and ledgers and accounts of the guild (membership dues and the like). These are all retained in his *bags of holding*. Marmel is not an expert fence, although he may use his Appraising proficiency to purchase and check items for the guild.

Marmel began life as an apprentice to a Furyondian mage, and had to suffer ill-treatment as the mage developed an insidious form of insanity. His master refused to allow Marmel to make his own way in the world, but the unfortunate apprentice got his chance when the mage was forced to accompany a Furyondian naval foray against some of the declining piratical force of the Sea Princes. Their ship was sunk, and Marmel took the opportunity to kill his hateful and cruel master, grab a couple of travelling spell books with low-level spells, and *levitate* to safety. The pirates decided to capture him rather than shoot him down, their own flying mage bringing down the unhappy apprentice, and Marmel became a reluctant pirate.

As piracy declined in the Sea Prince's lands, Marmel stayed with bad company in the form of thieves. His magic helped them, and they trained him. Marmel got safety and obscurity, staying in the guild house, in return for learning the skills of the thief. Marmel was very fearful that his old master might have been raised; his mage's guild might come looking for him; the old mage's relatives might come for him; in short, obscurity suited Marmel perfectly. It even overcame his fear of going robbing by night, and Marmel began an adventuring life anew as a thief, not wanting to work further as a mage, lest

those he feared would be looking for a hapless young mage should find him and punish him for killing his master.

Marmel is not now an active, adventuring thief. He is too valuable to the guild to be allowed to risk this. Happily, he has retired to a life of quartermastering. He maintains and administers the finances of the guild, and shepherds supplies and magical items for use by guild members. The availability of supplies is always good, due to Marmel's lines of supply and meticulous checks on his stocks. He also evaluates items brought in to the guild house by thieves, who must pay a 10% flat tithe of all earnings to the guild. Marmel's tripled Appraising proficiency makes him highly valuable in this respect. He routinely uses detect magic on anything which looks even remotely interesting. He can use an identify spell, and also has a wand of identification (duplicates the effects of an identify spell, with no Con loss to the mage) if several items turn up at once and the "owner" is in a hurry for any reason (he is reluctant to use his wand, since he can't recharge it, and charges 150 gp per charge for this service). If he is curious or suspicious about a guild member, or a seller to the guild, he will use investigative spells (or hypnotism) to learn more.

Marmel is a gentle enough soul, rather other-worldly at times. He likes a spot of haggling, although it's almost impossible to get the better of him. He has a strange fondness for heraldry, and may purchase items with unusual heraldic design for himself. He has a modest fortune from his own thieving days, and is paid a good salary by the guild. He rarely leaves the guild house, and when he does it is in the guise of a merchant's clerk (often accompanied by a guildmember who has a cover identity as a merchant).

**Marmel in Game Play:** Meeting Marmel is obviously easiest for guildmembers. They pay their tithes to him (10 gp per year for an apprentice, 50 gp per level per year from others to a maximum of 500 gp), may bring items to him to be valued, and come to him for supplies, or even the loan of magical items. Non-guildmembers can meet him for the sale or exchange of items, come across him at a sale of heraldic items, in an antique shop, or even possibly for training (for thief PCs)—at a very steep price!

A major role for any quartermaster is as a source of supplies. The DM can use a quartermaster to introduce new equipment items (the guild needs cash and the quartermaster is on a sales drive). "Hot" magic items (e.g., a sword with a non-erasable and unique design feature) can be sold to the quartermaster. New magic items could be had for sale (rarely), or exchange (more likely), or even borrowed for a security deposit. The DM should arrange these practicalities as he sees fit. You don't need tables of random determinations; you should use a quartermaster to bring in pet ideas, items you think are nifty, as you want to. Marmel has placed a *magic mouth* on each of his bags of holding, of course, so that if anyone other than him even touches them the magic mouth will scream out, "Get your paws off!." Of course, maybe after all these years a relative of the Furyondian mage wants to know where the apprentice who killed his uncle (say) has gone with those spell books, and the PCs are hired to do the job. Who would expect to find him in a thieves' guild??

**Tactical Notes:** Marmel is protected against undue influence. His *ring of immunity to enchantment* makes him immune to enchantment/charm spells of 4th level or below. His *ring of blinking* helps to protect him. Marmel isn't much of a fighter, and the guild will usually have some bodyguards with him in the event of major transactions or trips into the outside world. Marmel does not take his *bags of holding* outside the guildhouse with

him!

**Durdlan Silverpalm,**
**Master Fence**

AC 4 (dwarf-sized *leather armor +2*); MV 9; T 5; hp 28; #AT 1; Dmg by weapon type +1 (usually 2d4+2/ d6+3 with *broadsword +1*); Str 16, Int 15, Wis 11, Dex 16, Con 16, Cha 11; THAC0 18 (17 with magical sword); AL N; SA triple damage on backstab, thief skills; SD thief skills, 60' infravision, *rings of mind shielding and invisibility*. Languages spoken: Common, dwarf, gnome. Thief skills: PP 40, OL 40, FRT 50, MS 15 (95+*), HS 30, DN 45, CW 50, RL 15. Experience Point Total: 19,620.

**Weapon Proficiencies:** dagger, broad sword, quarterstaff.

**Nonweapon Proficiencies:** Appraising (Int; double proficiency, checks made with +1 bonus), Forgery Detection (use Int), Gather Information (Int).

**Additional Magic Item:** *Boots of elvenkind**.

**Physical Details:** Age 144 (human equivalent 52); height 4'4"; weight 162 lbs; long wavy black hair, thick beard plaited with gold threading, very large hands with thick, sausage-like fingers, strikingly bad breath.

**Key Idiosyncrasies:** Durdlan has an amazing number of pet animals and is very fond of them. He does use them to smuggle things inside and to send messages with, but he also simply likes animals a great deal. In cages in his back yard, attic, etc., he has pigeons, ferrets, guinea pigs, chickens (Durdlan likes omelettes), hamsters, a sleek black rat named Nasher which does tumbling tricks, small black rock lizards, and a pair of small flightless birds from Nesme which are brightly colored and awesomely stupid. Nasher is often in Durdlan's waistcoat pocket or in the kitchen hunting scraps (PCs are warned not to eat any of Durdlan's omelettes or anything else prepared here). Durdlan also has a horrible collection of pottery and ceramic halflings in a large glass-fronted display cabinet.

**Cover:** Durdlan has a primary cover and a secondary cover; this is a complex business, explained fully below.

**Guild and Leadership:** The thieves' guild of Mirabar is ruled by a single guildmaster, whose style of rulership is strong, moderately cruel, and moderately despotic. Durdlan operates independently of the guild, and is a consultant to them, so this doesn't unduly trouble him.

**History:** Durdlan Silverpalm is a fence who works closely with the thieves' guild of Mirabar in the northwest of Faerun (see FR5, *The Savage Frontier*, for details). The guild here is small—some 25-40 thieves at any given time will be in this large city—but trade through Durdlan is brisk. Durdlan owns a couple of moneylender and pawnbroker shops, and lives in a small terraced house in a street of granite houses all occupied by dwarves (there are some 4,000 dwarves in Mirabar). His primary cover is as a moneylender, and his family has long been engaged in this trade, hence their surname. Other family members are moneylenders, pawnbrokers, and locksmiths, and Durdlan has a share in several of these, including his brother Glengar's famous Rig-A-Mortice locksmith's shop. Durdlan thus has a primary cover as a moneylending small businessman.

Durdlan also has a secondary cover, a screen cover. He has been seen in disreputable company in Mirabar once too often in his 144 years, and the wily dwarf realizes that he

cannot escape the scrutiny of the law all the time. So, Durdlan runs a small numbers racket (illegal and unlicensed gambling) betting on various events—rat races (literally), ship sailing rates and arrival times and the like. The authorities thus know that Durdlan is a bad sort, but believe that he is just a small-time gambler and thus don't bother him much. Durdlan's screen cover (a petty crook to cover for his real big-time crook identity) works perfectly. The thieves Durdlan meets now and then in back alleys (seen by the agents of the authorities) also see the dwarf in the reinforced cellars of his home—unseen by the authorities. There, they bring goods for sale and trade.

Durdlan's primary specialty is gemstones and jewelry. Appraising such items, Durdlan is 95% likely to have an accurate estimate of their value. His secondary specialty is barbarian relics and icons—items of antique nature, religious significance, or exceptional workmanship. With such items, from the Uthgardt barbarians of the north, Durdlan is 90% likely to estimate their value correctly. With all other items a standard Appraising test (Int+1, roll 16 or below) is made. When he is wrong, allow him an Int test. If this is made, he knows his estimate is uncertain and he will state a value some 50% of his original estimate. An incorrect estimate will be from 10-40% above the true value or 10-50% below it (perceived value= 50% of actual value, plus dice roll x10%. A roll of 0 is taken as zero).

Durdlan offers a percentage of the true value of a hot item to his supplier. This is usually approximately 30-50%, depending on the "hotness" of the item, its absolute value (it is harder to sell very pricey items in many cases), the Charisma of the seller (no more than +4% for this), and the like. If the DM is very uncertain, simply offer 30+1d20%.

Durdlan can dispose of hot property fast because he has connections with many merchant families in Mirabar who aren't too fussy about where their secret treasures come from. Indeed, the strongly competitive nature of these families means that they are often eager to have better relics and treasures than other families, or even to steal their rivals treasures and enjoy them in illicit secrecy. One of Durdlan's favorite memories is of selling a sapphire and emerald brooch from Evereska to five different families, for ever-increasing profit margins, within the space of a single year, as each family in turn commissioned thieves to steal the item from their neighbors. Durdlan made sure that when the brooch was secretly held by one family, the next rival along the social line got to hear of it.

Durdlan has many friends in the dwarven merchant community who regularly dispatch wagon trains to Luskan on the coast. These caravans rarely get thoroughly searched; the guards have scruples which are alcohol—soluble provided a few gold coins are put their way. This access to a major coastal port (where again the customs guards can easily be bought off) gives Durdlan the chance to sell his goods for export, where their identity as stolen goods will not be known.

Durdlan is also ready, for a fat fee, to trade in human cargoes. That is, he will conceal people in his home (locking them into a cellar), and smuggle them out of Mirabar (usually in barrels or boxes bound for Luskan). Durdlan is believed to have helped one or two assassins in this way in his time.

**Durdlan in Game Play:** Durdlan has only a handful of contacts from the thieves' guild, almost all dwarves. He never trusts elves (he denies vehemently that his *boots of elvenkind* are anything of the sort, claiming they are boots of silent dwarfcraft) and he avoids direct contact with almost anyone, working through intermediaries. He will try to

stay invisible during a meeting if he can. He certainly doesn't like the location of his home being known.

Durdlan is a fine fence to sell many items to, and he rarely attempts to swindle his customers. He is the person to see for a fast escape from the city. He is also a moneylender, of course, and can be encountered in that guise. His love of animals or bizarre fondness for ceramic halflings could also be exploited to bring him into contact with PCs (not necessarily as a fence).

Durdlan also has connections; in wealthy merchant families, the thieves' guild, other merchants, the dwarven community, an assassin or two, and amongst officers, guards, and similar men who will look the other way if enough gold is put in their pockets. If Durdlan can't do something for a paying customer, the odds are that he knows a man who can. This makes him a very versatile walking game mechanic for any DM.

# Chapter 5: Tools of the Trade

## Equipment for the Thief's Skills

*Zondervan leaned away from the thick oaken door regretfully. "I can't hear a word of what's being said in there," he said miserably. His mentor Raimen smiled at him and reached into the voluminous folds of his robe. Hardly the time for a conjuring trick, the miserable apprentice thought. But Raimen swiftly flourished a polished bronze hemisphere topped with a cone, the open surface of the hemisphere wrapped about with a thin metal mesh. With only the hint of a flourish, he placed the end of the cone to his right ear and leaned closer to the door, gently placing the mesh-covered surface to the wood. A smile with just the slightest hint of smugness beamed from the older thief's face.*

*"Try again," Raimen urged his apprentice. Zondervan craned his neck closer and placed the cone against his own ear. Now he could hear the Guildmaster's voice—faintly, to be sure, but the words were clear enough . . .*

*"Just one thing, Master," Zondervan said in a newly-respectful tone on the way to the Footpad for an ale, "what is the wire mesh for?"*

*"To keep the ear seekers out, of course." Raimen said mildly. "The Guildmaster is very fond of using them as a defense against snoopers."*

*"But—but before you gave me the listening cone I . . . I tried to listen anyway, I placed my ear against the door . . .," cried the apprentice, suddenly aghast.*

*"Indeed you did," Raimen replied coolly. "Better nip off and see the clerics for a* cure disease *spell. I get ten per cent of their fees in such cases, you know. See you later, I trust . . ."*

A wide variety of special equipment items are available for thieves if they know where to look for them. This chapter details many such items. Many of these will be specific to particular thief skills and are listed for each skill. The use of lockpicks with the Open Locks skill is an obvious example. there are also many miscellaneous items which thieves are particularly likely to find useful in their work, and there is a full listing of these items also. A tabular summary of likely prices and encumbrance values can be

found at the end of this chapter.

All this isn't to say that only thieves should be allowed to use the items detailed here, of course. In some cases, other characters cannot use these items effectively. Lockpicks are useless for picking locks in the hands of anyone but a thief, for this skill is specifically (and exclusively) a thief skill. many other items do not necessarily have such restricted use. For example, the use of tar paper (see below for a full detailing of this) could potentially be useful for characters other than thieves. But such an item is particularly likely to be encountered in the subculture of thieves, and to be used by them when going about their nefarious activities. Also, taking a lively interest in equipment items which assist stealth, concealment, silent break-ins to places where you shouldn't be, and suchlike is naturally part of the role-playing of thieves. Brave, hardy warriors and pious priests really shouldn't be interested in such matters!

In the full equipment listing below, it is entirely for the DM to determine whether certain items may or may not be available in the campaign world. For example, as noted in the *Player's Handbook*, combination locks may well not exist in a world based on medieval times, and thus the use of a small listening cone to assist in opening such locks would be irrelevant in such a game world. Then again, certain items may well be available but not openly so. Only from shadowy, illegal sources and suppliers will such items as lockpicks be available. Availability of many items will depend on the nature of the society the thief operates within, as detailed in the chapter on Guilds.

Since the items detailed below are not included in the *Player's Handbook*, they can be introduced to PC thieves in different ways. Going on a job with an NPC thief who uses one or two specialty items is one way of educating a PC thief. A second possibility is regular attendance at the informal "seminars" of the Thieves' Guild—make that PC go back to high school! A third possibility is during training; part of a thief's training by a higher-level thief may include being told about a small number of items relevant to thief skills. If the PC is allocating a large slice of his 30 percentage points for improving one skill (often the case), then information about 1d3 items relevant to the use of that skill and also 1d2 miscellaneous items can be regarded as part of what the PC is paying for during his training. A fourth and final possibility—an entertaining one—is that the PC hears about such items from popular stories and tales concerning a legendary master thief NPC in the campaign world, or even from overhearing some officers of the law discussing such matters at the next table in the tavern!!

## Skill Modifiers

Many equipment items detailed below will be stated to give a modifier to the chance for success for a skill check. The skill modifiers should be treated as suggestions only, although for game balance it's probably best not to give bonus modifiers to a thief much greater than those suggested. In any event, a central rule which always operates is that the maximum chance for success after all modifiers are applied (for race, dexterity, conditions, equipment, etc.) is 95%; a "natural" roll of 96-00 on d100 always fails!

You might also wish to allow an analogous 1% chance for success—a natural 01 always succeeds, regardless of modifiers. The poor 1st-level thief trying to pick a masterful-quality lock in the dark with improvised lockpicks rolls—01! He's done it! The lock clicks open . . .

In some cases, different items of equipment may each add to some chance for success when climbing walls, opening locks, etc. In the case of nonmagical items, a general rule should be that no more than a total of +20 can be added to any chance for success in such a skill test, no matter how many items are employed to assist the thief's natural talent. The DM may also not allow additive modifiers if items have a similar function. An obvious case would be the use of climbing daggers and spikes for assisting the climb walls skill; the thief could not add the individual modifiers for these two equipment items together and claim an extra bonus, since they both do the same thing (although they have important, individual, additional uses).

## Picking Pockets

This skill is usually practiced by simple manual dexterity and swiftness. Even so, there is a small number of simple items which can help the thief in this art.

### Arm Sling

This is simply a cloth sling; the thief wears it to appear as if he has a broken or injured arm, and speedily withdraws his hand from it for the pocket-picking attempt.

This actually reduces the chances of picking pockets by 5%, but the payoff is that the chances for being discovered are halved (but a natural 00 on d100 always means discovery). This reflects the fact that people simply do not expect to see a man with a broken arm picking pockets and the expectation determines the perception. The use of this unusual strategy is only useful—but it is really useful here—when the priority is not to be discovered, rather than to be sure of success. A thief working in a city where he is not a guild member, or one where legal penalties for picking pockets are very harsh, might favor the use of this ruse.

A thief obviously cannot use this ruse for an extended period of time in the same place (save possibly by posing as a beggar). There is a limit to how long an arm can plausibly need for healing, after all.

### Mini-Blade

This is a generic term for a very small (and usually very sharp) blade which can be held (with care!) between the fingers or in the "edge of the hand". A very sharp coin-edge, filed down, can be used in this way, and has the advantage of being readily available. A more sophisticated (and rarer) version is the razor ring, a hollow signet ring with a flip-top and a very sharp blade within.

The mini-blade is used to cut a soft container—most obviously a purse or pouch—so that the thief can get at what's inside it. It is the most effective technique for getting at coins, gems, etc., inside a purse with drawn and tied strings. With a mini-blade the thief only has to make a simple pick pockets roll to effect the larceny. If the thief has, instead, to try to open the purse strings and then extract what's inside because he has no mini-blade, this needs two pick pockets rolls for success (one to open the purse, one to get at the goodies)—and two rolls for being observed, as well!

# Opening Locks

## Lockpicks

These are essential for the thief to use this skill at anything like his "natural" ability level. It is these items which are listed in the *Player's Handbook* as Thieves' Picks, costing 30 gp. They are usually short lengths of rigid wire and flat, narrow plates of iron or steel, especially designed and made for dealing with locks, and there will be a dozen or so to a set. They will be supplied either on a ring (like keys) or in a cloth or leather wallet which unrolls. These items will never be freely available on the open market.

## Improvised Lockpicks

Lockpicks are made for the job, but it is possible for a resourceful thief to improvise a lockpick from a length of wire, a hairpin or hat pin, or some similar ready-to-hand item. Obviously, this will never be anywhere as good as the specially-crafted item, but it's better than nothing. As stated in the *Player's Handbook*, a penalty of anywhere from -5 to -60 can be applied to the use of such improvised lockpicks. The following suggestions are given for the DM to select within this range.

To create improvised lockpicks the thief must make an Intelligence check, modified (positively!) by his experience level—reflecting the resourcefulness greater experience brings. If this check is successful, the improvised items can be used with a penalty of -5 to -30 (1d6x5) to the open locks roll. If the modified Intelligence check is failed, the thief can bodge up something, but it is a feeble effort—the penalty is -35 to -60 (1d6x5, +30) for the Open Locks attempt. Locks which are of Masterful quality, however, cannot be opened with improvised lockpicks (unless the DM allows the 01=success rule here).

**Critical Failure:** When opening locks, either with lock picks or with improvised lock picks, the DM may rule that on a skill check roll of 96-99 the tool snaps but can be wangled out of the lock if a Dexterity check is made; on a roll of 00 the snapped tool is wedged in the lock and cannot be removed (save for disassembling the whole lock!).

**Special Rule, Combination Locks:** The DM may wish to allow the existence of these complex locks in his campaign world. If he does, then such locks are always of Superior or Masterful quality. As an optional rule, a thief who makes a successful detect noise roll when trying to open such locks can halve the usual negative modifier to his skill for such formidable locks, as he is able to detect the sound of tumblers falling!

## Acid

If a thief is faced with a lock which his best efforts cannot pick open, metal-eating acid is one alternative. Such acids will eat through locks if the locks fail a saving throw (for metal) vs. acid (this save is 13). If the save is made, the lock cannot be opened, but it will be ruined (and unopenable!) if a second save (metal vs. acid) is failed. Use of such acid is difficult and avoided by most thieves, for various reasons.

Use of metal-eating acids is difficult because only acids of great strength will do the job effectively. The DM should greatly restrict the availability of such acid; acids of the strength of black dragon acid and thessalhydra acid (possibly also giant slug spittle) are among the few known effective metal-eaters. Thus, availability is very low (and cost very

high).

Thieves usually avoid such acids in any event. First, the acid is very hazardous to carry. While it may be contained in glass containers (and possibly ceramic), such vessels are fragile. Imagine falling down a pit and hearing the sound of breaking glass as double-strength acid begins to seep through clothing and over one's back . . .

Second, if the acid does not do the job it may ruin the lock and any hope of opening it in another way, as described. Third, it is a calumny on the professional reputation of a thief to have to resort to such means as acids!

### Chisels

A thief may attempt to force a lock open with a lock chisel and a small hammer. This is not really a highly skilled activity, and the DM might consider extending this to non-thieves. The base chance for success is equal to the open doors percentage (which is Strength-based, of course). A thief may add one-fifth of his open locks chance to this base chance—knowing something about locks does give a slight advantage here. Obviously, forcing a lock is a noisy activity and any hope of subtlety and surprise evaporates with the first blow.

### Cutters, Files and Hacksaws

These instruments may have to be resorted to if a thief cannot pick a lock, but thinks he has the time to try these desperately slow methods for bypassing the lock. With a file or hacksaw blade the thief can try to saw through the lock apparatus; a pair of small wire cutters may also be useful for disabling some part of the internal mechanism. Usually, only reasonably small locks can be cut through in this way. It may also be possible for the thief to cut around a lock with a hacksaw blade.

Again, use of such instruments is often fairly noisy (although nowhere near as noisy as using a lock chisel). The main drawback to cutting through or around locks is that it takes a very, very long time.  in most cases the attempt will be certain to succeed, unless there are special circumstances—e.g., the thief has only one small rusty file and the lock is a huge combination lock device!

### Magnifying Glass/Lens

At the DM's discretion, using such an item to inspect a lock may add 5% to a thief's chance to open the lock. This only applies if the thief has some element of the lock apparatus exposed to his view—if he can see something of the inner workings of the lock.

### Oil and Funnel

Some locks may grow rusty with age and disuse, and be harder to pick than new locks of the same quality of make would be. Seasoned thieves know only too well that the locks of doors in dungeons are all too often of this sort. The DM may apply modifiers (-5,-10, etc.) to the open locks chance for such doors as he sees fit.  rusted and even fairly dirty locks may have a little light oil applied to their insides, usually with the use of a

long-necked funnel (and maybe with a short length of rubbery tubing on the end of that). The negative modifier may itself be negated, in whole or in part, by such lubrication. It takes 1 round to apply the oil and 5-10 (d6+4) rounds for the oil to have its effect on the mechanism.

Of course, using oil to lubricate a lock helps the thief to open it silently. If the DM wants to make a silent movement check for lock-picking, it should be made at +10 if oil is used. Oil is also useful when it comes to rusty door hinges in this context.

### Time Scales

Picking a lock takes 1d10 rounds, as stated in the *Player's Handbook*. If the thief has no lockpicks or is using improvised lockpicks, this duration becomes 1d20 rounds.

Other ways of bypassing locks take rather longer. Using a lock chisel and hammer takes one turn; metal-eating acid takes 3d6 rounds; cutting around a lock takes 2d6 turns (assuming that the door is a wooden one of average thickness); cutting through a lock takes 3d6 turns. The DM may roll randomly for time needed, or may select a value within the range shown which reflects the quality and size of the lock. Size will most affect acid and cutting round a lock, whereas quality will affect cutting through a lock, as regards time needed.

## Finding and Removing Traps

Because the nature of traps can vary, a wide range of equipment might conceivably be helpful on different occasions; a magnifying glass, for example, might help with concealed traps. There are many items for which a DM might allow a +5% modifier to the find/remove traps roll. This needs a DM decision on a case-by-case basis. There is one exception: lockpicks, which are important in a wide range of cases.

### Lockpicks

These may be considered as necessary for discovering small traps which are affixed to locks. Without them, the thief cannot use his find traps skill nor his remove traps skill for dealing with such traps. Improvised lockpicks have a -30 penalty to both skill rolls. The kind of traps involved here are small poisoned needles inside drawers or coffers; spring-triggered poison dart traps inside containers; and so on.

## Moving Silently

### Footpads

These useful equipment items have even had a type of robber named after them, of course. Footpads can be improvised from rags or cloth tied to the feet, or built into footwear—the latter obviously negates any risk of cloth falling off!

Footpads are not considered standard equipment worn by the thief because of the disadvantage they have. Their advantage is that they add +5 to the chance for moving silently; the corresponding disadvantage is that footpads reduce traction, and so their use adds a -5 penalty modifier to any climb walls roll the thief has to make while wearing

them. Cat burglars are advised to use detachable footpads which can be donned after getting over the wall on the way in!

As an aside, the normal, unmodified move silently chance assumes that the thief is wearing normal, everyday footwear. If for some reason he is wearing hob-nailed boots or the like the DM may readily apply a penalty modifier of -10, -20 or so to any attempt to move silently.

## Silenced Armor

A special form of silenced elfin chain is available to the thief. Such armor has each individual link of chain armor wrapped in thin leather or light cloth binding. This to some extent "silences" the armor, at the cost of increasing its encumbrance by one-third above that of normal elfin chain. It is also fiendishly expensive, costing more than plate mail. Of course, it is even rarer than ordinary elfin chain itself. Finding a craftsman and persuading him to make such a suit of armor could be a challenging adventure in itself for a thief. The total profile for silenced elfin chain is shown in Table 28 below.

**Table 28:**
**SILENCED ARMOR (ELFIN CHAIN)**
**EFFECT ON SKILL**

| | |
|---|---|
| Pick Pockets | -25 |
| Open Locks | -5 |
| Find/Remove Traps | -5 |
| Move Silently | — |
| Hide in Shadows | -10 |
| Detect Noise | — |
| Climb Walls | -25 |
| Read Languages | — |

Bonuses for moving silently and hearing noise above those which apply for normal elfin chain are somewhat offset by penalties to picking pockets and climbing walls. Silenced elfin chain is particularly useful to a thief for whom subterfuge and sneaking around unobserved are very important, but who suspects that there is a high probability of combat at some stage during his mission!

## Strapping

A thief may use lengths of strapping—usually of stiff, hardened leather—to improve his chances of moving silently if these would otherwise be reduced by such factors as squeaky floorboards (but not otherwise). These straps will usually be 30 to 36 inches or so in length, and they help distribute the thief's weight over a wider area. Their use negates any negative modifier arising from squeaky floorboards, but the thief has to pick up the strips and move them before him as he walks along. This reduces his movement rate to only one-half of that which normally applies for attempting to move silently—i.e., one-sixth of normal walking move rate!

## Hiding in Shadows

As the *Player's Handbook* explains, this ability is not literally just the knack of hiding in areas of shadow while not moving. It also covers hiding in bushes, shrubs, behind drapes, in alcoves—anywhere where there is a chance of skulking about immobile in some location which offers cover and the hope of staying unseen. Considering appropriate equipment needs to be considered in this light.

### Camouflage Clothing

There may be exceptional variants on this—for example, if a thief knows that he needs to hide in shadows amongst the crimson curtains of a lady's boudoir he might use a crimson set of clothing. Apart from such singular special cases, there are two general types of camouflage clothing the thief will find useful in various situations.

**Darksuit**: This comprises black or very deep blue clothes, usually fairly voluminous robes or what might be termed a "utility suit." Such clothing will usually be lightweight so it can be carried about easily, and worn under normal clothing if needs be. It will always include significant facial covering. If such a suit is worn, it will add +5% to a hide in shadows chance in any area which is shadowy, has a light level equal to dusk or early dawn, or equivalent.

**Woodland Suit:** This has a similar basic design to a darksuit but is made of light clothing dyed in irregular patterns of greens and browns. It adds +5% to the hide in shadows chance when the thief attempts to conceal himself in any suitable outdoors setting such as woodland, a field, or the garden of a town house.

### Charcoal

Even wearing a darksuit, the glint of moonlight on a pallid white face can give a thief away. Blacking up the face (and neck) with charcoal adds a further 2% to the hide in shadows chance for concealment in shadows, dim light, etc. Burnt cork and soot are alternatives. The thief should not forget to blacken the backs of his hands either!

### Plant Dyes

Analogous to the use of charcoal in dim lighting, a thief can use plant dyes (crushed leaves, berries, certain oily barks, etc.) to disguise his exposed face and hands and add a further +2% to his hide in shadows chance in suitable outdoor settings. Such plant materials are usually rather sticky and smelly, however!

### Weaponblack

One common problem for the thief attempting to hide in shadows is the glint of a steel weapon in moonlight, torchlight, and the like. The way to avoid this is to use weaponblack, a thick, oil-based emulsion. Weaponblack can be coated on to any metal surface and renders it almost completely matte black and reflection-free. If the DM

wishes, use of weaponblack can give the thief a +5% bonus to hide in shadows. A superior rule, though, is that use of this substance saves the thief having to make a second hide in shadows roll if he draws a weapon while hiding, or saves him from any penalty modifier if he has a weapon already drawn when he attempts to hide in shadows initially.

Once the weapon has actually struck a blow, the weaponblack will be wiped off. Because it is oil-based, it is also highly flammable. If ignited it will burn brightly, turning the weapon into the equivalent of a *flametongue* (although it does not count as a magical weapon) for 1d4+1 rounds. if the thief is not protected from fire (e.g., with a *ring of fire resistance*) he suffers 1d4 points of damage per round while holding the weapon.

## Detecting Noise

### Listening Cones

The simplest versions of this item are cones of bronze or brass or some similar material, with the wide end placed against the surface through which the thief wishes to hear and the narrow end placed against his ear. Such listening cones add +5 to the chances for detecting noise. A generous DM may allow a thief to improvise such an item from the humble wine glass. As noted, with such a hollow cone it is wise to use mesh over the broad end to exclude ear seekers!

If such an item is used for a combination lock (listening for tumblers falling to assist the open locks roll), the thief may well need a special miniaturized cone to assist him. The proto-stethoscope may be born here . . .

## Climbing Walls

### Clawed Gloves and Shoes

Clawed gloves will be familiar to Oriental Adventures players as tiger's claws, but the DM may allow their availability in any fantasy campaign. Clawed overshoes, similar in design to clawed gloves, also existed and may be permitted (although they are a lot less common). The overshoes are slipped over the thief's normal footwear. The thief uses these clawed items for extra grip on small nooks and crannies of whatever surface he is climbing, so the bonus to the climb walls roll depends on the type of surface being climbed.

On very smooth surfaces where almost no nooks and crannies exist, clawed gloves and boots will not add anything to the climb walls chance for a thief. For smooth/cracked surfaces, clawed gloves add +5% to the climb walls chance, boots add +5% also, the two together add +10%. For any other type of surface, clawed gloves add +10%, clawed boots add +10%, and the combination adds +20% to the climb walls roll. Rates of movement are not altered.

The use of clawed gloves reduces silent movement rolls by -5%, the use of clawed boots by -10%, and the combination by -15%, if the thief is attempting to move silently during his climb (e.g., trying to evade detection by guards atop a parapet).

Clawed gloves can be used as a melee weapon—no weapon proficiency is required for their use. A successful hit inflicts 1 additional point of damage to that normally delivered by a fist blow. Clawed overshoes may similarly be used as a weapon, adding damage to a kick attack, if the DM allows such attack options in melee.

## Climbing Daggers

Daggers have been used to aid climbing by thieves for generations, so it is to be expected that a more specialized form has been developed for this task. Climbing daggers have relatively short blades (some 6 to 8 inches long) which are stiff, strong, flat, and very sharp. This allows the dagger to be inserted into wood or between bricks with greater ease than an ordinary dagger. They can be used in all surfaces other than very smooth ones. The handle is also flat and quite broad, and usually bound with leather strips or thick string to give the hands a good grip, or even to allow feet easy purchase when the dagger is used as a step. Also, in place of a normal pommel is a broad, smooth iron ring. This allows a rope to pass through, or it can be attached to one of the straps of a housebreaker's harness (see *Miscellaneous Equipment*, below).

Climbing daggers may add +10% to wall climbing chances at the DM's option, although their main use is with a housebreaker's harness. They may be used in combat, but because of their very different design from that of a normal dagger a separate weapon proficiency is required for their use and damage caused is but 1d3/1d2.

## Grapples

Grappling irons are relatively heavy iron tools, usually with three or four separate hooks branching from the end. The tool is attached to a length of rope for climbing. The hook is designed to be thrown and to catch on protrusions and thus support the rope and climber(s). The thief may throw the grappling iron vertically up to one-third his Strength score, rounded up and multiplied by 10 (in feet). Throwing a grapple takes one round; reeling in the rope and retrieving the iron for another attempt after a failure takes 1d4 rounds. The chance for success when throwing a grappling iron (a d100 roll is used) is shown in Table 29 below:

**Table 29: GRAPPLING SUCCESS**

| Grapple Target | Miss | Catch and Slip | Catch |
|---|---|---|---|
| Stone Parapet | 01-72 | 73-78 | 79-00 |
| Stone Wall Top | 01-83 | 84-89 | 90-00 |
| Tree Branches | 01-66 | 67-70 | 71-00 |
| Rocky Ledge | 01-88 | 89-93 | 94-00 |
| Wooden Wall | 01-70 | 71-74 | 75-00 |

The DM can adjudicate more uncommon instances from this table. A "catch and slip" result means that the grapple seems to have caught solidly, but will slip free after 1d6 rounds of supporting any load. If the thief pulls on a grapple for that many rounds he can dislodge the grapple, whereas a "catch" result means the grapple is securely fastened. If possible, thieves should test the grapple by pulling on it for six rounds before climbing!

Climbing a wall using a grappling hook and rope adds +40% to the normal climb walls chance.

**Noise:** Grapples make a moderately loud sound when they land. In conditions of near silence, a successful grapple landing can be heard as much as 400 yards away (depending on the size of the grapple, etc.); an unsuccessful throw (with the clang as the grapple lands on the ground) up to 800 yards away. Obviously, these are ideal instances and in most cases the effective range will be considerably lower. Whatever range is deemed appropriate by the DM, a padded grapple—one with sacking or some similarly heavy but coarse cloth covering almost all of the surface of the iron—will reduce it by half.

**Surprise!:** While this chapter is not concerned with counter-measures, one instance is irresistible: the cruel DM should be advised that shards of glass set into walls will sever the rope of a grappling line in 2d6 rounds. Broken glass is best set into the tops of walls, of course. A really brutal DM may allow a thief near the top of the wall a Dexterity check to avoid falling as the rope severs, success meaning that his hands are now impaled on savagely sharp wedges of glass which are coated in dust and filth, probably giving him blood poisoning if he lives long enough to worry about it.

## Special Function Arrows

Throwing grapples is by no means the most efficient way of attaching a rope to a wall, battlement or similar structure. Greater range is ensured by the use of arrows, and many special arrowheads have been developed to help the thief's chances with such operations.

Two distinct methods are used with special function arrows. The first is known as the one-rope method. The rope is simply affixed to the arrow, and when the arrow has found its mark the thief merely climbs directly up the rope. This method is simple, but the rope attached must be strong enough to bear the thief's weight, and this considerably reduces the effective range of the bow (and incurs penalties of -2 to hit and damage rolls if the arrow is used in combat for any reason). It also means that the bow shot, being less accurate and powerful, is less likely to provide a good purchase on the target.

The second method is the two-rope method. Here, a light string is threaded through a loop attached to the arrow, and both ends of the string are kept by the thief. The string is light enough not to affect the flight of the arrow. When the arrow has struck the target, a stout rope is attached to one end of the string and the string pulled through to play out the rope, thread it through the loop, and extend it fully in place of the string. This method is obviously more time consuming than the one-rope method; it takes one round to play out 20 feet of rope in this manner. Twice the length of rope is needed, of course, since the rope goes from the thief to the target and back. this method is more likely to obtain a firm fixing of the arrow into the target.

Either of these two methods can be used with any of the special function arrows below, with the single exception stated. Table 30 gives rules for their usage.

**Wood Biter:** This has a broad, flat head with backward-facing barbs. It is specifically designed to give a good grip when shot into wooden surfaces.

**Stone Biter:** The stone biter has a narrow, heavy head of metal, with small ridges rather than barbs. Careful craftsmanship is needed to produce these arrows, with high-quality metal being used and the arrow sharpened to the greatest possible extent. It is designed to give a grip when shot into stone, but will only work on relatively soft stone such as sandstone or brick.

**Stone Biter (Adamantine):** This is as the above arrow, save that adamantine is used in its manufacture. This makes the arrow capable of biting into all but the hardest stone surfaces, but also makes it **extremely expensive.**

**Minor Grapple:** This has a small, three-pointed grappling hook as its head, perhaps some 3 inches in total width. This is usually shot through a window, over a palisade, etc., in much the same way as a conventional grappling iron is thrown.

**Major Grapple:** The major grapple is a far more complex piece of apparatus than the minor grapple, and because of its method of use it can only be employed with the one-rope method (see above). The head of this arrow at first appears to be a fairly long arrowhead of normal width. Its true function is shown only when fired. The rope must be securely fixed at one end by the thief, and as the major grapple arrow closes in on its target and reaches as far as the rope will allow, the sudden tension pulls at the head of the arrow, which opens out into a large three-pointed grappling hook. This is some 6 to 8 inches in width, fully the equal of most ordinary grappling irons. The major grapple has better aerodynamics than the minor grapple and a better chance of gripping, but a considerably reduced range.

Table 30 shows modifiers to dice rolls on Table 29 made when using a special function arrow.

**Table 30:**
**SPECIAL FUNCTION ARROWS**

| **Arrow Type** | **Special Effects** |
|---|---|
| Wood Biter | +15 for Tree Branches and Wooden Walls |
| Stone Biter | +10 for Stone Parapet and Stone Wall Top, +5 to Wooden Wall |
| Stone Biter (Adamantine) | +20 for Stone Parapet and Stone Wall Top, +5 to Wooden Wall |
| Minor Grapple | +10 to Stone Parapet, Tree Branches; +5 to all others |
| Major Grapple | +15 to Stone Parapet, Tree Branches; +10 to Rocky Ledge, Wooden Wall; +5 to Stone Wall Top |

**Other Rules**

One-rope method: halve all bow ranges, -5 to all modifiers above save for major grapple.

## Spikes and Line

To be effective, climbing spikes need to be used together with a line. Hammering in a spike takes 1d4 rounds with a small hammer; spikes cannot usually be hammered into

very smooth surfaces (or they will not take, etc.), with the exception of an ice wall (where spikes offer the only hope of climbing safely). Hammering spikes into surfaces can usually be heard a long way away—even up to a mile in silent, windless, outdoor conditions.

Usually spikes are used as an insurance policy against falls—if a character hammers in a spike, ropes himself to it, climbs 20 feet above this with the rope tied to his waist, and falls he will only fall 40 feet (20 feet down to the spike and a further 20 feet taking up the slack of the rope). A spike used to arrest a fall in this way has a chance of coming loose, though! This chance is 10% per character supported on the climbing line (15% per character for ice wall ascension).

## Miscellaneous Equipment

Many more equipment items are detailed here, which may be used by thieves going about their business. Virtually none of these are restricted to usage by thieves only. as before, thieves are the most likely characters to use them or to know where to find those that are not legally available. The DM can determine which items may be available in his campaign, how PC thieves may become aware of them and the like, as with the previously described items.

The miscellaneous items have been grouped into various categories depending on their main application. This is sometimes just for convenience, and some items have several potential uses, so the list is worth perusing carefully. There is a final catchall miscellany, preceded by a section devoted to the several uses thieves can find for modified poles and staves!

## Burglary and Theft

### Crowbar

This is a simple all-purpose tool which can be used for forcing windows open, levering open chests with locks which refuse to be picked, and for similar purposes. At the DM's option, use of a crowbar adds +10 to any bend bars roll the thief has to make when trying to force open some portal. A crowbar is usually a metal rod 3 to 4 feet in length, with one end slightly crooked and often with a snake-tongue division in it. The DM may allow a thief to use a crowbar as a weapon, although a weapon proficiency slot would have to be used to avoid a non-proficiency penalty in its usage. Damage is d6+1 versus S/M creatures, d6 versus large opponents if the thief has proficiency. Otherwise, it inflicts damage as a club.

### Glass Cutter

This very simple instrument is usually a small diamond set into a suitable handle, or even one set into a ring. The diamond must be cut to a fine point, and if used in a ring a hinged top should be used to protect the gem. Such a tool will cut through glass fairly quickly. Attempting an entry through a window is always superior in principle to attempting to force a door, since windows cannot be as physically tough as doors and are less likely to be locked; but if they are locked, a glass cutter is highly useful.

The efficiency of this item is considerably increased if used together with Tar Paper (see below).

## Housebreaker's Harness

This is a vital piece of equipment for the serious cat-burglar or housebreaker. Known in thieves' cant as a "spider," it is made of linked leather straps, one around each thigh, one running around the waist, and one over each shoulder. The straps link together to form a tight harness, which can be worn over clothing or leather armor. Attached to the harness are up to eight or so more straps, of varying lengths up to 2 feet. At the ends of these straps are small metal rings, upon which many different devices can be affixed; tools can be hung, climbing daggers fixed, and suchlike. The principal uses of the harness are as follows:

(i) If the thief is climbing a wall using a rope, the rope can be run through one or more of the rings of the harness removing any chance of falling from letting go of the rope.

(ii) Once the thief has reached the point where he hopes to effect a break-in, two of the straps can be fixed to either side of him (usually with climbing daggers, or perhaps with wedges in a window frame, etc). This provides the thief with a firm base and allows him the free use of his hands to open a lock, cut glass, check for traps, and for similar actions.

Imaginative thieves will be able to think up many other uses for this handy and versatile piece of equipment.

## Keymaking Set

This expensive item allows a thief to make duplicates of keys he holds in his possession or from impressions of keys made using a wax pad (available as a separate item; see below). The keymaking set is a number of molds, files, small blades, metal-working instruments and the like. It also uses a small oil-burning apparatus for softening and molding metal, so its use is usually restricted to a safe, secure lair where the thief will not be disturbed. Duplicating a key takes 1d4 hours, depending on the size and intricacy of the original. A skeleton key (see below) cannot be duplicated with a keymaking set.

The keymaking set permits the manufacture of poor-to fair-quality soft-metal replicas of keys, which are rough in appearance and do not resemble the work of a professional. the duplicate key will open the same locks as the original if the thief makes a successful Dexterity test (the DM should roll this in secret). If the thief made his duplicate from a wax pad impression, there is a penalty of +2 to this dice roll. The thief always thinks his duplicate is a successful piece of workmanship, of course. Only when it is actually tried on the appropriate lock(s) will the thief find out for sure.

The keymaking set does not preempt the role of locksmiths or their skill. Professional locksmiths will duplicate keys with a 99% chance of success and have superior tools to the keymaking set described here. Each locksmith's set of tools are individually crafted and modified to suit the locksmith and are too complex for thieves who are not themselves locksmiths to employ.

## Limewood Strips

These are strips of wood, usually around 4 to 6 inches long and an inch or so high, and very thin. They are also very tough, however, being made of very resilient wood (like limewood, although other, similar woods can be used) and often coated on one or both sides with a very thin coat of toughening varnish. Limewood strips are slipped between a door and its door frame so that the thief can raise a latch on the other side of the door and open it normally (possibly after picking a lock). A normal latch can be opened, but a bar is too strong for a limewood strip to lift.

## Sharkskin

Sharkskin is made from thick cloth, into which are sewn hundreds of tiny curved and barbed hooks, rather like miniature fishing hooks. These hooks are very sharply curved, and are all sewn with the hooks lying in the same direction. Thus, when stroked in one direction the cloth feels perfectly smooth, but in the other it grips tightly and even tears skin or cloth. Sharkskin is so called, fairly obviously, because it resembles the skin of a shark, which is coated in hooked scales.

Sharkskin can be used as a form of hanging board; a square of the material affixed to a surface with hooks pointing downward can be used to keep tools and such in place. Items can simply be pressed down on the surface of the sharkskin, and they will effectively stick to it. This is most useful for a thief climbing a wall and has utility in other circumstances. Sharkskin-coated gloves can be used to assist in climbing walls, in which case they can be treated as clawed gloves (see above) in all respects.

## Skeleton Key

These were not considered earlier under the pick locks skill because the DM will almost certainly wish to restrict the availability of these items drastically, if they are allowed in the campaign world at all.

A skeleton key is one which is capable of opening many locks of several different types, in its most versatile form. The very best designs will open virtually any lock, but it is certain that the DM will not want any PC thief acquiring such an item! Rather, four ways of dealing with skeleton keys are suggested here.

First, any individual skeleton key may open locks of up to a certain complexity level. Skeleton keys may be of good, excellent, or superior quality (wretched and poor don't warrant them), and a skeleton key of any particular level of quality can open all locks with a quality the same as, or lower than, that of the skeleton key itself.

Second, a skeleton key can be treated as being equivalent to a thief of a certain level; this can be determined by the DM to suit the level of play in the campaign world. If a purely random determination is required, level 7-14 (6+d8) may be used. The open locks chance can be taken as 20%, plus 5% per thief level.

Third, a skeleton key can be treated as a "master key"—that is, it can open all the locks in some particular area (such as all the non-residential rooms in the east wing of the vampire's castle). In this instance it is really only a glorified substitute for a bunch of keys, although it saves time having just one key to use. A more interesting variant on this

theme is to have a skeleton key which can open all the locks commissioned from a particular locksmith (in the last few years, perhaps). If the locksmith was well thought of and often hired, there could be adventures built around just finding out which locations he had built the locks for, let alone going around opening them all!

Fourth, a skeleton key can be rated as a minor magical item, and removed from the realm of mundane equipment, if the DM wishes to restrict the availability of such a key without banishing it from game play. In this case, rating the key as equal in skill to a high-level thief and/or adding major bonuses to pick locks skill for locks up to masterful quality is the best way to use the key.

Finally, note that a skeleton key may open a particular lock, but it does not disarm any trap(s) attached to the lock or portal unless the original key would do so.

### Tar Paper

This is simply any kind of heavy paper or (more usually) cloth which has been soaked in tar, honey, treacle, or anything suitably sticky. The thief usually uses it by slapping it on a window before breaking the glass in a window-pane. The sticky surface keeps all the fragments together as the glass breaks. Noise is considerably reduced, both from cushioning the impact of a hammer on glass and by preventing broken glass from scattering all over the floor beyond the window. If there is someone within fairly close listening distance, the DM may make a secret move silently roll for the thief when using this stratagem.

Tar paper can also be used with a glass cutter (see above), being affixed to the center of the area of glass to be cut out, so that it can be simply pulled out when the cutter has done its work.

### Wax Pad

This is a small block of wax usually kept in a rigid container to keep it in one piece—the equivalent of a large snuff-box will do nicely. The thief uses the wax to record an impression of a key he wants to have duplicated later. Obviously, the thief can only do this if he has access to a key, at least for a short time, and if he doesn't wish to take a chance on borrowing the key for a while. From the wax impression, the thief can have a locksmith make a duplicate of the original key, or attempt to make one himself using a keymaking set, if he has one.

With very soft wax, which may need heat-softening on the spot, the thief may even be able to make a wax impression of such items as heavy seals, which may be capable of being duplicated later—but an expert will be needed for this kind of duplication/forgery!

### Evasions

Thieves often have reason to evade detection or pursuit. Some of their skills (hiding in shadows, moving silently) are tailored toward this end. Equipment detailed here includes further aids to evasion, items to assist in avoiding detection, and even an item or two to enable the thief to whistle innocently if he is found and apprehended at the scene of the crime.

## Aniseed

Aniseed is a simple plant-derived natural flavoring. A small quantity of aniseed extract can be used by a thief to ruin any effort to have dogs track his scent, if bloodhounds (or similar) are used by pursuers. Dropping a vial of aniseed down at a suitable place (e.g., by the bank of a stream the thief crosses, by the base of a wall he traverses, even at a crossroads) will ensure that the dogs' sense of smell is utterly ruined for 1d4+1 hours if they reach the spot where the aniseed has been dropped. A saving throw vs. poison will enable a trained dog to evade the aniseed to some extent, but the sense of smell is still lost for 1d4+1 turns. A spell such as *neutralize poison* or *slow poison* cast on an affected dog will eliminate the effect but the dog will still have to pick up the trail further along, somehow, to continue tracking. The effect of aniseed on any other kind of trained tracking animal is up to the DM, but aniseed should have a detrimental effect on almost anything's sense of smell.

## Caltrops

These actually come in different shapes and sizes, but the basic form is that of a metal ball with four to six spikes or prongs set into it. When a caltrop is thrown to the ground it always lands with one spike standing more or less upright. A thief may throw small caltrops to the ground to slow down pursuers. Caltrops cannot be used as missile weapons, however.

The effect of caltrops depends on how many are thrown down by the thief. The base number is 10 thrown down in an area of 25 square feet. Anyone entering the area must make a saving throw vs. paralyzation. A successful save means that the character has stepped on one, suffering 1d4 points of damage, and must halt movement. If half the number of caltrops is used (only five in a 25-foot area), the save is made at +4; for every extra five dropped in such an area, the save is made at an additional -2 (up to -6 in total). A character moving at less than one-third his normal movement rate doesn't need to make a save. A fresh saving throw must be made for each 5-foot section entered in which caltrops have been dropped.

If a pursuer steps on a caltrop, it must be removed before the pursuer can continue. This takes one round. Also, the pursuer must make a second save vs. paralyzation to see if he is temporarily lamed. If the save is made, pursuit can continue normally. If the save is failed, the pursuer can only move at one-third normal rate for 24 hours (or until the damage is magically healed).

An ingenious thief can even improvise caltrops—in one infamous instance, from a sack of potatoes found in the kitchen of a house being burgled and a small bag of nails carried by the thief in question. Modifiers to the saving throws of potential victims can be allowed for such improvised versions!

Note: For players and DMs with *Unearthed Arcana*, the rules above are based on the entry for tetsu-bishi in *Oriental Adventures*, which has somewhat superior rules to those in the *Unearthed Arcana* entry for caltrops.

## Catstink

Even the best-trained dog (watchdog or tracking dog) finds it impossible to avoid being distracted when there are cats about. This is exploited by the few alchemists who have the recipe for the manufacture of catstink. These few are well-paid by thieves' guilds for their work, blending various liquids obtained from diverse parts of cats with a few secret ingredients to produce a thick, foul-smelling, brown-yellow liquid, catstink.

Catstink is specifically blended to drive any dog to distraction, allowing the thief to get past watchdogs as they frantically try to locate the cat which they can smell so pungently. Dogs who can smell catstink will not do anything other than try to get at the source of the smell, no matter how highly trained. Spells (*slow*, *neutralize poison*) are only useful if the dog is wholly removed from the smell. Even then the effect of the spell will not be evident until one turn has elapsed and the dog returns to normal.

Catstink can also be used to delay dogs tracking a thief as he attempts to make an escape, in much the same way as aniseed is used, albeit much more effectively (and much more expensively). The smell of catstink can be picked up by dogs up to 200 yards away, or even as far as half a mile if they are downwind of it.

## Dog Pepper

This may be dropped on the floor, like aniseed, to put dogs off the scent when pursuing a thief. It is less effective than aniseed, however, the pursuing dog being allowed a saving throw vs. poison to avoid the effect of the dog pepper absolutely. If the save is failed, though, the dog is unable to continue pursuit for 1d4+1 turns.

Dog pepper may more usefully be scattered into the air, a small packet holding enough to fill a 10-foot cube. The pepper will hang in the air for 1d4 rounds after being flung into it. A dog entering the area during this time gets no saving throw to avoid the effect of the pepper. If dog pepper is thrown right into a dog's face, the unfortunate animal gets no saving throw and becomes hysterical for an hour, during which time it is totally uncontrollable.

## Hand Lamp

This is usually a small metal pot about the size of a night-light candle. It has a hinged flip-up lid with a mirror on the inside; a silver mirror is often used, so the item is not cheap. The mirror directs the light, and the lid also works as a snuffer when closed. The lamp provides enough light for the thief to work by (e.g., when trying to pick a lock in a dark place), while not shedding enough to give the thief away (hopefully). Certainly, the dim, focused light is unlikely to be visible at all further than some 20 feet from the thief, and even within this range it is very, very dim.

## Hollow Boots

These come in various forms, but a common design is one with swivelling heels. The heel of the boot is grasped and twisted firmly toward the inside surface. The heel swivels and reveals a small, hollow compartment within the boot. These compartments are very small, and will typically only hold one gem of moderate size or up to four small ones.

The design of the boot is such that there is not an externally visible built-up heel, but nonetheless a thief wearing these boots suffers a -5 penalty to any move silently rolls he has to make.

### Marbles

The use of these is an old chestnut, but perennially popular with thieves, not least because of their effectiveness. A small bag of marbles (a general term for small spheres of glass, metal, etc.) unleashed over a stone floor to roll around forces any pursuers to slow to half normal movement rate or be forced to make a Dexterity test. If this test is failed the pursuer slips up and has to spend a full round getting up again. Because marbles roll around a lot, a small bag (30 or so) will cover a 10' x 30' (or equivalent) area. Small stones and pebbles can only be substituted for marbles if they have been polished, filed, etc., so that they are almost perfectly round—a time-consuming business.

## Self-Protection and Combat

The equipment detailed here offers sneaky combat options for thieves, which any character with any real decency and sense of honor would usually eschew. Since by definition some of these items subvert normal combat options, the DM should feel free to modify and/or restrict the availability of items he feels unsuited to his campaign. the concealed weapons listed, at the least, should definitely be made available to thieves who are members of Assassins' Guilds.

### Blinding Powder

This is a general term for any powder which is highly abrasive, irritating to the eyes, and disabling to the victim as a result. Powdered stone, pepper, dust soaked in onion juice, and strong ammonium salts—blinding powder can be made from many ingredients.

Blinding powder is only useful if it is thrown right into the eyes of a victim. This counts as a called shot (*Dungeon Master's Guide*, p.58) with an additional (doubled) penalty, for a total of -8 on the attack roll. the Dexterity bonus of the person throwing the powder applies to the attack roll. Further, the base AC of the target ignores any armor or shield used, save for the use of a helmet or helm; magical protection such as *bracers of defense* or a *ring of protection* protect the target, as does Dexterity (unless the attack has an element of surprise).

If blinding powder strikes a victim the effects are the same as those of the *stinking cloud* spell save that they last for 2d4+2 rounds and no saving throw is allowed. If the victim can wash his eyes with plenty of water, the effect will only last for one round after the eyes are washed. Although blinding powder can contain some unpleasant ingredients, it has no permanently damaging effects on the eyes.

### Death Knife

This sinister instrument can appear to be a bladeless knife, but it is more often disguised as something more innocent such as a case for a comb or spectacles or quill

pen, a tool of some sort, etc. The disguise will not fool any close inspection, however. The blade of the knife is within a barrel inside the handle and is spring-loaded. The knife is triggered by pressing a catch on the handle; the blade shoots forward with considerable force. The weapon does the same damage as a normal dagger, although one point of damage is added for a first strike when the blade is triggered.

The obvious advantage of the death knife is its capacity for surprise. Since it doesn't look like a weapon until the blade is sprung, a victim can be taken totally off guard by its use. If the target does not realize a blow is coming and the thief manages to get the weapon close to the body of the victim so that a lunge can be made with it, any strike is treated as a backstab, with standard hit and damage bonuses, given the surprise element. A backstab is not always literally a stab in the back!

An envenomed death knife in the hands of a skilled assassin is an extremely dangerous weapon, and the DM may wish to rule that since the blade has to be concealed for some time before a strike there is a 25% (or higher) chance that the poison will have dripped from the blade before the assassin strikes with it.

### Folding Bow

Bows are very useful for thieves, but are very hard to conceal because of their size and shape. A folding bow solves this problem, dividing neatly in half when unstrung, making it a much more suitable size and allowing concealment—for example, in a thigh sheath. Only short bows have folding-bow equivalents.

The joint in the middle of the bow weakens it, however, reducing the effective ranges to S 4, M 8, L 13, and also making it -1 on damage rolls (but any hit causes at least one point of damage).

### Pin Ring

This simple weapon is a ring with a flip-up lid, below which is a needle capable of delivering a dose of poison (or knock-out drug, etc.) to the target. The most primitive version of this will have the pin simply sitting in a small reservoir of liquid drug or toxin. Since administration of the poison/drug is rather haphazard here, the victim receives a bonus of +2 to any saving throw against its effects. Subtler and more refined designs have a needle capable of drawing up liquid from a reservoir, so that only a normal saving throw (or even one with a -2 penalty) applies. The DM should decide which to allow in the campaign (both can exist at the same time, of course).

An attack with a pin ring is a called shot (with a -4 penalty to the attack roll) because it must strike exposed flesh—the pin will not administer poison through any significant thickness of clothing. A strike to the neck is the time-honored way of making sure the toxin gets into the bloodstream quickly. The DM may rule in unusual cases that no called shot is needed (e.g., the thief surprises a victim in his bath) or that the pin ring cannot be effective at all (e.g., the victim is clad from head to toe in field plate).

### Sword Stick

This is simply a long, slender, rapier-like blade concealed within what appears to be a

simple walking stick or cane. The long and thin blade requires a weapon proficiency slot to be used most effectively. Swashbucklers are particularly fond of this weapon. Damage done by the blade is as per a short sword. It takes one round to draw the blade from the sword stick and ready it for use. The main use of the weapon, obviously, is the possibility of smuggling it into places where weapons are not permitted.

It is highly doubtful whether anything like a sword stick existed in medieval times, but this weapon definitely adds some style and dash to a campaign. Since it does less damage than most swords (and requires a weapon proficiency) the DM should consider allowing it in his game.

### Wrist Sheath

This small leather sheath is made to hold a knife or dagger, and is strapped to the forearm (below the sleeve of a garment) so that the weapon can be flipped to the hand by an arm movement and the blade readied for action. A dexterous thief can work a blade into his hand by arm movements disguised in the context of changing posture while sitting in a chair, or similar, seemingly innocuous moves. Again, the obvious advantage is that of concealment.

Variants on this theme are drop sheaths, which are usually sewn into leather jackets or similar articles of clothing. Here, release of the dagger from the sheath can be triggered by mechanical means (pressing a jacket sleeve stud, etc.) or by muscular stimuli triggering pressure pads (tensing the biceps firmly against the fist of the other arm, etc.).

## The Joy of Sticks

This section details several uses for poles, staves, or stout sticks, many of which can obviously be improvised as and when necessary. PC thieves might, however, prefer suitably modified poles ready to hand in case of urgent need!

### Blade Pole

This is a substitute for a polearm, but is not used as a combat weapon. Rather, a small blade is wedged into one end of a pole, and this is used for cutting objects at a distance. The most notable use for the blade pole is in cutting trip wires (e.g., at a distance if the thief is unsure whether traps may be triggered).

### Climbing Pole

This has to be a stout, strong pole, 10 feet long or so, to be of any real use. It has notches cut into it at regular intervals (approximately every 2 feet) to enable the thief to climb using it. It must be set at a suitable angle against the wall, or else it cannot be employed. Thieves will not often have use for such an item, but it has its uses for dealing with very slippery or smooth surfaces, walls made with broken glass shards in the mortar, and similar unusual cases.

### Hooked Pole

A strong hook is set into the end of the pole, which has several uses. The first is to yank discovered trip wires, if this is what the thief wishes to do, although a blade pole is usually superior for dealing with such problems. The more common use, though, is to use the hook to catch on objects so they can be retrieved. Depending on the size of the hook, anything from a key ring or small jewelry casket (hooked through the catch) to a rich man's joint of beef can be purloined by the thief. At the DM's option, a skill check (a pick pockets roll) may be required for success. In medieval England, fishing through windows with hooked poles was so common that a subclass of thief who made a living in this way was commonly known and called "the hooker."

### Mirror Pole

This uses mirrors at both ends of the pole, set at a suitable angle so that the thief can peer, periscope-like, around corners using the instrument.

## Miscellany

### Blade Boots

This exotic title is a catchall for specially modified boots which have concealed blades within them. The blades have to be small, of course; they are usually little bigger than modern-day razor blades. They are usually concealed in secret compartments in the heels of boots (see Hollow Boots above), but slender blades can even be hidden in the soles of boots. Such blades are of little use as weapons, but can be used to slit pouches and purses, to cut ropes, and for similar tasks.

### False Scabbard

Thieves can employ stout scabbards which are slightly longer than the swords which fit into them, leaving a length of scabbard at the end which is a separate, hollow compartment. Usually, this can be accessed via a sliding panel at the end of the scabbard.

This hollow compartment can be used to conceal a great many kinds of things, either to smuggle them in (poisons, dog pepper, blinding powder, etc.) or smuggle them out (gems and such). Some are so well-designed that the compartment can be entered from above or below, so that the thief can use the false scabbard as a snorkel (or, more correctly, as an underwater breathing tube) if he has to stay concealed in the water for any reason.

### Hand Warming Lamp

This small lamp is oil-burning, with a reservoir of oil and a small wick sunk into an earthenware shell. It is used by the thief to warm his hands, by cupping them around it, if cold would otherwise impair his talents (try picking a lock with frozen fingers in a cold clime!). Virtually no light is produced, the aim simply being to warm the hands. The simplest version of this is a corked earthenware sphere which can be filled with hot oil before the thief sets off on his work, to be drawn from a pocket and held in the hands

when needed.

### Marked Cards and Biased Dice

These are standard trappings for any self-respecting swindler. There are no rules for gambling in AD&D® 2nd Edition, however, so the DM has two options. First, he can write his own. Second, the simple rule-of-thumb rules suggested here can be used.

If the Gaming proficiency is being used, use of suitably marked cards or biased dice allows a -1 modifier to the d20 check (remember that proficiencies work when low dice rolls are made).

If the game is actually being played out and the Gaming proficiency not used, then the thief PC is allowed (in effect) to replace any one card drawn or die thrown if he has the suitable prop and if a Dexterity test is made. Thus, if the PC is playing blackjack and has drawn a king and a five, the effect of using marked cards is simulated by allowing a redraw on one card, if the player wishes to do so (in this case, the five, in all likelihood). When rolling the Dexterity test, if the d20 roll is 18+ the thief has been seen cheating (even if he makes the Dexterity test successfully). For obvious reasons, the DM should roll this test in secret!

### Water Shoes

These belong most correctly in Kara-Tur, land of *Oriental Adventures* and ninja, but they could exist in any fantasy setting.

Water shoes are simply large, wickerwork basketlike devices which are worn over the feet (and come to mid-calf height). The thief balances in an upright position and propels himself across the water with a paddle or oar. The DM may insist on a move silently check at some stage. If anything happens to startle the thief (such as an arrow whizzing past his head or some monster rising up in the water), a Dexterity test may be called for to avoid falling over into the water.

## Cost and Availability of Equipment

In Table 31 below, the cost, weight, and legality of equipment items are listed. These are listed in the same order they appear in the preceding text. A few don't appear; there are no prices for the poles (which can be rigged up from equipment listed in the *Player's Handbook* anyway), for example. Cost and weight are as per the *Player's Handbook* format and clothing items have weights listed for them but are also denoted by the letter "C." They add nothing to encumbrance if worn normally.

Legality of the items is important. Items are listed as L (legal; freely available on the open market), S (shady; available in more liberal countries and in dodgy back-street shops under the counter), and I (illegal; from a thieves' guild only). Some items get a split classification, e.g., "L/S." This may be because they are borderline, or because they are legal for some narrow, specific occupational usage only (and there may be restrictions on their sale).

Finally, items marked with two asterisks (**) may be hard to obtain even if not illegal, for various reasons. They may need rare craftsmen to make, basic ingredients may

be hard to find (e.g., black dragon acid!), and such. The item description should make clear why an availability problem may exist. The DM should determine availability rather than using a random roll.

**Table 31:**
**PURCHASING THIEF EQUIPMENT**

| Item | Legality | Cost | Weight |
|---|---|---|---|
| Arm Sling | L | 3 cp | |
| Mini-Blade | L | 5 cp | * |
| Razor Ring (iron) | S/I | 2 gp | * |
| Razor Ring (silver) | S/I | 10 gp | * |
| Thieves Pick | I | 30 gp | 1 |
| Acid, Metaleating, 1 vial** | L | 50 gp | |
| (Lock) Chisels, set of 3 | L | 2 gp | 1 |
| Hacksaw (equivalent) | L | 3 gp | 1 |
| Hacksaw Blade | L | 6 sp | * |
| Metal File | L | 5 sp | |
| Wire Cutters | L/S | 1 gp | |
| Funnel, small | L | 3 cp | |
| Footpad's Boots | I | 8 gp | 3 C |
| Silenced Armor** | S | 750 gp+ | 50 |
| Leather straps (pair) | L | 3 sp | 1 |
| Darksuit | S | 30 gp | 5 |
| Woodland Suit | L/S | 35 gp | 5 |
| Charcoal, bundle | L | 2 cp | |
| Weaponblack (vial) | S | 2 gp | |
| Listening Cone (brass) | L | 2 gp | |
| Clawed Gloves** | I | 20 gp | 1 C |
| Clawed Overshoes | I | 15 gp | 1 C |
| Climbing Dagger | L | 5 gp | 1 |
| Grappling Iron | L | 3 gp | 2 |
| Arrow, wood biter | L | 8 sp | * |
| Arrow, stone biter | L | 1 gp | * |
| Arrow, stone biter, adamantine | L | 7 gp | * |
| Arrow, minor grapple | L/S | 6 gp | |
| Arrow, major grapple | L/S | 10 gp | 1 |
| Climbing Spikes, iron (10) | L | 5 sp | 4 |
| Crowbar | L | 6 sp | 4 |
| Glass-cutter (handled) | L/I | 120 gp | 1 |
| Housebreaker's Harness** | I | 25 gp | 2 |
| Keymaking Set | I | 60 gp | 6 |
| Limewood (as bark strips, 10) | L | 3 cp | * |
| Sharkskin (per sq. ft.) | L/S | 12 gp | 1 |
| Skeleton Key | I | var. | |

| | | | |
|---|---|---|---|
| Wax, block | L | 3 cp | |
| Aniseed, vial | L | 2 sp | * |
| Caltrops (10) | L/S | 3 gp | 1 |
| Catstink, vial** | S/I | 40 gp | |
| Dog Pepper, packet | S | 1 sp | * |
| Hand Lamp (with silvered mirror) | L/S | 10 gp | 1 |
| Hollow Boots | I | 15 gp | 3 C |
| Marbles, bag (30) | L | 2 cp | |
| Blinding Powder | var. | var. | * |
| Death Knife** | S/I | 12 gp | 1 |

| Pin Ring (silver) | S/I | 10 gp | * |
| Sword Stick** | L/S | 25 gp | 4 |
| Wrist Sheath | S | 3 sp | |
| Blade Boots | I | 15 gp | 3 C |
| False Scabbard** | L/S | 12 gp | 1-2 |
| Hand-Warming Lamp | L | 2 sp | |
| Marked Cards, Deck** | I | 5 gp | |
| Biased Dice, bone, box of 4 | I | 5 gp | |
| Biased Dice, ivory, box of 4 | I | 20 gp | |
| Water Shoes, pair | S/I | 5 gp | 1 |

## Magical Items for Thieves

When possible, the DM should select the magical items he will give out in his campaign. Sometimes, though, a fast and random selection may be needed. In this case, if the DM rolls 99 or 00 on Table 88 of the *Dungeon Master's Guide* (p. 135), he should not roll for a magical weapon, but make a simple d20 roll on Table 32 below.

The items shown in the later tables fall into three categories:

(i) Items restricted to use by thieves only. These are indicated by (T) following the title of the item in the tables.

(ii) Items which do not have to be restricted to thieves only, but which have more than one effect, with at least some of their effects being of value for thieves alone. That is, thieves will benefit far more from these items than other characters. These are indicated by (T*) following the title of the item in the tables. The DM may well wish to rule that these items can only be used by thieves in his campaign.

(iii) Items which can be used by nonthieves as well as thieves, but which are clearly important for such typical thief activities as spying, stealing, snooping, sneaking and such.

As a general note, most of the items in this section are of relatively low power. This should allow DMs to introduce one or two such items into even a fairly low-magic campaign with no fear of upsetting game balance.

**Table 32:**

**MAGICAL ITEMS FOR THIEVES**
**d20**

| Roll | Category | Table |
|---|---|---|
| 1-7 | Potions and oils | 33 |
| 8-11 | Miscellaneous Magic: Clothing and Jewelry | 34 |
| 12-15 | Miscellaneous Magic:Other Sneaky Stuff | 35 |
| 16-19 | Weapons | 36 |
| 20 | Special (see below) | |

For each of the later tables 33 through 36, a simple d6 roll is used to determine the nature of the item found. None of these later tables has any subtables to worry about.

## Detection Resistance

Many of the items listed below were designed to enable the thief to avoid detection, to prevent his ill-gotten gains from being discovered, and such. Clearly, the avoidance of detection by simple low-level magical spells is highly important to many thieves. As a consequence, some of the thief magical items are enchanted with detection resistance, requiring any spellcaster using a divination spell (such as *detect magic, detect invisibility* in appropriate cases, etc.) effectively to overcome 50% magic resistance so far as the detection goes. It also protects the thief against discovery by creatures able to detect invisible (allow a flat 50% chance of automatic nondetection in cases where such creatures have no spellcaster level). This detection resistance does not give the thief any general magic resistance, of course!

"XP Value" entries are experience point awards which apply for making the item. An entry of "U" means that the item is unique and cannot readily be magically made, since the original was made by unknown means.

**Table 33: POTIONS AND OILS**

| d6 Roll | Item | XP Value |
|---|---|---|
| 1 | *Essence of Darkness* (T*) | 300 |
| 2 | *Oil of Slickness* (T) | 350 |
| 3 | *Master Thievery* (T) | 500 |
| 4 | *Perception* (T*) | 300 |
| 5 | *Sleep Breathing* | 250 |
| 6 | *Thievery* (T) | 350 |

**Table 34:**
**MISCELLANEOUS MAGIC:**
**CLOTHING AND JEWELRY**

| d6 Roll | Item | XP Value |
|---|---|---|
| 1 | *Amulet of Dramatic Death* (T) | U |
| 2 | *Boots of Balance* (T*) | 1,000 |
| 3 | *Gloves of Evasion* (T*) | 1,000 |

| | | |
|---|---|---|
| 4 | *Mantle of the Mundane* (T*) | 1,500 |
| 5 | *Robe of Vanishing* (T) | 2,000 |
| 6 | *Shadowcloak* (T*) | 3,000 |

| 5 | *Scabbard of Poison* | 500 |
| 6 | *Shortsword of Backstabbing* (T*) | 700 |

## Description of Magical Items

### Potions and Oils

**Essence of Darkness:** This pure black oily fluid must be kept in tough, light-proof containers, since it is destroyed after one turn in bright sunlight or one hour exposed to daylight. Essence of darkness is pure, concentrated, liquefied darkness itself. It can be used in a number of ways:

(i) When a dose is swallowed it makes the imbiber's entire body, including hair, teeth, and even the whites of the eyes, pure matte black in color. This can enhance a thief's chance of hiding in shadows as shown below.

(ii) Similarly, if one dose is diluted in a gallon or so of warm water, the essence creates a powerful black dye. A gallon of this diluted form can be used to dye clothes and even armor and weapons; one gallon of the dye is sufficient to treat the clothes and equipment of one character. The dye takes one turn to mix and soak into the items and one turn to dry. This process also affects the chances for successful hiding in shadows.

| | |
|---|---|
| Body only (wearing normal clothes) | +5% |
| Body only (wearing no clothes) | +25% |
| Clothes only | +20% |
| Both body and clothes | +40% |

These bonuses only apply when the thief is trying to hide in darkened areas, obviously; that is, to "traditional" hiding in shadows. Detection resistance operates on a thief using essence of darkness to hide in this way.

(iii) *Essence of darkness* is unstable and if a vial is struck by a crushing blow it will explode into darkness 15' radius. A single dose of the magical essence will create a darkness 5' radius if so struck. This property has been exploited by making small glass or ceramic globes filled with the liquid which are then thrown forcefully onto hard surfaces to create "darkness bombs." At the DM's option, a thief who has ingested the essence or applied it to his clothing might similarly become the center of a darkness 5' radius effect if struck a severe blow (50% of remaining hit points, with a 12 hit point minimum for the effect to operate) with a blunt weapon.

The effects of *essence of darkness* last for six hours plus 1d6 turns, if used externally; if ingested, it has the same duration as a standard potion. Each bottle or vial of the essence found usually contains sufficient fluid for 1d4+4 doses.

**Oil of Slickness:** The consistency of this magical substance is variable; sometimes it is found as a small vial of very viscous oil, sometimes as a pot of thin, creamy white salve. It is applied by rubbing into the skin of the hands (taking one round). When rubbed in, it improves the speed and coordination of the hands so that all manually-based thieving skills (pick pockets, open locks, find/remove traps) are improved by 10%. A vial or pot of this oil (or salve) usually contains 1d4+4 applications. The effect lasts for 1d4+4 turns. The bonuses to the ability scores cannot be claimed by any thief who is wearing gauntlets or gloves of any kind, including magical ones!

**Potion of Master Thievery:** This potion gives the thief a temporary increase in levels if he has fewer than 13 levels of experience. The number of levels gained depend on the thief's level, as shown below.

| **Level of Imbiber** | **Levels bestowed** | **Added hit dice** | **Increase in each skill** |
|---|---|---|---|
| 1st-3rd | 5 | 5d6 | +20% |
| 4th-6th | 4 | 4d6+1 | +16% |
| 7th-9th | 3 | 3d6+2 | +12% |
| 10th-12th | 2 | 2d6+3 | +8% |

The thief acts as if he were at the experience level bestowed by the magic of the potion. Damage sustained is taken first from magically gained temporary extra hit points. So far as thieving skills are concerned, the potion affects these all equally by the increase shown. The effects of this potion last for 5d6 rounds.

**Potion of Perception:** This enhances the senses of the imbiber to a great degree, with numerous effects:

(i) A thief gains a 10% bonus to his open locks and remove traps skills.

(ii) A thief gains a 20% bonus to his find traps and hear noise skills.

(iii) A character's chance for being surprised is halved (usually this means a +1 or +2 on the die).

(iv) A character's chance for detecting secret or concealed doors is doubled. This may also be applied to detecting hidden or concealed objects if the DM wishes to use an Intelligence check for this; a bonus of +4 applies to such an ability check. A corresponding bonus of -4 applies to any observation proficiency check.

(v) A character has a 25% chance of automatically detecting invisible or detecting illusions (from spells or spell-like effects below 5th level) as such.

However, this enhancement also makes the imbiber vulnerable to gaze attacks and weapons and also sound-based attacks (such as a *shout* spell or the roaring of an androsphinx) and all saving throws made against such attacks are at -2. The effects of the potion last for 1d4+4 turns.

**Potion of Sleep Breathing:** This potion allows the imbiber to breathe a colorless, odorless cloud of sleep-inducing gas up to three times within an hour after drinking it. This cloud is effectively a 20' x 20' x 20' cube. Within the cloud, creatures are affected as if struck by a *sleep* spell, the effects of which are exactly duplicated by the cloud. If the thief does not breathe out a cloud in this way within an hour after drinking the potion, he must save versus spells or fall into a deep, comatose sleep himself for 1d4+4 turns. This potion is obviously of great value for the thief in dealing with numbers of low-level and peripheral guards when he is trespassing, breaking and entering, etc.

**Potion of Thievery:** Similar to, but weaker than, the *potion of master thievery*, this potion also grants the thief drinking it temporary increases in levels, hit dice, and skills, if he is of 9th or lower level prior to drinking it, as shown below.

| Level of Imbiber | Levels bestowed | Added hit dice | Increase in each skill |
|---|---|---|---|
| 1st-3rd | 3 | 3d6 | +12% |
| 4th-6th | 2 | 2d6+1 | +8% |
| 7th-9th | 1 | 1d6+2 | +4% |

As with the *potion of master thievery*, the individual acts in all respects as a thief of the higher level gained after drinking the potion, with the increase in thieving skills being equally spread across all categories by the bonus shown. Damage sustained is taken from additional temporary hit points gained first. The effects of the potion last for 1d4+4 turns.

## Miscellaneous Magic: Clothing and Jewelry

**Amulet of Dramatic Death:** Only a few of these prized items exist, each created for a high-level thief in the service of two powerful spellcasters, a mage and an illusionist, who combined their skills to create them. There are six amulets known, which differ in only one respect; all have the following common properties.

The amulet is activated when the wearer suffers one particular attack form (and only that attack form) which would be sufficient to kill or wholly disable the wearer (e.g., by *petrification*). At this point the magic of the amulet is activated. Damage sustained from

the killing attack is wholly negated, and a special attack (such as *petrification*) likewise negated. The thief is at once made invisible. Lastly, a powerful programmed illusion is brought into operation so that the amulet-wearer appears to have been slain or disabled by the attack. This programmed illusion is both complete and dramatic—e.g., an amulet protecting against magical fire will show the victim of *fireball* attack as a burned corpse, complete with the smell of roasted flesh. Only direct, tactile checks or a powerful *divination* spell will reveal the illusion for what it is. The amulet will function only once per day. Roll 1d6 on the table below to determine the single attack form which is protected against by the amulet.

| **d6 Roll** | **Specific Protection** |
|---|---|
| 1 | Magical fire (including red dragon breath, etc.) |
| 2 | Lightning and Electrical attacks |
| 3 | Cold-based attacks |
| 4 | Petrification |
| 5 | Edged Weapons |
| 6 | Blunt Weapons |

**Boots of Balance:** The wearer of these soft, low-heeled supple leather boots is endowed with a magically enhanced sense of balance. This has the following important effects:

(i) A thief wearing the boots gains a +10% bonus to all move silently rolls and also to all climb walls rolls.

(ii) The Dexterity of any character wearing the boots is increased by one point for all purposes where the hands are not involved. Thus, a thief cannot claim a bonus to skills such as open locks, but a bonus to Armor Class may apply, and likewise a bonus applies to Dexterity checks in certain situations (e.g., to avoid a fall).

(iii) The wearer gains the tightrope walking proficiency; if this is already possessed, a -4 bonus modifier applies to all proficiency check die rolls when wearing the boots.

A wearer of *boots of balance* cannot also claim a further bonus for moving silently from mundane aids (such as the use of leather strapping to cross creaky floorboards). Also, the bonuses gained from *boots of balance* cannot be added to the bonus gained if the wearer also uses *gauntlets of dexterity.*

**Gloves of Evasion:** These gloves are made of exceptionally supple, thin calfskin, and when put on they blend with the skin and become virtually undetectable (and are detection resistant). A thief wearing them gains a +10% bonus to open locks skill and can undo almost any knot automatically in one round. Any character wearing the gloves gains a proficiency in escapology, being able to manipulate his hands in such a way that he can escape from manacles, chains, irons or similar restraints if a Dexterity check (with a +2 bonus if the character is a thief) is made.

**Mantle of the Mundane:** This very ordinary, even shabby, brown or grey cloak makes its wearer appear utterly unmemorable. It gives a 5% bonus to hide in shadows in all circumstances and makes the wearer 80% undetectable if in a crowd (detection resistance applies here also). It also makes the wearer almost impossible to recognize after having been seen—very useful in avoiding identification after a crime. Unless a

witness (and it must be an eye witness) makes a check against one-fourth of his Intelligence the wearer of the mantle will have appeared so mundane and boring in appearance that the witness will be unable to relate him to the thief (regardless of whether the thief is wearing the mantle the next time the witness sees him).

**Robe of Vanishing:** This simple and innocent-looking robe is a boon for a thief needing to elude pursuers quickly. The thief only needs to grasp the hems of the robe and clutch it very tightly about him and he will simply seem to vanish, although the thief will just have been affected as per a *rope trick* spell (no rope is visible, of course) and also made invisible. detection resistance applies to the extradimensional space created. The *rope trick* effect will last for up to six turns but the invisibility created is of the normal sort (permanent until some offensive action is undertaken). Wise thieves will make sure that other magical aids to escape (notably a *potion of flying*) are on hand to maximize the value of this robe. The robe can be used up to three times per day to create its magical effects.

**Shadowcloak:** This large, cowled cloak is made from pure black velvet. When worn by a thief it improves hide in shadows chances by 25% and makes a thief 50% likely to be invisible in near-darkness (even to infravision, ultravision, etc.). It can also be used to cast *darkness, darkness 15' radius*, and *continual darkness* once each per day (at 12th level of magic use). Finally, once per day the wearer can actually transform into a shadow (cf. *Monstrous Compendium I*) for up to 12 turns, becoming a shadow in all respects save for mental ones (thus, the wearer cannot be damaged by nonmagical weapons, undead take the wearer for a shadow and ignore him, etc.). Saves against light-based attacks (e.g., a *light* spell cast into the eyes) are always made at -2 by the wearer of a *shadowcloak*.

If a cleric successfully makes a turning attempt against the wearer in shadowform, the cloak wearer is permitted a saving throw (this is at -4 if the cleric is actually able to damn/destroy shadows). If the save fails, the wearer suffers 1d6 points of damage per level of the cleric and the *shadowcloak* is destroyed. If the save is made, the character takes half damage and must flee in fear from the cleric at maximum rate for one turn.

## Miscellaneous Magic: Other Sneaky Stuff

**Bag of Vanishing:** This appears to be a simple pouch capable of carrying some 2-3 lbs. or so. In fact, it operates as a bag of holding capable of carrying up to 50 lbs. weight while having an encumbrance of only 3 lbs. Further, the *bag of vanishing* can have its drawstrings tugged tightly once per day and it will simply disappear for six turns; the equivalent of a rope trick spell will operate on the bag (although it will stay with its owner) and it will also have detection resistance operating upon it.

This bag is invaluable for smuggling, as should be obvious. The only problem is that each time the rope trick function is used there is a 5% chance that the contents will vanish into the Ethereal Plane and the bag will be empty when it is checked later.

**Boxes of Delightful Transports:** These wooden boxes are 6-inch cubes, and come in identical pairs (often decorated with great attention to detail). When a nonliving object of

suitable size is placed in one and the lid closed and a command word spoken, the object will disappear, only to reappear (effectively teleported) in the matching box. This function operates up to three times per day.

While *boxes of delightful transports* are obviously very useful, they have certain limitations. It is not possible for the object-teleport to cross any planar barriers. And, while the distance between the boxes is not important in affecting the teleport range, there is always a 5% chance that the object dispatched will not reach its destination, instead appearing at some random location 10d10 miles away. Thus, dispatch of valuables is not recommended. The boxes are more often used to send messages, which can always be sent in duplicate (which gives very high chances for at least one successful dispatch).

The major limitation on use of these boxes, though, is that no enchanted object can be teleported using them. Even the placing of a simple *Nystul's Magic Aura* spell on an object will prevent its being teleported using these boxes. Hence, magical items such as rings, potions, amulets and other such things, small enough to fit into one of these boxes, cannot be teleported to a distant location.

**Dust of Trail Dispersion:** A generous pinch of this magical dust, when scattered over the beginning or origin of a trail (such as at the bottom of a wall surrounding a house the thief has burgled, at the point he reaches the ground) will prevent its being followed by all normal sensory means (rangers, bloodhounds, etc.). The dust is usually found in a small box, or packets, with one "find" usually being sufficient for 1d4+4 uses.

**Lens of Remote Viewing:** These small, clear gems (the term "lens" is a slight misnomer here) appear to be worthless quartz, but in fact possess a powerful dweomer. If the owner attunes himself to a *lens of remote viewing* (a process which takes four hours of meditation), he can then "see" through the lens whatever scene is happening in front of the lens and within its field of vision, wherever the lens may later be. There is no range limit, save that no perception across the planes is possible. No auditory information is detected through the lens, and no spells can be cast through it. A *lens of remote viewing* is also detection resistant. At any one time, any thief may be attuned with a number of such lenses not exceeding one-half his Intelligence score (round fractions down). These items are usually found singly, and are of obvious value in spying.

**Lens of Valuation:** This highly-prized item consists of a lens some 3 inches in diameter with a handle some 6 inches long. The lens allows the viewer to estimate the true worth of any nonmagical object to within 5%, on studying it for five rounds or longer. Of course, this will be an average price, and special conditions of supply or demand may make this valuation wildly inaccurate.

Merchants usually go to considerable lengths to prevent any *lens of valuation* from being used on their goods! In the thieving community, it is most sought-after by fences, who can widen their operations in a major way if they possess this item.

**Tallin's Tightrope:** This modified *rope of climbing* will only snake forward at an angle of up to 45 degrees upward or downward, but it also enables its owner and up to five man-sized or smaller creatures touched by its owner to walk upon it as if they had the

tightrope walking proficiency, with a +4 bonus to any proficiency checks required. Anyone not touched by the rope owner attempting to walk on it will suffer a -4 penalty to any saves or checks made while on the rope. In all other ways, this item is identical to a normal *rope of climbing*.

## Weapons

**Crossbow of Angling:** This appears to be a quite normal light crossbow, although it has a thick wrist strap attached which is of unusual design and toughness. On command it can fire bolts with special properties up to three times per day. The magical bolt fired counts as a *+2 bolt* for determination of attack rolls (and damage if appropriate). When fired, this special bolt is trailed by a pencil-thin snaking line of faint blue light (which radiates magic fairly strongly) which connects it to the crossbow. When the bolt impacts, the head expands into a small claw which embeds itself in the target, such that the bolt grips it strongly. By the use of a second command word the crossbow user can "reel in" the target, the thin "cord" of magical energy shrinking to drag the target to the archer.

The speed at which the target is retrieved depends on its weight, friction, etc.; the maximum speed is 60 feet per round. The DM may need to exercise his judgement in most cases. If the target is heavier than the archer or is immovable or braced in some way, then the crossbowman may actually be dragged to the target rather than the reverse applying. This can be exploited, of course, to pull a thief up to a ceiling or up a wall. The magical cord is AC -2 and takes 15 points of damage (nonmagical weapons do no damage) to destroy.

**Dagger of Impaling:** These daggers are +2 to hit and damage, and on a natural roll of 20 (and also of 19 if this is sufficient to score a hit) on a backstab attack they impale the target, inflicting an additional 1d4+2/1d3+2 points of damage and also staying in the wound, where they cause an additional 1d4+2/1d3+2 points of damage each round until removed.

**Dagger of Resource:** These daggers usually have handles of ebony or ivory, or some similarly valuable and exotic substance, and have 1d3+1 small studs in the cross guards. The dagger has attack and damage bonuses, but it also has additional tools located within it, and depressing one of the studs will cause the corresponding item to spring from the hilt of the dagger, ready for use (only one tool at a time can be used). These bonuses and tools depend on the number of studs in the weapon, as shown below:

| **No. of studs** | **Hit/ damage bonus** | **Tools avail.** | **Description of tools** |
|---|---|---|---|
| 2 | +4 | 2 | Lock picks adding +5% to Open Locks rolls, plus tool for removing stones from horses hooves' |
| 3 | +3 | 3 | As above, plus *Lens of Detection* (see DMG p.173) |

| | | | |
|---|---|---|---|
| 4 | +2 | 4 | As above, plus *Gem of Brightness* with 3d10 charges |

**Dagger of Sounding:** This oddly-designed dagger is +1 for attack and damage determination, but it has a peculiar, hollow bronze bulb at the end of its pommel. If this is gently tapped against a hollow surface, it gives a resounding ring quite different from the dull tone emitted if struck against solid stone. Tapping it gently against walls allows the thief a 5 in 6 chance for finding a secret door, rising to 11 in 12 if the thief is elven or half-elven. Also, the thief can search for secret doors at twice the normal rate when using this dagger. In other cases, the thief is 80% likely to be able to determine successfully the approximate thickness and nature of the material the dagger is used to sound.

**Scabbard of Poison:** These scabbards have reservoirs in which poison can be stored, and when a blade is placed in the scabbard and then drawn, the venom will automatically and magically be drawn from the reservoir to coat the blade. The venom will be wiped from the blade after one successful hit on a target, or evaporate after 2d4 rounds in any event. Any venom can be used, for the dweomer gives the venom virulence against whatever creature is struck. The scabbard holds enough poison for six doses, but must be manually refilled when empty. 25% of these scabbards are the right size for long swords, 25% suitable for short swords, and 50% for daggers. All restrictions which apply to the use of poison weapons apply here, of course, and only evil characters would routinely use such a device.

**Short sword of Backstabbing:** In the hands of any character this is a +2 magical weapon, but in the hands of a thief it is especially potent. When a thief makes a backstab attempt with this short sword, it allows him to attack as if four levels higher than his actual experience level, with corresponding improvements in THAC0, attack rolls, and damage multiplier on a successful hit.

## Special Results

If the DM rolls a "Special" result from Table 32, then a unique item should be developed for the thief. This takes careful work by the DM to design the item, and also to determine a suitable history for it. Multi-property items in the listings above (such as the *potion of perception, boots of balance, amulet of dramatic death,* etc.) can be taken as inspirations. A specially-designed item should have several functions, none of exceptional strength, and with an emphasis on protection and nondetection rather than strong offensive potential.

A history for the item is well worth the effort. One obvious possibility is that someone, sometime, will come to try and get the item back! Certain NPCs may be hunting the previous wearer/user of the item, and while they do not have a description of the previous user they know what the item looks like. Perhaps they have been hired to do away with that previous user. So, when they see it on the person of the PC . . . The history of the item can have great potential for adventure locked within it, which the DM doesn't need to exploit immediately. Also, the player whose character gets the item should not be told the history of the item; that's something he will have to find out for

himself and, again, there may be adventures locked within this search. This is especially true if command words are needed to activate certain properties.

Don't make too much of such items, or other players may feel their characters are being put in the shade and overshadowed by all the attention the thief is getting. But a unique item, something the thief knows he is the only person on Oerth (or Krynn or in the Forgotten Realms) to have, adds color and character to any adventuring party!

# Chapter 6: The Arts of Deception: Classic Cons

*The old rogue slurped his ale noisily, complaining to the bartender, "The thieves these days, they've lost the art of it all. Like a bloody bunch of bandit half-orcs: Their idea of an elegant theft is a rich victim bashed neatly on the head, so his fancy clothes don't get scuffed so much and can be fenced more dear." The young bartender raised his eyebrows, a little wary but curious about what the wizened old coot had to say. "Now, in my day, the thief we all looked up to was one whose only weapons were his wits and a steady, speedy hand. It would be hours before his victim even knew'd he was robbed, and then he couldn't be sure who done it.*

*"There was this one guy, Willie—Cool Willie, they called him, 'cause he never lost his cool. He know'd ALL the scams . . . "*

Since day one, there have been people eager to get a free ride, to swindle others out of anything they can. These people, it has been observed, are typically the best targets for the swindler. After all, how likely are you to report a con man, when the reason he succeeded was that you thought you were taking advantage of him? Playing off other peoples' greed is the key to a successful swindling career, on whatever scale it is performed.

An astute swindler is always on the lookout for opportunities for a good racket. Some of these situations and scams have been nearly immortalized, and are classics: Not only does it seem everyone knows them, but everyone still uses them—and they still work. An excellent book filled with real-life anecdotes of classic cons is *The Compleat Swindler*, by Ralph Hancock with Henry Chafetz (New York: Macmillan, 1968).

What follows is a sampling of scams for the novice pigeon plucker.

## Short-Change Swindles

On the simple level, you have the short-change swindle. This is something you do to merchants—or merchants do to you! Through fast-talk, distraction and sleight-of-hand, you trick them into giving you as change more money than you paid them.

The story at the end of this chapter illustrates the short-change swindle.

## Gambling

Gambling is a finer racket. Gambling is irresistible to many people, and the swindler loves to take advantage of this weakness. Every sort of gambling—dice, coin-matching, the shell game, races and gladiatorial contests (the fantasy equivalent of modern organized sports)—presents an opportunity for the swindler to make a load of silver. A

swindler needs gambling proficiency to work any of the following scams, and any other character who makes a gambling proficiency check will probably be wise to the swindler's tricks.

**Dice Games:** Dice-throwing developed in ancient times, and has remained popular since (even into RPGs). An astute gambler understands the odds of winning in any dice game, such as craps, and a skilled swindler knows how to rig the game in his favor. Loaded dice (with imperceptibly rounded faces, or weighted pips, and so forth) are one way, but the true master can even throw dice so that they will land as he wishes. To do this trick, a swindler must make a successful pick pockets roll, at -40%, for each die.

**Coin Matching:** Coin matching is a simple, age-old game, appearing in various forms since the days of the pharaohs, and is simple to run a scam around.

The favorite variation for two swindlers working a sucker is "odd man wins"; Three coins are tossed, or revealed simultaneously (like the rock-paper-scissors game). If two are heads or tails, and the other is the opposite, the holder of the odd coin wins. If all three are the same, no one wins.

To set this up as a scam, there should be two swindlers. One plays the steerer, gaining the confidence of the pigeon, while the other pretends to be a foolish stranger. The steerer conspires with the real target, ostensibly to swindle the money of the stranger, his true partner. In the course of the game, the steerer winds up with all the money.

Of course, he's not able simply to share it with the pigeon, since they've supposedly just pulled a fast one on the foolish stranger. They have instead agreed beforehand to meet somewhere and share the spoils. Of course, the steerer never shows up to share and the would-be con artist is left penniless. Furthermore, since he was duped on account of his own greed, trying to do what was done to him, he'll probably swallow his chagrin and never report the incident to the local authorities!

**The Shell Game:** The shell game is another age-old classic. The swindler sets up at some event, like a circus, fair, or even a busy street corner. He has a single pea and three shells, which he rearranges. It is a test of observation, he says: Anyone who can identify which shell covers the pea, after they've been shifted around, will win whatever he bet. If he guesses wrong, he loses his money.

Someone takes on the challenge, and wins! Of course, this is an accomplice of the shell man (known as a "capper"). The crowd thinks the swindler is playing honestly. Then a real target places his bet. He, too, will win. The swindler will nurse the target's self-confidence to raise the stakes, and then (mysteriously!) the victim's powers of observation will decline, and he'll fail to spot the right shell! This of course is done through sleight-of-hand. (To do it unnoticed, the thief needs to make a successful pick pockets roll.)

## Quackery

Quackery is the realm of the mountebank, the seller of "snake oil" and all manner of exotic potions, unguents and charms, each supposed to be a medical wonder, but usually worthless (if not actually dangerous to its user). Even in a world where magic is real, quacks can make brisk profits from those who cannot tell a real potion from fake.

## Forgery and Counterfeiting

Forgery may also be a swindler's calling, including counterfeiting. Interestingly, forgery was not a serious crime in the middle ages; barter took precedence above coinage or credit notes, and it's hard to counterfeit a bushel of wheat or forge livestock.

As the Renaissance came, however, and banking developed, so did the forger's art—and the punishments became serious. As late as the first half of the 19th century in England, men and women were hanged for the crime of forging one-pound notes.

The value of forgery, therefore, and the risks involved, will depend on the nature of commerce and trade in your campaign.

## Jewelry Swindles

For the well-trained rogue, jewelry swindles can be both the most lucrative and the easiest, because it is so difficult for the untrained eye to identify or to judge the value of a precious stone. Besides dealing in paste and glass fakes, jewelry swindlers may pass off a lesser stone as something more valuable (e.g., quartz for diamond), or pay someone (especially naive but treasure-laden adventurers) for a diamond as if it were quartz. A nimble-fingered rogue may also replace fake jewels for real ones, and the owner may never know the difference!

Sly NPC jewel swindlers are a great way for DMs to relieve characters lacking gem cutting proficiency of their cash and jewels (provided they don't spew out at the start, "The dragon's treasure includes 12 opals at 1,000 gp each").

*"How much d'I owe ya?" asked the old rogue, upon finishing ale and tale.*

*"Four coppers," said the bartender.*

*The rogue fished in his pockets. "Hmm," he said. "All I have is this gold piece. Have ya got change?"*

*"Believe I do," said the bartender, taking the gold coin and putting out an electrum coin, four silvers, and six coppers in change.*

*"Say, why don't you get me a slab of cheese for the road?" asked the rogue, sliding over two coppers for it.*

*While the bartender retrieved the cheese from beneath the counter, the rogue opened his pouch to put the remaining coppers inside. "Well look here! Guess I had a silver after all!" he declared. He moved his hand toward the others, palming his new-found silver and hiding the electrum beneath the other coins, while appearing just to set the new silver coin with the rest. "Say," he tells the bartender. "I'd be hatin' to take all yer change like that. Why dontcha gimme an electrum for these five silvers?"*

*"Sure," said the bartender, handing him an electrum. The old rogue turned toward the door. "Wait!" said the bartender. "Ye left an electrum coin here with the silver!"*

*"So I did! Thank you. Honesty's a difficult quality to find these days! Well, to keep you with enough change, why don't I just give you this silver"—he then produced the coin he had palmed—"and you give me back the gold piece?"*

*"All right," said the bartender. "Have a nice day, then!"*

*As he walked down the street from the tavern, five silvers richer, the old rogue permitted himself a grin and a little skip of delight. All these years, and Cool Willie hadn't lost his touch.*

## Robbing the Robbers

Thieves as a class are people who enjoy toeing the line, when it comes to risk-taking. Some renegade thieves take it a step further, often a step too far, and dare to steal from other thieves, or even thieves' guilds.

It's dangerous activity, but it does have certain advantages. Foremost, the guilds and thieves can't very well report thefts to the authorities (assuming they don't control those authorities through bribes or blackmail).

And, of course, authorities permit the theft of stolen items when its purpose is recovery, to return the goods to the original owner, as bounty hunters do.

Sanction and some degree of protection might also be gained from a rival guild. Mob wars provide many opportunities for the daring thief, willing to run around in the crossfire, scoring loot. The trick is not to be identified as stealing from the wrong people (i.e., the guild that wins in the end).

Perhaps the biggest advantage of all, and the reason that thieves will brave the risks, is the enormous wealth that can be concentrated in the hands of a single criminal, especially an important officer of the guild.

But there's no shortage of risks. First off, intelligent thieves understand themselves and, by extension, other thieves. Each thief needs to be a troubleshooter, in a way, designing protection for himself and his possessions, and making sure that it's proof at least against any thief of his skill or less. This means that in stealing from another thief, you can expect a fairly difficult job.

Sometimes, however, a thief may be surprisingly flippant about not protecting his wealth. The people who can get away with this are incredibly powerful crime lords, with vast wealth and myriad connections. They have the resources to find anyone who dares to steal from them and deliver a fitting punishment. Among such punishments, a simple assassination is very mild and humane.

Understand that the underworld is often harsher on thieves than the established authorities. The underworld does not presume innocence; and sweet revenge is more important to a wronged crime lord (and his ego and ruthless reputation) than the recovery of any but the most precious property.

# Chapter 7: New Rules for Thieves

This section introduces rules of advanced complexity that players and DMs may wish to use in the campaign. While they are recommended for use in a gaming environment where thieves are common, they are not exclusively limited to the thief character.

As an exception to this generality, those optional rules that modify specific thief activities are, of course, useable only by thieves.

New rules are provided for lock and trap construction, removal, and modification; for specific animal training, tricks common and useful to thieves; to amplify the poison rules presented in the AD&D® 2nd Edition *Dungeon Master's Guide*; to allow thieves to possibly knock out a victim with a surprise blow from the rear; and to detail the encumbrance effects when armored characters attempt to perform acrobatics.

# Advanced Locks and Traps

The game works perfectly well under the assumption that a lock is a lock, regardless of its make or mechanism. Traps generally earn greater detail ("a poison needle flicks out of the panel beside the lock," for example), but even so, the actual workings of the device are not usually described.

However, locks and traps are in fact found in great variety, and while many might provide little challenge to the skilled thief, some will prove daunting even to the most experienced veteran. A device can be listed with a modifier of + or - up to 30%, reflecting the ease or difficulty with which a thief might pick the lock or find and remove a trap. The modifier is applied to the thief's chance of success with the obstacle; a –30 lock, for example, lowers the thief's chances of picking it by 30%. If his normal percentage is 65%, then his chance with this lock is only 35%.

## Describing Types

The more detail the DM can provide regarding the obstacle facing the thief, the greater the player's options in facing it.

Locks can include simple latches, keyhole locks with a single or multiple tumblers, puzzles that involve performing several procedures in a set sequence (pushing a stone, turning a handle, and pulling outward, for example).

Traps have many more varieties. Generally a moving part, such as a cage, block, blade, needle, sluice gate, or trapdoor, is triggered by the act of a character—a step on a surface, or a pull on a handle, for example.

A good trap design will include at least some vague description of how the two elements are connected. Levers, springs (both leaf and coil), pivots, bellows, deadweights, block and tackle, and hinges are all elements used in trap design.

## Modifying Checks

The major considerations for determining the difficulty of a trap are the skill of the locksmith or trap maker, the materials used for the job, and the purpose of the lock or trap. Some examples for locks are listed:

| | |
|---|---|
| +15% | Typical latch on small house, guest room of an inn, storage closet, etc. |
| 0 | Lock on a merchant's house, weapons locker, wine cellar of a large inn, etc. |
| –15% | Door to a cell or keep, security checkpoint within a dungeon, lock on a gem cutter's shop or moneychanger's house. |
| -30% | Lock on a major vault or most intricately designed cell door |

These guidelines should be used by the DM to establish a variety of challenges in the campaign setting. The many varieties of traps are too great to list, but the same principle of modification applies.

The new equipment listed in Chapter 5 includes a variety of aids for just such delicate work. By utilizing greater detail in the description of a lock or trap, more opportunities

for the use of this equipment will arise.

## Building Better Locks

A character with locksmith proficiency can try to build a superior lock, but only if the proper materials are available. In most cases this means an iron or steel lock, though special considerations can be adjudicated by the DM. The locksmith must make a proficiency check for the lock. A roll of 1 or less indicates a lock of superior craftsmanship. Subtract 1 from the die roll for every proficiency slot *beyond the first* spent on the locksmith skill. For example, a craftsman with three slots of locksmith skill creates a superior lock on a roll of 1, 2, or 3.

The modification for such a specific lock is determined by rolling 1d10, resulting in a 1-10% modifier. Each improved lock will be at least as good as the one before it, however, so re-roll results that are lower than the modifier for a previous lock made by that same smith. When the locksmith makes locks with a 10% modifier, he is allowed to roll 2d10. When he reaches 20%, he receives 3d10, but is no longer guaranteed to beat his previous high roll. He does get to roll 3d10 until he gets a result of 20 or greater, however.

For example, a locksmith builds a superior lock and rolls a 7% modifier. On his next superior lock, he rolls and discards a 6, 3, and 5, before rolling a 10. He keeps the 10, since that is the first roll to equal or beat his previous high of 7. On his next superior lock, he rolls 2d10, using the first adjusted roll of 10 or higher. If he eventually gets a 20, he rolls 3d10 until he gets a result of 20 or greater. All his subsequent superior locks, then, will gain at least 20% modifiers, with the occasional one perhaps as high as 30%.

## Multiple Locks

A simpler way to make a room or chest more secure against thieves is simply to protect it with more than one lock. Iron-bound chests with two or three built-in locks were not uncommon in rich treasure vaults. Certainly a powerful and suspicious wizard would not entrust his spellbooks to a cabinet with only a single lock.

## Lockpicking/Trap Removing Noise

A thief attempting to open a lock or remove a trap with complete stealth can try to do so. He suffers a -10% chance to his ability rating, but will perform the task quietly on any roll except 01-10%. In the latter case the lock or trap makes a sharp click, snap, or other sound, audible to anyone within earshot.

If a thief fails a silent attempt, he cannot try to open the same lock normally.

## Animal Assistants

A thief with an exceptional ability at animal handling and training can sometimes train creatures to assist him in his profession. This section discusses three possible creature assistants: dogs, ferrets, and monkeys. Other types can be used given the

approval of the DM; develop and define the abilities of the animal using these three as examples.

All animal training acts described below are useable with the standard proficiency rules. The main additions are specific tasks that can be learned by these creatures.

When an animal learns one of the specific tasks below, its chance of performing the task are determined by the proficiency of its trainer. The proficiency check required of the animal is the same as for its trainer. For example, a ferret is trained to fetch gems by a character with three slots of animal handling proficiency and a Wisdom of 15. He needs a proficiency check of 17 or less to train the ferret for the task. The ferret, consequently, needs a roll of 17 or less to fetch the gems properly.

Players should record the stats for animals on the PC character sheet. List the tasks each animal has been trained for, recording this proficiency number beside the notation.

At the DM's option, some animals may have such exceptional intelligence, or strength, or speed, that their ratings are granted a +1 or, rarely, a +2 modifier to specific tasks.

Dogs can serve primarily as protectors, requiring little training before they become alert and aggressive watchdogs.

Dogs can also be trained to track a character or other animal. The dog requires some scent information about the object being tracked and a general location of the trail. A proficiency check is made to find the trail. Another check must be made every 1-4 turns, and also whenever the trail takes an unusual turn (through water, along tree limbs, etc). Dogs specially bred for this (including many hounds) gain a +1 or +2 to this particular ability.

Dogs can sometimes be trained to perform the "Thief's Fetch" trick, below. Generally, small and nimble dogs are used for this task.

Ferrets can fit through openings as narrow as 2", and thus have an ability to go places other animals cannot. Ferrets can be taught the "Thief's Fetch" trick to acquire gems, coins, or other small objects.

Monkeys are the most adaptable of these animals. A monkey can be trained to be selective in its fetching. Gateways, high windows, and other obstacles can easily be traversed by a monkey. A monkey will fight to defend itself if cornered or seized.

Monkey: AC 7; MV 12(9 climbing); HD1/2; THAC0 20; Dmg 1-4

## The Thief's Fetch

Animals can be trained to retrieve specific types of items from a general area such as a room or yard. Specific objects include coins, gems, jewelry such as chains or bracelets, or even items of food and drink. Additional training sessions can train the animal to perform its task with stealth.

The animal can be sent by gesture in a specific direction. It will seek for some time in the area indicated, finally returning to its master. Generally, the animal will spend 1d8 turns on the search. However, additional training sessions can add another 1d8 turns to this duration.

If an animal is discovered or frightened during this task, it will attempt to flee to its master. It can be trained to flee in a different direction, or even to attack, if a good trainer takes the time to do so.

## Poison and Sedatives

The DMG provides detailed rules on poison types and effects. The following rules add several types of non-lethal poisons, introduce poison gases, and describe some poison antidotes.

Sedatives are ingested poisons that disable, rather than injure, a character. A sedative can be administered in food or drink, with different rates and effects:

| Method | Onset | Weakness | Duration |
|---|---|---|---|
| Eaten | 4-40 min. | 1-6 min. | 2-12 hours |
| Drunk | 2-12 min. | 1-6 min. | 1-4 hours |

Sedatives are treated as regular poisons, except that their first effect is a period of weakness when all ability scores and the character's movement rate are reduced to half. This lasts 1d6 rounds, after which the character saves vs. poison. Failure renders him unconscious. Success means that the weakness lasts for another hour. The character then saves each hour, with the weakness remaining until a successful save is made.

Poison Gases are rare, expensive, and highly dangerous. A typical dose is a clay or glass jar weighing 5 pounds. If the jar is shattered or opened, gas fills a 10' x 10' x 10' cube. It disperses after one round unless contained on all sides. The gas lasts for 2d6 turns in an enclosed room; 2d6 rounds in a room with at least one open door, window, arrow slit, etc.

It might be possible for creative players to create larger doses of poison gas, but such lethal devices are left to the DM's discretion.

Poison gases generally have the effects of poison type D, taking effect after one or two minutes, inflicting 30 points of damage (2d6 with a successful save). The damage is inflicted each turn the character breathes the gas.

An extremely lethal poison gas is reputed to exist, similar to poison type J (onset in 1d4 minutes, causes *death* or 20 points of damage with save).

Unlike injected or ingested poisons, however, poison gas does not remain in a character's system after death. Thus, attempts to raise characters who have perished this way do not have to contend with the venom in the character's system.

## Poison Antidotes (Optional Rule)

In AD&D® 2nd Edition rules, a character with healing proficiency is able to aid poisoned individuals. This is described in Chapter Five of the *Player's Handbook*. We reproduce those rules here with additional options, including ones for those campaigns that are not using nonweapon proficiency rules.

### Campaigns without Nonweapon Proficiencies

Treat rangers, characters with forester secondary skills, and thieves with the kits assassin, bounty hunter, and scout as having herbalism proficiency; treat clerics and paladins as having healing proficiency; and treat druids as having both.

## Healing Proficiency and Poison

The basic healing proficiency rules for poison, from the *Player's Handbook*, are as follows.

A character with healing proficiency can attempt to aid a poisoned individual, provided the poison entered through a wound. If the poisoned character can be tended immediately (the round after the character is poisoned) and the care continues for the next five rounds, the victim gains a +2 to his saving throw (delay his saving throw until the last round of tending). No proficiency check is required, but the poisoned character must be tended to immediately (normally by sacrificing any other action by the proficient character) and cannot do anything himself. If the care and rest are interrupted, the poisoned character must immediately roll a normal saving throw for the poison. This result is unalterable by normal means (i.e., more healing doesn't help). Only characters with both healing and herbalism proficiencies can attempt the same treatment for poisons the victim has swallowed or touched (the character uses his healing to diagnose the poison and his herbalist knowledge to prepare a purgative.)

Note that these rules concern antidotes only obliquely, through the herbalism proficiency in instances of ingestive and contact poisoning.

## Antidote Effects

Antidotes can be manufactured for most poisons. To use an antidote you must match it with its poison (see the assassin kit), or just administer an antidote and hope that by chance it is the right one. (The DM may permit the existence of some antidotes that counter more than one poison, e.g., both types A and B injected.) An antidote will take effect if administered immediately or at least before the toxin's onset time. It then either negates the poison entirely (if the poisoned character made his saving throw in the first place) or reduces its effect to saving throw level.

## Producing Antidotes

Most of the time an antidote has not been prepared in advance, and a character with herbalism proficiency will attempt to produce an antidote from scratch.

Doing this presupposes an assortment of herbs, mosses, and such necessary materials, already selected and close at hand (e.g., gathered, dried and stored in a pouch). If the herbalist needs to gather the materials as well (and there are materials around to be gathered—not the case in most dungeons), at least half an hour is required to do so. When materials are available, putting together and administering an antidote takes 1d6+4 (5-10) minutes.

If time for gathering materials and making the antidote turns out to be greater than the poison's onset time, the efforts are in vain. If not, a proficiency check must be made to

determine the antidote's success or failure. The check suffers a -10 penalty if the poison has not been identified. If the check is successful, the antidote takes effect.

For example, the assassin Therius is adventuring with his companion, Orlene, when she is struck by a poisoned blade. The opponent is swiftly dispatched and Therius turns his attention to her wound. Orlene, meanwhile, has failed her saving throw. The DM knows that the poison is Type O, injected, with an onset time of 20 minutes; he notes this information secretly. One minute has already gone to finishing combat. If the poison is not successfully treated, Orlene will be left paralyzed for nine hours.

Therius is a 7th level thief (assassin kit) with herbalism proficiency and Intelligence 14; he does have a kit of useful herbs with him just for such emergencies as this.

He first sets out to identify the poison. His base chance is 35% (7th level) + 5% (Int 14) = 40%. This is his chance of learning from Orlene's symptoms. He rolls a 48 on percentile dice and fails. His next attempt is by sight, examining the slain opponent's blade, with a 20% chance of success. This also fails. Concerned about time (three minutes have already ticked by), Therius puts a dab on his tongue. He needs to roll 35 or lower . . . and gets a 26! He spits out the poison, recognizing it as type O. The DM doesn't bother to see if the poison affects Therius, since a paralytic poison at half strength would have no effect.

Therius works to produce an antidote with the materials in his pouch. This takes him six minutes. He then makes a proficiency check, needing a 12 or lower (because herbalism has a -2 modifier—see *Player's Handbook*, Chapter Five) for success. He rolls a 13—failure! Nine minutes have ticked by. He hurriedly attempts again to concoct the antidote. This time it takes a full 10 minutes . . . Therius rolls a 9 this time, however, so he succeeds just in the nick of time.

The antidote totally halts the paralytic poison, since that is what the result of a successful saving throw would have been.

## Mugging—the Thief's KO

A thief can attempt to knock out a victim under certain circumstances by striking from behind with a blunt instrument. In order to be eligible for a mugging attack, a target must be eligible for a *backstab*, as explained in Chapter Three of the *Player's Handbook*. In addition to all restrictions governing a backstab, a thief cannot mug a victim more than twice as tall as the thief.

The eligible thief character simply makes a mugging attack instead of a normal backstab. The thief gains his +4 backstab bonus and the victim loses shield and Dexterity bonuses. If helmets are detailed in the campaign, the victim has AC 10 unless the head is protected.

If the thief scores a hit, the victim must make a saving throw versus petrification or fall unconscious for 2d8 rounds. Modify the saving throw by the difference in level or hit dice between the mugger and the victim.

For example, Pwill the thief (T9) sneaks up behind the ogre sentry (4 HD). Pwill's blow is successful, so the ogre saves as a level 4 warrior. Normally he would save on a 12 or better, but the difference in Pwill's level (9) and the ogre's HD (4) modifies his necessary save to 17. However, the DM rolls a 19 for the ogre, so Pwill's attempt only makes the sentry mad. And loud.

## Armor and Acrobatic Proficiencies

This system of modifiers for armor other than the usual leather may be used for non-thief characters as well as those thieves who may be found wearing heavier protection.

Elfin chain mail is light and thin and can be worn under normal clothing. All other types of armor except simple leather are stiff or bulky, and can only be covered by a full body cloak.

**Jumping:** For an acrobat wearing armor and attempting a jumping maneuver other than pole vaulting, compute the height or length of the jump as described in the Player's Handbook, Chapter Five. Then adjust this distance according to the armor of the character, as shown on Table 37. Should the resulting total be less than zero, the character fails the acrobatic feat entirely (probably by tripping and landing flat on his face).

Pole vaulting is a different matter. To successfully get off the ground in armor bulkier than leather requires a proficiency check, adjusted, as indicated on Table 37, according to the pole vaulter's armor. In addition, a pole vaulter with armor heavier or bulkier than studded or padded can vault no higher than the height of the pole.

**Tightrope Walking:** Adjustments listed on Table 37 indicate the penalties associated with each sort of armor if it is worn while tightrope walking. The DM should also take into account how heavy the character and all his armor, weapons and equipment are, and whether the rope or beam or other surface on which the character walks is capable of supporting such weight.

**Tumbling:** Defensive and offensive tumbling maneuvers are limited by the use of armor. As the *Player's Handbook* states (Chapter Five), a character with tumbling proficiency can improve his armor class by 4 against attacks directed solely at him in any round of combat, provided he has the initiative and forgoes all attacks that round. The row "Tumbling—Defensive" on Table 37 indicates what AC bonus, if any, the character can get when he is wearing various sorts of armor. When in unarmed combat, a character with tumbling proficiency is also normally able to improve his attack roll by 2. The bonus, if any, that the character has when in armor is shown in the row "Tumbling—Attack."

The third function of tumbling proficiency is the ability to avoid falling damage. If the character makes a successful proficiency check, he takes only half damage from falls of 60 feet or less, and none from falls of 10 feet or less. Modifiers to this proficiency check are listed in the row "Tumbling—Falling."

**Table 37:**
**EFFECTS OF ARMOR ON ACROBATIC PROFICIENCIES**

| Skill | No Armor | Elfin Chain | Studded orPadded | Hide | Ring or Chain | Brigandine or Splint | Scale or Banded | Plate Mail | Plate Armor |
|---|---|---|---|---|---|---|---|---|---|
| Broad jump, Running | +1' | — | -1/2' | -3' | -5' | -7' | -10' | -15' | -20' |
| High jump, Running | +1' | -1/2' | -1' | -2' | -4' | -8' | -10' | -20' | -18' |
| Broad jump, | | | | | | | | | |

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Standing | +1/2' | — | -1/2' | -2' | -3' | -4' | -5' | -7' | -10' |
| High jump, Standing | +1/4' | — | -1/2' | -1' | -2' | -21/2' | -2 1/2' | -3' | -3' |
| Pole vaulting | — | -1' | -1' | -3' | -5' | -8' | -10' | -12' | -15' |
| Tightrope Walking | — | -1 | -1 | -3 | -5 | -6 | -8 | -10 | -12 |
| Tumbling | | | | | | | | | |
| Defensive | +4 | +4 | +3 | +1 | +2 | +1 | 0 | 0 | 0 |
| Attack | +2 | +2 | +2 | 0 | +1 | +1 | 0 | 0 | 0 |
| Falling | — | -1 | — | -3 | -5 | -6 | -8 | -10 | -12 |

General Notes: Leather armor is taken to be the standard, with no positive or negative adjustment to thief skills. No dexterity bonuses apply to thief functions (though penalties do) when wearing armor other than simple leather.

1. This category applies when wearing *bracers of defense* or a cloak, but no large protective devices.
2. Includes bronze plate mail.
3. Encompasses both field plate and full plate armor.
4. (Table 38) Assumes that armor worn is covered by another garment. Elfin chain mail is light and thin, and can be worn under normal clothing. All other types of armor except simple leather are stiff or bulky, and can only be covered by a full body cloak.

## Armor and Thief Skills

Rogues traditionally wear no more than leather armor, since garb any more bulky greatly hinders the traditional abilities of thieves. The *Player's Handbook* notes the benefits or penalties of wearing no armor, elfin chain, and studded or padded leather armor, since these options are also available to thieves. In some instances thieves will be found wearing still other sorts of armor. Multi-classed demihumans and dual-classed humans, for instance, may have fighter or cleric as one of their classes, and may therefore be permitted any sort of armor whatsoever.

Thieves using the disguise proficiency also should be permitted to wear armor not normally used by their class, to aid the deception. (Otherwise it becomes obvious that anyone in leather armor who refuses to don chain mail must be an assassin or spy.)

For this reason we offer expanded rules to cover the effects of the heavier and bulkier armor types on thieves' skills. Table 38 lists the adjustments accorded to each armor type.

**Table 38:**
**EFFECTS OF ARMOR ON THIEF SKILLS**

| Skill | No Armor | Elfin Chain | Studded or Padded | Hide | Ring or Chain | Brigandine or Splint | Scale or Banded | Plate Mail | Plate Armor |
|---|---|---|---|---|---|---|---|---|---|
| Pick Pockets | +5% | - 20% | -30% | -60% | -40% | -40% | -50% | -75% | -95% |
| Open Lock | — | -5% | -10% | -50% | -15% | -15 | -20% | -40% | -80% |
| Find/Remove Traps | — | -5% | -10% | -50% | -15% | -25% | -20% | -40% | -80% |
| Move Silently | +10% | -10% | -20% | -30% | -40% | -40% | -60% | -80% | -95% |

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Hide in Shadows | +5% | -10% | -20% | -20% | -30% | -30% | -50% | -75% | -95% |
| Hear Noise | — | -5% | -10% | -10% | -20% | -25% | -30% | -50% | -70% |
| Climb Walls | +10% | -20% | -30% | -60% | -40% | -50% | -90% | -95% | -95% |
| Read Languages | — | — | — | — | — | — | — | — | — |

Notes 1-4: See Table 37.

No skill can have a chance of success (including all adjustments) greater than 95%. However, a character can always have a 1% chance of success, even when trying to pick pockets in full plate armor.

Option: Some DMs may permit thieves to wear any available armor. For most thieves, however (especially at low levels), it isn't worthwhile to wear bulkier armor because the penalties cripple thiefly skills. A rogue could favor bulk anyway, but DMs should emphasize (a) if the player wants a fighting machine he should play a fighter, (b) the thief can't gain experience and increase skill in thieving abilities that he doesn't use.

# Chapter 8: The Thief Campaign

*Terrak, the Master, looked through the hazy air of the hideout. The acrid scent of charcoal smoke mingled with the sweat dripping freely from his assembled thieves. Indeed, the air in the attic remained always fetid, for even on a cool night such as this they dared not open any passage to the outside. So precarious was their position in the city, so firm was the Black Duke's grip on the populace, that any hint of their presence here would bring swift and brutal reprisal.*

*For the hundredth time, Terrak examined the members of his small band. They were brave men and women, and he trusted them all. They were bound to him not by any bonds of love—though he knew they respected him—but instead by a common, flaming hatred. He wondered, again, if such a ragged assemblage could actually be a threat to one as mighty as the Duke. But then he sighed, knowing they had no choice.*

*Straight across from him, Terrak saw Ardina, the weaver. The old woman practiced her trade skillfully during the day, and none suspected that her bottles of dye, or her carefully wrapped bundles of cloth, were used to smuggle the gains of the band around the city, and even to locations beyond the high wall. Even now the band gathered in the attic of her shop, since she had risked her cover and her life to provide them this temporary hideout.*

*Wistfully, Terrak remembered the guildhall, built with the profits of his long labors, and even the sweat of his own brow. The building had contained secret passages, hidden compartments, deadly traps, and easily defensible combat stations. But it had all gone up in smoke when the Black Duke's enforcers had attacked. Terrak's eyes misted as he thought of Serana, his beautiful, young Serana, calling to him with her last words before the flames had taken her, had taken so many of them.*

*But the Master Thief hardened his mind and his plans. Indeed, it had been those same precautions, the secret doors and the hidden compartments, that had allowed this small remnant of his band to escape. Now they gathered here, dry kindling awaiting the spark that would ignite the flames of their revenge.*

*Terrak turned to an old man beside him. "And so, Rorden, the Duke's treasury awaits us now?"*

*The man nodded his balding head. Terrak reminded himself that the man was not as old as he looked. The Duke, however, had seized Rorden's wife for use as a concubine many years earlier. By threatening her with death, the ruler had forced the talented Rorden to keep his books and provide him with information. Now, the Duke's threat to claim the man's daughter for a similar fate had finally driven Rorden to fight against his brutal lord.*

*"Indeed, Master." Rorden spread a piece of parchment on the floor. "You see here the layout of the Duke's mansion. I have marked the secret passage to the vault, though I could not gain the key to the lock. I am sorry, but the Duke keeps it on a key around his neck."*

*Terrak waved away the man's apology. Once they found the lock, he knew Xeno could open it. Indeed, the lockpicker even now instinctively flexed his fingers and licked his lips. Xeno, too, had lost his woman in the Duke's raid. Terrak knew he would perform with skill on this night.*

*"And the painting?" asked Terrak, carefully watching the other members of his band. He saw Rocko flex unconsciously, grasping the stump of his right arm with his left hand. Rocko had lost his hand as a mere boy, when the Duke's watchmen had caught him stealing bacon in the marketplace. Rocko was brave, but not terribly bright. He, of all of them, had expressed the most misgivings about the plan to steal the piece of art along with the Duke's treasury of gems.*

*"Remember, the Duke is ruled by his vanity above all else," Terrak reminded them, directing his measured stare at the unflinching Rocko. "That painting of himself, the work he paid thousands of gold pieces for that it may hang in his great hall, serves as a symbol of his vanity. It has left a bitter taste in the mouths of the entire city. Its theft will put a large dent in the Duke's armor of rulership!" (At least, I hope it will!), Terrak concluded silently.*

*"Now, the challenges," the Master Thief continued. He looked at Kyrin, to his left.*

*"I will have the wagon ready," the girl answered solemnly. She had been just old enough to understand her loss when her parents had died in the inferno of the guildhouse. Terrak knew that she spoke the truth.*

*"Here are the magic mouths." Terrak gestured at the parchment as Rorden nodded.*

*"My spell of silence will be ready," nodded another thief, a thin and wiry man of indeterminate age. Only the golden sheen of his blond hair suggested his true race. The half-elf was a skilled thief, but at times his talents as a magic-user were even more valuable to the band.*

*"These walls are oiled to prevent scaling," explained Rorden, gesturing around the periphery of the courtyard.*

*A snicker came from a young woman across the room, and Terrak allowed himself a slight smile of his own. The Black Duke would need more than slippery walls to stop Bria the acrobat and her grappling hook. "Just remember to drop a rope for the rest of us," reminded the Master.*

*"And finally, the guards," pointed Rorden. "They are commanded by Puroch, whose loyalty the Duke extorts by holding his family at knifepoint."*

*"The family is now safe in hiding?" asked Terrak, looking at the old weaverwoman.*

*She nodded with a toothless grin. "Puroch will join us now."*

*Terrak looked again at his small, capable band. He knew them all, understood their*

*strengths and their weaknesses. He would not betray them, and he knew they would not betray him.*

*"We cannot hope that the theft of a painting and a few gems will bring the power of this duke crashing down," he said softly. "But if, by this theft, we can force the entire city to see him for the madman he is—and his madness will be plain to all when he discovers the defaced painting hanging above the outer gate of his mansion!—we can do him great harm."*

*"And too, we can pave the road to our return. Soon, my loyal comrades, we will become the influential guild that we were once before!"*

## Elements of the Thief Campaign

The thief campaign resembles any other AD&D® game campaign in many respects: There must be a challenge for the PCs to face, the challenge must be balanced to the strength of the characters, and the rewards must be enjoyable enough to keep everyone having a good time—but not so abundant as to drastically inflate the finances of your campaign world.

But it is in the specifics of play that some of these campaign aspects can take on unique and entertaining features when applied to a campaign involving many thief characters.

This section explores some of these features, providing detail to DMs and also players.

### Cultural Considerations

The cultural overview of the campaign setting is an important consideration for the adventuring careers of all PCs, none more so than the thief. Some cultures have a strong and deep-running tradition of thievery while others will be quite foreign to the concept.

Generally, the more primitive a civilization, the less the likelihood of a strong thief element within it. Savage tribesmen or aborigines, of course, have few possessions that a thief would deem worth stealing. While characters from these backgrounds might covet the possessions of other cultures, their methods of acquisition will be less subtle than those of a ``civilized'' thief.

Of course, nothing prohibits a character from a savage or barbarian background from joining the thief class. Ideally, the character will have the opportunity to learn a little about his chosen trade before he meets up with an experienced city watch patrol.

Rural cultures, too, will be less likely to provide interesting settings for thief adventures than will urban locales. Thief characters can of course learn their trades in small town or country settings, but unless they have a steady stream of travelers passing through from which to select their victims, such thieves will have difficulty maintaining a career of any long duration.

But perhaps an even more significant cultural consideration is the view of that culture towards personal property and an honest day's labor. It is in this context that a city, with a strong class of merchants, an important economic system, and a reliance upon trade, becomes the ideal setting for the thief's activities.

The culture of such a bustling city cannot help but give rise to laws and law enforcers,

to objects of value, and to interesting inhabitants. All of these items, as they relate to the thief's activities and opportunities, are discussed below.

## The Social Campaign Environment

Thieves, more than any other character class, must interact with NPCs in order to utilize the full capabilities of their class. Unlike the fighter or the magic user, who can face an opponent from the safety of spell or missile range, or in the heat of melee combat, the thief must often communicate with his enemies, staying alive as much by his wits as by his strength.

It is incumbent upon the DM, of course, to provide the necessary environments for his players' enjoyment. For thief characters, and particularly in a campaign with numerous thief-types, this means the creation of numerous NPCs, detailed sufficiently for smooth interaction with the PCs, and a society or culture with enough features to provide motivation and ambition to thieves and to allow plenty of room for adventure.

Some of the significant features of such a campaign include:

## The Social Overview of Thieves

How does this society view thieves? Are they vigorously exterminated wherever they can be found? Are they encouraged to leave town by the closest available gate? Or are they an integral part of the city's infrastructure, contributing to its economic life every bit as directly (if not, perhaps, as constructively) as the trading of merchants?

The answers to these questions determine, to a great extent, what kind of status a thief might hold in the society. Of course, status is almost always enhanced by wealth, but a wealthy thief, in many societies, is still regarded as mere scum, however cleansed and sanitized he may be on the surface.

In areas where thieves are vigorously persecuted, thief characters will have to operate almost entirely underground. Even the location of such a major establishment of the thieves guild will be a carefully guarded secret. The guild headquarters might move around frequently, changing locations at the first hint of detection.

Thieves in these types of societies will probably need to have several alternate hideouts lined up, ready for use at a moment's notice. The number of thieves working together, whether in a guild or a more informal band, will be small. Paranoia among the members will be common, and even the hint of betrayal will likely meet with gruesome consequences.

Indeed, thieves in societies that strive to root them out will often be forced to resort to a cover occupation or identity, simply to maintain appearances with neighbors, casual acquaintances, and even curious members of the city watch. The development of the cover can involve as much time and detail as player and DM want to spend. In this type of culture, a thief's success at his cover can affect his fortunes every bit as much as his performance on the job.

While a cover provides a thief character with an inherent professional weakness, it can also provide wonderful opportunities for roleplaying. Additionally, a thief who works to preserve a cover might find himself working in an area that is normally closed to thieves. This entails a corresponding increase in the likelihood of encountering lucrative

targets for theft. Also, there will often be a relative lack of competition from other thieves in such an environment.

Conversely, societies where thieves are at least tolerated, and those where thieves are accorded rank of some status, present thief player characters with other challenges. Because of the notoriously chaotic nature of the class, thieves are constantly adjusting the status of members within their ranks. Thieves who would succeed must struggle to stand out from the masses. Where every street has its cutpurses and every neighborhood its petty boss, the thief PC will find himself in the midst of savage competition. He will nearly always be forced to choose sides. Although this selection can include the choice of independent operations, of course, most thieves look upon those who are not declared friends as undeclared enemies. Competition from other thieves and thief organizations becomes a major conflict for these characters.

## Detailed and Varied Non-Player Characters

Obviously, NPCs are a major part of any social campaign environment. For a campaign with major roles for thieves, this must be one of the primary areas of DM concern.

Details are important, as always. Because of the number of NPCs needed, DMs will probably want to develop a convenient shorthand procedure for keeping track of all these characters. It is not necessary, for example, to include stats and proficiencies and equipment for each shopowner and innkeeper in the player character orbit. Often a name for the character and a one or two word personality description will suffice to give the DM all he needs to roleplay the NPC in an interesting and consistent manner. (Remember, if the innkeeper is "greedy and bigoted" the first time the PCs encounter him, he is likely to be that way next time as well.)

Of course, NPCs who might logically be expected to enter combat with the PCs (guards, rival thieves, thugs, bullies, etc.) will need to be detailed with the relevant combat information. Other NPCs who fill the roles of the potential targets for PC thievery (merchants, nobles, dandies, caravaners, fences, influential criminals and thieves, etc.) will need additional information on valuables possessed, how those goods are secured—including notes on locks, traps, secret compartments, and the like—as well as enough combat information to allow the DM to quickly adjudicate an encounter should matters come to blows.

Chapter Twelve of the AD&D® 2nd Edition DMG includes valuable information on defining the personalities of NPCs (pg.114) and on creating fast, realistic characters when needed (pgs.115-117).

The DM, after working out an easy way of recording his NPCs, must then keep this information close at hand where it can be easily referenced. He is then ready for any encounters the characters might decide to find.

A variety of NPCs is every bit as important as the detail used to record them. In all campaigns, the player characters will interact with folks from all walks of life—in a thief campaign such interaction is common and expected.

Some of the NPCs will need to be peers of the PCs—fellow thieves and rogues inhabiting the same area. These NPCs can serve as rivals, temporary helpers, sources of information, and even sort of a measuring scale for the PC's successes.

Thieves will often develop contacts with NPCs even lower in status than the thieves themselves. These characters can include beggars, urchins and orphans, harlots, and other low-life types. A stable of these NPCs can provide the PCs with a ready source of information ("Here's a copper, kid—go and count the guards outside the storehouse for me!"), as well as providing a touch of believability to the campaign background. These low-life NPCs will, of course, have the same variety of personalities and abilities as other NPCs. Because the PCs represent persons of power to them, however, player character actions can have a great rebounding effect in their relations. For example, a thief that always shares a (however small) portion of his take with the gang of urchins constantly roaming the neighborhood will find those urchins to be useful lookouts and helpful, willing sources of information. The thief who spends his time cursing and kicking the youngsters away from his abode may just find them leading an elite unit of the city watch straight to his door.

Potential targets for robbery include a whole vast realm of NPCs: wealthy merchants, powerful nobles, influential foreigners, even thieves and other adventurers who have enjoyed a certain amount of financial success in their endeavors. A variety of characters is essential here because this gives the PCs the opportunity to determine for themselves what will be the site of the next furtive operation.

Here your group might try pacing the gaming sessions to give the players complete freedom of choice, while not burdening the DM with the task of detailing every mansion, noble house, and merchant shop in town. Simply use the expedient of closing a gaming session with the PC planning meeting for the next operation. Then, when the target for the theft has been selected, the DM has the next week (or next few hours, depending on how often you play) to prepare a detailed layout of the setting.

No campaign is complete without at least one, or ideally several, strong villains to serve as antagonists for the player characters. Villains, of course, do not have to be criminals or other low-life types. They can be nobles, government officials, law enforcement officials or magistrates, foreign ambassadors, powerful wizards or sinister clerics—in short, all types of characters can make good villains in a thief campaign. And don't overlook the grandmaster of the thieves guild or some other powerful criminal who might be a rival of the PCs; these kinds of long-running feuds can kindle the fires of many an extended campaign adventure.

Whoever the DM picks as a central villain for the campaign, a few general principles apply. The villain must be a powerful character—one who can inspire fear, or at least grudging respect, in the PCs. Power can be expressed in financial resources (an estate, fortress, collection of treasures, etc.), authority (such as a troop of guards or command of the city watch), personal abilities (such as magic powers, magical artifacts, combat skill and weaponry, or sheer intelligence or charisma), or, ideally, some combination of all these characteristics. Certainly in order to seem formidable, a villain's power must exceed the combined power of the PCs.

Scenes involving the villain should be paced and staged carefully—the PCs probably will not find him in a back alley rolling drunks. (If they do, that should tell them something about the drunk!) Villains, being powerful and influential individuals, are not stupid. When they are encountered, they will usually be surrounded by their lackeys and henchmen (some of these can be quite stupid, at the DM's option).

In fact, the villain's lackeys should be common antagonists of the player characters

throughout the campaign. It is well worth a DM's time to develop some of these henchmen as detailed NPCs—minor villains in their own right. What is the Sheriff of Nottingham without his loyal house guards, after all?

Any villain worth his black mustache will have one or two escape routes planned from every location where he is likely to be encountered. These will only be used in emergencies, of course, but can serve an important campaign function in that, as a villain escapes from near-certain death time after time, the players will develop their own motivation in wishing to go after him and end the conflict once and for all. This resolution, ideally occurring after many gaming sessions, then becomes a major triumph in the PCs' careers. Of course, if they blow it, the last battle can make a glorious final chapter in a PC career . . .

A final category of NPCs, impossible to overlook in the thief campaign, are those characters entrusted with the enforcement of law, or justice, or power—whatever prevails in your campaign environment. Even should you have created an anarchistic society, people will take steps to protect their belongings and some of these steps usually involve big, tough fighters.

It is interesting and enjoyable to have several of these characters become very well-developed NPCs in the campaign. The gruff sergeant-major of the city watch, for example, might have a few stern words for the PCs each time they are apprehended. A villainous thug in charge of a platoon of mercenary guards might develop a personal grudge against the PCs that can grow into a major campaign storyline. Even a severe magistrate can be a recurring character, especially if PC lawbreakers are coerced into helping the forces of justice in exchange for their freedom, lives, or whatever.

The DM need not go overboard on details for these NPCs. After all, having 100 NPCs in the campaign isn't much use if the DM has to shuffle 100 pieces of paper every time a player character asks a question. It is best to work out to your own satisfaction the level of detail required for consistent, enjoyable play, while allowing a brief enough format that the DM does not become overwhelmed with recordkeeping and NPC creation.

## Unique Buildings and Structures

Whether these are temples, fortresses, vaults, inns, palaces, or mansions, the buildings in a thiefly environment should be well detailed. Determine, as much as possible, details such as window placement, even on higher floors.

Features of construction can be important; a brick wall may prove easier to climb than a surface of smooth plaster. Are there trees or clinging vines near the walls? Are the grounds well-maintained? (Many a thief has failed a move silently check because the leaves rustled beneath his feet!)

Add entertaining features to your buildings such as balconies, atriums, wide stairways with railings, chandeliers, swimming pools, secret passages, and so on. Hanging draperies can make wonderful emergency transportation, and a wine cellar, icehouse, or other specialized room can also be put to interesting use.

Experiment with unusual settings as well—just because your thieves adventure in a social environment doesn't mean that you can't put a dungeon under a noble's manor, or a hidden cavern leading to and from the lair of a rival band of thieves. After the PCs have plundered several houses, you might offer a tower or a pyramid for a change of pace.

Insomuch as a great portion of a thief's career might be spent skulking about the buildings of the campaign world, it is well worth the DM's time to prepare them carefully and imaginatively.

## A Well-Defined Economic System

This can be as simple as consistent observation of the prices and costs listed in the Players Handbook, or as complicated and involved as a DM cares to make it. Because so many thieves measure their accomplishments in financial terms, however, some sort of consistent measure of worth is extremely important.

Another consideration within the economic system is the effect of theft on the items being re-sold. Certainly a jeweled tiara can be appraised at 1,000 gp. However, if word of its theft has traveled far and wide, PC thieves might have difficulty getting someone to pay half the listed amount.

Other aspects of economics often overlooked in a campaign can be very relevant for thieves. Bribes are often necessary in order to gain information or to persuade a guard to look the other way—keep rigorous track of this cost of doing business! Protection money might be offered by victims; conversely, if a merchant is paying protection money to someone else (a thieves guild, for example), those being paid will leave no stone unturned in seeking the one who has flaunted their warnings.

All such extra costs and hidden consequences should be determined by the DM, at least to the extent of their impact upon the campaign environment. It can be left up to the PCs to discover for themselves how these little extras can impact (perhaps even shorten!) their illicit careers.

## Interesting Objects D'Art and Other Treasures

A well-defined cultural store of valuable objects always gives a thief something to think about, and can provide some wonderful impetus for roleplaying. ("I simply must have that last Van Hoot original!") These items add a great deal of color and life to a campaign, encouraging players and the DM alike to think in terms other than simply the gp value of a treasure. Indeed, a valuable art object may be worth far more than its base value to a collector. By the same token, such an object might be recognized far and wide as stolen property—a complication that can make disposal of the goods an adventure in its own right.

Part of this campaign aspect involves establishing a consistent economic system for the world, of course, as mentioned above. But taking the time to specify treasures and their worth within that economic system carries the concept to a level of detail that greatly enhances any campaign—but particularly one involving many thieves and their illicit activities.

Objects can be classified by type and artist, most obviously, but also by such things as materials (especially in the area of gems and jewelry), intricacy of design, and size.

It doesn't so much matter *what* you choose to invent and define here. It is more important for the DM to create enough detail about some area that the most treasured pieces are known to one and all, and enough other facts about the art to allow PC thieves to make proper value judgements.

Of course, establishing an artistic level of a culture is an ingredient of any campaign. Thieves, however, are more apt to become involved in the gaining and losing of such items than are characters of other classes, and because of this the thief campaign calls for a little extra attention to be paid here.

Whether these objects are paintings, statues, jewelry or gemwork, tapestries or rugs, ornate crystal, or religious icons, a well-defined set of existing treasures helps a thief put his own acquisitions and losses into context. Dungeon Masters will find the time spent creating a detailed cultural and artistic background for the campaign well spent.

Player character thieves will doubtless find one or two more things that just might cause them to lick their chops.

## Well-Defined Legal System

This does not mean that your campaign has to have a law-and-order basis with plenty of tough penalties for thieves, and a gung-ho team of watchmen and sheriffs to see that unlawful perpetrators are quickly apprehended.

Instead, a well-defined legal system in a campaign means that the DM must give careful thought to the role of law and order in the campaign culture. It is far more important for penalties to be consistent than for them to be harsh.

Once the DM has established a consistent legal structure for the society, a working knowledge of that structure should be communicated to the players.

In any event, the laws of a society will usually be formed to reflect the standards and expectations of the majority (or at least the most influential portion) of the populace.

As always, game balance is important here as well. Societies with harsh penalties for thievery tend to discourage such nefarious activities. Because of the risk involved, potential gains should be correspondingly higher than in locations with more easy-going magistrates.

A few words about specific penalties: While the death penalty for lawbreakers is not an unrealistic sanction in a medieval-based society—and, indeed, many a nail-biter of a rescue has pulled a character from the shadows of the gallows, headsman's axe, or whatever—it is not the most enjoyable thing to roleplay.

Far better to have a character who has gotten himself in deep trouble be subjected to leverage from the law, perhaps being coerced to betray his companions or spy upon a powerful rival thief in exchange for his freedom and pardon. This way the sanction is a device propelling the character into another adventure instead of a one-way ticket out of the campaign.

## Counter-Thief Tactics

This is an area all too often neglected in campaign and city design. It reflects the truism that people who have been robbed, or who know they are susceptible to robbery, will take steps to guard their belongings.

Counter-thief tactics include structural features such as locks, walls, traps and alarms; NPCs such as guards, judges and investigators; magical procedures for locating lost objects or protecting items of value; and any other steps property-owners and societies might take to hamper the activities of thieves among them.

The degree of counter-thief tactics employed in a campaign can be a useful balancing tool for the DM, as well as a source of endless challenge and adventure for the PCs. As with any roleplaying game situation, the degree of challenge should be compatible with the amount of reward offered. Not every small strongbox in a city will have magical locks and a full-time patrol of high-level guards.

However, the protections employed by a society to counter thievery will also relate directly to the amount of thievery to be expected. In places where robberies are common but wealth is valued, those who have the wealth will take vigorous steps to protect it.

Such protections do not all have to be of the common nature—extra guards, a trap built into the lock, etc. Some NPCs will certainly hide their loot in unexpected locations—the nightmare of many a cat-burglar. Another occasionally employed tactic is the substitution of some worthless object for the real thing. A nasty twist on this latter case has the thief actually stealing something harmful to himself or others. For example, the thief who has just poisoned his guildmaster with what he thought was a *potion of eternal youth* finds himself in a very awkward situation indeed.

## Background of Interesting Conflicts

A thief campaign can probably run for a long time on the central conflict of "Haves vs. the Have-nots". Players and DMs alike will find a lot more flavor and depth in a setting with a little broader background of conflict, however.

Conflicts appropriate to a thief campaign are little different from those that should liven up any campaign. Every social setting will have tension between the various legs of the power structure, whether these are ruling houses, political parties, or even different members of the same ruling family.

Conflict between different classes or social strata is another common point of tension in society. The rich might seek to dominate the poorer folk, who strive in their own right to gain a share of the good life. In a mercantile society there might be a middle class of merchants and artisans who seek to insulate their privileges from those less fortunate, while at the same time striving for financial betterment for themselves and their families.

Religious conflict is a common feature of campaigns, particularly appropriate in worlds with a wide pantheon of varied gods. Thieves and others can often be employed by the clerics of different temples in order to spy upon, pilfer, or sabotage the centers of rival religions.

Conflicts among thieves themselves, and obviously between the law and breakers of the law, should be standard features of the campaign. The conflict between a thieves' guild and independent (usually player character) thieves has become a cliche, but it still creates a tense background for a thief's activities. Just try to establish that this is not the only conflict around which the campaign is based.

Conflicts, as always, are most effective when they can be personalized. In a religious conflict, for example, detail the influential clerics on each side. If a thief PC encounters a challenge from an NPC thief working in the same territory, give that NPC a face and a personality. When conflicts are personalized, player characters develop a natural motivation and enthusiasm for their resolution.

## Challenges To Thief Character Class Abilities

Finally, the thief campaign should ideally include a multiplicity of opportunities for thieves to employ their own unique talents. Most significantly, this means many opportunities to pick locks, to find and remove traps, to climb sheer surfaces, and so on.

The DM should additionally tailor the challenges to the specific type of adventure suitable to the thief or thieves in the campaign. A character with great proficiency in disguise, for example, should have opportunities to use a cover identity, or to find work as a spy.

By successfully creating challenges that match the particular strengths of the player characters (of all classes), the PCs have a chance to carve out a solid niche for themselves in the campaign world.

### The Thieves' Guild

Whether or not to place a guild in your campaign setting is a decision central to the gaming careers of your thief player characters. Guilds can provide many interesting conflicts, and also require a certain amount of DM commitment in order to exist believably in a campaign world.

Consequently, the creation of a guild is not a decision to be taken lightly. Of course, they are more or less standard in many gaming environments, and if everyone in the campaign expects there to be a thieves guild, there probably should be a guild.

Thieves guilds can provide many opportunities for adventure, as detailed in Chapter 4: Thieves Guilds. Many of the ideas there can be used in creating a guild for your own campaign environment.

Remember also, should you decide not to have a guild in your own campaign world, that the absence of a guild does not mean there aren't plenty of thieves running around out there, looking for their share of the spoils and working actively to defend their "turf."

## Basic Storylines For Thief Campaigns

Perhaps the player character thieves will be content at the start of a campaign to plunder this noble mansion and that opulent gallery, staying one or two steps ahead of the city watch. Such campaigns require little planning beyond the next gaming session for the DM, and work well with players who can only attend occasional gaming sessions.

However, the repetition of objectives and motivations can prevent players from exploring the full possibilities of their characters and the game. Even if each mission involves a different setting, new monsters, and unique, challenging traps and NPCs, players and DMs alike may find themselves wanting more.

The addition of a basic storyline can add a theme tying the campaign together, giving the player characters a cause higher than mere plunder for their exploits. Storylines allow for greater development of NPCs, and also provide the PCs with more opportunities for interactive roleplaying (as opposed to combat and other physical encounters).

Several suggested storylines are presented here. Many dungeon masters prefer to create their own, and this is encouraged. The examples are brief enough that each campaign's will be specifically tailored for a unique fit.

## The Great Artifact

This is the type of story that gets the old thieves talking late into the night, sipping their mugs and reminiscing wistfully about the big job that they never quite got around to.

The great artifact is a unique object, a one of a kind wand or gem or statue or anything else of tremendous worth. It is famed for its power (like a magic item) or its symbolic value (like the crown jewels of a proud government) or perhaps simply for its mindboggling worth financially (the mint or gold repository of a powerful city-state, perhaps). Occasionally, an artifact will combine features of all these types, and more. Objects labelled as "artifacts" in the AD&D® game system usually fall into this category.

Whatever its nature, some generalities about the theft of the great artifact apply. Its worth is fabulous. Although it may not be sought by *everyone*, there are plenty who would give anything to own it.

The great artifact's acquisition should be a process requiring many gaming sessions. Perhaps several additional quests are required before the theft of the artifact can even begin—a key must be obtained before the magically warded chest can be opened, for example.

The protections of the artifact should be many, and their effectiveness should increase the closer the PCs get to their goal. These barriers should ideally include obstacles to the mental, as well as the physical, abilities of the characters. Often a great deal of planning and coordination can be required of a band of thieves, in order to pull off the theft everyone thought was impossible.

Indeed, there might be a body of lore surrounding the artifact. Player characters willing to do their homework might be able to find survivors of previous expeditions, or at least hear tales handed down from earlier years. Such cautionary tales, of course, may contain more fiction than fact. They may also be couched in obscure language (as, for example: "Beware the witching moon when the hog walks upon the water"), containing a meaning that only becomes clear when certain conditions come to pass.

The quest for the great artifact does not have to end with its acquisition, by the way. Once its removal becomes public knowledge, any object of such great value becomes the focus of attention for bounty hunters, master thieves, and whoever had the object stolen to begin with. Especially in the case of potent magic, the PCs might find themselves holding onto a lot more than they bargained for.

## The Mysterious Client

The mysterious client is usually an NPC. He or she can be a player character, however, if that player is briefed by the DM privately beforehand.

However the client is played, the role is that of a person (or perhaps a deity) who contacts the main group of PCs and asks them to perform some task worthy of their thiefly abilities.

This storyline is easy to start because the client can always direct the PCs toward the first encounter. The most important feature here is for the DM to surround the client with an air of mystery. Perhaps the characters never see the client's face, or learn his or her name. Maybe all of their communications are in writing, and they are allowed no information as to where the client can be found.

Mysterious clients can be drawn from any and all character classes, or even from the ranks of monsters. A powerful and intelligent monster that cannot mingle freely with humans might seek thieves to perform some of its business. In the ultimate extreme, of course, the client turns out to be a powerful god or other extraplanar being, and the PCs are involved in really big time trouble before they know what's happening.

The task required of the thieves by the client can include theft, of course. Other possibilities include the search for a lost object, often requiring investigative work as well as stealth; the gaining of information by requiring the characters to serve as spies or scouts; or other even more nefarious tasks invented by the client or the DM.

## Role Reversal

An interesting challenge to player characters, and particularly *thief* player characters, is the task of protecting some object from an imminent theft. This story can be combined with the mysterious client plotline to create another twist.

The PCs can be assigned to move the object somewhere, guarding it on the way, or simply to protect it where it is. The challenge arises from anticipating the plans of whatever thieves might be inclined to make the attempt.

Generally, the PCs will be tested with one or two easy probes before the real challenges occur. The guardianship role can easily be extended through several gaming sessions, as more and more vigorous attempts to acquire the loot are mounted.

This storyline is not as well suited for a longrunning campaign as are some of the others. However, characters who spend most of their time attempting to obtain items of value might find the change of perspective interesting.

## Foul Betrayal

This storyline is best combined with one of the others. It fits well in the thief subculture and can be wrapped around any significant non-player character in the campaign. It provides PCs with strong motivation and can dramatically shake up a campaign that starts to run too smoothly.

The NPC who betrays them should be an important figure in the campaign, and one who is fairly well known to the player characters. He can be their employer, or a respected neighbor, or even a mentor or family member to one of the PCs. Ideally, in one of the latter cases, the NPC has a deep and compelling motivation for the betrayal. Most characters, even including thieves, would not be too likely to sell their brother or grandmother down the road for a small profit.

The betrayal should be set up carefully by the DM. Perhaps one or two clues might indicate the NPC's true nature, but only if the players are exceptionally alert. The betrayal itself should not be the end of the story, however; the PCs should have a long and difficult road to follow in their quest for an accounting.

The betrayal situation works best in campaigns where there are many well-detailed NPCs. If it is used capriciously in a setting with few NPCs, players may become inclined to distrust *every* NPC introduced to the game. This is frustrating for players and DM alike.

### The Spy

This plotline works most effectively for small groups of player characters, or even individuals. More complex evolutions can involve large groups, all cooperating on an intelligence-gathering mission, but these are harder to run and more confusing to play.

Perhaps more than any other, a spying storyline allows the DM to draw upon a vast store of novels, films, and other media. Plotlines involving spies, even when set outside the fantasy area, can often be converted into challenging roleplaying situations. Substitute a *crystal ball* for satellite reconnaissance, *clairaudience* for a phone tap, and a *flying carpet* for a helicopter, and you will be able to reproduce many a modern thriller in an AD&D® game setting and format.

The spy storyline offers another advantage to many players in that it serves as a non-evil alternative for thief player characters. Of course, spies can be evil, but a spy may also be motivated by grander ambitions than perhaps the common thief. A character or group sent to infiltrate the ranks of a menacing warlord or bandit king can perform great service for the good of society if they can succeed in their mission.

## Playing In And Running the Thief Campaign

One of the great strengths of the AD&D® game and its attendant campaign worlds is the diversity of character types that will be present, both as NPCs and generally as PCs. The mixture of combat, stealth, sorcery, and spiritual abilities all add to the whole in ways that can help keep the game fresh and imaginative even after many years of play.

However, this should in no way inhibit players with similar interests from creating PCs of the same class. Indeed, there are many situations where such groups make ideal adventuring parties—a small group of captains commanding several companies of soldiers upon a mission of conquest, for example, might all be fighters.

Nowhere does this specialization lend itself so well to a campaign setting as when a band of thieves gather to embark upon missions of stealth. The presence of a fighter, with his heavy boots and clanking armor, can be a serious hindrance to such a group. Characters of all other classes will find sheer surfaces to be serious obstacles, even as the thieves are already scrambling down the far side. And indeed, no character can move so quietly, or remain hidden so effectively, as can a thief.

The tactics discussed in this section do not imply that a campaign must be populated exclusively with player character thieves. Players who wish to run characters of other classes should be able to do so, and the DM should be sure to provide appropriate challenges to all characters. However, if most PCs choose to play thief characters, a variety of adventure opportunities beckon. Additionally, interesting roles and activities for other character classes are easy to generate.

### Wizards Working With Thieves

Of all the other classes, wizards might best perform with a band of thieves. They have no metal armor or heavy weapons to make noise, and spells such as levitate and silence can provide cover for themselves, and even enhance the abilities of the thieves. Magic users can be found in all alignments, and many have no particular moral qualms about

engaging in theft and other illicit activities.

Wizards can provide a variety of useful services to thieves as well. Even at low levels, spells such as *sleep, charm person, spider climb,* and *Tenser's floating disk* offer obvious possibilities on a mission of thievery.

Many a thief guild has one or more wizards of low to medium level in its employ, even occasionally among its leadership. Of course, extremely high level wizards generally grow beyond the need for such companionship. High level wizards associated with thieves generally treat the latter as if they were slightly odiferous servants.

## Levels of Magic in the Thieves' Campaign

Like any good campaign, the level of magic in use is a function of the players' and DM's desires, the cultural setting, and perhaps to an extent the experience levels of the PCs. Much of this decision should be based on the magical capabilities of the PCs (whether or not the thieves have a wizard working with them, for example) and the degree of reward to be gained by overcoming magical challenges.

In general, most challenges to thief PC missions should be found in forms the characters can cope with: mechanical traps instead of magical ones, for example, provide a better gaming obstacle to thieves.

However, a DM can certainly employ magical traps to protect things he doesn't want the PCs to get their hands on. Also, such traps add an element of tension to a mission that helps keep everyone on their toes. A mission of thievery involving an intrusion into the lair of some powerful wizard should *always* have an air of magical, mysterious danger.

## Multi- or Dual-Classed Thieves

Thieves who can also perform the tasks of one or more other character classes also offer clear advantages when accompanying a mission. The fighter/thief, for example, will find many opportunities to wield his sword and perhaps a shield while his stealthy comrades go about their work.

However, thief characters who also exhibit knowledge of another character class will sometimes undergo the scorn and mistrust of their more "pure" comrades. Very rarely will a thief/wizard or thief/cleric rise to a position of prominence in a thieves guild. Fighter/thieves are subject to less prejudice, perhaps because their abilities are clearly understandable to thieves. Fighter/thieves are nonetheless considered by most thieves to be of somewhat lower status than themselves.

## Henchmen and Hirelings of Thieves

Though thief characters often function as lone wolves, or in small, stealthy groups, they will often have need of the skills, or sometimes simply the reinforcing numbers, of others. Since thiefly activities generally flourish in urban environments, there is usually no shortage of NPCs for the characters to meet and use and henchmen or hirelings.

Hirelings are particularly easy to come by, and can include craftsman and merchants as well as those of the adventuring classes.

Hirelings, however, are not generally trusted with the knowledge of a guild or

hideout. They will be contacted in their own place of residence or work, their information or services gained there, and then they will be left by the mysterious thief who disappears into the alleys and backstreets. Even when hirelings are used on a mission, they will often be joined at a rendezvous outside the guild, and left there when the mission is over.

This is not a hard and fast rule, however. Particularly in cases where a guild location is well known, or where hirelings are necessary to the functioning of the guild—there aren't enough PCs and henchmen to maintain a watch, for example—a hireling will be brought into the lair. Of course, generally some effort will be expended describing to the hireling the consequences of his betraying the great amount of trust that has just been shown him. Indeed, in large thieves guilds it is unrealistic to assume that most members will be PCs or the henchmen of those PCs.

Henchmen, of course, are another matter. They will generally be trusted to know almost everything the PC knows. As with any PC, some henchmen might be gained from the ranks of hirelings who have served loyally and bravely through the years.

Ideally, however, the player and DM should give some thought to interesting backgrounds for other henchmen, based specifically on the player character's background. This is especially important if the character adventures in the same city or nation where he spent his childhood and youth. It is likely that *some* contacts would have been made during that period—contacts that now offer the potential of valuable help to the aggressive young thief.

In the tangled world of the thief, such longrunning relationships are often the best way to develop a trustworthy companion. Players and DMs should combine to define a henchmen character drawn from a PC's background. Such a character should not be too powerful, but should be given a few useful abilities. If the henchmen is of an adventuring class, he should be of lower level than the player character.

## Dens and Hideouts

Of course, the guildhouse is the most common type of thieves' den, but nearly all thieves will require some sort of secret lair from which to conduct their illicit activities. Dens and guildhouses will vary by size, in relationship to the number of thieves living or working there; and by obscurity, appropriate to the level of secrecy the guild needs to maintain in the community.

Some societies expect thieves to flourish in their midst, and among these cities the guild will often be a large, perhaps even prominent building. Of course, it is not likely to have a sign posted, describing the building's nature, but a few discreet inquiries will usually allow one to discover the guildhall. Its location will certainly be known to the city watch or other law enforcers. Indeed, sometimes a watch captain or lord-mayor might allow a thieves guild to function in a known location simply to keep better tabs on it.

But more often the guildhall's location will be a secret, guarded jealously and ruthlessly by the guild. Likewise, a den or hideout serving as a shelter for a small group of thieves will have a discreet and carefully protected location.

Privacy can be found underground, of course. Subterranean thieves lairs offer the advantage that their presence is easily concealed from the outside world. However, many humans and demi-humans (excluding dwarves, of course) dislike the chilly, damp nature of underground living quarters. Thieves who risk their lives to gain objects of value are

not likely to hide their wealth and themselves away in a hole in the ground.

Additionally, the underground lair presents problems in construction. Large amounts of dirt must be hauled away, much labor is required in order to create a lair of any size. Both considerations add major difficulties to the secrecy of lair construction. A wizard with a *dig* spell, on the other hand, can make the excavation a whole lot easier, but doesn't solve the problem of dirt disposal.

The easiest type of lair to set up is found in some already existing structure, or perhaps group of structures. A long row of town houses, for example, might be interconnected into a single, convoluted guildhouse. Or the attic of some merchant's shop can be taken by a small band to use as a hideout until they can get something better. Of course, if the merchant doesn't know about the thieves, chances of discovery increase dramatically. The best hideouts are buildings inhabited only by thieves, or by thieves and those who are in league with them.

In some cities it will be necessary for the hideout to maintain some kind of cover. Perhaps it is enough that the neighbors think it abandoned. Maintaining this appearance requires diligence on the part of the thieves, however, for a pattern of noise or light detected from the "abandoned" house will be sure to arouse suspicions.

If a cover is necessary, often a cooperative merchant or craftsman will labor in part of the house, maintaining the pretense of a place of business. Such a worker might even be a thief, but unless he can put forth a reasonable appearance of knowing his cover occupation, the craftsman and the hideout can both be in danger.

Guildhouses and dens may also be maintained as private residences. Such locales are not so likely to be visited by strangers as are cover locations in places of business. However, the residents of the house will probably be known to the neighbors, at least by sight. Large numbers of strangers may give rise to suspicion.

The hideout should ideally have several entrances, at least one of which is a block or two away from the actual den. A large guildhouse will have several such access points, usually connected via underground passages or secret corridors passing through surrounding buildings.

Thus, in a secret guild, the number of people entering and leaving the hall will not be visible to neighbors or other observers. Indeed, if an access route is sufficiently torturous, a visitor can be brought into the guild without being shown the building's exact location. He might know nothing more than that the guild is within several blocks of a certain alley where he stepped through a secret trapdoor in the ground.

A major guildhall will also have several built-in traps to deter unwelcome intruders. If enough thieves man the lair (more than a dozen or so), a full-time watch will be maintained.

Only the most permanent of thieves' dens will have a built-in vault or storage chamber for the loot. When such a chamber exists it is only used for the temporary storage of objects that cannot quickly be fenced. Thieves know only to well that such storage sites are all too easily penetrated. It is much more likely that the thieves will maintain their hoard in some other, nearby but secret location. Of course, thieves who are very brazen about their activities, or very confident that they face no competition in a given locale, may well keep large amounts of valuables in their guildhall. Such a hoard might even be a source of pride to the guild, a sort of challenge to the unwary.

## Introduction

In every area and every region throughout the world, traveling musicians wandered throughout the land. They moved from town to town, making a living by plying their trade as artists of sound and motion. In the AD&D® game, adventurers who do this are called *bards*.

Historically, bards were the poet-musicians of the Celtic peoples living in the British Isles (the Irish, Welsh, and Scots). Bards composed music, sang songs, and entertained their masters. Usually they worked for noblemen and spent their time honoring these noblemen and their families in song and music. Bards often accompanied their songs on the *crwth*, a type of lyre. Since their music wasn't written down, most of it has vanished.

During the early Middle Ages, bards had considerable political power and influence in the royal houses. However, in 1284 A.D., Edward I conquered Wales; the resulting turmoil reduced the importance of bards. Noblemen had more pressing concerns, and bards were left to fend for themselves. A few lingered on, into the 17th and 18th centuries in Ireland and Scotland as folk singers and musicians, but they eventually vanished along with their music.

During the 19th century, a determined effort was made to revive the bardic tradition. Folk music gatherings took place in and near Wales. These neo-bardic activities caught on among the public, and today the annual Eisteddfod folk festival is a popular and growing event in this region of the world.

Thus, bards have shown a cunning knack to survive through the ages. In one form or another, bards have been around for nearly 1,000 years. Besides the Eisteddfod festival, the bard has been immortalized in the genre of fantasy. Now you have a chance to continue the bardic tradition. This book covers not only the traditional bard, but expands the class with new and unique character kits. All of these kits involve some form of live entertainment, as all bards are entertainers at heart. Nearly half of these kits entertain through music in one form or another: poetry, song, instruments, etc. But some present such diverse new kits as the Blade, who entertains through creative weapon displays, knife throwing, and sword swallowing. Read on and enjoy.

## Optional Rules

Within this book are many new rules, bard kits, suggestions on role-playing, details of

instruments, and new proficiencies. This information adds to the rules presented in the *Player's Handbook* .

It is important to note that this book is a supplement to the *Player's Handbook*. All of the rules presented here are optional. As a player, you must have your *Dungeon Master's* consent before using any of these new rules.

*The Complete Bard's Handbook* is a book of supplemental rules for adding depth, spice, and life to the bard character class. However, even if your Dungeon Master should decide that none of the rules within this book can used in his campaign, you can still gain a lot by reading the pages that follow. Most of the important tables from the *Player's Handbook* (*e.g.*, level advancement, bard abilities, etc.) are compressed into one convenient section within this book. It is also possible to mimic most of the new bard kits within the existing bard class. This book answers many questions about bardic abilities and presents an extensive list of instruments available to medieval bards, along with illustrations. And, finally, this book has a lot of good information to help gamers to better role-play their bard characters.

## The Other Complete Books

*The Complete Bard's Handbook* is the seventh book of the PHBR series. If you find this book useful in your gaming, you may want to look into the other PHBRs.

**Table 1: THE COMPLETE PHBR LINE**

| Designator | Topic | Stock # |
|---|---|---|
| PHBR1 | Fighter's | 2110 |
| PHBR2 | Thief's | 2111 |
| PHBR3 | Priest's | 2113 |
| PHBR4 | Wizard's | 2115 |
| PHBR5 | Psionics | 2117 |
| PHBR6 | Dwarves | 2124 |

All of these books contain much information that can enhance your bard. Some of the more useful information is listed below.

**The Complete Fighter's Handbook:** The "Character Creation" section provides an in-depth look into the armorer proficiency. Those bard kits able to wear non-standard armor will find this topic particularly interesting. Weapon quality and its effects on combat are also discussed. The "Role-Playing" section provides a list of warrior personalities, some of which could be adopted by bard characters. Since some bards are adept with numerous weapons, the section on combat rules applies to certain bards (particularly the expanded weapon proficiency rules, which allow a character to learn multiple weapons while expending only a few proficiency slots). Fighting styles, martial arts, and other odd combat rules are also presented here. Even jousting tournaments are covered (ideal for the Gallant kit). Within the "Equipment" section is a sizable collection of new weapons, new armor, and new magical items.

**The Complete Thief's Handbook:** As you might expect, this handbook has a great deal of useful information for the bard class. Within are more useful rules than can be

listed here. However, general topics you may find helpful include the following: role-playing thieves, new proficiencies, guilds (construction, maintenance, and types), thief tools, thief equipment, new magical items, classic cons (especially good for the Charlatan), new thief rules, and a description of the thief-based campaign.

**The Complete Priest's Handbook:** There is little information in this handbook that is pertinent to the bard character class.

**The Complete Wizard's Handbook:** Chapter 4 discusses campaign worlds with varying levels of magic. Chapter 5 covers wizards and combat. Chapter 6 describes spell casting under water, spell functioning on various planes, and impaired casting. Chapter 7 presents a commentary on new applications for old spells, adjudicating illusions, spell research, and magical item research. Chapter 8 gives all-new spells ranging from 1st to 8th level. Finally, Chapter 9 contains a number of useful wizardly lists.

**The Complete Psionics Handbook:** There are two useful elements within this book. Most important are the wild talents in Chapter 1. It is possible for a bard to have a few wild psionic talents (the process for determining this is given in Chapter 1). If a wild talent is discovered, the bard player will find the rest of this book invaluable, as it contains all the information needed to run a psionically endowed bard. Also, note that all player character Gypsy-bards are wild talents. The psionics book also contains a number of challenging psionic monsters.

## How to Use This Handbook

How players use this handbook depends upon their skill level, seriousness about the bard character class, and their relationship with their Dungeon Master.

Skilled players who are serious about role-playing bard characters will want to read this book closely. Those who are not as serious will find the (in the front of this book) and the index (in the back) to be invaluable in locating topics of interest.

A new bard character record sheet is located at the back of this handbook. It has been custom-tailored to the bard character class. You will find spaces to place every detail of your bard. Furthermore, the sheet has been laid out with numerous helpful notes, comments, and formats to provide you with a plethora of information without referring to the rule books. You may photocopy the sheet for your own personal use.

For those of you who wish to create new bard kits, a handy kit creation sheet is also bound into the back of this book. This may also be photo copied for personal use.

It is not necessary for you to read this book from cover to cover unless you wish to be the ultimate bard role-player. Instead, locate the section you wish to explore in greater detail and read it to your own satisfaction.

A major effort has been made to make this handbook complete, as its title states. Many of the rules specific to bards in both the *Player's Handbook* and *DUNGEON MASTER Guide* have been complied and condensed within this handbook. Also contained herein is the information needed to generate a bard and maintain him during level advancements. The commonly asked questions about standard bards have been attended to, along with rules clarifications where needed. The bard class has also been fully defined for all to see. The fine points of the class have been examined, illuminated, and made more accessible. Finally, there are many added details concerning role-playing,

including the bard personality, reputation, and role as a performer.

# Chapter 1: Character Creation

Now it is time to begin creating your own bard player character. Before you decide whether he is flippant and cavalier or stately and pondering, whether he is skilled at playing the lyre and reciting lyrics or spinning tales of long-lost heroes, first you must generate and record his fundamental character statistics.

This section includes the basic information needed to generate a bard. The following information is a comprehensive summary of the Rogue and Bard sections found in the *Player's Handbook*. It is assumed that any player using this book is intimately familiar with the *Player's Handbook*; thus, space is not spent here upon background and role-playing information. For a general discussion of these topics, refer to the Rogue and Bard sections found in Chapter 3 of the *Player's Handbook*. Of course, *The Complete Bard's Handbook* would hardly be complete without discussing such subjects. Refer to the "Role-Playing Bards" section of this book for a detailed examination of these topics.

## Qualifications

Generating ability scores high enough to qualify for the bard class is difficult. In fact, it is unlikely unless your DM allows one of the alternative dice-rolling methods described in Chapter 1 of the *Player's Handbook*. A complete discussion on generating bard player characters (along with pre-generated bards) using all six dice-rolling methods is presented at the end of this section.

To be a bard or not to be a bard, these are the qualifications (see Table 2).

**Table 2: CLASS QUALIFICATIONS**

**Ability Requirements:**

Dexterity 12
Intelligence 13
Charisma 15

**Prime Requisites*:** Dexterity, Charisma
**Races Allowed:** Human, Half-elf
**Alignments Allowed:** Any Neutral
(LN, NG, N, NE, CN)

*Bards with a 16 or better in both Dexterity and Charisma gain a 10% bonus to their

awarded experience points.

## Core Abilities

Bards can wear any armor providing Armor Class 5 (chain mail) or worse. Other forms of armor are simply too constraining, heavy, and awkward for true entertainers to wear. Likewise, bards cannot employ shields, as these get in the way of activities such as playing instruments or performing sleight-of-hand tricks. Carrying a lute around in the dungeon is hard enough without worrying about a large metal shield banging around and getting in the way.

**Table 3: ARMOR ALLOWED**

| Armor | Cost AC | Weight (gp) | (lb) |
|---|---|---|---|
| Leather Armor | 8 | 5 | 15 |
| Padded Armor | 8 | 4 | 10 |
| Studded Leather | 7 | 20 | 25 |
| Ring Mail | 7 | 100 | 30 |
| Hide Armor | 6 | 15 | 30 |
| Brigandine Armor | 6 | 120 | 35 |
| Scale Mail | 6 | 120 | 40 |
| Chain Mail | 5 | 75 | 40 |

Although bards fight as rogues and calculate their THAC0s accordingly, they are allowed to use any weapon. Cost, weight, damage, and other relevant statistics for all weapons are found in Chapter 6 of the *Player's Handbook*.

All rogues (including bards) use Table 25 of the *Player's Handbook* to determine level and hit dice based upon experience points. As noted in the expanded reprint of this table, a six-sided die is used to determine hit point increases for bards of level 1 through 10 (plus any Constitution adjustments).

After 10th level, bards gain 2 hit points per level advanced. A hit die is no longer rolled and Constitution adjustments no longer apply.

**Table 4: EXPERIENCE LEVELS**

| Level | XP Needed | Hit Dice (d6) | THAC0 |
|---|---|---|---|
| 1 | 0 | 1 | 20 |
| 2 | 1,250 | 2 | 20 |
| 3 | 2,500 | 3 | 19 |
| 4 | 5,000 | 4 | 19 |
| 5 | 10,000 | 5 | 18 |
| 6 | 20,000 | 6 | 18 |

| | | | |
|---|---|---|---|
| 7 | 40,000 | 7 | 17 |
| 8 | 70,000 | 8 | 17 |
| 9 | 110,000 | 9 | 16 |
| 10 | 160,000 | 10 | 16 |
| 11 | 220,000 | 10+2 | 15 |
| 12 | 440,000 | 10+4 | 15 |
| 13 | 660,000 | 10+6 | 14 |
| 14 | 880,000 | 10+8 | 14 |
| 15 | 1,100,000 | 10+10 | 13 |
| 16 | 1,320,000 | 10+12 | 13 |
| 17 | 1,540,000 | 10+14 | 12 |
| 18 | 1,760,000 | 10+16 | 12 |
| 19 | 1,980,000 | 10+18 | 11 |
| 20 | 2,200,000 | 10+20 | 11 |

Proficiency and saving throw numbers are listed in the Table 5 to complete the information for level advancement. If a bard uses a weapon with which he isn't proficient, a -3 attack roll penalty is incurred.

**Table 5: LEVEL IMPROVEMENTS**

| **Prof.** | | | **Saving Throws** | | | | |
|---|---|---|---|---|---|---|---|
| **Level** | **W** | **N/W** | **PPDM** | **RSW** | **PP** | **BW** | **S** |
| 1 | 2 | 3 | 13 | 14 | 12 | 16 | 15 |
| 2 | 2 | 3 | 13 | 14 | 12 | 16 | 15 |

**Proficiency Abbreviations:**

W: Weapon Proficiency slots

N/W: Nonweapon Proficiency slots

**Saving Throw Abbreviations:**

PPDM: Paralyzation, Poison, or Death Magic

RSW: Rod, Staff, or Wand

PP: Petrification or Polymorph

BW: Breath Weapon

S: Spell

In addition to their many special abilities, bards dabble in wizardry. They gain no spells until 2nd level and they progress through the spell levels slower than true wizards. However, they are very adept learners, so their casting level is equal to their experience level. Thus, although a bard gains his first spell at 2nd level, he casts that spell as a 2nd-level spellcaster. For example, if the 2nd-level bard memorized *affect normal fires*, it would last for four rounds when cast (two rounds/level).

**Table 6: SPELL PROGRESSION**

| **Bard** | **Spell Level** | | | | | |
|---|---|---|---|---|---|---|
| **Level** | **1** | **2** | **3** | **4** | **5** | **6** |
| 1 | -- | -- | -- | -- | -- | -- |
| 2 | 1 | -- | -- | -- | -- | -- |
| 3 | 2 | -- | -- | -- | -- | -- |
| 4 | 2 | 1 | -- | -- | -- | -- |
| 5 | 3 | 1 | -- | -- | -- | -- |
| 6 | 3 | 2 | -- | -- | -- | -- |
| 7 | 3 | 2 | 1 | -- | -- | -- |
| 8 | 3 | 3 | 1 | -- | -- | -- |
| 9 | 3 | 3 | 2 | -- | -- | -- |
| 10 | 3 | 3 | 2 | 1 | -- | -- |
| 11 | 3 | 3 | 3 | 1 | -- | -- |
| 12 | 3 | 3 | 3 | 2 | -- | -- |
| 13 | 3 | 3 | 3 | 2 | 1 | -- |
| 14 | 3 | 3 | 3 | 3 | 1 | -- |
| 15 | 3 | 3 | 3 | 3 | 2 | -- |
| 16 | 4 | 3 | 3 | 3 | 2 | 1 |
| 17 | 4 | 4 | 3 | 3 | 3 | 1 |
| 18 | 4 | 4 | 4 | 3 | 3 | 2 |
| 19 | 4 | 4 | 4 | 4 | 3 | 2 |
| 20 | 4 | 4 | 4 | 4 | 4 | 3 |

Besides just dabbling in wizardry, 10th-level bards have the powerful ability to use any written magical item, whether it is a scroll, book, map, or other written form. This skill is not limited by normal class restrictions. Thus, bards can use clerical scrolls, wizard scrolls, and even magical books restricted to other classes.

Since all bards are dabblers and not devotees of the magical arts, their understanding of written magic is imperfect. There is a 15% chance that they use the work incorrectly. The consequences of incorrect use is up to the DM, but they are almost certain to be unpleasant. (It is common for a bard's allies to flee in panic when he begins to read such items.)

Bards are most renowned for their communication and entertainment talents. To enhance these skills, they pick up a number of thief skills. Of course, when times are lean, many bards ply these abilities in less-than-honorable manners.

All four of these skills are treated as the equivalent thief skills. Skill bases are listed below.

**Table 7: BASE THIEF ABILITIES**

| Pick Pockets | Detect Noise | Climb Walls | Read Languages |
|---|---|---|---|
| 10% | 20% | 50% | 5% |

The player also gets 20 points to distribute among the four skills at 1st level and 15 additional points every time the bard advances in level. If these points are distributed so as to gradually equalize the skills, the bard might advance each level as indicated on Table 8.

**Table 8: BARD AVERAGE THIEF SKILLS**

| Level | Pick Pockets | Detect Noise | Climb Walls | Read Lang. |
|---|---|---|---|---|
| 1 | 16 | 25 | 53 | 11 |
| 2 | 20 | 28 | 56 | 16 |
| 3 | 24 | 33 | 58 | 20 |
| 4 | 29 | 36 | 60 | 25 |
| 5 | 33 | 40 | 63 | 29 |
| 6 | 37 | 44 | 65 | 34 |
| 7 | 41 | 48 | 68 | 38 |
| 8 | 46 | 52 | 70 | 42 |
| 9 | 50 | 56 | 72 | 47 |
| 10 | 54 | 59 | 75 | 52 |
| 11 | 59 | 63 | 77 | 56 |
| 12 | 63 | 67 | 79 | 61 |
| 13 | 67 | 71 | 82 | 65 |
| 14 | 71 | 75 | 84 | 70 |
| 15 | 76 | 78 | 87 | 74 |
| 16 | 80 | 82 | 89 | 79 |
| 17 | 84 | 86 | 91 | 84 |
| 18 | 88 | 90 | 94 | 88 |
| 19 | 93 | 94 | 95 | 93 |
| 20 | 95 | 95 | 95 | 95 |

As with all rogues, a bard's thief abilities are adjusted by race, Dexterity, and armor worn.

**Table 9: THIEF SKILL ADJUSTMENTS**

| Race | Pick Pockets | Detect Noise | Climb Walls | Read Lang. |
|---|---|---|---|---|
| Human | - | - | - | - |
| Half-elf | +10% | - | - | - |
| Dwarf | - | - | -10% | -5% |
| Elf | +5% | +5% | - | - |
| Gnome | - | +5% | - | - |
| Halfling | +5% | +5% | -15% | -5% |

**Dexterity Adjustments**

| Dex | Pick Pockets | Detect Noise | Climb Walls | Read Lang. |

| 9 | -15% | - | - | - |
| 10 | -10% | - | - | - |
| 11 | -5% | - | - | - |
| 12 | - | - | - | - |
| 13-15 | - | - | - | - |
| 16 | - | - | - | - |
| 17 | +5% | - | - | - |
| 18 | +10% | - | - | - |
| 19 | +15% | - | - | - |

**Kit Adjustments**

| Kit | Pick Pockets | Detect Noise | Climb Walls | Read Lang. |
|---|---|---|---|---|
| True Bard | - | - | - | - |
| Blade | - | +5% | +5% | -5% |
| Charlatan | +5% | - | - | +5% |
| Gallant | -25% | - | -5% | +5% |
| Gypsy | +10% | +5% | -10% | -5% |
| Herald | -5% | +10% | -10% | +5% |
| Jester | +10% | -5% | - | -10% |
| Jongleur | +5% | - | +15% | -5% |
| Loremaster | -5% | +5% | -10% | +15% |
| Meistersinger | -10% | +10% | - | -10% |
| Riddlemaster | - | +5% | +5% | +5% |
| Skald | - | +5% | - | -25% |
| Thespian | +5% | +5% | - | +5% |

**Demi-Bards**

| Demi-Bard | Pick Pockets | Detect Noise | Climb Walls | Read Lang. |
|---|---|---|---|---|
| Dwarf Chanter | -5% | - | +5% | - |
| Elf Minstrel | - | - | - | - |
| Gnome Prof. | -5% | - | - | +10% |
| Half. Whistler | - | +10% | - | - |

| Type of Armor | Pick Pockets | Detect Noise | Climb Walls | Read Lang. |
|---|---|---|---|---|
| None* | +5% | - | +10% | - |
| Leather | - | - | - | - |
| Padded | -30% | -10% | -30% | - |
| Studded Leath | -30% | -10% | -30% | - |
| Ring Mail | -25% | -10% | -25% | - |
| Brigandine | -20% | -10% | -25% | - |
| Scale Mail | -25% | -15% | -40% | - |
| Hide Armor | -30% | -5% | -30% | - |
| Chain Mail | -25% | -10% | -25% | - |
| Elven Chain | -20% | -5% | -20% | - |

*Includes small magical items, such as rings, bracers, and cloaks, but not large or bulky devices.

If you compare these armor adjustments to the "Effects of Armor on Thief Skills" table in *The Complete Thief's Handbook*, you see that bards have a special advantage when using ring mail, brigandine, scale mail, hide armor, and chain mail. Since bards often wear such armor while thieves do not, bards are more comfortable and familiar with the workings of these armor types. Thus, bards suffer only about half the skill penalties that thieves suffer if wearing the same armor.

If your DM allows a bard to put on any form of armor normally disallowed to the class (as suggested by certain kits, for purposes of disguise, out of necessity, or for the sake of entertainment), the penalties are identical to those for a thief in similar armor.

**Table 10: ILLEGAL ARMOR ADJUSTMENT**

| Armor Type | Pick Pockets | Hear Noise | Climb Walls | Read Lang. |
|---|---|---|---|---|
| Splint Mail | -40% | -25% | -50% | - |
| Banded Armor | -50% | -30% | -90% | - |
| Plate Mail | -75% | -50% | -95% | - |
| Bronze Plate | -75% | -50% | -95% | - |
| Field Plate | -95% | -70% | -95% | - |
| Full Plate | -95% | -70% | -95% | - |

At 9th level, bards attract 10d6 0-level followers who arrive as soon as the bard secures a stronghold.

The above information defines the standard bard character class. This core is common to all bards no matter what setting, history, personality, or bard kit is used. As such, it does not include the special kit abilities or personality aspects that make a character stand out. This type of information is found in the chapter on character kits later in this book.

The experienced player will note that many of the bard's special abilities listed in the *Player's Handbook* are missing in the above treatment. That is because the standard bard, as detailed in the *Player's Handbook*, is considered a complete kit unto itself. It is called the True Bard kit. This kit combines the core information above with the kit approach of this book to define the bard as it appears in the *Player's Handbook* .

## Generating Ability Scores

Chapter 1 of the *Player's Handbook* presents six die rolling methods for generating player characters. Ability scores have been pre-generated below that qualify for the bard using all six of these methods. The probability of generating a qualifying bard with each method is also provided. Note that it is very difficult to generate a bard by the standard method (method I). Only by using one of the alternative methods do you have a good chance to roll up a bard.

If these alternative methods are used, method VI will practically guarantee a qualifying character. Methods IV and V are also likely to succeed. Although methods II and III are less likely to result in a qualifying bard, they are still better than method I. However, if your DM does not allow for these alternative methods, do not badger him. After all, it is his right to select the rules used in his campaign. This will make the bard much more special when a qualifying character is finally rolled.

**Table 11:**
**PREGENERATED ABILITY SCORES**

**Method I**

| Sample Bard # | Str | Dex | Con | Int | Wis | Cha |
|---|---|---|---|---|---|---|
| 1 | 10 | 13 | 11 | 13 | 10 | 15 |
| 2 | 11 | 13 | 14 | 13 | 14 | 16 |
| 3 | 9 | 13 | 15 | 13 | 8 | 16 |
| 4 | 7 | 12 | 6 | 16 | 11 | 15 |
| 5 | 12 | 14 | 8 | 13 | 6 | 17 |
| 6 | 11 | 12 | 11 | 13 | 7 | 16 |

**Method II (almost 5%)**

| Sample Bard # | Str | Dex | Con | Int | Wis | Cha |
|---|---|---|---|---|---|---|
| 1 | 12 | 15 | 14 | 16 | 13 | 16 |
| 2 | 10 | 13 | 13 | 15 | 16 | 15 |
| 3 | 9 | 12 | 13 | 13 | 12 | 15 |

| | | | | | | |
|---|---|---|---|---|---|---|
| 4 | 15 | 12 | 14 | 13 | 14 | 15 |
| 5 | 14 | 12 | 12 | 13 | 11 | 16 |
| 6 | 9 | 16 | 17 | 14 | 14 | 15 |

**Method III (slightly over 29%)**
**Sample**

| **Bard #** | **3d6 Rolls** |
|---|---|
| 1 | 17, 13, 13, 10, 9, 8 |
| 2 | 15, 14, 13, 11, 8, 6 |
| 3 | 17, 16, 12, 11, 9, 6 |
| 4 | 16, 14, 14, 13, 12, 11 |
| 5 | 18, 15, 13, 13, 11, 11 |
| 6 | 16, 13, 13, 10, 8, 7 |

**Method IV (slightly under 66%)**

**Sample**

| **Bard #** | **Six Best 3d6 Rolls** |
|---|---|
| 1 | 15, 14, 14, 13, 11, 11 |
| 2 | 18, 16, 14, 14, 13, 12 |
| 3 | 15, 14, 14, 13, 11, 11 |
| 4 | 15, 15, 13, 13, 13, 11 |
| 5 | 15, 15, 14, 13, 12, 11 |
| 6 | 15, 14, 13, 13, 13, 11 |

**Method V (slightly under 75%)**

**Sample**

| **Bard #** | **4d6 Rolls, Drop Low d6** |
|---|---|
| 1 | 17, 15, 14, 12, 10, 9 |
| 2 | 17, 16, 13, 13, 11, 10 |
| 3 | 18, 15, 13, 13, 12, 10 |
| 4 | 16, 15, 13, 12, 12, 10 |
| 5 | 15, 14, 13, 11, 10, 9 |
| 6 | 15, 14, 12, 11, 11, 6 |

**Method VI (slightly under 98%)**

**Sample 8 Pts Per Ability,**

| **Bard #** | **Add 7d6 As Desired** |
|---|---|
| 1 | 16, 14, 12, 11, 9, 9 |
| 2 | 17, 14, 13, 11, 10, 8 |
| 3 | 18, 13, 13, 12, 10, 9 |
| 4 | 17, 15, 13, 13, 11, 10 |
| 5 | 15, 14, 12, 12, 9, 8 |
| 6 | 16, 13, 12, 11, 11, 9 |

All of the above statistics qualify for a bard player character. If it is agreeable to you and your Dungeon Master, you may simply roll 1d6 and consult any of the above tables your DM allows for a quick way to generate your bard's ability scores. If your DM allows all six methods, you can even roll a first d6 to select the table, then a second d6 to select the actual ability scores.

Method I and II require ability scores to be recorded in the order rolled. This has been done for you. Since methods III and up allow the player to assign the scores as desired, these scores have been organized from high to low for your convenience. Method VI is unusual. Every ability starts with a base score of 8. The player then rolls 7d6 and adds the results to the base 8 in any order or combination. However, the full count of a die must be added entirely to one ability. If this causes the ability to raise above 18, then the die cannot be used on that ability.

# Chapter 2: Bard Kits

Kits can be thought of as subclasses of the bard character class. They all represent bard characters, but each is unique enough to warrant individual treatment by those players who enjoy examining the finer points of the bard class.

All of the bard kits are set up the same way. There are ten possible subsections to each kit that flesh out the kit and delineate its unique aspects. The details of these subsections are described below.

If the word "Standard" is listed under any subsection, it means that the information that would normally go in that section is identical to the standard information for the True Bard. Actually, every kit's subsections should be thought of as having the "Standard" default. If any question ever arises as to the limits or extensions of a kit, the True Bard kit should be consulted.

## Kit Subsections

**Specialty:** That kit's entertainment form.

**Qualifications:** Qualifications will limit or extend allowed race, alignment, and ability scores for the particular kit.

**Introduction:** This section presents a colorful, first-person example of the kit. Listen to the NPC as he chats with you about himself and his kind.

**Description:** This section describes the kit and distinguishes this particular type of bard from the others.

**Role:** Role explains the role that this type of bard plays within a party and in society as a whole.

**Secondary Skills:** Secondary skills is an optional rule found in Chapter 5 of the *Player's Handbook*. If this rule is used, only skills listed in this subsection of the kit can be selected by characters who adopt this kit.

Weapon Proficiencies: A character can become proficient only in the weapons listed

in this subsection.

**Nonweapon Proficiencies:** Although nonweapon proficiencies are an optional rule, it is strongly recommended that they be used if bard kits are allowed into the game. They have been carefully selected to give each kit a unique feel.

*Bonuses:* Each bard kit has four bonus proficiencies. These proficiencies are gained without expending any proficiency slots. It is strongly suggested that at least half of a bard's proficiency slots be spent in one of three ways: gaining proficiencies from among those on the "Suggested" list, gaining additional topics (see the chapter on proficiencies) to proficiencies on the Bonus or Suggested lists, or in improving proficiencies on either list.

**Armor/Equipment:** Armor restrictions or extensions are listed here. Sometimes special comments will be made about equipment, such as typical dress, identifying colors, special tools, and so on.

**Special Benefits:** Each bard kit has four special benefits. These benefits set the kit off from all other character classes and kits. The character should take on a different role-playing feel because of the kit's descriptive information.

**Special Hindrances:** Special hindrances or limitations are placed on certain kits. Hindrances are listed here only if they do not fall into any subsection listed earlier.

**Notes:** On rare occasions, this subsection is used to list special notes that don't fit into any of the earlier subsections.

## List of Kits

All of the bard kits are listed on the following pages. The first kit is that of the True Bard, as presented in the *Player's Handbook*. This kit establishes a base from which all the other kits are built. The other kits are arranged in alphabetical order. A section on multi-classed bards follows. It contains an additional four kits, but these are restricted to demihumans.

### True Bard

**Specialty:** Jack-of-all-trades.

**Qualifications:** Standard ability scores (Dexterity of 12, Intelligence of 13, and Charisma of 15).

**Introduction:** This is a typical bard right out of the *Player's Handbook*. No introductions are needed.

**Description:** Bards are described in the *Player's Handbook*. They are the epitome of the jack-of-all-trades, able to wield all weapons, don most types of armor, cast a good number of wizard spells, and employ four of the eight thief skills. Bards are very versatile, but they are masters of no craft.

As with all bards, True Bards are entertainers. They can sing, play instruments, create and recite poetry, and spin tall tales. In fact, a bard's skill at these art forms is such that he can inspire and rally allies and even negate the effects of hostile songs and sounds.

Bards are always able to read and write their native language. They know much about local history, and they can relate legends pertaining to many of the powerful magical items they encounter in their travels.

Bards are tremendous listeners, readers, and searchers. They eagerly listen to any news and stories that folk are willing to tell. If there's anything available for a bard to learn, he'll learn it as soon as he can.

**Role:** Bards are excellent characters to play in small gaming groups. Their varied skills enable them to fill in for many more-specialized characters. For example, a bard could serve as a small group's wizard and thief. They are great survivalists, as they can almost always find some skill to help them out of any predicament they fall into.

**Secondary Skills:** True Bards may select any secondary skill.

**Weapon Proficiencies:** Bards are unrestricted as to weaponry, but they rarely carry around bulky weapons, even if they are proficient with them. A bard seen carrying a two-handed sword or halberd is likely to arouse suspicions about his intentions. A bard with an elegant bow across his back, however, does not draw as much attention. A finely crafted weapon even adds a touch of class to the bard's appearance.

**Nonweapon Proficiencies:** *Bonuses:* Singing, Musical Instrument, Reading/Writing (native tongue), Local History.

Other proficiencies may be selected as desired. For every additional proficiency slot spent in the musical instrument proficiency, bards not only increase their ability, but they also gain the use of two more instruments. A bard initially knows how to play one instrument (of the player's choosing). If a second proficiency slot is used for musical instruments, the bard can now accompany himself on three instruments.

**Armor/Equipment:** The bard can use any weapon. He can wear any armor up to, and including, chain mail, but he cannot use a shield. True Bards generally wear bright, cheerful colors, sometimes wearing plumed hats to complete the ensemble. Their instruments, clothing, and other equipment are all kept in top condition.

**Special Benefits:** *Influence Reactions:* When performing for an audience, the bard can attempt to alter the mood of his listeners. Such an audience must not be attacking or preparing for an immediate attack. The bard must be singing, chanting, spinning a tale, reciting a powerful oratory, or playing a tune on an instrument with which he is proficient. The intended effect of the performance is determined by the bard's player; he may want to make the audience friendlier or more hostile, for instance. After a length of time (1d10 rounds is suggested), all NPCs able to hear the performance (regardless of whether or not they are paying attention) must roll a saving throw vs. paralyzation. For small groups, roll individual saving throws. For large groups, the DM may split the audience into groups of ten or so and roll a separate saving throw for each group. There is a -1 penalty to the saving throw for every three levels of experience of the bard. Those failing the roll have their reactions adjusted one level (from friendly to indifferent, for example) in the desired direction—consult Table 59: Encounter Reactions, in the *DMG*. Those whose saving throws succeed have their reactions adjusted one level in the direction opposite from that intended by the bard.

*Rally Allies:* To use this ability, the bard must know the nature of the upcoming combat. A bard can't rally allies if there is no obvious opponent. Rallying allies is done is much the same manner as influencing reactions. The bard sings heroic songs or weaves inspiring tales about how his comrades will overcome their foes and win the day. Such

heroic recitals always take at least three rounds, and the audience must be in close proximity to the bard for the effects to occur (within a 10-foot radius per level of the bard). When complete, all the affected allies automatically receive one of the following three benefits (as decided by the bard's player): +1 to attack rolls, +1 to saving throws, or +2 to morale. The chosen effect lasts one round per level of the bard. The effects can be renewed by the bard, even during the same encounter, but combatants have to return to within the bard's radius and listen to his tales for another three rounds. It is impossible to rally allies who are actively battling opponents.

Note that the benefit applies only to the specific encounter that the bard sings about. It does not apply to a ranger who hears the tale, rides off on his horse to warn the rear guard, and is then ambushed by wandering bandits.

*Counter Song:* Another powerful use of story, song, or tale when voiced by a bard is that of counter song. This is the intricate art of canceling the effects of hostile sound, whether it be songs, chants, wails, or even commands and suggestions from magical spells. In order to sing the proper counter song or chant the proper counter poem, a bard must concentrate intensely. He may perform no additional actions other than a slow (half speed) walk. If he is struck by an attack or fails a saving throw, his attempt is ruined. The exertion is such that only one counter song may be attempted per encounter or battle.

Success of the counter song is realized only if the bard rolls a successful saving throw vs. spell. If this is successful, the hostile sounds have no effects within 30 feet of the bard. If the saving throw fails, the bard's attempt is fruitless and the hostile sounds have their standard effects (applicable saving throws and other defenses still apply).

Counter singing does not prevent hostile spellcasters from reading scrolls, using magical item command words, or casting spells (even spells with verbal components). Counter singing does prevent all other hostile sounds from functioning, including spell effects that require the caster to speak (e.g., *command, quest, suggestion, tongues*, etc.).

*Legend Lore:* One of the most useful abilities of the bard is his knowledge of famous magical items and uncanny knack for figuring out how they function. To perform legend lore, the bard must scrutinize the item closely. This does not necessarily require actually handling the item, but it must be fully visible to the bard.

Scrutiny takes 1d10 rounds, after which a percentile roll is made. The bard has a 5% chance per level of knowing something about the item. The exact information revealed is up to the DM. The bard draws upon history, rumors, and clues based on the item's construction to gain this information. Typical information revealed includes the item's history, maker, name, and other less technical aspects. Information such as the number of pluses, exact command words, etc., are rarely learned. This type of specific information is left for spells, such as *identify, commune, limited wish*, and so on.

A good optional rule is to give some very specific information to the bard player if the roll is equal to or less than the bard's level. Furthermore, if the roll is 01, the bard should know almost everything there is to know about the item.

If the DM allows it, the following table may be used as a fast optional method to determine what is known about an item that was successfully examined by a bard. To use this table, the bard must first succeed with the legend lore percentile roll. If this roll succeeds, the player should roll on the following table once per level of the bard. Results that come up more than once are not rerolled; the bard simply knows a lot about this aspect of the item. After rolling, give the DM some time to come up with a suitable

background and history. Few items are detailed with this type of information. After all, bards tend to be more curious about the legends and lore that lie behind an item's powers than most others.

**Table 12: LEGEND LORE RESULTS**

| 3d6 Roll | Information Gained |
|---|---|
| 3 | How many charges/uses left |
| 4 | Whether item is intelligent |
| 5 | Whether items is cursed/evil |
| 6 | Value on the open market |
| 7 | Name |
| 8 | Famous past owners |
| 9 | Age of item |
| 10 | What race created it |
| 11 | Where it was made |
| 12 | Who crafted it |
| 13 | Alignment of owners |
| 14 | Who can use it |
| 15 | General effects |
| 16 | How to activate it |
| 17 | Item type (as per *DMG* ) |
| 18 | Let player read *DMG* entry |

**Special Hindrances:** None.

## Blade

**Specialty:** Assassin/Spy/Weapon Master.

**Qualifications:** Blades must have a Dexterity of 13 or more, an Intelligence of at least 13, and a Charisma of 15 or more.

**Introduction:** *So you want to know about Blades, eh? Well, keep out of the way and I can show you about myself and those like me. My name's Dark and I'm a Blade. I take my name from the black garb that I wear at all times. I'm actually not exceptional in this, as all Blades dress in dark clothing. But the name has stuck, and I like it.*

*I currently work for a small carnival that travels around the mid-Flanaess, entertaining the local crowds and thrilling the women. My tricks are similar to those of most Blades. I perform sword dances, swallow sabers, put on weapon displays, and perform feats of knife throwing. Most crowds are especially enthralled when I strap Tatanna, a young-looking elf maiden, to a wooden plank, blindfold myself, step back 12 paces, then encircle her body in a wall of knives.*

*Entertaining fools is only my surface career. On the last day of a performance, a half dozen of my fellow performers and I stage the real entertainment-at least from my point of view. We slip into the upper class section of town and relieve some pompous wealthy dupe of his family fortune.*

*Although these "side shows" are very profitable, they still don't give me the old thrill*

*that I used to get. Thus, I've turned to a more daring hobby-assassination. I'm not a "Blade for hire," and I absolutely hate those mindless, ruthless killers. What I do is feel out a town to discover who's oppressing the populace the most. Once I've found the biggest bully in town, I slip into his residence, spy on him, and plan his untimely demise. Then I perform my greatest solo act. I slip into the fellow's bedroom, poison him, cast* sound bubble*, wake him, and then share in his last few moments of life.*

**Description:** Blades are master artisans with bladed weapons. Everyone has seen a Blade in action at fairs and carnivals. They are the knife throwers who pop balloons while blindfolded and swallow slender sabers such as those used by lawless pirates on the high seas.

Blades also perform amazing displays of weapon skill and control as they flash various weapons all about their bodies with deadly precision. Oriental Blades are perhaps the most skilled at this particular art form. Using weapons such as the three-piece rod, nunchaku, or the katana, Oriental Blades put on amazing displays of rapid weapon movement, including offensive and defensive spins, katas, and ritual dances. Occidental Blades are also impressive, as they rapidly spin short swords, quarterstaves, or sickles about them.

Besides rapid displays of weapon skill, Blades also perform slow, elegant dances, involving incredibly precise movement and timing. These dances include thrusts, lunges, leaps, graceful arcs, etc.

If there is a showy way to wield, throw, or perform with a weapon, a Blade knows how to do it better than anyone.

**Role:** Blades have great reputations as the most deadly weapon masters in the land. This is generally far from the truth. Any warrior is more skilled than most Blades at successfully attacking opponents. Blades don't understand offensive and defensive weapon maneuvers, nor do they know the locations of vital body parts. Blades can be effective in many combat situations, however, as they use flash and flare to enhance their attacks.

Imagine what an orc would think if it was trapped in a cavern with only two exits and a man blocking each. One man (a warrior) wears plate mail and is calmly holding a long sword; the other (a Blade) is dressed in solid black studded leather armor and is grasping a halberd. Both men advance upon the hapless orc, but the Blade begins rotating his halberd in an ever-quickening offensive spin, demonstrating masterful control of his weapon. Which opponent will the orc choose?

Blades are valuable aids to any party, as their amazing displays can have significant effects upon the resolve and morale of opponents.

For every Blade who leads an adventurous life, there is another who serves in the role of assassin. Blades make perfect killers, as they know how to climb walls, cast wizard spells, and use any weapon they choose. Furthermore, Blades can use their performing personae to gather information and even get themselves invited to perform within the homes of their victims.

**Secondary Skills:** Armorer, Bowyer/Fletcher, Gambler, Weaponsmith.

**Weapon Proficiencies:** At least half of a Blade's weapon proficiency slots must be selected from the following: sword (any), dagger, knife. Blades are also limited to expending but one slot on a purely missile weapon (one that cannot be used in melee combat). This does not include such weapons as spears or hand axes, which can be

thrown or used in melee.

**Nonweapon Proficiencies:** *Bonuses:* Reading/Writing (native tongue), Local History, Blind-fighting, Juggling. *Suggested:* Blacksmithing, Bowyer/Fletcher, Disguise, Poetry, Weaponsmithing.

**Armor/Equipment:** To complement their entertainment image as mysterious and fearsome men, Blades often dress in black garb, even going so far as to wear masks, facial wraps, or black headgear. Their weapons are always kept in perfect condition and highly polished for maximum effect during a performance. A man dressed in solid black, flashing gleaming silver blades, is truly an awesome sight.

**Special Benefits:**

*Weapons Display:* For this ability to have an effect, the Blade must whirl a non-missile weapon about his body. The observer must be close enough to the Blade to see the display (*e.g.*, a *darkness* spell negates the effect). The display has no effect upon those already engaged in close combat, as they are too busy to pay attention to the show. Also, Weapons Display works only on those of Low (5) or better Intelligence, who can either use weapons or have seen them used. (It is impossible to impress green slime by twirling a dagger in your fingers.) Likewise, a highly intelligent creature that has never seen a weapon used will also be unintimidated by the Blade's display.

By whirling a melee or hurled weapon about, a Blade can affect the morale and courage of others. Such a display of skill, precision, and deadly grace lowers opponents' morale by 2 (but it does not require an immediate morale check) and inspires allies, giving a +1 bonus to allies' attack rolls.

The display must occur for a full round without interruption. During this time, any successful attack upon the Blade, or failed saving throw by the Blade, disrupts the display.

Weapons Display may be used only once per encounter; the display lasts for one round per level of the Blade.

This ability requires a lot of room; it cannot be done in a narrow corridor. Specifically, the Blade must be able to stand with his arms extended while holding out the weapon and be able to move his arms in all directions without contacting any obstructions.

*Handle Weapon:* Blades train and perform with weapons in both hands. Although all thieves are allowed to attack with two weapons (see Chapter 9 of the *PHB*), Blades suffer no penalty to their main weapon and only a -2 penalty to the attack roll with their secondary weapon.

Blades are considered to be ambidextrous. They can shoot a bow equally well with either their left or right hand, they can wield a sword in either hand, and they can throw daggers with either hand-all with no penalties.

When a Blade tries to catch small weapons that are thrown at him, the attack roll (see the juggling proficiency) is made using the Blade's level as a bonus.

*Trick Throw:* Although this ability is called "trick throw," it functions the same for both missile weapons and hurled weapons. Trick throw enables a Blade to perform called shots (as per Chapter 9 in the *DMG*). The usual -4 attack roll penalty is lessened by 1 for every five experience levels of the Blade (round fractions up). Thus 1st- through 5th-level Blades suffer only a -3 penalty, 6th- through 10th-level Blades suffer only a -2 penalty, and so on.

Because Blades throw weapons blindfolded, they extend the blind-fighting proficiency to include hurled weapons and missile weapons (to a maximum range of 30 feet).

*Defensive/Offensive Spin:* Defensive and offensive spins are elements of a good weapon display. They have other uses as well.

A defensive spin is a specialized form of parrying (see Chapter 9 of the *PHB* ) in which the Blade whirls his weapon to create a deadly shell about his body. A Blade may not attack during any round in which he is performing a defensive spin. The Blade's Armor Class is lowered by half the Blade's level (round fractions up) during this maneuver. In addition, any creature that makes a melee attack on the Blade must roll a successful saving throw vs. paralyzation or suffer damage equal to half the Blade's level (round fractions up; the damage is limited to the weapon's maximum damage, including any bonuses of the weapon). A defensive spin may be used only once per combat; it lasts for a maximum number of rounds equal to the Blade's Constitution. A successful hit upon the Blade disrupts his concentration and ends the defensive spin.

An offensive spin is a much more threatening maneuver. The Blade creates a fearsome-looking display of skill directed at a specific opponent. The spin must last for the entire round, during which the Blade does not attack (nor does he receive any Armor Class adjustment, as he would for a defensive spin). On the next round, the Blade makes a normal attack roll. If this hits, the victim must roll a successful morale check or it will try to stay at least ten feet from the Blade (going off to attack other members of the Blade's party or fleeing in terror if the Blade is the only available opponent). Offensive spins may be attempted only once on a particular creature. Furthermore, the Blade cannot have been damaged by that creature prior to the offensive spin attack (a creature won't fear someone it has already injured). This is a difficult condition to fulfill, as the creature gets a free round to attack while the Blade is the first round of the offensive spin. Offensive spins function only against creatures of Low (5) or better Intelligence.

If the Blade's spin is interrupted (either voluntarily or by a successful attack), the Blade does not get an attack that round.

**Special Hindrances:** Unlike many other bards, Blades do not gain the 10th-level ability to use all forms of written magical items. Blades study weapons, not scrolls, maps, and books.

**Notes:** Although Blades do not receive a single bonus to damage or attack rolls, and they fight as rogues, they are still some of the flashiest combatants you'll ever meet or play.

## Charlatan

**Specialty:** Trickster/Con Artist.

**Qualifications:** Standard ability scores. Charlatans live off the fat of the land, bending all the rules and hopping through loopholes in the law. It is completely against the personality of the Charlatan to be lawful. Charlatans are limited to NG, N, NE, or CN alignments. Gnomes may become Charlatans and advance up to 6th level.

**Introduction:** *My real name is Tiel, but most of the fools who fall into my traps call me Tori. I know exactly how to get what I want from others. Especially those who are*

*overconfident, weak, or emotional.*

*People often believe what they want to believe, and I take advantage of this. I know how to swindle these simple-minded fools and make them feel good about it.*

*I have many disguises with which to cloak my activities. My favorite is that of a cleric of Tyr. Of course, none of my ruses has ever been uncovered, and it's a good thing. There's a saying: "There are two types of Charlatans-those who are good and those who are dead."*

*I usually don't stay in one place for very long; it's not safe. By the time the poor fool I've tricked has figured out what happened, I'm long gone.*

*Once, I agreed to watch over the castle of a good "friend," the rapacious Sir John of Canters, while he went off on a quest. I sold the castle and made off with all the loot before he returned. For now, I am performing sleight-of-hand tricks for mere pocket coins until I meet another "friend." Perhaps tomorrow I will be a powerful mage or a war hero.*

*I thrive in cities and towns where victims are plentiful and easy to manipulate. Lately, I have been considering the possibility of posing as a thief. Why? So I can accompany a party of adventures in a quest and collect my "share" of the treasure.*

**Description:** Charlatans are masters at manipulating people. Using their high Intelligence and understanding of human nature, Charlatans prey upon the foolish, overconfident, and greedy people around them.

Charlatans often seem bold and boisterous, but they always maintain self-control. The profession of swindling others and making them feel good about it is an age-old practice and none are better at it than Charlatans.

The Charlatan's profession has its downside, too. When a Charlatan's facade is pierced, he is in grave danger, for no one likes to be conned. Then the Charlatan's quick feet may serve him better than his quick wit.

**Role:** Charlatans are wanderers. They go from town to town, switching from one identity to another, always a step ahead of the last person they swindled. In large cities, Charlatans may be able to live out most of their lives moving from one quarter to the next. When times are tough and no great con comes to mind, Charlatans sometimes perform sleight-of-hand tricks just to get by. Charlatans also have a knack for acquiring jobs that allow them to bluff their way through each day. Charlatans can sometimes be found masquerading as priests, healers, sages, diplomats, powerful mages, and retired heroes.

As player characters, Charlatans are most useful in town-based campaigns or when traveling across inhabited country. Their talents often support the entire party with food, shelter, and minor luxuries. Unfortunately, many of their talents have little use when exploring ruins or wilderness areas. However, they often pose as wizards, warriors, thieves, and sometimes even priests. As NPCs, Charlatans really come into their own.

**Secondary Skills:** Charlatans can have any secondary skill. However, well over half of all Charlatans are gamblers, jewelers, or limner/painters, for these skills help fill their coin purses in lean times.

**Weapon Proficiencies:** Charlatans must take dagger, short sword, or long sword as one of their initial weapon proficiencies, as these weapons are used in so many roles that they shouldn't be passed over. At least every second weapon proficiency gained must be one of these three until they are all selected.

A Charlatan selects the rest of his weapons to fill the needs of various roles. For example, if Charlatan decides to masquerade as a powerful warrior, he arms himself with a heavy combat weapon (a two-handed sword, polearm, long bow, or a battle axe) and spends a proficiency slot learning it. This way he can appear to be a skilled and tough fighter. The Charlatan always uses his proficient weapon in dire situations. If an encounter is less threatening, the Charlatan uses one of the other weapons so as to appear to be a well-rounded fighter (the -3 non-proficiency penalty is easier to hide when attacking monsters with poor Armor Classes).

**Nonweapon Proficiencies:** *Bonuses:* Acting, Disguise, Forgery, Gaming. *Suggested:* Appraising, Astrology, Healing, Herbalism, Juggling, Reading Lips, Religion, Rope Use, Singing, Ventriloquism.

**Armor/Equipment:** A Charlatan is allowed to wear any type of armor if a role requires it. Thus, a Charlatan masquerading as a paladin can wear plate mail and carry a shield. But a Charlatan is a finesse character; heavy, bulky armor goes against the grain of his personality. No Charlatan will maintain a role that requires him to wear non-bard armor for more than a few weeks.

**Special Benefits:**

*Charm:* Charlatans are aware of their unique charm and flair. They have learned to use this gift to sway the reactions of others. However, such charm must be carefully tailored to a specific audience. Charlatans can affect only a small group of people, no larger in number than their current level.

To be charmed, a group must be in average to high spirits. (You can't charm a merchant who's just been robbed.) The Charlatan must mingle among the intended group and chat for at least 1d10 rounds. After this time, those in the group roll a saving throw vs. paralyzation with a penalty of -1 per three levels of the Charlatan. Those who succeed are unimpressed with the Charlatan and may even find him to be an irritation. If they succeed on a natural 20, they see through the Charlatan's facade.

Those who fail have been caught up in the Charlatan's tales and find him to be a most remarkable person. The effects of the charm are identical to the wizard spell of the same name. However, it is not magical in any way, and future saving throws are not made based on Intelligence and time. Rather, every time the Charlatan stresses the relationship-by calling for a favor, or requesting delicate information-the paralyzation saving throw is rerolled. The DM can give bonuses or penalties depending on how much stress the request puts on the relationship.

*Masquerade:* The ability of masquerading requires much study, time, and effort on the part of the Charlatan. This enables a Charlatan to appear to have a specific skill. This is not a disguise, as the proficiency of that name. Rather, it is the ability to appear proficient at the chosen skill. The character picks up the language ('buzz words'), professional mannerisms, and general techniques to help him in his endeavor.

Unlike the True Bard, the Charlatan only appears to be a jack-of-all trades. He does not study skills to use them, but for the sake of conning others into believing he has them.

The use of this ability is resolved by the DM in much the same manner as an illusion spell. If the performance is not overly suspicious and the characters watching have no reason to disbelieve the bard's ability, then the attempt appears genuine. Otherwise, a saving throw vs. paralyzation is rolled with a -1 penalty per three levels of the Charlatan. Those who succeed realize that the Charlatan is a fraud.

A Charlatan can use his masquerade ability to fake any nonweapon proficiency or secondary skill. Furthermore, if the Charlatan rolls a successful Intelligence check with a -10 penalty, he actually functions as if he really knows the skill or proficiency (for this one check only). Thus, a Charlatan can actually succeed just enough to keep skeptics satisfied.

For example, if Tiel is masquerading as a cleric, she can claim to know the healing proficiency even though she doesn't really have it. Unless those she heals are suspicious, they will believe that the attempts are genuine (if they are suspicious, roll as described two paragraphs prior to this one). First Tiel's player rolls an Intelligence check with a -10 penalty. If that roll succeeds, she next rolls a healing proficiency check. If this check also succeeds, the patient is healed of 1d3 points of damage. If the Intelligence check fails, everyone watching rolls a saving throw vs. paralyzation (with a -1 penalty per three levels of the Charlatan) to notice that the Charlatan is a fraud. If the Intelligence check succeeds but the healing check fails, the patient and onlookers notice only that a valid attempt was made but it just didn't help.

Each time Tiel masquerades as a healer, an Intelligence check is rolled with a -10 penalty. If the check succeeds, a successful healing proficiency check will actually heal 1d3 points of damage.

*Detect Fakery:* Because Charlatans are so skilled at faking their personalities, lying, and concealing their feelings and reactions, they can see right through false personae and verbal trickery when others attempt them. As the old saying goes, "You can't con a con man." Any time a Charlatan player requests it, he can try to determine if someone is lying, operating under false pretenses (including a masquerade), or swindling him. A Charisma check is rolled. Success means the Charlatan realizes the deception.

Furthermore, a Charisma check with a -10 penalty enables the Charlatan to determine a person's alignment. This requires that the Charlatan speak with and observe the individual for 1d10 rounds.

*Swindling:* Major cons, such as duping a king into believing that you are a highly respected sage, drawing him into your inner confidence, and then relieving him of the crown jewels, should be done only through role-playing. However, Charlatans hone such skills by constantly performing minor swindles and tricks. These are far too numerous and insignificant to role-play every time. Swindling covers this aspect of a Charlatan's skill repertoire.

By performing various cons, sleight-of-hand, and other deceptions, a Charlatan is often able to walk away from a merchant with far more than a fair deal. The same is true of any common outlay of coins, such as buying meals at a tavern, paying for a room at an inn, and purchasing ordinary items. In instances like these, the Charlatan makes a pick pockets roll. If successful, the cost of the item is reduced to the percentage rolled; this is what the Charlatan pays. If the roll fails by more than the Charlatan's Charisma, the con is seen through. Swindle rolls above 95 are always detected by the victim.

For example, Tiel tries to swindle a barkeeper for a 10-gp glass of imported wine (Tiel has only six gold coins left). Tiel's pick pockets roll is a 53 and she has a Charisma of 16. She rolls a 25 and swindles her way into paying only two gold and one electrum for the wine (25% of the original cost). If she had rolled a 54-69 the barkeeper would have noticed the error and politely requested the remainder of the money. On a 70 or above the barkeeper would not only have noticed the error, but he would have realized

that Tiel tried to swindle him (with unpleasant consequences for Tiel).

Swindling rolls should not be used for amounts in excess of 10 gp per level of the Charlatan. Such grand swindles require full role-playing.

**Special Hindrances:** None.

## Gallant

**Specialty:** Romantic Warrior (cavalier).

**Qualifications:** Standard ability scores. Gallants cannot be neutral evil. Most Gallants are neutral good.

**Introduction:** *Life as a Gallant? Well, take it from me, Sir Gladiel, that life and love are one and the same. I and my squire, Thorp, have been traveling the Dale Lands since we met some four years ago. Always I am enriched by the charming young ladies I encounter. Between them and the innocent children, I don't see how any man can claim that we live in evil times.*

*For the past seven months I've been following the jousting circuit established by his royal highness, Duke Mark of Gunwar Keep. It's been a splendid round of competition. So far I've only won three of my 27 matches, but nearly two dozen of the fairer sex will whisper my name for years to come, for I have entranced them with my honest charm and pure heart.*

*Unfortunately, there are few men left these days who believe in love for love's sake, who protect the innocent, and who strive for moral purity. Even paladins are too caught up in their own righteousness to live life properly.*

*It seems that no one realizes that happiness is the goal of life. Winning and losing is unimportant. All that matters is that you are happy and that your actions do not deprive others of happiness.*

**Description:** There is no character as pure and romantic as the Gallant. He travels the lands on the wings of romance and true love, stealing the hearts of the young and lightening the spirits of the elderly. A Gallant seems to be blessed with a grace and charm not given to others of his race.

Gallants are often mistaken for paladins or cavaliers. They dress and act much like heroic warriors. But they are not driven by blood lust or the desire to slay monsters for the sake of destroying evil. Gallants are romantics at heart. They defend beauty, innocence, and love.

Yet the ways of love and romance cause many a famous Gallant to end his life in tragedy. Shakespeare's Romeo would be such a Gallant.

**Role:** Gallants travel the lands in search of beauty and true love. Their romantic outlook is such that they can always imagine a purer life just over the next ridge. Thus, they never stay in one place for long. Because of this, most Gallants own a horse to travel the lands.

The pastime of many Gallants is the medieval tournament. Here the skills of jousting, dueling, archery, and other combat practices are honed. Such tournaments draw crowds of young men and women before which the Gallants may perform. Although the warrior classes usually win these tournaments, Gallants often win the hearts of the onlookers and steal the day's glory away from the victorious warriors. Of course, this causes a lot of

friction between Gallants and jealous warriors.

When a Gallant goes on an adventure, it is likely the result of some promise to a fair maiden, to retrieve an item of beauty and love, or for some other romantic cause. In these situations, the Gallant adopts the role of a heroic fighter and charges forward regardless of the dangers that lie ahead.

**Secondary Skills:** A Gallant should pick his secondary skill from one of the following: Armorer, Bowyer/Fletcher, Groom, Hunter, Leather Worker, Weaponsmith.

**Weapon Proficiencies:** Gallants must select the jousting lance for use in tournaments. Being the romantic fighters that they are, it is important that Gallants always keep their weapons in perfect order and well polished.

**Nonweapon Proficiencies:** *Bonuses:* Dancing, Etiquette, Languages (Ancient), Poetry. *Suggested:* Animal Training, Armorer, Artistic Ability, Blacksmithing, Blind-fighting, Bowyer/Fletcher, Languages (Modern), Leatherworking, Musical Instrument, Riding (Land-Based), Reading/Writing, Singing, Weaponsmithing.

**Armor/Equipment:** Gallants are allowed to wear any form of armor, even those not normally allowed to the core bard. However, Gallants are more interested in quality and appearance than in the armor's actual protection. They will don a gleaming suit of chain mail instead of a dented suit of plate mail. A suit of *studded leather +1* is more appealing to them than the gleaming chain, but *padded leather +4* is even better (i.e., the bigger the magical bonus the better, regardless of the armor type). However, of all forms of armor, elven chain mail is most prized by the Gallant.

The same logic holds true for all of their equipment.

**Special Benefits:**

*Essence of Purity:* Because Gallants are so infused with love, beauty, and the aspirations of a romantic, they seem to hang onto life when others would allow it to slip away. Thus, Gallants gain a bonus of 1 hit point each level (in addition to any Constitution bonuses). Furthermore, if a Gallant fails a saving throw that will result in his death, the saving throw is rerolled for a second chance.

Even when a Gallant is slain, he does not immediately drop over dead. Rather, he lingers on long enough to recite one final tragic poem for those who will listen. If the Gallant is slain in combat while defending love, innocence, or beauty (including members of the opposite sex), the Gallant hangs on and fights for another 1d4 rounds or until struck for additional damage equal to his level. Then he recites his poem and dies.

*The Code of the Gallant:* Gallants all live by a code of ethics that has slowly evolved over the years. If a Gallant is true to this code, he gains an inner confidence and peace that results in a +2 bonus that can be applied to either his attack roll, damage roll, Armor Class, or saving throw each round. During the round, the Gallant player may decide to use the +2 bonus at any time before rolling the dice that will be adjusted. Once the bonus is used in a round, it is not available again until next round. The bonus cannot be split into two +1 modifiers.

If a Gallant breaks this code, he loses the +2 bonus until the infraction is remedied. Further, he must seek out a priest who will listen to his transgressions and cast atonement upon him (such priests will often require some form of penance).

**The Code of the Gallant**

The Gallant will ...

... defend lovers, the innocent, and those of the opposite sex and aid them in times of need (unless they are enemies or hostile).

... never marry nor solemnly vow to love only one person.

... never retreat from combat until allies of the opposite sex have done so first (unless they are fellow Gallants).

... never overstay his welcome at any place.

... spend at least half of his money on the innocent or romance.

... own only what he can carry with him.

*Romantic Appeal:* The romantic appeal of a Gallant is so strong that non-hostile encounter reactions are adjusted one level in a more friendly direction unless a successful saving throw vs. paralyzation is rolled with a -1 penalty per three levels of the Gallant. However, if the encounter includes mixed genders, those of the same sex as the Gallant will actually be adjusted one level in the opposite direction if they succeed on their saving throw (as jealousy rears its ugly head).

*Poetic Charm:* A Gallant who directs his attention to one person of the opposite sex can attempt to win that person's heart. This requires the Gallant to perform many subtle acts of wit and charm. Among these acts must be the recital of at least one poem concerning the person. The entire effort takes a minimum of 1d10 turns, after which the person rolls a saving throw vs. paralyzation with a -1 penalty per three levels of the Gallant. Failure means that the person is affected as if the Gallant cast a *charm* spell on him or her.

The effect is not magical and doesn't wear off over time, unless the Gallant exploits or treats the person badly. Each such abuse results in another saving throw being rolled to break the Gallant's charm. The Dungeon Master may apply adjustments based on the situation. For example, if a Gallant asks a princess to tell him where the king's treasure is hidden, she will gain a saving throw adjusted by the degree of loyalty she has to her father. Striking the princess (something greatly out of character for a Gallant) to gain this information is likely to result in at least a +5 bonus to break free of the Gallant's charm.

**Special Hindrances:** A Gallant is a wanderer who never builds a stronghold. Nor does he attract followers at 9th level. At 5th level, however, a Gallant gains a squire (a 1st-level fighter). This squire is absolutely devoted to the Gallant, maintains his equipment in top order, and accompanies him on all of his quests. If a Gallant's squire is slain, a new squire arrives as soon as the Gallant acquires two more experience levels.

## Gypsy-bard

**Specialty:** Dance/Instruments/Singing.

**Qualifications:** Standard ability scores. Gypsy-bards cannot be lawful neutral. Elves can become Gypsy-bards able to advance to the 9th level.

**Introduction:** *I'm known as Madraime, and I'm a Gypsy lady. Oh, I'm not what most people would call a typical Gypsy. Within the society of gypsies, there are many different types of individuals. I am what is known as a Gypsy-bard, performing-Gypsy, or dancing-girl.*

*I travel with my father's caravan, performing for the locals of a region as we pass through. When I'm not singing and dancing for the outsiders, I often entertain those of my caravan in the evening hours. There is nothing as lovely as spending an evening among my own kind, dancing, singing, and enjoying the company of those who understand the world.*

*Like all Gypsies, I realize that humans, elves, dwarves, and others were meant to lead lives of inner discovery, peaceful joy, and association with nature. I know that many people distrust Gypsies, calling us thieves and worse. This occurs because we Gypsies are misunderstood. Our beliefs are so pure and so natural that they are hard for outsiders to understand.*

*For example, as a Gypsy, I understand that ownership of an item exists only so long as the item is not ignored or forgotten. If I lay down my magical dagger, walk away, and one of my brothers should find it, the dagger is then his. If I want it back I must trade him something in exchange.*

*How can anyone claim to own something that they aren't using or aren't holding? What gives a king the right to say that he owns the land of a country? The land was there before he or his family ever lived, and it will be there long after they are all dead. Likewise, how can a farmer claim that he owns the sheep that feed upon the land? These sheep exist because they eat the fruit of the land, and the land belongs to no one. The ways of outsiders are very odd indeed.*

*We Gypsies are a peaceful folk who wish only to travel upon the good earth, laugh, sing, and live the ways of life.*

**Description:** This kit defines the role of the bard in Gypsy life. Gypsies can be treated as a coherent society or as any group with a nomadic lifestyle.

Gypsies are often called "forest nomads." They travel the lands in caravans comprising carts, wagons, horses, and the Gypsy folk. These people are well known for their strange Gypsy music and dances. Some caravans survive by entertaining the communities they encounter. Not all gypsies are bards; the Gypsy-bard is only one type of character that fills the ranks of a Gypsy band.

Gypsy ways are strange to others and poorly understood by most. They do not recognize the existence of private property. The fruits of the land belong to all. If there is not enough to go around, it is easy enough to pack the wagons and move along. Likewise, Gypsies use only what they need and do not seek wealth or possessions for their own sake, or for the influence or power that they bring. They do not have a king or queen, although sometimes they will lay claim to these titles to gain advantage in bartering (when outsiders believe this, the Gypsies take it as proof of their gullibility and stupidity).

Gypsy-bards have an entire collection of unconventional concepts that make up their philosophy of life:

- Gypsy-bards are free thinkers. For example, many do not marry, seeking companionship only for as long as both parties agree to the arrangement.
- Gypsy-bards love nature.
- Many Gypsy-bards don't worship deities (although certain deities may look over them). Instead, they worship the concepts of nature, free will, and life.
- Gypsy-bards draw their energies from their free will, their brethren, and from their natural surroundings.
- A Gypsy-bard is loyal to and protects his friends, but friendship must be earned,

and it is not gained easily.
- Possession and ownership are the same.
- Money is useless unless it brings you pleasure; trade is a better form of commerce.
- You should always dress and act naturally and comfortably.
- The rigid customs and beliefs of non-Gypsies are foolish and should be ignored.

Only a fellow Gypsy truly understands the Gypsy way of life. Others wrongly classify Gypsies as thieves, beggars, carnival people, nomads, or any number of other erroneous names. If a label must be used, the most accurate is "free-men."

**Role:** Gypsy-bards wander the land, experiencing life as they go. They travel until they find something of interest: a beautiful glade, an interesting village, an audience to sing and dance before, or someone who wants to trade with them. Then they establish a temporary camp and remain until their need to see more of the world overpowers their desire to stay.

An adventuring Gypsy-bard may be on a personal quest to locate some special animal or flower for the "Gypsy queen," or he could simply be out to experience the great wonders that appear along the adventuring path. In any event, a Gypsy-bard always has a purpose and philosophy to his adventuring, even if it is "to wander for the sake of wandering."

**Secondary Skills:** Forester, Gambler, Groom, Hunter, Jeweler, Teamster/Freighter, Trader/Barterer.

**Weapon Proficiencies:** Gypsy-bards must take either dagger or knife, and their first sword (if any is ever taken) must be either the khopesh or scimitar. Gypsy-bards cannot become proficient in the following weapons: battle axe, lance (any), polearm (any), trident, two-handed sword, bastard sword, or warhammer. All other weapons are available to them.

**Nonweapon Proficiencies:** *Bonuses:* Dancing, Direction Sense, Languages (modern-Gypsy), Musical Instrument (tambourine, violin, mandolin). *Suggested:* Ancient History, Astrology, Cooking, Craft Instrument, Disguise, Fire-Building, Gaming, Herbalism, Hunting, Juggling, Singing, Spellcraft, Survival, Tracking, Ventriloquism, Weather Sense.

**Armor/Equipment:** Gypsy-bards can wear only leather, padded, studded leather, hide, or elven chain mail. The other types are too noisy, bulky, and are considered to be impure and unnatural.

Both male and female Gypsy-bards love to wear gaudy jewelry. Their garments are typically loose-fitting and comfortable.

**Special Benefits:**

*Animal Rapport:* Gypsy-bards are nearly druidical in their ability to associate with animals. They automatically gain the proficiencies of animal handling, animal lore, animal training, and riding (land-based). Furthermore, their training and riding skills extend to any animal with which they become familiar.

At 5th, 10th and 15th levels, Gypsy-bards gain the ability to cause certain spell-like effects, each once per day. At 5th level, they are able to cause the effects of *animal friendship* by speaking kindly in the secret language of their own (Gypsy dialect). At 10th level, they can concentrate and gain the benefits of a *locate animals or plants* spell.

Finally, at 15th level, they gain the *speak with animals* ability.

*Allure of the Gypsies:* Certain Gypsy songs and dances are very alluring and can have powerful influences over those who willingly listen or take part. For such performances to function, a group of at least three Gypsy-bards must be performing together, or the audience must be willingly participating.

These performances take at least 1d10 turns. The effect of such performances can be identical to any one spell of the enchantment/charm school (as determined by the dance). However, at least one of the main performers must be high enough level to cast the spell. It is not required that the performer have the spell memorized, but he must have personal knowledge of it (in his spell books; roll a successful "chance to learn spell" check). The spell range, duration, and other effects that vary by caster level are determined by the eligible performer's level, as if he actually cast the desired spell.

*Fortune Telling:* By using any magical item suited for scrying or divining the future, such as a *crystal ball* or *medallion of ESP*, a Gypsy-bard can gain the benefits of an *augury* spell. Each day, the Gypsy-bard can ask one question per five levels of experience (rounded up). Note that Gypsy-bards can even tell fortunes by using magical scrying items that are not otherwise usable by them. For example, *crystal balls* are usable only by wizards, and not even a Gypsy-bard can gain the typical benefits of the ball. However, by looking into one and concentrating, a Gypsy-bard can ask one *augury* --style yes/no question per five levels, during that day.

Besides items suited for scrying and divining the future, Gypsy-bards are able to perform the same feat with a *deck of many things*. Additionally, when a *deck of many things* is used by the Gypsy-bard for this purpose, the cards turned never affect him for good or bad. Drawing the void or the donjon card will not cause the deck to vanish. However, the deck still functions normally when used for purposes other than the augury.

*Psionics:* An unusually large number of Gypsy-bards are psionic. If the optional psionics rules are used (see *The Complete Psionics Handbook*), all player character Gypsy-bards should be wild talent psionics. Psionic talents are determined by whatever method the DM prefers.

**Special Hindrances:** A Gypsy-bard's climb walls ability works best when climbing trees. They are not skilled at climbing cliffs, building walls, or cave walls; they suffer a 25% penalty when scaling these surfaces.

## Herald

**Specialty:** Linguist/Orator.

**Qualifications:** Standard ability scores. Demihumans can become Heralds of up to 6th level.

**Introduction:** *Hello, my name is Bard, James Bard, and I'm a Herald working for His Majesty, the king.*

*My duties are of the utmost importance to the king and to the continued vitality of the kingdom, for I am secretly in charge of the King's private men-at-arms and personal bodyguards. If the king's life is in danger, I am responsible for ensuring his safety.*

*My public image is one of party-goer, ladies' man, and general royal busybody. I frequent all the best parties in town. The king often ensures that I am invited. At these*

*functions, I meet important people and use my fantastic communication skills and intellect to uncover potential plots against the throne.*

*When I'm not partying, the public finds me at the castle gate. When a party comes to the castle, I use my knowledge to identify their Herald or banner and call out their name, such as: "Duke Amenga and entourage from Castle Peledge." This is a useful service, but my real purpose is to identify these visitors, assess their potential threat to the king, and act accordingly.*

*Enough talk, I must be off to chat with that strange-looking man entering the gates over there.*

**Description:** Heralds make their living by uncovering hidden truths. If a royal family has a closely guarded secret, a Herald will undoubtedly discover it. In the struggle for land and power among kingdoms, the Herald is a key force. A good Herald knows who is plotting against his king and why.

Heralds are confident and well-versed in matters of social etiquette. They often gather their information at royal events, such as balls and other celebrations. They are often mistaken for nobility; thus, they can easily make their way past guards. Heralds dress in the latest and most expensive fashions of the day. They prefer silk and bright colors. Members of the opposite sex are often attracted to Heralds by their self-confident manner and slight arrogance.

One thing is certain, Heralds are some of the most competent communicators around. They can speak dozens of languages, understand sophisticated words, locate a person's home village by his dialect, and can read almost everything they get their hands on.

**Role:** There are two types of Heralds. One travels from place to place, relating current events across the land. They sell their tales of travel and the news they learn to those who will listen. Most medieval commoners cannot read or write, so it is up to such Heralds to relate local events.

The other type of Herald secretly serves a king. It is the royal Herald's duty to uncover plots against the king and royal family. The royal Herald is quick witted and fast talking. Heralds of this stature often have a reputation that precedes them. They are recognized and feared by their foes. Thus, they must occasionally deal with assassination attempts at inconvenient times (for instance, a *delayed blast fireball* under the bed). Royal courts often employ them to preside over jousting tournaments, announce the arrival of important foreign envoys, and for personal counsel.

Heralds turn to the adventuring life for several reasons. Primary among them are the fantastic stories that can be related from such ventures. "News" has a very broad meaning in the campaign world, and tales of a daring band of heroes braving unknown horrors not only qualifies, but often draws a larger crowd than local gossip.

The royal Herald might be sent by his king on an undercover fact-finding mission-for instance, to investigate a rumor that Zhentil Keep is secretly funding an orc uprising in the south. Often, a Herald's communication skills will prove invaluable on such quests.

**Secondary Skills:** Groom, Hunter, Jeweler, Limner/Painter, Scribe.

**Weapon Proficiencies:** Heralds are not restricted in this area.

**Nonweapon Proficiencies:** *Bonuses:* Etiquette, Heraldry, Local History, Reading/Writing. *Suggested:* Languages (ancient or modern), Musical Instrument (horn family). At least half of a Herald's nonweapon proficiencies must be spent in learning languages.

**Armor/Equipment:** Standard.

**Special Benefits:**

*Identify Rumors:* Heralds are always aware of their surroundings and have picked up the skills necessary to stay atop local events. Any time rumors are generated for player characters, Heralds learn twice as many as a normal character. Heralds are also able to determine the validity of a rumor. A Charisma check is rolled; if it succeeds, the Herald knows whether the rumor is true or false. Even if a rumor table isn't included in a given adventure, the Dungeon Master should make up at least one rumor per three levels of the Herald and inform him of the rumors at the adventure's onset.

*Local Lore:* After snooping about an inhabited area, a Herald is able to learn who the important people are, what most of the buildings are used for, the quality of certain establishments, *etc*. It takes a Herald one day per 1,000 inhabitants to gain a good information base. Of course, a Herald could concentrate on a specific quarter of town or neighborhood and accomplish the task much faster.

Once a Herald is done scouting, he can recall the name of an important official if he rolls a successful Intelligence check. If the check is successful with a -2 penalty, he can identify the person on sight. This roll can also be used if the Herald player wants to know other local lore, such as where to go for the best food in town, what neighborhoods are dangerous at night, what time the city watch rotates, or which local sage is said to be most reliable. If the check is a 20, the Herald believes he knows the desired information, but the Dungeon Master actually makes up some false tale for the player.

This ability must be carefully judged by the Dungeon Master. Penalties should be applied based upon the information's local significance. It is unlikely that a Herald will know the name of a typical citizen in a large city (a -10 penalty might be appropriate). However, the name of the king's horse is likely a well-known fact (no penalty).

*Basal Communication:* As stated above, Heralds are master linguists. In fact, they can often communicate with races that are of low Intelligence or better and have a spoken language, even if the Herald does not speak that language. The Herald incorporates bits and pieces of fundamental root languages, certain universal gestures, and common expressions to get his meaning across. For the Herald to perform such difficult communication, the "listener" must be within ten feet, clearly visible, and there must be no distractions (including combat).

Success is determined by succeeding with a read languages roll (even though the communication is rarely in written form). A separate roll is needed to send or receive ideas. Thus, it is possible for a Herald to understand a being, but be unable to communicate his own ideas (or vice versa).

*Persuade Crowd:* A Herald can affect the mood of a crowd by telling them true (or slightly altered) local rumors and news. The Herald must be able to speak the crowd's language to use this ability. To determine a crowd's mood or opinion on a given topic, use Table 59 in the *DMG* .

After 1d10 minutes, those listening to the Herald's words are allowed a saving throw vs. paralyzation, with a -1 penalty per three levels of the Herald. Those who fail have their reactions adjusted one level in favor of the Herald's opinion. Those who succeed have their reactions adjusted one level in the opposite direction.

A Herald could attempt to persuade a crowd not to eat at the Skinned Dog Tavern until dragon eggs are back on the menu, to cast stones at the cruel teamster Tornack, or to

go and plunder the local granaries. Of course, reactions can be altered only one level by this method. For example, if everyone is indifferent to the fact that Tornack whips his horses cruelly, the Herald will at most persuade them to be cautious about using the teamster's wagons to haul their goods.

**Special Hindrances:** None.

## Jester

**Specialty:** Pantomime/Acting/Dancing/Jokes.

**Qualifications:** Standard ability scores, except that Dexterity must be at least 14. Jesters must be of any chaotic alignment, since no mind attuned to law and order could possibly sustain such an odd personality. Gnomes may advance to 15th level as Jesters, while halflings cannot rise above 8th level.

**Introduction:** *My name is Marigold the Mirthful, and I am proud to be called a Jester, for I am one of the greatest fools in all the kingdom. Being a fool is not all bad, for who else can poke fun at the most powerful people around without meeting the gallows or worse?*

*Indeed, I lead the perfect life. The king puts me up in a fantastic little room at the top of the East Tower. When the morning sun comes through my little window, I rise and don my charming gear. Then I spring and dance down the 40-foot-long spiral staircase to the main hall. All the while, my costume bells are jingling and I can hear the moans and groans as the court wakes from my passing. Next, I tumble down all the castle's halls and awaken the rest of the royal patrons.*

*Unless there are foreign envoys to be entertained at noon, I am off until evening. I wander about, keeping the young folk happy and feeding the chickens and the castle's two war dogs. Then I usually find a comfortable willow tree and lie down for a short nap.*

*Most evenings, the king invites me in to entertain him, his family, and his guests. I dance about, act foolish, juggle a bit, perform some minor acrobatics, pretend to get burnt by the fireplace, and tell jokes that I made up while lying under the willow tree.*

*So you see, I live in the king's castle and actually do little or no work. What a lucky life! Of course, the real fun occurs when foreigners arrive. I always make sure they leave the king's court with fewer goods than they came in with. I would hate to see them lug all that gold, silver, and jewelry clear back to their homelands.*

**Description:** Jesters are known by many names: fools, clowns, jokers, buffoons, etc. The Jester kit covers them all. Jesters are comedians at heart. They love to have a good time and enjoy sharing their mirth and merriment with others (even when they aren't welcomed). Most people enjoy having a Jester about, as they raise morale, entertain, and make great scapegoats when problems arise.

Jesters are flamboyant, outrageous, and ridiculous. Many sages believe that Jesters live in a constant state of borderline insanity. It is known that they live for attention and feel relaxed only when they are the focus of events.

**Role:** Jesters are often hired by noblemen for entertainment. They dance, prance, and jump about while the more civilized look on and laugh at the fools. More often than not, these noblemen are paying the price for their entertainment, as the Jester is liable to make off with a piece of gold for every laugh he hears. Other Jesters serve as clowns in

traveling carnivals or circuses. And of course every community has its local fool.

Jesters rarely take up the adventuring life. (PC Jesters are the obvious exceptions.) Their motivations for doing so will have to be carefully constructed to maintain realism. A Jester may be sentenced to escort a group of heroes on a dangerous quest as punishment for a joke about the king's nose (throwing him in jail would hardly be appropriate). A Jester might be assigned to accompany a band on a grim and deadly adventure, to combat the gloom and dread that will be encountered. Whatever the reason, having a Jester in the party will certainly result in more than one good laugh.

**Secondary Skills:** Any.

**Weapon Proficiencies:** Jesters spend most of their lives entertaining others by playing the role of a fool or clown. Large weapons do not fit into this role. Thus Jesters may become proficient only in the blowgun, hand crossbow, dagger, dart, hand axe, javelin, knife, quarterstaff, scourge, sling, short sword, and whip.

**Nonweapon Proficiencies:** *Bonuses:* Acting, Dancing, Juggling, Tumbling. *Suggested:* Crowd Working, Disguise, Jumping, Musical Instrument, Poetry, Singing, Ventriloquism.

**Armor/Equipment:** Jesters may wear only the following types of armor: leather, padded, studded leather, or elven chain mail. Other types of armor do not fit the image of fools.

Jesters almost always act and dress in the most outlandish manner. Even when danger is imminent, Jesters still hop around in their flashy suits with tassels and foppish hats.

**Special Benefits:**

*Fool's Luck:* It is amazing to most that Jesters can survive in any situation. They are careless, foolish, and given to whimsical decisions. It is fool's luck that has saved many a Jester's life.

Jesters receive a +1 bonus (+5% on percentile rolls) to most die rolls. This includes saving throws, initiative, surprise, proficiency checks, thief skill checks, ability checks, and ability sub-checks (*e.g.*, bend bars/lift gates, resurrection survival, and so on). The fool's luck also adds a +1 bonus to the Jester's Armor Class.

About the only die rolls that the fool's luck ability doesn't affect are attack rolls, damage rolls, initial character generation rolls, and Hit Die rolls.

*Jesting:* Jesting is the art of projecting meaning and mood through the use of body motions. By jesting (or gesturing), a Jester may communicate a single sentence each round to anyone who rolls a successful Wisdom check with a -5 penalty. Such communication is totally silent and does not rely upon a shared language. The Jester must use his entire body for the communication; thus, he must be fully visible and within 30 feet for communication to take place.

Jesting may be done to taunt or tease. Such jesting affects only those who are within 30 feet of the Jester and who are able to fully view him. This form of jesting causes those being jested at to roll a saving throw vs. paralyzation, with a -1 penalty per three levels of the Jester. Those who fail must immediately try to physically strike the Jester for as long as the jesting continues. The effect ends when the jesting ends. Combat strategy is ignored by those who are affected. They recklessly pass by more dangerous targets in an attempt to attack the Jester. Jesting is thus a wonderful way to break the ranks of enemy forces.

*Joking:* The practice of creating and telling jokes has been elevated to an art form by

the Jester; this skill can be used for many special purposes. Jokes are told in an attempt to alter encounter reactions. For any form of joke to function, the Jester must speak a language known by the recipient of the joke. Furthermore, the Jester must be within easy verbal range of the recipient.

Such jokes require 1d10 rounds to tell, after which the audience must roll a saving throw vs. paralyzation with a -1 penalty per three levels of the Jester. Those who fail have their reactions adjusted one level in the direction desired by the Jester. However, those who succeed take the joke the wrong way and have their reactions adjusted one level in the opposite direction.

Finally, a joke told at just the right moment can dispel the effects of fear. Such a joke requires a round to tell and enables all those affected by fear (normal or magical) to roll a second saving throw to avoid the fear (note that those affected by the fear do not immediately run away, but remain until the joke is told). If no first saving throw was allowed, then the saving throw is rolled vs. spell.

*A Jester's Mind:* Jesters are immune to attacks that cause insanity. Jesters also gain a saving throw bonus equal to their level vs. wizard spells of the enchantment/charm school and priest spells of the charm sphere. (A saving throw of 1 always fails, however.)

Furthermore, any attempt to read a Jester's mind has a percentage chance equal to the Jester's level of causing confusion in the mind reader (treat as if under the effect of a confusion spell).

**Special Hindrances:** None.

**Notes:** Jesters can be a lot of fun if properly played with the right gaming group. However, this character kit can be devastating to an overly serious campaign. It is strongly suggested that both DMs and players discuss the ramifications of the kit and how it will fit into the game if allowed.

## Jongleur

**Specialty:** Juggler/Acrobat.

**Qualifications:** Jongleurs must have a Dexterity of 14 or more (other ability scores, standard). Gnomes can advance to the 9th level as Jongleurs. Halflings can attain 12th level.

**Introduction:** *Yes, I am a Jongleur. My stage name is Jonclaur the Jongleur, and that will do for now. I travel across the Flanaess with a small carnival band. I believe you have already met one of my companions, Dark. He's good with knives and swords, but his personality matches his name a little too much for me.*

*When our troupe puts on a show, I tend to draw the largest and most consistent audience. In particular, families and village thieves enjoy watching my act. Families watch because my juggling, pole vaulting, acrobatics, and tightrope walking amazes them (and occasionally fills them with concern when my act looks particularly hazardous). The thieves come to study my actions. Many thieves can pole vault, walk tightropes, and perform various feats of acrobatics, but none have my skill. In a way, it's a form of research for them.*

*And it is true, though I hate to admit it, that my talents are occasionally put to less-than-honorable uses. On one of the last few days of our show, a large part of our troupe*

*often stages some complex burglary. My skills are often invaluable. I can vault across moats or into upper story windows that are protected by walls coated with contact poison. If a mansion is guarded by dogs, I use a crossbow to fire a line from a nearby building, then walk across it. Of course, I rarely keep my share of this booty. Instead, I usually donate it to the local orphanage or poorhouse.*

*Well, nice chatting with you, but I must get back. My second act is about to begin.*

**Description:** Jongleurs are loosely based upon the French entertainers of the same name. They are masters at manipulating small items with their hands. They can catch and juggle almost anything. On top of this they are skilled acrobats, able to traverse tightropes, turn flips, polevault, and perform any number of acrobatic feats. Their agility provides them with great defensive resources.

**Role:** As entertainers, most Jongleurs are typically found accompanying carnivals or circuses. A troupe of Jongleurs can put on a remarkable show all by themselves. They often perform in taverns or clubs, using their arts to draw in the crowd and captivate them long enough for the barkeeper (as well as the Jongleurs) to drain the crowd's purses. Of course, a few free-lancers work the streets out of greed or need.

Jongleurs are useful adventuring allies; their skills are invaluable when the going gets tough. They are able to squeeze into places where nobody else can go without the aid of magic. Finally, their skill at avoiding certain traps makes them excellent scouts.

**Secondary Skills:** Any.

**Weapon Proficiencies:** Jongleurs can use all hurled weapons. A hurled weapon is any weapon that can be thrown (this does not include bows, blowguns, or other missile weapons that are fired or shot). Otherwise, Jongleurs are restricted to the following weapons: polearms, quarterstaff, sling, staff sling, and whip. All of these weapons can be used in their performances. For example, they can juggle daggers, pole vault with polearms, and balance with spears or quarterstaves.

**Nonweapon Proficiencies:** *Bonuses:* Juggling, Jumping, Tightrope Walking, Tumbling. *Suggested:* Direction Sense, Endurance, Poetry, Rope Use, Running.

**Armor/Equipment:** If a Jongleur wears any type of armor other than leather, studded leather, padded, or elven chain mail, he cannot use any of the following special benefits. All other forms of armor are simply too restrictive or bulky for the Jongleur to properly perform.

Jongleurs tend to dress in rather flashy colors. However, they don't take this to the extremes that Jesters do. They avoid large capes, robes, and other garments that can catch or tangle during movement. Of course, this does not mean that a Jongleur is going to wear a flaming red suit that sparkles in the dimmest of lights when exploring ancient ruins. They prefer flash and fanfare, but they aren't stupid.

**Special Benefits:**

*Extended Proficiencies:* Because Jongleurs are extremely skilled at all forms of juggling and acrobatics, they gain certain special benefits to their bonus proficiencies.

Juggling:

- The Jongleur adds his level to the attack roll when trying to catch small items.
- Missile or hurled weapons too large to catch can be deflected by using the juggling proficiency.

Jumping:

- The Jongleur doubles his level for all jumping calculations.
- The character can use poles up to 20 feet longer than himself.
- Vaults can be made with a 15-foot run. The pole need not be dropped if a second proficiency check is successful.

Tightrope Walking:

- All penalties are halved, dropping fractions (*i.e.*, -5 for one-inch surfaces, -2 for two- to six-inch surfaces, and -2 attack roll penalty).
- Use of a balancing rod provides a +4 bonus.

Tumbling:

- The +4 Armor Class bonus applies during any round in which initiative is won, even if the Jongleur opts to attack later that round.
- No proficiency check is required to reduce falling damage. However, a successful proficiency check doubles the falling distances (*i.e.*, no damage up to 20 feet and only half damage up to 120 feet).

*Dodge:* Jongleurs are amazingly agile and have very quick reflexes. This enables them to jump free of many potentially harmful situations if a successful saving throw vs. paralyzation is rolled. The only bonus allowed to the save is the defensive bonus for high Dexterity.

If the attempted dodge fails, the Jongleur suffers the full effects of the danger. No other saving throw can be rolled to avoid the threat, as the dodge takes the place of all other saving throws. The benefit of dodging is that all harm is completely avoided, whereas many successful saving throws result in half damage. Of course, the Jongleur player can opt to skip the dodge attempt in favor of any normally allowed saving throws.

Dodging does not affect missile weapons or hurled weapons, personal spells (those that affect only one person) directed specifically at the Jongleur, or spells that have no physical effect to dodge (such as *hold person* ).

Situations that can be avoided include falls (into pits, through illusionary floors, down sliding stairways traps, etc.), being struck from above (by ceiling blocks, rocks, piercers, collapses, *etc.*), area-effect spells that can be dodged (*lightning bolt, web, fireball, etc.*), and any other situation that the Dungeon Master feels could be avoided by a sudden agile leap (possibly breath weapons). Of course, if a jump to safety is impossible, the Jongleur cannot attempt a dodge. Note that Jongleurs are also able to climb walls and might avoid certain situations by clinging to a wall.

*Entertain Crowd:* By juggling, performing flips, or displaying his acrobatic talents, a Jongleur can influence the reactions of an audience. This ability is similar to the True Bard's influence reactions ability.

As with that ability, the crowd cannot be attacking or about to attack. The Jongleur must perform for 1d10 rounds, after which all non-player characters viewing the performance must roll saving throws vs. paralyzation (split large audiences into groups of 10 and roll one saving throw for each group). The saving throw is rolled with a -1 penalty per three levels of the bard (round down). Those failing have their reactions adjusted one level in a more friendly direction, as per Table 59 in the *DMG* .

Unlike True Bards, Jongleurs cannot attempt to worsen the reactions of a crowd (it is very difficult to juggle or walk a tightrope in an offensive manner). However, if the crowd saves with a natural 1, the onlookers disapprove of the Jongleur and their reactions actually worsen by one level.

**Special Hindrances:** Jongleurs do not gain the 10th-level ability to use any written magical item.

## Loremaster

**Specialty:** Chronicler/Historian.

**Qualifications:** Lore masters must have an Intelligence and Wisdom of 14 or more (other ability scores are standard). Elves can advance up to 12th level as Lore masters.

**Introduction:** *You want to know about history, lost civilizations, and other fascinating topics? Well, let me introduce myself, I'm Ashlan, a gray elf and self-proclaimed Lore master.*

*I guess I've been poring over old tomes, exploring ancient ruins, and searching for lost civilizations for the past 150 years or so. And I've learned many important things. Did you know that, in ages past, the entire inland plains were covered with a vast forest of pinon and pine trees? Humans were scarce back then and elves ruled the land. Oh, that must have been a beautiful time! Then there came the great goblin wars, when all goblinkind rose up in anger after being pushed far below ground. They were lead by Trogundak, perhaps the largest and most evil troll shaman who ever lived.*

*But I forget myself. You want to know about me and not the past. Well, I'm called a recluse by most of the villagers around here. This is actually far from the truth. I love people, all people. I love to study about their past history in an attempt to understand them better than they understand themselves. Then I try to teach them about their past and educate them so they won't commit the mistakes of their forefathers all over again.*

*I guess I do seem a bit odd to the average soul, seeing as how I'm always poking around cemeteries, old churches, ruins, and private libraries. Most people can't figure me out. Some think I'm a cleric, others believe me to be a simple hermit, and there are those who call me sage or wizard. It is true that I can speak over half a dozen languages, but I'm just a Lore master, that's all.*

*Remember, study your past; it can be the most powerful tool you have.*

**Description:** Lore masters are romantically entranced by the past. They believe in the circular nature of history and relate the lessons of ancient times to the problems of the present to help guide their people along the path to the future. As Lore masters proceed through life, they record the events of their own times for posterity.

Lore masters love to relate the lessons of history to those who will listen. However, they are often viewed as being more reclusive and eccentric than wizards. Their preoccupation with old tomes, arcane lore, ancient languages, and lost civilizations dominates their lives, when they aren't putting on an oratorical performance. From their research, Lore masters gain unique wisdom and insight, allowing them to identify certain magical items, understand ancient writings and languages, gain special benefits in the arcane lore of magic, and incite crowds to action.

**Role:** There is a fine line between Lore master and sage. So fine that many Lore

masters call themselves sages and are rarely questioned about it. However, true sages are knowledge specialists who concentrate their efforts into mastering a specific field such as mushrooms, elven swords, and so on. Lore masters are fond of any aspect of history that makes a good story.

Many Lore masters are travelers who wander the lands searching for great historical tales and facts to relate to crowds. In order to gain the substance of their tales, Lore masters often take up adventuring. Unlike many other adventurers, Lore masters are not simply seeking gold or magic. Rather, they are searching for a new legend or tale. Lore masters are the first to open old tomes, read the runes on passage walls, and record the general events of an adventure.

**Secondary Skills:** Limner/Painter, Navigator, Scribe (better than a third of all Lore masters are scribes.)

**Weapon Proficiencies:** Due to their great interest in knowledge and their concentration on the past, Lore masters bother to learn only the lightest and simplest of weapons. They are limited to selecting weapon proficiencies for blowgun, dagger, dart, hand crossbow, knife, quarterstaff, sling, and staff sling.

**Nonweapon Proficiencies:** *Bonuses:* Ancient History, Languages (ancient), Navigation, Reading/Writing. *Suggested:* Animal Lore, Artistic Ability, Astrology, Direction Sense, Engineering, Etiquette, Heraldry, Languages (modern), Local History, Musical Instrument, Religion, Spellcraft, Weather Sense.

**Armor/Equipment:** Lore masters spend their time studying arcane tomes and ancient civilizations. They do not bother to practice the use of heavy armor. Thus Lore masters can use only leather armor.

Lore masters generally dress and act much like wizards.

**Special Benefits:**

*Legend Lore:* Lore masters gain the same legend lore ability as True Bards. This ability works in similar fashion, with the following exception: All of the optional rules suggested for the True Bard's legend lore ability are required for the Lore master.

*Arcane Lore:* Through their devoted study of the past, Lore masters come across numerous texts on the arcane lore of magic. They read all of these, hoping that some great tale will be uncovered. Lore masters eventually gain a fundamental understanding of many strange magical items not normally usable by the bard class. Thus, Lore masters can attempt to use any magical item. A Wisdom check is rolled; if it is successful, the Lore master successfully uses the magical item in question. This does not mean that the Lore master fully understands the operation of the item, only that his attempt to use it in this particular way is successful.

Lore masters also pore over scrolls and spell books whenever they get the chance. This enhances their understanding of magical spells so much that they memorize and cast spells as if they were one level higher. Thus, a 1st-level Lore master casts spells the same way as a 2nd-level True Bard.

*Persuasion:* Usually Lore masters recite their collections of historical fables and legends to a crowd simply to entertain and educate. Although these oral performances are wonderful to hear, they do not necessarily have any direct impact upon the crowd.

When a Lore master wishes to affect the mood or actions of an audience, he uses his great skills of verbal persuasion, oratory, and rhetoric. He might relate the legend of the horrible massacre of Tothar Keep by lizard men in an attempt to incite the crowd to hate

and despise lizard men.

Using such persuasion takes at least 1d10 rounds. All who are listening to and can understand the Lore master must roll a saving throw vs. paralyzation with a -1 penalty for every three levels of the Lore master. Those who fail have their reactions adjusted one level up or down (as desired by the Lore master). Those who succeed are not inspired by the tale, and those few who roll a natural 20 strongly disagree with the tale and have their reactions adjusted one level in the opposite direction.

*Etymology:* Lore masters can make their read languages attempt twice if the language in question is an ancient one (a language no longer spoken). They can also use their read languages ability to decipher runes, glyphs, pictograms, ideograms, or any other form of ancient visual communication.

Even though a Lore master cannot be proficient in a newly encountered ancient language, if he makes his Ancient Languages proficiency check, he understands the basics of the ancient language. Elementary use of the language is gained, allowing for written or even spoken communication at one-tenth the normal rate.

**Special Hindrances:** None.

## Meistersinger

**Specialty:** Pied Piper/Animal Charmer.

**Qualifications:** Standard ability scores. Elves can become Meistersingers and reach 15th level.

**Introduction:** *Welcome to Great Wood. My name is Shellana and I will be guiding you through this beautiful forest. I've lived here for as long as I can remember. My father is a ranger who patrols the forest and my mother maintains a small cottage for us all.*

*My dearest friends are Simbiom, a red barn owl, and Moshma, a jet black panther. They accompany me wherever I go. And where is that? Well, I don't really have a job as most people would define it. I often help the rangers who patrol the Great Wood. They are concerned with the security of some kingdom or other and want to keep the forest free of spies and evil monsters. I help them by reporting any strange people or creatures I encounter.*

*But my real goal is to keep the forest and its animals safe from the encroachment of "civilization." Greedy furriers and loggers and wasteful travelers are my enemies. I have freed countless animals from live traps, have broken numerous logging saws, and have scared off several dozen city folk this year.*

*I secretly work with the druids. Together we have kept the forest and its creatures relatively safe from harm. But our jobs grow more and more difficult as new villages keep popping up near the forest's edge. And with that said, I must go and plant some more trees before Simbiom eats all of my nuts.*

**Description:** Meistersingers wander the woodlands, mountains, and deserts, seeking out those who will listen to their songs. Unlike other bards, Meistersingers rarely perform for humankind. They tailor their music to the tunes of nature. Their audiences are the birds, the bees, and the behemoths.

Meistersingers have wandered unsettled lands since the dawn of mankind. Loremasters tell tales about how the ancient dryads and nymphs would find lost human

children and teach them the ways of the forest. Others were taken in by druids. Over the years, these children of nature have evolved into a definable class of character--the Meistersinger. Whether these tales are true or not, Meistersingers do exist.

The concerns of Meistersingers center around nature, especially animals. Lawful neutral, true neutral, and chaotic neutral Meistersingers see themselves as one with nature (although each views the structure of nature differently). They protect animals as humans protect those of their society. Neutral good Meistersingers look upon animals as innocent children who should be isolated and protected from the harsh and uncaring realms of civilization. Neutral evil Meistersingers see animals as subjects to be controlled and exploited. They use animals as some lords use slaves. True neutral Meistersingers are closest to druids in the way they look upon animals.

**Role:** Meistersingers are the mortal enemies of ruthless and profiteering hunters, trappers, and fishermen. They believe such activities should occur only when the game is needed for survival and no part of the animal is wasted.

Forests, deserts, and mountains are the typical arena for the adventuring Meistersinger. Rarely does a Meistersinger adventure any where unless animals are somehow involved--as mounts, as companions, or perhaps as captives who need to be set free.

**Secondary Skills:** Farmer, Forester, Groom, Hunter, Teamster/Freighter, Trapper/Furrier.

**Weapon Proficiencies:** The following weapons are forbidden to the Meistersinger: harpoon, lances, mancatcher, polearms, and trident.

As a hunter and woodsman, a Meistersinger must maintain a variety of weapons: those that are purely for melee, those that are purely missile weapons, and those that can be used in both melee and missile combat (hurled weapons). At 1st level, a Meistersinger must select one melee and one missile weapon. Each additional weapon proficiency slot must be spent in the following repetitive sequence: hurled, melee, missile.

**Nonweapon Proficiencies:** *Bonuses:* Animal Lore, Musical Instrument, Singing, Survival. *Suggested:* Agriculture, Animal Training, Blacksmithing, Craft Instrument, Dancing, Direction Sense, Fire-Building, Fishing, Herbalism, Hunting, Mountaineering, Riding (airborne), Riding (land-based), Rope Use, Set Snares, Swimming, Tracking, Weather Sense.

**Armor/Equipment:** Standard.

**Special Benefits:**

*Song of Companionship:* At 1st, 5th, and 10th levels, a Meistersinger can play the Song of Companionship, which lasts for 2d12 hours.

The DM and player should select six naturally occurring wild animals (not domesticated or fantasy-based) appropriate to the current terrain. A d6 is then rolled and the selected animal emerges from the nearby woods or over the next hill. The animal is a faithful companion to the Meistersinger from that day onward.

The Meistersinger and animal can communicate simple thoughts and desires. Such communication must be in the form of music or song by the Meistersinger, and a growl, caw, hiss, or some other appropriate sound by the animal. Others cannot understand the communication. The companion has hit points equal to those of the Meistersinger at his current level. The companion's hit points do not increase as the Meistersinger rises in level.

The companion gained at 1st level should be tiny or small (as per the "Size" entry in the *Monstrous Compendia* ). The animal transfers its primary sensory power onto the Meistersinger. This is much like the *find familiar* spell, but it is not identical and does not take the place of that spell.

The 5th-level companion should be small or medium in size. The Meistersinger gains the ability to *polymorph* his arms and head into those of this companion, for purposes of unarmed combat. Attacks are made using the Meis ter singer's THAC0, but successful attacks cause damage equal to that of the animal's natural weaponry. The Meis ter singer also receives multiple attacks, if the animal is entitled to them.

The 10th-level companion should be medium or large. The Meistersinger gains the ability to *shape change* (as the 9th-level wizard spell) into this companion's form once per day.

A Meistersinger's companions are his best friends. If one is slain, the mental strain of the loss forces the Meistersinger to roll a successful system shock check or die. (Likewise, if the Meistersinger is slain, the companion animals must roll system shock checks, at 80% + 1% per hit die.) If the check is successful, the Meistersinger goes into deep mourning for 101 days, during which he does not adventure. A Meistersinger can call for one replacement companion each time he advances in level (he is not required to call for a replacement). The replacement is the same size as the lost companion and confers the same abilities upon the Meistersinger.

*Song of Sanction:* This song envelops the Meistersinger, creating a nearly magical barrier of good will around him. Any attacking animal or monster must roll a saving throw vs. paralyzation with a -1 penalty per three levels of the Meistersinger or ignore the Meistersinger and those within one foot per level of him for as long as the song is played. The effect of the song is ended if the Meistersinger attempts to move or if anyone in the protected area attacks (including offensive spell use).

*Animal Charm:* Meistersingers know a number of songs that have special charm-like effects upon animals (including giant animals).

If the Meistersinger concentrates, he can attempt to charm one animal within view by his singing. Only an animal of Hit Dice equal to or less than the Meistersinger's level can be affected. Furthermore, the total Hit Dice of all such charmed animals accompanying the Meistersinger cannot exceed twice the Meistersinger's level.

The song takes 1d10 rounds, but the animal is held temporarily spellbound during the performance, as long as no hostile advances are made upon it by the Meistersinger or his allies. After 1d10 rounds, the monster rolls a saving throw vs. paralyzation with a -1 penalty per three levels of the Meistersinger. If it fails, it is under the effects of a *charm* spell. If it succeeds, it is unaffected and acts normally. If the roll was a natural 20, the animal is enraged and immediately attacks the Meistersinger.

*Influence Reactions:* Meistersingers can attempt to influence the reactions of animals that aren't attacking and that allow the Meistersinger to play for them. This ability is handled exactly as the True Bard's influence reactions ability (except that it affects only animals).

*Special Hindrances:* Meistersingers do not gain followers, nor do they build typical strongholds. Their animal companions serve as their followers, and they tend to build several small cottages or huts throughout the lands they patrol.

## Riddlemaster

**Specialty:** Riddler/Intellect.

**Qualifications:** Riddlemasters must have an Intelligence of 15 or more. Their other ability scores are standard. Gnomes can rise to become 8th-level Riddlemasters. Halflings can advance up to 9th level.

**Introduction:** *Yes, I am Retean, the Riddlemaster, mastermind of enigmas and games. I can solve any riddle and complete any puzzle. Pay the price and watch me twice.*

*As a Riddlemaster, my mind is constantly in motion. I'm wiser than most clerics, and smarter than most sages. Always thinking, always plotting, always alert.*

*When I encounter someone, I analyze him, evaluate his value to myself, and act accordingly. When I enter a tavern I don't just grab the nearest chair. Instead, I scan the room, select the most advantageous seat, and then evaluate the fare as I decide what to have. None of my decisions are made without deliberate, conscious thought.*

*Yet, I can be entertaining as well. I love to pose questions and riddles. For example:*

If the world were round,
And you stood on the ground,
How many places could you stand . . .
Walk south 20 leagues, east 20 leagues, north 20 leagues
and end up hand in hand.

*The answer is not the north pole, but "One." True, the North Pole is the only place where you can do this, but I asked, "how many places," not which places.*

*And now, as I have summed up your worth to me, I must be off to a new challenge.*

**Description:** Riddles, rhymes, and puzzles are the medium of the Riddlemaster. These characters look upon life as an intricate and challenging puzzle to be solved. Their seemingly strange ways cause many a commoner to label them crazy (much like the Jester). However, Riddlemasters are exceptionally intelligent, and their minds work on a level above that of the common man.

Riddlemasters devote their entire intellect to maximizing favorable outcomes for themselves and their friends. Some believe that Riddlemasters are just extraordinarily lucky, but this is not the case. Riddlemasters are always considering the environment around them, being sure to stand in the most favorable places, socializing with the most advantageous people, asking the best questions, and so on. They seek to develop the supreme mind.

To flaunt their skills, Riddlemasters often speak in riddles or rhymes, causing others to stop and think in order to understand them. Riddlemasters love to pose questions, in the form of riddles, to everyday people. These riddles are carefully constructed and often conceal lessons or observations that apply to the Riddlemasters' audience.

**Role:** Each Riddlemaster applies his intellect in a different way. Evil Riddlemasters seek to demean and put down others in order to rise above them. Good Riddlemasters make their way through society attempting to educate the "less fortunate." Others simply travel around, enjoying the sport of poking fun at others while advancing their own intellectual understanding.

Traveling Riddlemasters are most common, as their unique ways often irritate others, forcing them to maintain a mobile lifestyle. Adventuring Riddlemasters enjoy the

supreme tests of judgment and intelligence that must be passed in order to survive perilous quests. Besides this, their input on decisions is nearly invaluable. Of course, some party members may find their manner difficult to put up with.

**Secondary Skills:** Few Riddlemasters have a secondary skill, as they have spent their time in intellectual pursuits. Those who do are most likely Gamblers, Jewelers, or Trader/Barterers.

**Weapon Proficiencies:** Riddlemasters enjoy finesse weapons over those that require simple brawn. They can become proficient in the blowgun, bow, crossbow, dagger, dart, hand axe, javelin, knife, quarterstaff, sling, spear, staff sling, short sword, or whip.

**Nonweapon Proficiencies:** *Bonuses:* Artistic Ability (riddles), Languages (modern), Poetry, Reading/Writing. *Suggested:* Appraising, Blind-fighting, Direction Sense, Gaming, Heraldry, Musical Instrument, Navigation, Reading Lips, Singing, Weather Sense, Ventriloquism.

**Armor/Equipment:** Standard.

**Special Benefits:**

*Probable Path:* Riddlemasters can use their great intellects to make analytical decisions. When a decision must be made concerning multiple options (*e.g.*, which hallway to proceed down, which door to open first, which opponent to attack first in order to achieve some goal, etc.), the Riddlemaster can use his intellect to help make the decision. In such cases, the DM secretly rolls an Intelligence check for the Riddlemaster, with a penalty equal to the number of previous probable path decisions made that day (representing mental fatigue). If the roll succeeds, the DM tells the player all significant clues that the Riddlemaster might know or observe. If there are no clues, no information is gained-- Riddlemasters aren't lucky, they're just very intelligent.

If the roll is a natural 20, the information gained is misleading.

Unless a given situation changes somehow, using this ability multiple times in the same situation gives identical results.

*Riddles/Puzzles:* If any adventure includes an actual riddle or puzzle that the players must solve, the player of the Riddlemaster can make twice as many attempts to solve the riddle or puzzle as is normally allowed. For example, an adventure might include an encounter in which the party runs into a sphinx. The sphinx may demand the answer to a riddle in exchange for safe passage. In this situation, if the Riddlemaster gives the answer, the player can actually make two guesses, and if either is correct, the sphinx is satisfied.

The same thing applies if the party comes across a room with a tiled floor that must be crossed in a specific sequence. The Riddlemaster is allowed to make one free mistake. Only on his second mistake does the character suffer any hazardous consequences.

If a problem has a time limit, the Riddlemaster has twice the allotted time to solve it.

A special use of solving riddles and puzzles occurs when a Riddlemaster attempts to understand a newly discovered spell. The Riddlemaster has a +10% bonus to his roll to learn spells (to a maximum of 95%).

Furthermore, the Riddlemaster gains the ability to use any written magical item at 8th level, instead of 10th level.

*Common Sense:* To signify the common sense a Riddlemaster has at his disposal, Riddlemasters gain certain benefits. Although these benefits are similar to those of the Jester kit, they are not luck, but rather a result of intellectual calculations made by the

Riddlemaster.

- The Riddlemaster has a +1 adjustment to his Armor Class.
- A Riddlemaster receives a +1 (or 5%) bonus to many die rolls, including saving throws, individual initiative, attacks rolls, damage rolls, proficiency checks, thief skill checks, ability checks, and all ability-based rolls (bend bards, system shock, etc. ), except for resurrection survival.

The only die rolls that common sense doesn't affect are surprise, initial character generation rolls, hit die rolls, resurrection survival, and monster damage rolls.

*Riddling and Rhyming:* By chanting certain riddles and rhymes, a Riddlemaster can influence an audience's reactions. This ability functions in all ways as the True Bard's influence reactions ability.

**Special Hindrances:** None.

## Skald

**Specialty:** Viking Poet/Warrior.

**Qualifications:** Standard ability scores. Dwarves can advance up to the 12th level as Skalds.

**Introduction:**

I'm Herak the Skald
and I am quite bald,
but I have lots of gold,
as I am quite bold.

*It needs a little work, but I can get to that latter. Welcome! Come in by the fire and I'll tell you a bit about my clan.*

*Being a Viking, I'm a great warrior and belong to the mightiest clan of raiders ever assembled. When we go on our great forays, it is I, Herak, who records our deeds for all to hear. But that is only part of my role as a Skald. When combat is fierce, I often chant one of the great war songs of my forefathers. These songs have great power, and more than once have I turned the tide of battle in our favor.*

*When my clan isn't at war or on a raid, I work on ballads, poems, and chants. It is our tradition that the clan's elder Skald pass on those songs that establish the clan's worth to the upcoming Skalds. To these are added the greatest tales of the current clansmen. In this way, all our descendants will know how great they are. They can retell these tales, sing the ballads, and thus establish their place among the clans.*

*Being a Skald is a wonderful life. There is nothing to match rowing a longboat across a mist-shrouded bay early in the morning, in preparation for a raid on some enemy village. Everyone is silent, the only sound is the creaking of oars and soft slap of the water, and you can hear the chatter of teeth due to the cold and nerves. We eventually slip up onto land, enter the village, then I shout out a mighty chant and the fun begins.*

**Description:** Skalds are honored and respected members of their clans. These great poets memorize the feats of each raid and battle, setting them down in the form of poetry.

Every war party loves to have a Skald in its midst. This assures that their great deeds and mighty skills will be honored in the Skald's next recital, and thereafter immortalized for all time. Members of most bands treat Skalds with utmost respect and courtesy. It is

well known that the foolish warrior who maligns a Skald will soon hear his name slandered in innumerable ballads across the land.

Poems are the form in which Skalds honor others and themselves. Poems are also used to relate the oral history of the clan. Significant ballads are passed down from one generation to another via the Skald's talents. In this way, the lessons and deeds of the past are related to those of the present so they can be passed into the future.

**Role:** Skalds are often supported and protected by clan nobles and kings who love to hear of great duels and mighty wars. When events are unfolded in the form of poetry, it makes the telling all the more inspiring. Such men would hear Skalds relate tales of their family's glory to visitors.

Skalds rarely perform together unless they have entered into a poetic duel.

Adventuring Skalds are common. Every Skald is easily caught up in the fervor and majesty of adventure, danger, and combat. Great quests also serve as source material for their ballads and poems.

**Secondary Skills:** Armorer, Bowyer/Fletcher, Hunter, Leather worker, Weaponsmith.

**Weapon Proficiencies:** An initial proficiency slot must be spent on either the broad sword, hand axe, battle axe, or spear. At least half of the Skald's weapon proficiencies must be spent on these weapons (until they are all selected).

**Nonweapon Proficiencies:** *Bonuses:* Ancient History, Local History, Poetry, Singing. *Suggested:* Armorer, Blacksmithing, Blind-fighting, Bowyer/Fletcher, Crowd Working, Etiquette, Hunting, Leatherworking, Musical Instrument, Weaponsmithing.

See "Special Hindrances" concerning the reading/writing proficiency.

**Armor/Equipment:** Skalds lean toward warrior skills more than most bards. Because of this, they can wear any form of armor up to bronze plate, and they can even use shields.

**Special Benefits:**

*War Chant:* By chanting a war song, a Skald can inspire allies as they go forward into combat. For the chant to have an effect, the Skald must begin chanting at least three rounds before combat begins, otherwise his allies are too caught up in the events about them to benefit from this ability.

Such chanting has an effective range of ten feet per level of the Skald. The effects end as soon as the Skald receives his first wound. If the Skald does not enter the fray (and avoids being wounded), the effects end in a number of rounds equal to the Skald's level.

At 1st level, the Skald can choose only one of the following six effects per battle; at 3rd level two effects are chosen, three at 6th, four at 9th, *etc*. The Skald player chooses the effects, and can change them from one battle to the next.

Chanting can elevate spirits, remove concerns about danger, keep men's minds focused on combat, and fill friendly forces with a sense of being larger than life. Translated into game terms, this results in the following six possible effects for the members of the Skald's party:

- Bonus hit points equal to the Skald's Hit Dice.
- A morale bonus of 1 for every six levels of the Skald (rounded up).
- A +1 bonus to all attack rolls.
- A +1 bonus to all damage rolls.
- A +1 bonus to all saving throws.

- A -1 bonus to everyone's Armor Class.

*Influence Reactions:* If a Skald spends 1d10 rounds singing ballads, he can attempt to improve the reactions of an audience. Everyone able to clearly hear and understand the Skald must roll a saving throw vs. paralyzation with a -1 penalty per three levels of the Skald. Those who fail have their reactions to the Skald improved by one level. Those who succeed do not find the Skald's ballad to be particularly moving. Those who succeed on a natural 20 find the song to be offensive and their reactions worsen one level.

*Battle Chant:* Skalds are a bit more combative than most bards. This provides them with certain combat advantages. The Skald fights with a +1 attack roll bonus any time he is singing or chanting during combat, even a soft chant under his breath. In addition, the Skald gains a +1 damage bonus when using a broadsword, axe (any type), or spear while he is chanting, provided that he has proficiency with the weapon. These bonuses almost always apply, unless the bard is silenced, under water, *etc.*

*Legend Lore:* Skalds love legends about war and combat. Legend lore works the same for Skalds as it does for True Bards, except that Skalds can perform legend lore only upon magical items having to do with war or combat (*e.g.*, weapons, armor, *strength potions, etc.*).

**Special Hindrances:** *The* Skald's society does not have a written language. Because of this, Skalds cannot take the reading/writing proficiency when created. Furthermore, they do not get the read languages ability at 3rd level if they stay in their home society. However, both of these limits are lifted once the Skald comes into contact with a culture that reads and writes. He can then pick up the reading/writing proficiency at twice the normal cost and gains the read languages ability at a 0% base (*i.e.*, he must put points into the skill or he has a zero chance for success).

Skalds do not gain the use any written magical item ability at 10th level.

Spells are also nearly unknown in the Skald's society, and they are viewed with suspicion in any event. Thus, Skalds cannot learn any spells until they encounter a spellcasting culture. Once contact has been made, the Skald can begin casting spells when he gains his next level. At this time he is considered a 2nd-level spellcaster (providing he is at least 3rd level by this time). His spellcasting level increases by 1 every time he gains a level thereafter.

If your campaign does not have a Viking culture, but a player still wishes to play a Skald, assume that the character left his distant homeland and has journeyed to the existing campaign setting. This character can take reading/writing proficiency when he gains his next level, provided he has the proficiency slots available. He gains the ability to cast spells as outlined above.

**Notes:** The *Vikings Campaign Sourcebook* is a good resource to be used in conjunction with Skald bards.

## Thespian

**Specialty:** Actor/Mime.
**Qualifications:** Standard ability scores.
**Introduction:** *I am Glateela the Thespian. I would like to invite you to the*

*performance of the "Green Dragon and Golden Knight," given this weeks' end in the Old King's Theater. I will be playing Maiden Zephnia.*

*I have played various roles on the Old King's stage for the past four years. Acting is a wonderful occupation. I'm always busy learning parts, performing, and teaching the young children. When I'm not performing, some courtly gentleman or other has me over for blackroot tea. I'm on a first-name basis with the city mayor, all of the ranking constables, and even the Duke knows me.*

*What few people realize is that I'm sister to the infamous wanderer Hanalacious, and we often adventure together. Hanalacious is actually a warrior. Her reputation as a bard is a result of my dressing up as her double and acting the part. In this way, the legend of Hanalacious grows with a speed that would be impossible for any single human.*

*Unknown even to Hana is the fact that I occasionally play other off-stage roles. This is the real thrill of being a Thespian. You can be anyone you want if you are good enough.*

*Hope to see you this weekend. And if you whisper a word of my secret to anyone, you'd best beware of everyone you meet, for one of them will be me in disguise and I will silence your loose tongue forever.*

**Description:** Of all the various types of bards, Thespians put the most time and energy into performances. Thespians are actors. They display their talents in plays, skits, and dramatic productions. Some even perform in streets or village squares. When a Thespian isn't acting, he is likely writing scripts or reading for upcoming parts.

Thespians are somewhat like, yet unlike, Charlatans. Where Charlatans act to deceive, Thespians act to make others believe. Because of their similar methods, Thespians have some skills in common with Charlatans.

**Role:** Thespians rarely travel from town to town unless they are on an acting tour. Even if they are on tour, they often return to their established home. Most Thespians belong to the local actor's guild and take part in regularly scheduled performances.

Occasionally, Thespians are secretly hired to serve as spies, or temporarily fill in for a missing person. The great Thespian Hanalacious once filled in as the Lord Mayor of the Free City of Greyhawk for over a month while the real mayor was away on secret errands.

The adventuring Thespian is a rare person (player characters represent almost all of them). Such Thespians are often out for "field research." After all, if you want to play the part of a mighty warrior, what better practice than to go dungeoneering? Other Thespians adventure for the thrill of it all. They look upon such activity as taking a part in the "Grand Play of Life." Such Thespians often go to any length to mold the adventure into a dramatic production with themselves as the stars-often to the chagrin of their fellow party members.

**Secondary Skills:** Any.

**Weapon Proficiencies:** Since they are actors, Thespians spend a lot of time practicing with all types of weapons, in order to make their plays more realistic. This produces a unique situation. Thespians understand the showy stage methods for using most weapons, but they rarely practice with any one weapon long enough to become truly proficient at it.

As a result, 1st-level Thespians are proficient only with the dagger. At 2nd level they become proficient with the knife, and at 5th level Thespians gain their final weapon

proficiency--the short sword.

This restriction is partially offset by the fact that a Thespian suffers only a -2 nonproficiency penalty (equal to that of warriors) on all other weapons because of practicing with these weapons during rehearsals.

**Nonweapon Proficiencies:** *Bonuses:* Acting, Disguise, Languages (modern), Reading/Writing. *Suggested:* Artistic Ability, Crowd Working, Dancing, Etiquette, Jumping, Languages (ancient), Musical Instrument, Poetry, Reading Lips, Seamstress/Tailor, Singing, Tumbling, Ventriloquism, Weaving.

**Armor/Equipment:** Again, Thespians are actors and don all forms of armor for their various roles. This sets them apart from the norm. As a result, they can wear any form of armor and even carry shields. However, they incur a +1 Armor Class penalty when wearing armor that is not standard for the bard character class (their understanding of these armor types is imperfect). Thespians have no real understanding of shields; though they can carry shields, they gain no Armor Class bonus for the effort.

**Special Benefits:**

*General Acting:* Thespians are masterful actors. Using this ability, they can act as if a light blow was fatal, pretend to faint, or exaggerate their abilities. These skills are required on stage, but are also very useful during adventures.

Once, Hanalacious's band came upon a camp of six ogres. Realizing that they were outmatched, Hana leapt forward to meet the charging ogres. She acted as if the first strike against her was a fatal blow. The ogres believed this and charged on to attack the rest of the band. With the time that Hana had bought herself, she managed to unpack her fireball scroll and succeeded in roasting the ogres and saving the day.

Hana's finest performance occurred in the famous dungeons of the Greyhawk ruins. Here, she came upon Farcluun, a great red dragon. During the next four hours, Hanalacious was involved in the most dangerous role she ever played. When she saw the great wyrm, she quickly disguised herself as Zagig Yragerne, the original founder of Greyhawk Castle. Entering the cavern of Farcluun, Hana played up her knowledge, wisdom, and magical prowess. In the end, she cowed Farcluun and actually had the dragon huddled in a corner with threats of turning its life's treasure trove into an ant hill.

Acting functions in much the same way as illusion spells. If the audience believes the act, then it works without question. If the audience is skeptical, they are allowed to roll a saving throw vs. spell with a -1 penalty for every three levels of the Thespian. If the saving throw succeeds, they realize that the Thespian is acting; otherwise, they accept the act.

Of course, acts can go only so far. It is impossible to act as if you are lifting a 700-pound boulder over your head unless you have the aid of magic (or a Strength of 20 or more).

*Spell Acting:* Any Thespian who has taken the spellcraft proficiency can act as if he can cast powerful spells. To put on such a performance, the Thespian must be easily viewed by all who will be affected. The Thespian then stands up, chants arcane words, gestures, and tosses "magical" powder about. During the spell acting, the Thespian directs his attention and gestures toward the intended targets of the spell. After one round, the targets must roll a successful morale check or flee in terror.

If the Thespian actually casts a flashy spell during the act (*e.g., burning hands*), the morale check is made with a penalty equal to the spell's level. Imagine what you would

think if a wizard's hands sprouted flame while he chanted and made gestures of doom in your direction.

*Influence Reactions:* Thespians can influence the reactions of those they meet by trying to act in an appealing manner. After 1d10 rounds of such a performance, those associating with the Thespian roll a saving throw vs. paralyzation with a -1 penalty per three levels of the Thespian. If they fail the saving throw, their initial reactions are altered one level in the direction that the Thespian desires. If the saving throw succeeds, the audience realizes that the Thespian is acting and their reactions are adjusted one level in the opposite direction.

*Observe Motions:* As actors, Thespians are trained to observe the motions of others. Usually they use this skill to see cues from fellow actors during a performance. This ability also enables them to predict the movements of opponents during combat.

In any round that a Thespian wins initiative, he gains a +2 bonus to his Armor Class and saving throws and a +1 bonus to attack rolls.

**Special Hindrances:** None.

## Creating New Kits

Although the list of kits given in this handbook is large, it isn't all-inclusive. There are many other bard kits that DMs and players can come up with.

Before designing a new kit, first examine the existing kits to see if one of them can be modified to fill your needs. If not, make a photocopy of the Bard Kit Record Sheet located in the back of this handbook. Fill it out with the description of your new kit. The information that should be listed under each section is described in detail at the beginning of this chapter. Refer to it for assistance.

After you have created a new kit, present it to your Dungeon Master for approval. Often, he will wish to adjust certain aspects of the new kit for balance. Once the kit is complete and ready for use, the Dungeon Master still might adjust it in the future, based on how well it works in play.

Here is a helpful list of additional bard kits that you may wish to create on your own.

- Historical Bard--Druid historian
- Dervish--Arabian Dancer/Healer
- Muse--Singing Healer
- Scop--Anglo-Saxon Minstrel
- Entrancer--Spell Dancer
- Troubadour--Thief/Illusionist
- Poet--Courtier/Romeo
- Rustic--Folk Singer
- Rhythmist--Instrumental Dancer
- Savage--Medicine Man
- Sleuth—Spy
- Legionnaire--Cavalier

## Acquiring, Dropping, and Changing Kits

Bard kits should be taken only when the character is first created. The one exception might occur when this handbook is first introduced into a campaign. In this case, the Dungeon Master may allow certain existing bards to be converted to the kits that most resemble the manner in which they have been played in the past. However, note that such a transfer will have to be adjudicated by the Dungeon Master.

If a player decides to drop a bard kit, he should meet with his Dungeon Master to discuss the manner in which the transition should occur. When a kit is dropped, the character becomes a core bard (not a True Bard), and that character cannot regain his old kit. This has the following effects upon the character:

- Future weapon proficiency slots can be spent on any weapon desired.
- The bard's four bonus proficiencies must either be dropped or all future nonweapon proficiency slots must be spent paying for them before any new nonweapon proficiencies can be selected.
- The character no longer needs to pay attention to his old kit's suggested nonweapon proficiencies.
- The character can wear any armor normally allowed to the core bard, but cannot use any other type of armor (including shields).
- All special benefits are lost.
- All special hindrances are ignored.

It is possible for a bard to change kits, but only in one very limited manner. First, the bard's existing kit must be dropped. Then, if the bard wants, he may gain a new kit, but it must be the True Bard kit. The process for gaining the True Bard kit goes as follows.

- Once the bard's old bonus nonweapon proficiencies are either dropped or paid for, the next available proficiency slots must be spent gaining singing, musical instrument, reading/writing (native tongue), and local history.
- As the bard gains the next four levels, he gains one of the True Bard's special benefits at each new level. The specific benefit gained is determined by the player.

# Chapter 3: Demi-, Multi- and Dual-Classed Bards

## Demihumans as Bards

As per the *Player's Handbook*, only humans and half-elves can become bards. Even this book doesn't allow dwarves, elves, gnomes, and halflings to become bards in the true sense of the word. However, each of these races has a strong tradition in the performing arts. Dwarven chanters are legendary, as are the great elven minstrels. Gnome professors and halfling whistlers are also well-known.

Unlike humans and half-elves, those playing demihumans must take a bard kit if they

are to run bard player characters. If the kit system is not used, dwarves, elves, gnomes, and halflings cannot be bards. Since these races cannot be true bards, they are referred to as demi-bards. Only a few kits are open to these races, but each race has a kit that is available only to members of that race (indicated by italic type in the following tabele).

**Table 13: DEMI-BARDS**

| **Race** | **Maximum** |
|---|---|
| Kit | Level |
| **Dwarves*** | |
| Chanter | 15 |
| Herald | 6 |
| Skald | 12 |
| **Elves** | |
| Gypsy | 9 |
| Herald | 6 |
| Loremaster | 12 |
| Meistersinger | 15 |
| Minstrel | 15 |
| **Gnomes**** | |
| Charlatan | 6 |
| Herald | 6 |
| Professor | 15 |
| Jester | 15 |
| Jongleur | 9 |
| Riddlemaster | 8 |
| **Halflings*** | |
| Herald | 6 |
| Jester | 8 |
| Jongleur | 12 |
| Riddlemaster | 9 |
| Whistler | 15 |

* *Counter Spell:* Dwarves and halflings are extremely nonmagical. These two demi-bards are not allowed to cast spells. They also fail to receive the 10th-level bard ability to use any written magical item.

However, as demi-bards, these two races possess the curiosity of all bards. This leads them to study the workings of magic (*i.e.*, dwarf and halfling demi-bards must take the spellcraft proficiency). Although this doesn't result in the acquisition of magical powers, it enables them to gain special resistances to spells they understand.

If a halfling or dwarf is able to find a spell and learn it (*i.e.*, succeed with their "chance to learn spells" roll), they become highly resistant to the effects of that spell. Of course, these two races can learn to resist only spells of the same level as bards are

typically able to cast. Thus, a 2nd-level dwarf or halfling demi-bard can learn how to resist the effects of all 1st-level spells that he has learned (as per Table 6: Spell Progression). Of course, the demi-bard is still limited to the number of spells he can learn to counter. This limit is set by his "Maximum # of Spells per level" (an aspect of Intelligence).

When a dwarf or halfling demi-bard is subjected to a learned spell's effects, he can roll his "chance to learn spells" in an attempt to thwart the spell's effects. This roll is in addition to all other saving throws normally allowed. This does not cancel the spell; it simply prevents it from having any effect upon the dwarf or halfling demi-bard.

** *Illusions:* Gnomes have a hard time understanding and casting the more practical and substantial spells. They prefer spells that create illusions, flashy colors, and other wondrous effects. Because of this, gnome demi-bards do not gain the full range of spells normally allowed to bards. Instead, they must select and use spells as if they were illusionists. However, they still use Table 6: Spell Progression, to determine the number of spells they cast at a given level.

## Demihuman Kits

Following are four kits available only to demihumans. These kits cannot be selected by humans. However, half-elves can select the Minstrel kit, advancing up to 12th level.

### Dwarven Chanter

**Specialty:** Chanter/Time Lord.

**Qualifications:** Chanters must have a Constitution of 13 or more. However, they have no Intelligence qualification (unlike most bards). Only dwarves can become Chanters and they are limited to 15th level in advancement.

**Description:** Many times have other races attempted to analyze the phenomenal success of the dwarven race; their uncanny ability to survive incredible hardship, their dogged nature, the immense amount of work they perform, and their successful military campaigns. Always the analysis comes up short.

Much of the success of the dwarven race can be attributed to their Chanters. Throughout the ages, these special dwarves have passed along the secrets of their kind. They have learned the many mining, forging, marching, and war chants of their elders. Other races dismiss these chants as simple entertainment, but it is the power of the dwarven Chanter that has built the steel in the dwarven spine. If a skilled Chanter is present, dwarves can mine through solid granite for months without growing bored or lax.

Some chants are purely vocal, but many require the use of a percussion instrument to keep the rhythm steady. Chanters often employ drums, gongs, gourds, and so on.

**Role:** The secret of chanting has been kept hidden from outsiders. Thus, Chanters are heavily guarded and highly regarded within the dwarven kingdom. Of all dwarven

organizations, the Chanter's College is one of the most powerful. Even kings have been overruled in the past by mighty Chanters threatening to cease their rhythmic songs. Without the Chanters, the dwarven communities would slow to a crawl and their underworld enemies would push them from their homes.

Adventuring Chanters are a great boon to any party and are even more useful in large-scale battles. They are the pace-setters and the very heartbeat of those around them.

**Secondary Skills:** Armorer, Jeweler, Mason, Miner, Weaponsmith.

**Weapon Proficiencies:** Chanters often use their weapons to beat upon an instrument, a rock, or even the ground. Because of this, they generally become proficient only in blunt weapons or stick-like weapons.

The following weapons are available to Chanters: club, flails (all), maces (all), javelin, morning star, quarterstaff, sling, spear, staff sling, and the warhammer.

**Nonweapon Proficiencies:** *Bonuses:* Crowd Working, Musical Instrument, Chanting, Spellcraft. *Suggested:* Ancient History, Appraising, Armorer, Blacksmithing, Cobbling, Craft Instrument, Engineering, Gem Cutting, Languages (ancient), Languages (modern), Local History, Mining, Mountaineering, Pottery, Stonemasonry, Weaponsmithing.

**Armor/Equipment:** Chanters can wear any armor except for plate; plate mail, bronze plate, field plate, and full plate are all forbidden. They cannot employ shields.

**Special Benefits:**

*Counter Chant:* Like all dwarven demi-bards, dwarven Chanters gain the counter spell ability defined earlier. In order to counter a spell, a Chanter must voice the proper counter chant.

In addition to the typical counter spell ability, Chanters can actually "attack" certain spells. A Chanter can walk up to a wall of force (assuming he has previously learned the spell), begin counter chanting, and if he succeeds with his "chance to learn spells" roll, he actually cancels the entire spell for a number of rounds equal to his level. If the roll is equal to or less than the dwarf's level, the cancellation is permanent.

*War Chant:* Dwarven war chants are legendary. There is nothing quite so powerful and terrifying as watching a mass of heavily armed and grim-looking dwarves advancing and chanting. Their deep voices, all booming in unison, often destroy enemy morale and put fear into the heart of many a brave foe.

When a Chanter starts a war chant, he can affect up to ten dwarves per level or one non-dwarf per level. To be affected, the recipients must join in the chant (it doesn't matter if they have ever heard it or not). After 1d10 rounds of chanting, the power of the chant begins to take effect. A chanting band gains a +1 bonus to initiative, a +2 bonus to resist surprise, and a +2 bonus to all morale checks. Those combating a chanting group suffer a -1 initiative penalty and a -2 penalty to all morale checks. The bonuses for a member of the Chanter's party last for as long as both the individual and the Chanter are chanting; the penalties for the opponents last as long as the Chanter keeps up the chant.

*Timing Chant:* The real power of the Chanter is the numerous timing chants he knows. These chants function similarly to war chants in that they take 1d10 rounds to take effect, and last while both the Chanter and affected are chanting. But the results are quite different.

There are four common timing chants: one each for mining, forging, marching, and general labor. The purpose of each chant is to increase productivity, soothe the mind, prevent boredom, stave off sleep, and support resolve. All timing chants must be

accompanied by a percussion instrument.

Timing chants by Chanters increase speed or production by 5% per level of the Chanter. A top-level (15th) Chanter can get 75% more work out of a group than it would normally produce.

Of course, such rapid work does take a physical toll, even if the mind is willing. Each hour that a person works under the effects of a timing chant, he must roll a Constitution check. A failed check results in the loss of 1d4 hit points. This damage is temporary and is recoverable at the rate of 1 point per hour of rest or sleep. Anyone reduced to 0 hit points in this way falls over from exhaustion; death results unless a Constitution check succeeds.

*Trance:* Obviously, if a mining crew's Chanter falls over from lack of sleep or exhaustion, the timing chant will cease. For this reason, Chanters have learned to place themselves into a self-induced trance. This takes 1d10 turns of uninterrupted meditation, during which the Chanter grumbles the words to some ancient meditative script. Once in a trance state, the Chanter will begin some set activity: chanting, combat, marching, working, studying, *etc*.

The trance state causes the Chanter to shut down all of his being (mind and body) that is not needed for the activity at hand. An entranced Chanter can maintain this set activity until a predetermined circumstance occurs. For example, the Chanter may have said to himself, "Awake when there are no more goblins on the field of battle," "Awake when we reach the Kingdom of Thorbardin," or "Awake after 1,000 strikes of the great drum."

Trances are not lightly entered, as they are very dangerous to the character. During a trance state, the Chanter does not drink, eat, rest, or sleep. Every time that one of these activities should normally occur, the entranced Chanter must roll a Constitution check. A failed check results in the loss of hit points: 1d8 for drink, 1d3 for food, 1d4 for rest, and 1d8 for sleep. Furthermore, the only known way to interrupt a trance before the predetermined circumstance occurs is to reduce the Chanter to 0 hit points (*i.e.*, knock him unconscious or kill him).

Damage resulting from food and water deprivation must be healed as if it were combat damage, but damage resulting from lack of rest or sleep is temporary and can be regained at the rate of 1 point per hour of rest or sleep. If reduced to 0 hit points by sleep or rest deprivation, the entranced Chanter falls unconscious; death results unless a Constitution check succeeds. However, if all damage is a result of food and water deprivation, the Chanter dies regardless of the check result.

**Special Hindrances:** Like all dwarven demi-bards, Chanters do not gain the bard's spell abilities. Nor do they gain the 10th-level bard ability to use any written magical item.

## Elven Minstrel

**Specialty:** Elven Spell Singer.

**Qualifications:** Only elves and half-elves can become Minstrels. Elves can advance up to 15th level as Minstrels, while half-elves are limited to 12th level.

**Description:** Of all musicians in the world, none can play as purely as an elf. Minstrels spend their entire lives seeking musical perfection. Of course, the definition of

perfection differs from one culture to the next. Elves believe that music should be simple, pure, beautiful, and natural. Furthermore, those who listen should become lost in the music, and their spirits should transcend their bodies to ride upon the sweet flow of glittering notes.

Elves are a very magical race, and this is especially true of Minstrels. It is said that Minstrels cast spells by the simple strumming of an instrument.

**Role:** Within elven society, Minstrels are regarded as nobles. Minstrel groups perform during annual festivals for the enjoyment of all, and kings invite them to dine in exchange for an evening's song. Outside their own culture, elven Minstrels are looked upon with envy, distrust, and some fear.

Elven Minstrels occasionally adventure out into the world. Some seek life-experience to heighten the quality of their music. Others simply wander, relishing the sensation of freedom that inspires their songs. A few Minstrels seek to purge themselves of some impure act or event.

**Secondary Skills:** Minstrels train to be great musicians all their lives. They do not spend the time necessary to learn a secondary skill. Thus, Minstrels have no secondary skills.

**Weapon Proficiencies:** Elven Minstrels are limited to the following weapon proficiencies: blowgun, bow (any), dagger, dart, hand axe, javelin, knife, quarterstaff, sling, spear, staff sling, long and short swords, and the trident.

**Nonweapon Proficiencies:** Bonuses: Musical Instrument, Reading/Writing, Singing, Spellcraft. Suggested: Ancient History, Artistic Ability, Craft Instrument, Etiquette, Heraldry, Local History, Poetry.

**Armor/Equipment:** Minstrels can wear only leather armor, padded armor, or elven chain mail. Even studded leather is considered too harsh for a Minstrel to don.

**Special Benefits:**

*Special Resistance:* Elven Minstrels gain a +2 saving throw bonus against all magical effects based on music. If the attack does not allow a saving throw, they receive a normal saving throw, anyway.

*Spell Singing:* Minstrels are some of the few beings still in existence who know the ancient art of spell singing. Some sages claim that magic was originally released into the Prime Material plane by an ancient master musician. These sages maintain that music is the true catalyst for ultimate sorcery. Whether this is true or not, it is a fact that elven Minstrels cast spells through their music.

Minstrels cannot cast spells in the typical manner. When a spell calls for a somatic component, they must play an instrument. Likewise, they must sing when a spell requires a verbal component.

Material components must be carried on the Minstrel's person in a specially prepared bag (made from deer leather). The Minstrel need not reach into the bag or manipulate the material components. When the spell is cast, the components simply vanish from within the bag. If the bag does not contain the required components, the spell does not function.

Not all instruments can be used for spell singing. First of all, if a spell requires a verbal component (singing), only those instruments that leave the Minstrel's mouth free can be used. This eliminates most of the wind instruments. If the spell requires a somatic component, the instrument must support numerous, complex hand manipulations (as is true of any stringed instrument). This eliminates gongs, cymbals, drums, and most of the

percussion family. Thus, elven Minstrels typically carry stringed instruments. Keyboard instruments would work but are generally too bulky to carry around.

Spells that normally emanate from the caster's hands instead radiate from the spell singer's instrument. Thus, *burning hands* produces its 120-degree arc of flame from the instrument (and not the Minstrel's hands).

Spell singing is in all other ways just like typical spell casting.

*Influence Reactions:* This ability works just like the True Bard's ability of the same name. However, a Minstrel can sing or play an instrument in an attempt to influence reactions. And, if the Minstrel does both, he can adjust the reactions by two levels instead of the typical one. This is not cumulative with the crowd working proficiency or the bard's reputation.

*Counter Song:* The last special benefit of the Minstrel is identical to the True Bard's counter song ability in every way.

**Special Hindrances:** Without an instrument, Minstrels cannot cast spells that require somatic components.

## Gnome Professor

**Specialty:** Lecturer.

**Qualifications:** The standard qualifications for Intelligence and Charisma are switched for gnome Professors (*i.e.*, they must have a minimum Intelligence of 15 and Charisma of 13). Prime Requisites also change to Intelligence and Charisma. Only gnomes can become Professors, and they can advance up to 15th level.

**Description:** Professors are an odd sort; other races have a hard time deciding whether these strange gnomes are geniuses or fools. Half of their speeches and inventions seem revolutionary. The rest of their speeches sound like endless babbling, and most their inventions are death traps that injure more gnomes than they help.

Professors are eccentric gnomes who love to tinker with things: chemicals, gears, pulleys, magic, and so on. For a Professor, gaining knowledge for its own sake is wasteful. Only when it is being used to develop "things of consequence" is knowledge worthwhile. Professors often say, "If the textbooks don't make sense, throw 'em away and approach the problem experimentally."

Above all, Professors feel that they have an obligation to educate the ignorant and provide them with mechanical wonders to help elevate their standard of living.

**Role:** Professors are held in high regard within gnome society. Every gnome loves to sit in on one of their frequent lectures or to have a Professor over for tea. Yet, when Professors get that odd glint in their eyes and start experimenting, even their brethren know to run for their little lives.

Adventuring Professors are often intense and fanatically greedy for knowledge. Those who are dangerous threats to other gnomes are actively encouraged to go out and help "educate" the other races. But there are certain Professors who truly possess some small spark of genius within them. These Professors often realize the potential knowledge and practical experience that adventuring can provide, and they set out to explore the world.

**Secondary Skills:** Professors can have any secondary skill.

**Weapon Proficiencies:** Professors are very eccentric and love complex devices with multiple moving parts. This personality trait is evident in the type of weapons they select.

Professors can become proficient in the following weapons: arquebus, blowgun, bow, crossbow, harpoon, mancatcher, scourge, sling, staff sling, and whip.

**Nonweapon Proficiencies:** *Bonuses:* Ancient History, Languages (ancient), Languages (modern), Reading/Writing. *Suggested:* Agriculture, Animal Lore, Appraising, Astrology, Brewing, Cooking, Direction Sense, Engineering, Etiquette, Fire-Building, Gem Cutting, Heraldry, Herbalism, Local History, Musical Instrument, Navigation, Religion, Rope Use, Spellcraft, Weather Sense, Whistling/Humming.

**Armor/Equipment:** Professors are not overly concerned about the practicality of wearing good armor. They tend to wear something comfortable unless they are experimenting with armor functionality.

Professors wear only leather, studded leather, or padded armor on a regular basis. However, each month, a Professor can experiment with one type of armor (even shields) for up to 1d10 days. When experimenting and wearing other armor, the Professor suffers a +1 Armor Class penalty and loses all Dexterity defense adjustments.

**Special Benefits:**

*Legend Lore:* This ability is exactly like the True Bard's ability of the same name.

*Profess:* All Professors give frequent speeches to anyone who will listen. Although this can be entertaining and occasionally educational, such lectures have little direct impact upon play. However, if a Professor is able to examine a situation and evaluate it, he sometimes comes up with a great plan. The act of revealing such a plan is known as "professing."

When a Professor examines a given situation for 1d10 rounds, he is able to determine several good plans to deal with the situation. If the Professor communicates (professes) this information to his comrades, and they heed the information, certain benefits result.

After professing a course of action, the Professor player is able to hand out a number of bonuses equal to the Professor's level. These bonuses can be applied to any die roll (prior to the roll) that the Professor designates, as long as the affected individual is following the Professor's suggested course of action. (If the roll is being made on percentage dice, the bonus is 5%, otherwise a +1 bonus results).

As an example, imagine that an adventuring party has spied through a keyhole into a room. The gnome Professor, Nowtal, asks if he can have a look. After examining the orc-infested room for six rounds (a 6 was rolled on the 1d10), Nowtal comes up with a plan. The player then role-plays his character, informing the other players of the plan: "Torcan, you slip around to the side door and jump into the room in an attempt to startle the orcs, then Larcon Heavy-Hand can charge the main door in hopes of breaking it down for a surprise rear attack. During the commotion, Lefty will slip over to that chest and attempt to make away with any interesting contents."

As the party proceeds with the plan, Nowtal's player hands out a +1 bonus on Torcan's attempt to surprise the orcs. He also boosts Larcon's bend bars attempt (to increase his chance to break down the bolted door by 5%). Since Nowtal is only 3rd level, he has only one more bonus to hand out. He could use it to improve Larcon or Torcan's attack roll, increase damage, etc. Instead he gives it to the thief, Lefty. However, Lefty's player has decided to backstab an orc instead of dashing over to the chest. Thus, the DM rules that Lefty isn't following the Professor's plan and Nowtal's player will have to use his last bonus somewhere else. Just then, an orc shaman casts a fireball from a necklace of missiles and the last bonus is used to help Larcon with his saving throw.

Note that these bonuses last only for one die roll. These single bonuses cannot be combined into a +2 (10%) or better bonus.

*Mechanically Inclined:* Of all known devices, Professors love those with multiple moving parts more than any other.

Since Professors are mechanically inclined, they can find and remove traps. The chance to succeed at this progresses just as the "find/remove traps" skill on Table 19: Thief Average Ability Table, in the *DMG*. Since Professors approach traps from a purely mechanical standpoint, they receive no racial, Dexterity, or armor adjustments to this roll.

This same percentage chance can be used to help solve other mechanical problems-much like having a "mechanical proficiency." For example, if the party comes upon a futuristic device, such as steam-driven bellows, the Professor can examine it in an attempt to understand how it works. If the roll succeeds, the DM should inform the player that his character understands the device. Through role-playing, the player can then tell the rest of the party how to operate it.

*Invention:* A Professor's most useful ability, and his most dangerous, is that of invention. Professors love to invent odd gadgets, such as sword hilts with screw-on blades that can be used as short, long, broad, bastard, or two-handed swords. Another invention might be a wagon pulled by draft horses located in the center of the wagon. This protects the animals from attack and allows the teamster to feed them as they walk.

A Professor's chance to succeed with an invention is based upon his "mechanical proficiency" (see previous paragraphs). From that base chance, the DM must assess the difficulty of an invention and apply a modifier (usually in the range of -25% to +25%). If the proper tools, raw materials, and time are available, a successful roll indicates that the invention works. If the roll is below the Professor's level, the invention is a great success. However, if the roll fails, the invention either has some major flaw or is a total flop. If the failed roll is a 95% or higher, the failure results in an injury, as determined by the Dungeon Master. A roll of 100 indicates that a fatality results unless the victim rolls a successful saving throw vs. paralyzation.

**Special Hindrances:** Unlike typical bards, gnomes are not eligible to learn and cast spells from any school of magic. Instead, they are restricted to the spell selection available to illusionists. This is further explained in the "Illusion" note found earlier in the "Demi-Bard" section.

## Halfling Whistler

**Specialty:** Wanderer.

**Qualifications:** Whistlers must have a Wisdom of 13 or better. However, qualifying Intelligence is lowered to 10. Prime requisites for Whistlers are Wisdom and Charisma.

Halflings are the only race able to become Whistlers. They are limited to 15th level.

**Description:** Much like dwarven Chanters, halfling Whistlers are the unheralded heroes of the halfling race. Halflings belong to the general category of nature-sensitive races and professions. Because halflings hate to kill forest animals for food or butcher farm pets, they live by using their knack for agriculture.

Their success is largely due to the existence of halfling Whistlers. Although almost any halfling can whistle up a tune, true Whistlers are extremely rare. Each halfling

community has but one or two.

Whistlers are extremely attuned to the natural environment about them. In particular, they love forest animals and all types of plant life. The very tunes of a skilled Whistler can help a garden overcome drought or blight. Whistlers can also communicate with birds to help prevent insect swarms from wiping out a village's food supply.

When Whistlers aren't tending gardens and crops, they can be found performing for the locals. Nearly every day, a comfortable crowd forms in some grassy section of the community for an evening's entertainment. Some just sit on the grass and listen to the Whistlers' tunes, while others dance about, laugh, and make merry.

**Role:** Whistlers are an odd mix of a farmer, forest wanderer, and entertainer. Although they are loved by everyone in the community, most of them seem a bit reclusive, often living on the edge of town or even in a small burrow just within the forest's edge. In truth, they aren't reclusive-they are simply maintaining their unique link with nature.

**Secondary Skills:** Farmer, Forester, Fisher, Leather Worker, Tailor/Weaver, Trapper/Furrier (but see below).

**Weapon Proficiencies:** Like all halflings, Whistlers love missile weapons, particularly those that can be thrown. At least half of a Whistler's weapons must be types that can be hurled.

Whistlers can select from among the following weapons: blowgun, short bow (either type), club, light crossbow, dagger, dart, footman's mace, hand axe, harpoon, javelin, knife, quarterstaff, sling, spear, staff sling, short sword, or war hammer.

In addition to these, Whistlers can take a special weapon proficiency: rock pitching. All halflings are skilled at pitching rocks, but Whistlers are especially renowned. A "good" rock can be pitched with the exact same effect as a dart, except that a Whistler gains a +1 damage bonus if he hits.

Of course, rocks cause blunt damage (not puncture damage as do darts). Only good rocks that are specially selected by the Whistler gain the above advantage. If just any old rock is being pitched, damage is reduced to 1 (plus any Strength adjustment) and long range becomes 3 (not 4). Good rocks have been worn round in swift rivers. Most rubble, cave rocks, and the broken rocks found in old dungeons are not good rocks. Whistlers usually carry a supply of 2d4 good rocks (thrown rocks that hit their targets can be recovered; those that miss are lost).

**Nonweapon Proficiencies:** *Bonuses:* Agriculture, Dancing, Spellcraft, Whistling/Humming. *Suggested:* Animal Lore, Astrology, Brewing, Cooking, Crowd Working, Direction Sense, Fire-Building, Fishing, Herbalism, Hunting, Leatherworking, Mountaineering, Musical Instrument, Poetry, Rope Use, Singing, Set Snares, Survival, Swimming, Tracking, Weather Sense.

Whistlers generally use fishing, hunting, set snares, and other such skills for the benefit of nature. They learn these skills so they can scare game away from sport hunters, spring snares and traps set by greedy furriers, and so on. Using nature when necessary is acceptable, but it should never be abused. A Whistler will resort to hunting and fishing only if there is no other way to avoid starvation.

**Armor/Equipment:** Whistlers wear only padded armor. They don't like the thought of wearing leather armor, as some animal had to die for it, and they find other types of armor too restricting and unnatural.

**Special Benefits:**

*Influence Reactions:* Although Whistlers use a different form of music, namely whistling and humming, their ability to influence reactions functions exactly like the True Bard's ability of the same name.

*Counter Tune:* As noted earlier in the demihuman bard section, halfling demi-bards don't cast spells. Rather, they gain a special counter spell ability. Whistlers implement this ability by humming or whistling the proper counter tune. A counter tune must be whistled to counter a spell that has a verbal component; otherwise, the counter tune must be hummed.

Counter tune functions just like counter spell in all other ways.

*Chattering:* Whistling is a wonderful way to express one's mood, but Whistlers take this form of basic communication a bit further. By "chattering," a process of whistling, trilling, and emitting an occasional squeak, Whistlers are able to communicate. They can carry on complex conversations with other chatterers and are even able to communicate with some animals.

Whistlers can communicate with any naturally occurring animal that can squeak, chirp, or whistle. Such communication is on a fundamental level. Basic information can be exchanged, as well as mood, feelings, etc. For example, a Whistler could chatter with a squirrel and learn that it has a lot of nuts hidden in a nearby oak tree. Whistling with a bird might enable the Whistler to learn if it has seen any large monsters (but not if it has seen five ettin or other specific information).

Whistlers often find a forest friend that accompanies them on some of their less dangerous adventures. Ferrets and foxes are particularly fond of adventuring with Whistlers.

*Stormwhistle:* The phrase "whistle up a storm" was coined when a ranger once witnessed a halfling (actually a Whistler) standing out in the middle of a drought-struck potato field. To the ranger's amazement, the little fellow stuck his hands into his pockets and starting whistling. Puzzled, the ranger crouched behind a large birch and watched. An hour later, the sky had clouded over and it started to rain. After the rain was coming down quite heavily, the ranger glimpsed a satisfied-looking halfling strolling away.

It is true that halflings can't cast wizard spells. However, Whistlers are able to cast certain clerical spells. They do not receive these spells like clerics. In fact, the source of these spells is somewhat of a mystery. Most Whistlers agree that they are granted by Mother Nature herself.

In any event, Whistlers gain the ability to cast each of the following spells once per day. The usual components for these spells are ignored; the Whistler need only whistle to cast the spell. Whistlers gain the following spells at the listed levels:

1st level: *pass without trace*
3rd level: *obscurement*
5th level: *plant growth*
7th level: *speak with plants*
9th level: *control winds*
11th level: *weather summoning*
13th level: *control* weather
15th level: *entangle*

**Special Hindrances:** As with all halfling demi-bards, Whistlers do not gain the bard ability to cast wizard spells, nor do they gain the 10th-level bard ability to use any written magical item.

## Multi-Classed Bards

As noted in Chapter 3 of the *Player's Handbook* under the discussion of multi-class benefits and restrictions, no multi-classed bards combination were listed. Now that this book is out, it is time to introduce bard multi-class combinations. Note that multi-class options are not open to human characters.

All of the standard demihuman races and their allowable bard multi-classes are listed below. For added flavor, multi-class combinations have been defined for specific kits. If the kits are not used in your campaign, only those combinations that include the True Bard can be used.

Entries such as "Fighter/Chanter * Skald" are a shorthand way of saying "Fighter/Chanter or Fighter/Skald."

**Dwarf**
Fighter/Chanter * Skald

**Elf**
Mage/Minstrel
Thief/Gypsy

**Gnome**
Illusionist/Professor
Thief/Professor * Jongleur

**Half-Elf**
Fighter/True * Blade * Gallant * Skald
Ranger/True * Meistersinger
Mage/Loremaster * Riddlemaster
Cleric/True
Druid/Meistersinger
Thief/True * Gypsy * Jongleur * Thespian

**Halfling**
Thief/Jongleur

## Dual-Classed Bards

Only humans can be dual-classed. Dual-classed humans can use any kit that the Dungeon Master allows in his campaign.

In order to switch from the bard to another character class, the character must have a

15 or better in both Dexterity and Charisma and a 17 or better in the prime requisite of the new class.

If the character is of another class and wishes to pick up the bard class, he must have a 15 or better in the prime requisite of his other class and a 17 or better in both Dexterity and Charisma.

# Chapter 4: Proficiencies

Following their jack-of-all-trades reputation, bards can learn proficiencies from the general, rogue, warrior, and wizard proficiency groups. Only those proficiencies in the priest group cost an additional slot to gain. However, because most proficiencies fall into more than one group, a lot of proficiencies listed in the priest group are also available to the bard under another group. In fact, of all the proficiencies listed in Chapter 5 of the *Player's Handbook*, only one, healing, is not in one of the bard's proficiency groups. Thus only healing requires the bard to spend an additional slot to acquire (three total).

## Compiled Proficiencies

The following table has been compiled in order to assist bard players in selecting their nonweapon proficiencies. **Bold-faced** proficiencies are new proficiencies found only in this book. They are expanded upon later.

*Italicized* proficiencies require the player to record a specific topic or area that the proficiency covers. For example, the survival proficiency must be specified for a particular environment (*e.g.*, arctic, woodland, desert, steppe, mountain, or tropical). If woodland is chosen, the proficiency is to be recorded as "Survival (Woodland)." Each additional proficiency slot used can either improve the proficiency for a specific topic or it can be used to gain another topic, such as "Survival (Woodland, Steppe)."

**Table 14: NONWEAPON PROFICIENCIES**

| Proficiency | Slots Req'd. | Ability | Relevant Mod. |
|---|---|---|---|
| **Acting** | 1 | Cha | -1 |
| Agriculture | 1 | Int | +0 |
| *Ancient History* | 1 | Int | -1 |
| Animal Handling | 1 | Wis | -1 |
| Animal Lore | 1 | Int | +0 |
| *Animal Training* | 1 | Wis | +0 |
| Appraising | 1 | Int | +0 |
| Armorer | 2 | Int | -2 |
| *Artistic Ability* | 1 | Wis | +0 |
| Astrology | 2 | Int | +0 |
| Blacksmithing | 1 | Str | +0 |

| | | | |
|---|---|---|---|
| Blind-fighting | 2 | NA | NA |
| Bowyer/Fletcher | 1 | Dex | -1 |
| Brewing | 1 | Int | +0 |
| Carpentry | 1 | Str | +0 |
| **Chanting** | 1 | Cha | +2 |
| Charioteering | 1 | Dex | +2 |
| Cobbling | 1 | Dex | +0 |
| Cooking | 1 | Int | +0 |
| **Craft Instrument** | 2 | Dex | -2 |
| **Crowd Working** | 1 | Cha | +0 |
| Dancing | 1 | Dex | +0 |
| Direction Sense | 1 | Wis | +1 |
| Disguise | 1 | Cha | -1 |
| Endurance | 2 | Con | +0 |
| Engineering | 2 | Int | -3 |
| Etiquette | 1 | Cha | +0 |
| Fire-Building | 1 | Wis | -1 |
| Fishing | 1 | Wis | -1 |
| Forgery | 1 | Dex | -1 |
| Gaming | 1 | Cha | +0 |
| Gem Cutting | 2 | Dex | -2 |
| Healing | 3* | Wis | -2 |
| Heraldry | 1 | Int | +0 |
| Herbalism | 2 | Int | -2 |
| Hunting | 1 | Wis | -1 |
| Juggling | 1 | Dex | -1 |
| Jumping | 1 | Str | +0 |
| *Languages, Ancient* | 1 | Int | +0 |
| *Languages, Modern* | 1 | Int | +0 |
| Leatherworking | 1 | Int | +0 |
| *Local History* | 1 | Cha | +0 |
| Mining | 2 | Wis | -3 |
| Mountaineering | 1 | NA | NA |
| *Musical Instrument* | 1 | Dex | -1 |
| Navigation | 1 | Int | -2 |
| Poetry | 1 | Int | -2 |
| Pottery | 1 | Dex | -2 |
| Reading Lips | 2 | Int | -2 |
| *Reading/Writing* | 1 | Int | +1 |
| *Religion* | 1 | Wis | +0 |
| *Riding, Airborne* | 2 | Wis | -2 |
| *Riding, Land-based* | 1 | Wis | +3 |
| Rope Use | 1 | Dex | +0 |
| Running | 1 | Con | -6 |
| Seamanship | 1 | Dex | +1 |
| Seamstress/Tailor | 1 | Dex | -1 |

| | | | |
|---|---|---|---|
| Set Snares | 1 | Dex | -1 |
| Singing | 1 | Cha | +0 |
| Spellcraft | 1 | Int | -2 |
| Stonemasonry | 1 | Str | -2 |
| *Survival* | 2 | Int | +0 |
| Swimming | 1 | Str | +0 |
| Tightrope Walking | 1 | Dex | +0 |
| Tracking | 2 | Wis | +0 |
| Tumbling | 1 | Dex | +0 |
| Ventriloquism | 1 | Int | -2 |
| Weaponsmithing | 3 | Int | -3 |
| Weather Sense | 1 | Wis | -1 |
| Weaving | 1 | Int | -1 |
| **Whistling/Humming** | 1 | Dex | +2 |

* Healing is not within a bard's proficiency group, thus it takes three slots to learn instead of two as listed in the *Player's Handbook* .

## New Proficiencies

### Acting

Acting enables a character to skillfully portray various roles. Acting is most often used as a form of entertainment; it can also be useful in aiding a disguise. If both acting and disguise are known, the proficiency check for either is made with a +1 bonus.

Proficiency checks are required only if the actor must portray a particularly difficult character or is attempting an "ad lib" role (*i.e.*, a nonrehearsed role or on short notice).

### Chanting

The character is an accomplished chanter and can use this ability to help fellow workers or soldiers keep pace. Proficiency checks are used to determine the effectiveness of the chanting.

On a successful proficiency check, those who can hear the chanter become slightly hypnotized by the rhythmic sound, causing the time spent on arduous, repetitive tasks to pass quickly. The DM can, at his option, adjust results for forced marching, rowing, digging, and other such tasks accordingly.

### Craft Instrument

Those who take this proficiency must specify whether they are skilled at crafting wind, stringed, percussion, or keyboard instruments. It takes an additional proficiency slot to gain one of the other skills. Three additional slots allow the character to take the title "master craftsman" as he is able to craft instruments of all forms.

A craftsman must buy materials equal to a quarter of the instrument's sale value. It

then takes 1d6 days to craft a wind or percussion instrument, 2d8 days to form a stringed instrument, and 3d10 days to create a keyboard instrument. These times assume that the craftsman is spending 10 hours a day working on the instrument. If craftsman tools (cost 25 gp, weight 5 pounds) are not available, all times are doubled.

The quality of an instrument is determined by a final proficiency check. Failure results in an instrument of poor quality, while success indicates good quality. A natural 20 indicates that the instrument is nonfunctional, while a natural 1 results in a masterpiece worth twice the normal value.

Simple repairs take only 1d4 hours and require no proficiency check unless the proper tools are not available. However, repairing severe damage requires 1d8 hours and a check is mandatory for success.

### Crowd Working

Almost every bard is familiar with the ways of a crowd. However, those who take crowd working learn all the tricks of the trade. Such bards are skilled at observing crowds and adjusting their performances accordingly.

Any bard who is using a special ability to adjust the encounter reactions of a crowd (*e.g.,* influence reactions) can make a crowd working proficiency check. If this check is successful, the bard can alter the reactions of the crowd by two levels instead of the typical one.

If the bard or his group is soliciting money from a crowd, a successful proficiency check indicates that the bard is particularly appealing and the crowd willingly donates twice as much money as it normally would (or conditions improve one category if using the performance rules earlier in this handbook).

### Poetry

Proficiency in poetry includes the skills of reciting poetry and judging its quality. It also indicates that the character has a repertoire of poems memorized for recital at any time. No proficiency check is required for a normal recital.

If the character can read and write, original poems can be written. A successful proficiency check indicates that the poem is of above average quality.

### Whistling/Humming

Almost anyone can whistle or hum. Those who take this proficiency are exceptional whistlers and hummers. They can produce tunes as captivating as most songs. A person with this proficiency is a true master whistler and hummer.

It is so easy to learn a new tune to whistle or hum that characters with this proficiency can learn numerous tunes. In fact, if a proficiency check is made, a whistler or hummer knows any particular tune in question. In addition, a character with both this proficiency and the animal lore proficiency can mimic any bird call he has heard.

However, most adventurers do not take whistling just for the entertainment value. Instead, they are looking for its uses in communication. This communication is possible only among those who know this proficiency. If both characters succeed with their

proficiency checks, a single concept can be communicated. Some examples are "Go around to the side door," "I hear them coming," "Slowly reach out now, the guard doesn't see you."

# Chapter 5: Bard Abilities

This section examines most of the core bard's common abilities. These include pick pockets, detect noise, climb walls, read languages, and the bard's 10th-level ability to use any written magical item.

The first four of these abilities are collectively known as a bard's "thief skills," as they mimic the thief skills of the same name. As stated in the *Player's Handbook* under the section on the thief class, thief skills cannot be raised above 95%, no matter what modifiers are applied.

## Pick Pockets

The ability to pick pockets extends far beyond reaching into a victim's coat pocket and removing its contents. It has many other applications, as listed below. Some of these applications can be reversed and are indicated below. For example, "Redo" is the opposite of "Undo."

- Undo/Redo: A bard can untie, unstring, unclasp, unbuckle, unbutton, etc., an item without being noticed.
- Palm/Place: Palming enables a bard's hand to be held naturally while looking empty, but it actually contains some item: cards, a dagger, a scroll, silverware, coins (up to 10 + 2/level), gems (up to 5 + 1/level), etc.
- Lift/Drop: Lifting is the art of removing small items from others' pockets, sleeves, girdles, packs, *etc*., without the victims noticing.
- Strip/Garb: If a bard removes any accessible item (small or large) from a sleeping person (swords, boots, hat, and so on) without waking the victim, he is stripping items from the victim.
- Sleight of Hand: This is a general category that enables a bard to transfer an item from one hand to another, make the item seem alive, make it vanish and reappear, cause it to appear behind another's ear, and so on.
- Adjust Items: This skill enables a bard to make subtle adjustments without being noticed. For example, a bard could slip a peg from hole 1 of some game into hole 2.
- Exchange: Exchange enables a bard to reach into a pile of coins and remove more than he places there or to drop in a gold but remove a platinum.
- Slit: Slitting is the art of cutting through straps or cutting holes in bags, garments, purses, pouches, *etc*., without being noticed.

Most of these pick pockets functions can be reversed. So doing requires a successful pick pockets roll. An example follows.

While enjoying a fancy dinner party, the bard, Rembam, may wish to frame the good cleric Baldwin as a thief. To do so he might undo Madam Morgava's necklace, lift it from her, then drop it in Baldwin's pocket (this process requires three pick pockets rolls).

Later Rembam could alter the topic of discussion to that of jewelry, causing Madam Morgava to notice her missing necklace. As soon as a large stir is made, Rembam might exclaim, "I noticed the good cleric here was doting over your person earlier. Perhaps we should ask him to empty his pockets."

**Success/Failure/Detection:** If a bard rolls equal to or below his pick pockets score, he succeeds in the attempt. If he rolls above his pick pockets score, he fails. However, success and failure are separate from being detected. A bard's attempt to lift a gem from a merchant's pocket might be detected regardless of whether the bard succeeds in his attempt.

Detection is determined by subtracting three times the victim's (or observer's) level from 100. If the bard's roll is equal to or above this number, his attempt is detected (regardless of the attempt's success or failure).

## Detect Noise

Bards are attentive to every sound or noise, no matter how small or seemingly insignificant, including faint sounds that most others miss.

The rules listed in the *Player's Handbook* under the thief and bard classes (as well as in the *DUNGEON MASTER Guide* under "Listening" in Chapter 15) state that a listener may attempt to pick up faint sounds any time he wants, simply by standing still and listening for one round. Any head gear (hat, helmet, etc.) must be removed and there cannot be any noise in the immediate vicinity (*i.e.*, party members must be quiet). The check is made secretly by the Dungeon Master. Success means that the listener picks up some noise. Additional checks can be made in which the listener can attempt to discern one of the following (per check):

- number of beings
- race
- nature of beings
- exact direction
- movement
- bits of conversation
- distance to beings

Once a check fails, no more information can be gained unless conditions change considerably (and favorably).

If you would like to add greater detail to your character's chance to hear noise, consider using Table 15.

**Table 15: DETECT NOISE MODIFIERS**
(Optional)

| Situation | Modifier |
|---|---|
| *Distance (indoor/outdoor)** | |
| Up to 5 feet/yards | +10% |
| Up to 25 feet/yards | ---- |
| Up to 50 feet/yards | -10% |
| Up to 100 feet/yards | -25% |
| Up to 150 feet/yards | -50% |
| Up to 200 feet/yards | -75% |
| Up to 300 feet/yards | -100% |
| | |
| *Ear Covering* | |
| Cap | -10% |
| Scarf/Cloth | -10% |
| Hat | -25% |
| Leather helmet | -50% |
| Metal helmet | -75% |
| | |
| *Sound Obstructions* | |
| Closed door | -50% |
| Ear pressed to door | -20% |
| Bend in corridor | -10% |
| Curtains | -15% |
| | |
| *Sound Volume* | |
| Whisper | -25% |
| Personal conversation | ---- |
| Speaking to an audience | +10% |
| Shouting | +25% |
| Yelling | +50% |

*Distances are measured in feet indoors and in yards outdoors.

## Climb Walls

There is an entire section in the *Player's Handbook* devoted to this skill. It is found in Chapter 14: Time and Movement. It is important to note that bards perform just like thieves when it comes to climbing walls. Any climbing walls comment that applies to thieves also applies to bards. For example, in the *Player's Handbook,* thieves are given a number of special climbing benefits, which all apply to bards as well.

Although most adventurers can climb rocky cliffs and steep slopes, rogues (including bards) are far superior to others in this ability. They not only succeed more often than others, but they can climb even the most difficult surfaces without the aid of special gear (called free climbing). Rogues are the only characters who can climb rough, smooth, and very smooth surfaces without the use of ropes or other equipment. And they are the only characters able to climb very smooth surfaces when they are slightly slippery.

For your convenience, all climb walls rules that apply to bards have been compiled and are listed here in an easy-to-use format.

**Mountaineering Proficiency:** Every proficiency slot spent on mountaineering (including the initial slot) increases a bard's climb walls score by 10%. The bard is not required to use climbing gear in order to gain this benefit. It is a permanent increase that applies in all situations.

**Table 16: CLIMBING MODIFIERS**

| Situation | Modifier |
|---|---|
| *Miscellaneous* | |
| Rope and wall* | +55% |
| Encumbrance** | -5% |
| Climber below half hp | -10% |
| *Rappelling down a surface* | |
| Bottom of rope is held | +50% |
| Bottom of rope is not held | +30% |
| *Surface condition* | |
| Abundant handholds (brush, trees, ledges) | +40% |
| Sloped inward | +25% |
| Slightly slippery (wet or crumbling) | -25% |
| Slippery (icy, slimy) | -40% |

*Assisted Climbs (Using Climbing Tools)****

| Armor Type | Assisted Bonus | Total Modifier |
|---|---|---|
| No Armor***** | - | +10% |
| Leather Armor | - | - |
| Padded Armor | +25% | -5% |
| Studded Leather | +25% | -5% |
| Ring Mail | +10% | -15% |
| Brigandine | - | -25% |
| Scale Mail | +30% | -15% |
| Hide Armor | +25% | -5% |
| Chain Mail | +10% | -15% |
| Elven Chain | +15% | -5% |
| Splint Mail | - | -25% |
| Banded Armor | +65% | -25% |
| Plate Mail | +45% | -50% |
| Bronze Plate | +45% | -50% |
| Field Plate | +45% | -50% |
| Full Plate | +45% | -50% |

*This bonus applies when the character can brace his feet against the wall and use the rope to assist in the climb.

**This penalty is cumulative for each encumbrance category worse than unencumbered (*e.g.*, a moderately encumbered bard would suffer a -10% penalty).

***The armor adjustments to a bard's climb walls percentage, given on Tables 9 and 10 in the "Creation" section, apply to bards performing free climbs (i.e., climbs in which pitons, rope, and so on aren't used, which is the norm for rogues). When a bard uses climbing tools, he is performing an assisted climb. Assisted climbers suffer less severe armor penalties, as ropes can be coiled about and attached to their armor, and they are able to lean out from the wall more, making the bulkiness of their armor less significant.

The "Assisted Bonus" column can be used by players who want to record only their free climbing percentage (*i.e.*, their climbing walls score has been adjusted as per Table 9 or 10 in the "Creation" section). The "Total Modifier" column lists the result of combining the armor penalty with the assisted climb bonus.

As an example, studded leather normally causes a -30% climbing penalty. If tools are used, a bonus of 25% is added, making the penalty for assisted climbing in studded leather only -5%.

****Includes small magical items such as rings, bracers, cloaks, but no large or bulky devices.

**Climbing Checks:** A climbing check must be made any time a bard tries to climb more than 10 feet. According to the *Player's Handbook* (Chapter 14: Time and Movement), an initial check is made to see if the bard is able to even attempt the climb. If this check fails, the wall is too difficult and another attempt can be made only if the bard's chance to succeed increases (*i.e.*, a rope is tossed down) or he moves to a significantly different new location (half a mile or more along a cliff).

Another check is not required unless the bard climbs more than 100 feet or takes more than a turn (ten rounds) to climb. The reason for this is that the first check assumes that the bard is scouting out the wall (or cliff), picking the best route. If the check is successful, he has found such a route and can climb the surface safely.

*Optional Rule:* It should take one turn to scout out a surface. If the surface cannot be seen or scouted for some reason, the bard must simply start climbing and hope for the best. In such cases, a climb walls check is made; if it fails, the bard falls. To determine how high he had climbed, roll a percentile die and that is the fraction of the climb that had been completed before the fall.

For example, if Aldwin is adventuring in a large underground cavern and decides to climb a wall, he spends a turn examining what he can see (say 15 feet in torch light). He then rolls his climb walls check. If successful, he sees an obvious route and can climb up to 15 feet without mishap. If he decides to climb the other 50 feet of this 65-foot-high wall, he must roll a second check (it is impossible to scout in the middle of a climb). He rolls and fails; now the DM rolls a percentile of 98. Aldwin almost reaches the top before he falls. The DM decides that the damage should be 6d6 as Aldwin essentially falls 60 feet.

**Falling:** As always, falling damage is 1d6 per 10 feet. A fall of 40 feet causes 4d6 damage.

If a climber is climbing assisted (using tools), he cannot fall clear to the ground. If pitons or spikes are being driven into a wall and rope is attached between them and a climber, the climber will fall only until the slack between him and the piton is taken up.

Thus, if the climber attaches 20 feet of rope to the piton, climbs 10 feet up, and then falls, he would fall 30 feet (10 feet down to the piton plus the 20 feet of slack) and suffer 3d6 points of damage (the DM might decide to allow a saving throw vs. paralyzation for half damage, since the rope takes up some of the shock).

Pitons and spikes are not completely reliable and pull out 15% of the time.

Characters can also rope themselves together. If a roped character falls, any character directly tied to him must immediately roll a climbing check. Success stops the fall, failure means that they are both falling. If more than one person is falling, a -10% penalty results for every falling character in addition to the first one (*e.g.*, if three characters are falling the penalty would be -20%).

**Climbing Rates:** To determine how fast a bard climbs, look for the type of surface and the surface condition on the following table. Multiply the resulting number by the character's current movement rate. That is the number of feet per round the bard can travel in any direction (up, down, sideways, or diagonal). This rate is twice as fast as nonrogues can travel.

**Table 17: BARD CLIMBING RATES**

| Type of Surface | Dry | Slightly Slippery | Slippery |
|---|---|---|---|
| Very smooth | 1/2 | 1/4 | - |
| Smooth, cracked | 1 | 2/3 | 1/2 |
| Rough | 2 | 2/3 | 1/2 |
| Rough w/ledges | 2 | 1 | 2/3 |
| Ice wall | - | - | 1/2 |
| Tree | 8 | 6 | 4 |
| Sloping wall | 6 | 4 | 2 |
| Rope and wall | 4 | 2 | 1 |
| Rappelling | 10 | 10 | 10 |

**Combat While Climbing:** Combat is both difficult and dangerous while climbing. Spells can be cast only if the bard is in a steady, braced position. If the spell has a material component, the bard must have one hand free. Somatic components require the use of both hands (*i.e.*, the bard must be able to steady himself with rope and legs alone).

The following additional adjustments occur while climbing:

- Dexterity and shield Armor Class bonuses are lost.
- Most attacks against a climber are made with the +2 rear attack bonus.
- Climbers suffer a -2 penalty to attack, damage, and saving rolls.
- Attacking from above results in a +2 attack roll bonus and attacking from below results in a -2 attack roll penalty. These two adjustments apply to climbers and nonclimbers alike.
- Two-handed weapons are rarely usable by climbers.

- If struck for any amount of damage while climbing, an immediate climbing check must be rolled. A free-climbing character falls if this roll fails, while an assisted climber loses his balance for a round (he can't attack, suffers an additional -2 penalty to saving throws, and opponents gain an additional +2 bonus to their attack rolls).

All adjustments are cumulative. Thus, an ogre standing atop a cliff gains a +6 to attack if Aldwin has lost his balance on his assisted climb (+2 because Aldwin is below the ogre, +2 because Aldwin's back is exposed as he is facing the cliff, and +2 because he is off balance).

## Reading, Writing, and Speaking

This section clarifies the differences and similarities between the multiple ways in which a bard can attempt to read, write, and speak languages. In particular the following will be examined: the thief ability read languages; the proficiencies of reading/writing, ancient languages, and modern languages; the spell *read magic*; and the 10th-level bard ability to use any written magical item. Each has its own specific functions, but the various uses overlap.

The thief ability to read languages enables any rogue, including the bard subclass, to attempt to read any material (other languages, maps, ideograms, *etc*.) that the character isn't proficient in reading. This skill does not enable a thief to read writings that others can read only by using a *read magic* spell (*i.e.*, magical writings cannot be read with the read languages ability). The thief's ability to read languages does not impart the ability to write or speak a language.

All three of the language-oriented proficiencies require the player to record a specific language when the proficiency is first learned. Additional proficiency slots can be spent to gain additional languages, which must also be specified and recorded. Characters automatically succeed when using these three proficiencies (*i.e.*, no proficiency check is rolled) under most circumstances. Only when the proficiency is used in extreme cases, such as reading a very old document or speaking odd dialects, is a proficiency check rolled.

The proficiency reading/writing enables a character to both read and write a specific language-no proficiency check is rolled and there is no need to roll against read languages. Only a "modern" language can be selected as the topic of this proficiency, and only if the character already knows how to speak the language. (A modern language is any language that is currently being used in the character's known campaign world. If a language is not modern, it is always "ancient.")

The modern languages proficiency enables a character to speak a specific language, but not read or write it.

Ancient languages is a unique proficiency that combines the functions of the above two proficiencies with respect to ancient languages. When an ancient language is specified for this proficiency, the player must decide whether the character is fluent in the language (knows how to speak it) or if the character is literate in the language (can read and write it)--both are not immediately gained. If both skills are desired, an additional

proficiency slot must be spent on the same language.

The spell *read magic* enables a caster to read, but not write or speak, any writing that is magical. It doesn't matter what language it is written in or who wrote it, only that it is magical. Once read, the caster can read it at any later time without the use of the spell. If the writing isn't magical, this spell has absolutely no effect.

The bard's 10th-level ability to use any written magical item (with a 15% chance of using it incorrectly) is a very special case. By the 10th level, bards have finally learned enough magical symbols and signs that they are able to puzzle through them without the use of *read magic*, *read languages*, or any other aid. However, a bard does not exactly understand the effects of an item until he first uses it. Up until that time, he has only a vague idea as to the item's general use (*e.g.*, the bard might know that a *flame strike* scroll contains an offensive fire spell). He must read the scroll and activate its magic to learn the exact nature of the scroll.

Note that at 10th level the bard can ignore class restrictions for all magical items of a written nature.

# Chapter 6: Magic

## Spell Books

Unlike wizards, bards do not engage in the systematic study of magic or the pursuit of specific spells. In spite of this, most bards pick up some magical knowledge in the course of their travels. However, understanding the meaning of a spell is a difficult task. Spell books are not filled with lines of neatly written text. Instead, they contain arcane formulae, strange symbols, notes, comments, odd runes, *etc*. Understanding them is difficult, as spells aren't "read" like normal writing; they are "solved" like complex mathematical equations, and impressed upon the mind by an act of will.

Only those able to cast spells can attempt to unlock their secrets and tap the energies needed to cast them. The only way to do this is for the spellcaster to successfully roll under his "chance to learn spells" score, which is a function of Intelligence. Once understood, no further attempts to solve a given spell need to be made as long as the spell book is available for study. Note that a spellcaster cannot understand a spell of a level higher than he can currently cast.

## Musical Components

Most bards are almost magically skilled at some form of musical expression. If you are seeking a way to more closely incorporate this talent with a bard's magical abilities, you may want to consider the option of using music as the verbal component to spells. Then, instead of speaking arcane words to invoke a spell, the bard sings a song, recites poetry, or plays a tune.

Of course, as with all optional rules, you must first obtain your Dungeon Master's

approval. If this option is taken, a bard can perform some form of music in place of a spell's verbal component. However, once this option is agreed upon for your bard, he can no longer speak words to cast spells requiring verbal components. He must always resort to music. Only one of the three musical mediums (singing, poetry, or instrumental) works for any particular bard (until 10th level). Demi-bards have different options available to them. The musical options for bards and demi-bards are given in Table 18.

**Table 18: VERBAL COMPONENT SUBSTITUTES**

| **Kit** | **Musical Substitute** |
|---|---|
| True | Singing or Instrumental* |
| Blade | Poetry |
| Charlatan | Singing |
| Gallant | Poetry |
| Gypsy | Instrumental |
| Herald | Instrumental |
| Jester | Poetry, Singing, or Instrumental* |
| Jongleur | Poetry |
| Loremaster | Instrumental |
| Meistersinger | Instrumental |
| Riddlemaster | Poetry |
| Skald | Singing |
| Thespian | Singing |
| | |
| *Demi-Bards* | |
| Chanter | Chanting |
| Minstrel | Special** |
| Professor | Whistling or Instrumental* |
| Whistler | Whistling |

*The bard must select only one of these options. This choice is binding and cannot be altered at a later time.

**Minstrels are a special case. Refer to their kit description.

## New Spells

### Alter Instrument

**(Alteration)**
Level: 1
Range: Touch
Components: V, S
Duration: 1 turn/level
Casting Time: 1
Area of Effect: 1 instrument
Saving Throw: None

By using this spell, the caster can transform one musical instrument into another of similar size and equal value. Any hand-held instrument can be altered into any other hand-held instrument. However, in order to obtain a large instrument, such as a base harp, organ, or any other instrument that is too large or heavy to be easily carried, the spellcaster must start with an equally large instrument.

In any event, the value of the new instrument is identical to the original. A golden recorder will generate a silver plated lute, a child's drum will generate a nonfunctional lyre, *etc*.

Bards use this spell to save both money and equipment carried. It is a lot cheaper to buy a single instrument and alter it when another is needed than to buy every instrument that might be required. This also saves a lot of space in one's backpack.

If the instrument the bard wishes to alter is being carried or played by another character, a successful attack roll against the opponent's Armor Class must be made in order to touch the instrument.

## Sound Bubble
**(Abjuration, Evocation)**

Level: 1
Range: 0
Components: V, S, M
Duration: 10 rounds + 1 round/level
Casting Time: 1
Area of Effect: Special
Saving Throw: None

When this spell is cast, an invisible bubble springs into existence. It can either be centered on and mobile with the caster or cast on an area. The mobile bubble has a radius of 10 feet, while the area bubble has a radius of 5 feet per caster level. The bubble has only one effect: sound can't pass through it. Thus sound generated within the bubble can't be heard by those on the outside and vice versa.

Bards often use this spell to enhance the quality and effect of their performances. It also functions nicely when a bard wishes to use one of his talents in a dungeon or other limited setting in which noise is sure to draw unwanted attention.

Besides its entertainment functions, *sound bubble* is also useful in many of the same situations in which *silence* is used.

The material component of the spell is a blown egg shell or a soap bubble.

## Silence 15' Radius
**(Alteration)**

Level: 2

Range: 60 yards
Components: V, S
Duration: 2 rounds/level
Casting Time: 5
Area of Effect: 15-foot-radius sphere
Saving Throw: None

Upon casting this spell, complete silence prevails in the affected area. All sound is stopped: conversation is impossible, spells with verbal components cannot be cast, and no noise issues from or enters the area. The spell can be cast into the air or upon an object, but the effect is stationary unless cast on a mobile object or creature. The spell lasts two rounds for each level of the experience of the caster. If the spell is centered on a creature, the effect then radiates from the creature and moves as it moves. An unwilling creature receives a saving throw vs. spell. If successful, the spell effect is centered about one foot behind the position of the creature at the instant of casting (the effect does not move with the creature in this case). This spell provides a defense against sound-based attacks, such as harpy singing, a *horn of blasting*, *etc.*

## Improved Magic Mouth
**(Alteration)**

Level: 3
Range: 10 yards
Components: V, S, M
Duration: Special
Casting Time: 3
Area of Effect: 1 object
Saving Throw: None

This spell works in all ways like the 2nd-level wizard spell *magic mouth*, except as follows.

When this spell is cast, the mouth is endowed with the bard's current knowledge, Intelligence, and personality. When the predetermined event occurs that activates the mouth, it converses as if the bard were actually there. For example, the mouth might say, "Who goes there?" and wait for a reply. If the visitors announce their names, it could go on to say, "Tarnak, please proceed to the music room, while the rest wait in the sitting room."

The mouth lasts until the conversation is over.

Although the mouth can be set to activate due to a visual stimulus (*i.e.*, activate if anyone wearing a green feather approaches the castle gate), once triggered, it reacts only to sounds and speech. Also note that the mouth and the bard are not linked in any way. Once cast, the mouth's knowledge is set and will never change. Thus, if a bard is extremely angry at Tarnak when he casts an *improved magic mouth*, the mouth will remain in a state of anger, even if the bard and Tarnak have reconciled.

## Instant Audience

**(Conjuration)**
Level: 3
Range: 30 yards
Components: V, S, M
Duration: Up to 4 hours
Casting Time: 2
Area of Effect: 1 room or area within range
Saving Throw: None

When this spell is cast, audience members are magically conjured. Each round 1d4 people enter the room or area in a normal manner. (They actually appear just outside the room when no one is looking.) This continues for a number of rounds equal to the caster's level.

The audience contains a combination of races, gender, and social class appropriate to the occasion.

Instant audience members act in every way like any other members of the audience. They walk around during intermission, talk, eat snacks, and so on. However, they always evade questions about their past, their history, or current events, as they have no past, no history, and have no idea as to what is going on in the world outside of the room.

Instant audience members are strictly noncombative and never attack or cast spells (although they can be bullies or braggarts if that is appropriate). If one suffers even a single point of damage, he instantly vanishes along with all of his items (including items no longer on his body, such as clothes that he hung in the linen closet).

Once the performance ends, instant audience members leave in an appropriate manner and vanish as soon as they are out of view.

If the audience is treated in an inappropriate way (as determined by the DM), the spell instantly ends. For example, an audience could be summoned to watch a combat, but if the audience is used as a human shield, it vanishes.

The material components are a small collection of the items carried by the appropriate audience (a gold coin, a piece of fine fabric, a snuff box, *etc*.). These are tossed into a bag that contains at least one live mouse. The mouse is not destroyed, but vanishes during the spell to reappear somewhere in the room after the spell ends.

## Wall of Sound

**(Evocation)**

Level: 3
Range: 60 yards
Components: V, S, M
Duration: Concentration + 1 round/level
Casting Time: 3
Area of Effect: Special

Saving Throw: None

The *wall of sound* spell brings forth an immobile, shimmering curtain of violently disturbed air. The wall is made up of a number of 10'x10' sections equal to the caster's level. These sections can be arranged as desired as long as the resulting wall all lies in one plane ( i.e., it must be flat) that stands up vertically.

One side of the wall, selected by the caster, produces a voluminous roar that completely disrupts all communication, command words, verbal spell components, and any other form of organized sound within 30 feet. In addition, those within 10 feet are deafened for 1d4 turns if they fail a saving throw vs. spell.

On the other side of the wall, a loud roar can be heard, but communication is possible by shouting, and verbal components and command words function normally.

Anyone passing through the wall suffers 1d8 points of damage and is permanently deafened unless he rolls a successful saving throw vs. spell. Deafened creatures suffer a -1 penalty to surprise rolls, a +1 penalty to their initiative rolls, and they are 20% likely to miscast spells with a verbal component.

A *silence 15' radius* spell cast by a higher level caster specifically for this purpose will dispel the wall; the wall otherwise destroys all *silence* spells that come into contact with it.

The material component is a piece of slate and a finger nail clipping.

## Conjure Cabinet
**(Conjuration)**

Level: 4
Range: 10 feet
Components: V, S
Duration: 1 round/level
Casting Time: 4
Area of Effect: Special
Saving Throw: None

This is a very special spell created specifically for the bard class. Before this spell can be used, the bard must have a special cabinet made. It must be of the highest quality, worth at least 1,000 gold pieces. It can be any size up to 4 feet wide by 4 feet deep by 8 feet high.

Once the cabinet is made, this spell must be cast upon it and the cabinet must be named. At any later date, the bard can cast this spell and the cabinet temporarily teleports to the bard's current location. The cabinet carries with it any contents that are of a performing nature usable by the bard. (For example, it might contain musical instruments, cleaning tools, a playing stool, *etc*., for a True Bard. It might be lined with throwing daggers, rapiers {for sword swallowing}, and blindfolds for a Blade).

When the cabinet teleports to the bard, a percentile die must be rolled. On a 01-04, it appears 2d20 feet in the air and falls, destroying itself (but its contents are recoverable). On a roll of 99-00, it teleports into the ground and is destroyed. Otherwise, it is safe.

The cabinet remains for the duration of the spell or until the bard speaks the cabinet's name. It then teleports safely back to its previous location, along with any carried items of a performing nature usable by the bard.

A bard may have only one such cabinet at a time. The teleport will not carry the cabinet to another plane. If items of a nonperforming nature are left in the cabinet, then the cabinet will not teleport.

## Magical Items

As is the nature of bards, they meddle in everything, including magical items created by the great wizards of past and present. Below you will find a list of new magical items, old magical items, and new ways to use old magical items.

### New Magical Items

**Case of Compression:** When empty, this musical instrument case appears as any other such case. However, when touched to any instrument normally carried in a case, it transforms so that it perfectly fits the instrument. When the case is closed with the instrument inside, it shrinks until it easily fits in the palm of the hand. The reduced case weighs only a pound. When the case is opened, it returns itself and its instrument to full size.

About 10% of these cases are cursed; such cases devour the instrument 25% of the time.

**Gourd of Travel:** By shaking this gourd and saying the command word, the bard is able to teleport himself and one other to any known place. A *gourd of travel* does not allow for travel between planes.

A *gourd of travel* has 1d10 seeds within it, which produce the rattling sound that causes the gourd to function. Every time the gourd is used, one of these seeds vanishes. When the last seed vanishes, the gourd becomes a nonmagical item.

**Harp of Healing:** When this magical harp is played within 10 feet of wounded creatures, it heals each creature by one point per hour of playing. However, once the music stops or a new player takes over, further playing is useless unless new wounds are received.

After eight hours of continuous playing, a bard must begin to make successful Constitution rolls once an hour or he misplays the harp and healing ends.

**Horn of Amplification:** This horn is not hollow as one would expect. Rather, it is solid and resembles the horn of a rhinoceros. It is used by touching its base to the forehead. It magically attaches and conveys its special power. At this time, the one wearing the horn has his voice amplified from two to ten times in volume. The exact increase is up to the character using the horn. The horn has no other function. It can be removed by anyone who lightly pulls on it.

This horn increases the range of all songs, jokes, rhymes, and other forms of verbal communication proportionately (*e.g.*, an amplification of five increases the range by five

times the normal distance).

The character can also yell. A yell causes 2d10 points of damage to everyone except the user within a range of 5 feet times the amplification (*e.g.*, setting 2 has a 10-foot range, setting 5 has a 25-foot range, etc.). A successful saving throw vs. petrification reduces damage by half. Only one yell per encounter can be attempted.

Each time the horn is used, there is a 1% chance that it permanently affixes to the user's forehead and loses all magical ability. It can then be used as a weapon for head butts, causing 1d3 points of damage. However, the oddity of having a horn growing from the character's head results in a -2 Charisma penalty. A wish must be used to remove the horn.

**Horn of Baubles:** When this instrument is blown, one 5'x5'x5' cube of useless baubles spews out of it per level of the blower. Although this is usually rather comical, it can be dangerous in a limited space.

The instrument can be safely blown once every hour. If blown more frequently, there is a 10% cumulative chance that the horn backfires, sucking the blower into it and spewing him out as a collection of useless baubles. It is impossible to resurrect or reincarnate a creature in this state, although a *wish* can be used to recover the victim.

**Lyre of Wounding:** This cursed item appears normal in every way until it is first played. When the musician's fingers strike its strings, they sever the tips of his fingers. Roll 1d6 for the number of fingers that the musician loses: 1-4 the number of lost fingers, 5 all fingers and the thumb, and 6 escaped unscathed. Each finger lost causes 1d2 points of damage, but the musician should not be lowered below 1 hit point due to lost fingers.

Each lost finger causes the musician's proficiency at playing musical instruments to suffer a penalty of -2. Other proficiencies and activities requiring manual dexterity are likewise reduced, at the DM's discretion. Lost digits can be regenerated magically.

As with cursed swords, whenever the musician decides to play, the lyre leaps into his hands; magically altering the form of the instrument does not abate its curse.

**Periapt of Proof Against Sound:** This small periapt is indistinguishable from other gems. The character who has this periapt gains extra resistance to any sound-based attack or influence. If a saving throw is normally allowed, the periapt provides an extra bonus to the saving throw. The level of the bonus depends upon the quality of the periapt, as follows:

| **D100** | **Save Bonus** |
|---|---|
| 01-40 | +1 |
| 41-60 | +2 |
| 61-75 | +3 |
| 76-90 | +4 |
| 91-95 | +5 |
| 96-00 | +1, 5' radius |

If no saving throw is usually allowed, the periapt provides a normal saving throw vs. spell against the sound. A *periapt of proof against sound* affects all hostile sounds, including harpy singing, sirens, screams or shrieks that cause damage or fear, all musical influences (including bard abilities), spells that rely upon verbal communication to affect their victims (*e.g., command, suggestion, etc.*), and so on. However, the periapt has no

effect upon communication, such as, "Kill that stupid bard!," verbal components for spells, magical item command words, or any other sound that does not directly affect the individual who has the periapt.

**Pick of Strumming:** This magical pick enables the user to play any stringed instrument that is normally plucked with fingers or a pick. This includes harps, lutes, mandolins, etc. The person grasping the pick can play any song he has ever heard. The pick's magic is so great that all functions of the instrument are instantly mastered. Thus, the bard automatically knows the proper grips to use on the lute, how to hold the harp, how to adjust the strings of the mandolin, *etc*. His skill level rivals that of a master musician proficient in the instrument's use.

Also, a bard who uses this pick to play the lyre of wounding does not suffer any severed fingers.

**Recorder of Recording:** This recorder has two magical functions. If, after a song is played on it, the bard says, "Play it again when X happens," the recorder will magically play the entire song over again any time condition X occurs (*e.g.*, "When Tarnak comes within 20 feet.").

The other magical function is activated by speaking the word, "record," before playing a song. At any later time, the bard can say, "play back," and the recorder produces all sounds that it recorded within 30 feet during the song. Furthermore, these sounds are played back as if the recorder hadn't been making any noise at the time.

The recorder does not reproduce special sound-based attacks of any sort.

**Zither of Speed:** This zither appears to be a normal musical instrument. However, if it is played in a rapid tempo and the musician says, "Adagietto," all allies within 30 feet are affected as if under the influence of a *haste* spell.

If the zither is played slowly and "Adagissimo" is spoken, all foes within 30 feet are affected as if under a *slow* spell (no saving throw). The effects last as long as the bard concentrates upon the music or until he plays the zither at a moderate tempo and says, "Andante." If he moves, defends himself, suffers damage, rolls for a saving throw, or performs any other action, his concentration is broken.

A *zither of speed* functions only once per day. Furthermore, for every successive day in a row that its magic is used, there is a 10% cumulative chance that one of its strings breaks, rendering the item useless unless it can be repaired.

## Old Magical Items

The following magical items are all located in the *Dungeon Master's Guide*; they are particularly suited to or favored by bards. *Italicized* entries are cursed or are items that bards find particularly distasteful.

**Potions**
Philter of Glibness
*Philter of Stammering and Stuttering*
Ventriloquism
Rods
Beguiling

Rulership
Splendor

**Miscellaneous Magic (Noninstrumental)**
*Boots of Dancing*
Helm of Comprehending Languages and Reading Magic
Sheet of Smallness
Tome of Leadership and Influence

**Miscellaneous Magic (Musical Instruments)**
*Chime of Hunger*
Chime of Interruption
Chime of Opening
*Drums of Deafening*
Drums of Panic
Harp of Charming
*Harp of Discord*
Horn of Blasting
*Horn of Bubbles*
Horn of Collapsing
Horn of Fog
Horn of Goodness (Evil)
Horn of Valhalla
Lyre of Building
Pipes of Haunting
*Pipes of Pain*
Pipes of Sounding
Pipes of the Sewers

**Weapons and Armor**
Armor of Command
Elven Chain Mail
Sword of Dancing

## New Twists on Old Items
(Optional Rules)

This optional section contains suggested special effects that occur when various bard kits use the instruments and other magical items listed above. All of these suggestions are optional, but will make for a lot of added flavor and fun in your campaign.

Because bards are so musically inclined, their understanding of all musical instruments, including magical items, is such that they gain certain special benefits. This is also true of several other magical items that are specially related to bards.

**Elven Minstrels:** Because these special demi-bards understand the union of magic and music better than anyone, they gain a special benefit. Any time a hazardous magical effect based on music occurs, an elven Minstrel gains a +2 bonus to the saving throw.

Success indicates that the hazardous effect is avoided. If no saving throw is allowed, this allows one at the normal chance for success.

**Philter of Glibness:** If a Charlatan imbibes this potion, even *detect lie* will have only a 5% chance to note any "stretching of the truth."

**Philter of Stammering and Stuttering:** This potion functions as a *philter of glibness* or *persuasiveness* when imbibed by a Jester and has no ill effects.

**Boots of Dancing:** These boots have no effect upon a Jester.

**Helm of Comprehending Languages and Reading Magic:** When worn by a bard, this helm grants the ability to understand 95% of strange writings and 90% of magical writings. If the bard is 10th level or higher, the chance to understand magical writings rises to 95%.

**Tome of Leadership and Influence:** When this is read by a bard, the character increases by one level. His experience points become equal to the minimum required to attain the new level.

Unless stated otherwise, the following notes apply only to bard kits that have Musical Instrument listed as a bonus proficiency. Those kits that have Musical Instrument listed as a suggested proficiency are also affected, but only if the bard in question is proficient with the particular instrument.

**Chime of Hunger:** When struck by a bard, this chime's cursed powers radiate out 60 feet + 10 feet per level of the bard.

**Chime of Interruption:** When this is used by a bard, affected spellcasters must roll their saving throws with a -1 penalty per three levels of the bard. Elven Minstrels disrupt any spell that they can themselves cast.

**Chime of Opening:** Bards can attempt to destroy locks, lids, doors, valves, and portals with this chime (in addition to its normal functions). The chance to destroy is equal to 5% per level of the bard. Thus a 6th-level bard would have a 30% chance to destroy such an item. The maximum chance is 95%. Of course, if the bard doesn't want to destroy the item, he can use the chime normally.

**Drums of Deafening:** These drums are a pair of kettle drums, but bards can invoke the magic in each drum separately. If the left drum is struck, it causes those within 10 feet to be stunned for 2d4 rounds. If the right drum is struck, it causes all within 70 feet to be permanently deafened (a *heal* spell or similar magic is needed to regain hearing). Dwarven Chanters can double all areas of effect.

**Drums of Panic:** If these drums are struck by a bard, the radius of the inner "safe zone" can be reduced to any desired measurement. Affected creatures suffer a saving throw penalty of -1 penalty per three levels of the bard.

**Harp of Charming:** Once per turn a bard is able to cause the harp to cast a *command* spell as a caster equal to the bard's level.

**Harp of Discord:** Unfortunately for bards, their greater musical talents cause the effects of this instrument to last for 2d4+2 rounds after the music stops. Jesters cause the effect to last for 2d4 turns.

**Horn of Blasting:** Bards are better able to play this instrument, so that there is only a 5% cumulative chance per day that the horn will explode. Furthermore, the listed "2% cumulative chance of the instrument self-destructing" is reduced to 1%.

**Horn of Bubbles:** Bards are actually able to use this cursed magical item to their advantage (once they determine what the horn is). When properly blown by a bard, the horn emits a cone of bubbles 30 feet long with a 30-foot diameter end. Anyone caught in the bubbles is effectively blinded for 2d10 rounds unless he rolls a successful saving throw vs. breath weapon. However, there is a 5% chance that the horn backfires and sucks the bard through it, emitting him as a mass of bubbles. Once all of the bubbles pop (taking 2d10 rounds), the bard is irrevocably dead. Jesters have only a 1% chance of being turned to bubbles.

**Horn of Collapsing:** Bards have only a 5% chance of sounding the horn improperly. Dwarven Chanters never use this instrument improperly once they know the command word.

**Horn of Fog:** When this horn is blown, bards are able to create the typical fog, or they can create a region of magical rain. Rain can be very useful as a source of water, to put out fires, or to fill the bottom of a room with water. The rain will accumulate 1 inch of water per round in a 10-foot square.

**Horn of Goodness (Evil):** Unfortunately for many bards, sounding this instrument might produce an alignment change. There is a 50% chance that the bard becomes neutral evil, otherwise he becomes neutral good. If the bard is already one of these two alignments, the horn functions normally.

**Horn of the Tritons:** Bards are able to sound this horn even though it isn't normally usable by rogues. Meistersingers and halfling Whistlers are able to use this magical horn twice per day.

**Horn of Valhalla:** At 5th level bards can sound the brass horn, at 10th level the bronze horn, and at 15th level the iron horn. Skalds can play any of these horns without penalty.

**Lyre of Building:** A bard can negate the effects of a *horn of blasting*, a *disintegrate* spell, or the effect of up to three rounds of attack from a ram or similar siege item. This works once per day for every three levels of the bard. When the lyre is used to perform work, a bard is able to achieve the work of 100 men + 10 men per level of the bard. If a bard should happen to fail the false chord check, a saving throw vs. paralyzation is also allowed. Success indicates that the bard recovered from his mistake without mishap.

**Pipes of Haunting:** When these powerful pipes are blown by a bard, those who fail their saving throws vs. spell are affected as if subject to a *fear* spell. Those who succeed on the roll still suffer the -2 penalty to morale checks and a -1 penalty to surprise rolls. The bard can choose to use the pipes normally.

**Pipes of Pain:** Because of the musical skills of bards, all within 60 feet are subject to the magic of these pipes when played by a bard. Saving throws are rolled with a -1 penalty per three levels of the bard.

**Pipes of Sounding:** Bards are able to generate any sound with these pipes, up to and including the volume of eight yelling men. The only limit is that the sound can't imitate any form of understandable verbal communication. Charlatans, however, can generate understandable communication.

**Pipes of the Sewers:** When played by bards, these pipes actually teleport the rats from some unknown location. Thus, a bard can summon rats even if he is in an area completely devoid of rats. Meistersingers can select whether giant or normal rats arrive, and have a +10% bonus to any control rolls.

**Armor of Command:** Bards wearing this armor are able to speak one *command* a day with the effects of the first level priest spell, *command* .

**Sword of Dancing:** Bards can release a *sword of dancing* on any round in which its plus isn't a 1 (*e.g.*, round 2,3,4,6,7,8, *etc*.). Blades of 5th level or higher can release the weapon after the first round; it will fight on its own for a number of rounds equal to the Blade's level before returning for one round.

# Chapter 7: Music

## Throughout History

This section contains a short, nonfantasy look at the history of music from the Dark Ages through the Renaissance period. This examination concentrates upon western culture, which is the primary basis for the AD&D® game.

Music was not always the sophisticated production that we of the 20th century are used to hearing. Although it has played a part in the life of the human race since before recorded history, modern music took many years to develop.

Before the time of the Christian church, music was rarely written down. With such sparse information, it is hard to decipher what the songs of the ancients were like. However, it is likely that they were very simple rhythms that were pounded out with sticks or simple percussion instruments.

Eventually reeds or canes were used to form the first woodwinds and a new musical sound emerged. But we still don't know what the music of this early era sounded like.

It wasn't until the 800s that music was being regularly recorded in western civilizations. Even then, it was only the monks of the Christian church who were writing it down. Thus, our records of these early songs are somewhat slanted. Music throughout most of the Dark Ages (up until A.D. 1100) consisted mainly of simple tunes that were played or sung in unison, thus they were pure melody *(i.e.*, no accompaniment). They were primarily used either to help pass time during work or to sing during religious ceremonies.

This Dark Age music was based on the modal scale, as opposed to the keyed scale of modern times. Dark Age music was likely borrowed from the Greeks and Romans. Although simple, it could be very elegant and beautifully expressive.

Near the end of the Dark Ages, musicians were combining several melodic lines. At first this was performed by mirroring a tune at a different pitch, but soon the added lines were taking on a form of their own, becoming a melody in their own right. This development was immeasurably enhanced when a system for writing down music developed around A.D. 900.

Around A.D. 1100, examples of written music begin appearing outside the Christian church. Songs and dances were written by and performed by public entertainers (like many of the bard kits included in this book). From the mid-14th century on, secular music was being composed and performed by professional musicians. However, such professionals were mainly employed by the church and a few nobles.

At the same time, music began to take on a more complicated form. Accompaniments and advanced multiple melodies (polyphonics) were being used. This spurred an increased demand for public entertainment and noblemen began taking a major interest in music. It became a matter of honor and pride for a nobleman to support a professional musician at his court.

During the Renaissance, the cry for secular music increased dramatically, with master compositions appearing around A.D. 1500. These compositions included both instrumental and vocal parts. Yet, even then, most composers wrote primarily for the church or wealthy noblemen.

Music continued to evolve through the baroque period (A. D. 1600-1750), classical period (A. D. 1750-1827), and on into the modern era, but these are beyond the scope of the AD&D® game.

## Instruments

Most bards would not be caught dead without at least one musical instrument upon their person or near at hand. Many of their special abilities rely upon the use of an instrument. Instruments are also used as status symbols, trade symbols, and as part of the bard's personal garb. Some instruments take on a life of their own, gaining more fame than the bards who play them.

Musical instruments are very rare, expensive, and complicated devices. Only a master craftsmen would even think of constructing a lyre or herald's trumpet, let alone a pipe organ. Bards not only understand how these rare and complex devices work, they can use them to produce beautiful sounds. By simply working the strings and keys of these devices, bards can bring a crowd to tears or have them leaping for joy (all this without even using their kit's special benefits).

Most bardic colleges agree that the instruments of the time should be divide into four general categories: wind, stringed, percussion, and keyboard. Common instruments within each of these categories follow in Table 20 (as well as an "Other" category for several instruments that do not fall into the four general categories). After each instrument is a one-letter code that identifies the time period during which this instrument was developed and used; these periods coincide with the following dates.

**Table 19: ERAS**

| Code | Era | Time Span |
|---|---|---|
| A | Ancient World | prior to A. D. 450 |
| D | Dark Ages | A. D. 450"1100 |
| M | Middle Ages | A. D. 1100"1450 |
| R | Renaissance | A. D. 1450"1600 |

### Musical Proficiency

There are now well over 50 musical instruments for bard players to choose from.

Although such a large selection is nice, players might wonder if they have to spend a proficiency slot for each instrument they wish their bards to master. Fortunately, the answer is "no."

The instruments in Table 20 have been broken down into convenient categories and grouped appropriately into an indented outline format. A number in parenthesis appears after each level that contains subentries. This is the number of proficiency slots that must be spent in order to gain proficiency in all instruments indented beneath that level. For example, for five proficiency slots, a character can become proficient in all wind instruments; for only three slots he can limit himself to becoming proficient in all instruments in the flute family. Those instruments that don't have a number next to them cost a single slot to gain.

Note that proficiency in an instrument or category includes not only those instruments listed, but any others in his campaign world that fall into the same category. Thus, if a bard spends two slots to gain proficiency in bagpipes, he isn't limited to just the dudy and zampogna. He knows how to play any bagpipe that exists in his campaign world.

## Cost and Weight

Note that some category names, such as "Bagpipes," are also the names of specific instruments. These categories have a gold piece cost and weight in pounds listed next to them so you can buy the instrument of that name. However, purchasing a generic bagpipe does not mean that you have both a dudy and zampogna--you have only a generic bagpipe.

## Glossary of Musical Instruments

The following section describes some of the aforementioned musical instruments.

**AEolian harp:** Named after the Greek god of winds, this instrument is played by the wind. AEolian harps resemble flat boxes with strings.

**Alphorn:** An alphorn is a 6- to 12-foot-long, "J"-shaped, Swiss horn used to call cattle, among other things.

**Bagpipe:** This ancient instrument was used throughout the world: Rome, Northumberland, Scotland, Ireland, Brittany, France, Italy, Spain, Portugal, Norway, Finland, Poland, Russia, Greece, Persia, China, India, and the Balkan countries.

**Balalaika:** This is a three-string Russian triangular guitar. It comes in various sizes, the largest resting upon the ground when played.

**Bells:** These are sometimes attached to clothing to accentuate rhythm in dance.

**Bones:** A simple instrument in which two pieces of bone are clacked together.

**Castanets:** This Spanish instrument consists of two small, hollow-shaped pieces of wood. Castanets are worn on the finger and thumb. Like bones, they are clacked together.

**Cembalo:** This was the old Italian name for dulcimer (but it was later used to refer to the harpsichord).

**Chitarrone:** This double-necked lute is very large, often six feet long, and has 20 wires. It was also called the Roman theorbo.

**Citole:** This instrument was invented in Italy. It has a flat body, a short neck, four brass or steel strings, and is plucked with a quill. By 1550 this was known as the cittern.

**Cittern:** A member of the guitar family, the cittern is shaped like a fig, with a flat back, fretted fingerboard, and wire strings (usually four pairs). It is a descendant of the Medieval citole. The bass cittern is also called the pandora.

**Clappers:** Two pieces of hard material (wood, bone, metal, *etc.*) struck together are called clappers. They have existed for thousands of years in all parts of world (as spoons, bones, *etc.*).

**Clarsach:** An ancient small harp of the Scottish highlands.

**Clavecin:** French harpsichord.

**Claves:** When these short, round sticks of hardwood are used, the hollow of one's hand acts as a resonating cavity for sound amplification.

**Clavicembalo:** This is the Italian harpsichord and is often abbreviated as "cembalo." The word derives from latin "clavis"-a key, and "cembalo"-a dulcimer, which describes the instrument-it's a keyed dulcimer.

**Clavichord:** This keyboard instrument is small, often just an oblong box placed on the table. It can have its own legs and stand on the floor, but this was a later development. Sound is made when a small piece of metal hits a string, producing a soft, quiet tone.

**Clogs:** Wooden shoes.

**Cornett:** The cornett (not cornet) is a woodwind with a cupped mouthpiece (like that of a trumpet) that comes in three sizes: treble, small treble, and tenor. It is shaped either as a straight tube or as a tube curved like an S.

**Crumhorn:** This double-reed woodwind comes in all sizes: trebles, tenors, and basses.

**Cymbals:** These are brass dishes that are slammed together.

**Drums:** Drums have existed for thousands of years. The many types have one thing in common: a skin or membrane stretched tightly over some kind of hollow vessel. The membrane is beaten with sticks or the hands.

The exception is the friction drum, which has its skin pierced by a stick or string that is rubbed or pulled, causing the skin to vibrate.

*Kettledrums* are metal bowls with parchment stretched over them.

*Side drums* are wooden or metal cylinders with skin over each end. The lower end has string or gut, called snares, stretched over it that causes the drum to rattle when it is beaten.

*Bass drums* are very large, double-headed drums from two to three feet in diameter and of equal length.

*Gong drums* are like bass drums but they have only one head (membrane).

*Bongos* are two small drums that sit side by side.

*Tom-toms* are small Oriental drums with pigskin heads stretched over a bowl-shaped shell.

*Cylinder drums* are a type of base drum that is beaten at both ends.

The *changgo* is a Korean two-headed lap drum.

*Talking drums* are used to send messages.

*Slit drums* can be made by hollowing out a tree or log through a long narrow slit. The wood is then beaten to produce the sound.

**Dulcimer:** Used in Hungary, Rumania, and Czechoslovakia, the dulcimer is a

shallow, closed box over which are strung wires that are struck with a wooden hammer. In Hungary and Rumania this is called a cimbalom, and in Greece, a santouri.

**Fanfare trumpet:** This is often hung with a heraldic banner and used for state and ceremonial purposes.

**Fiddle:** There are two types of fiddles: folk (or spiked) fiddles and medieval fiddles. A spiked fiddle is a type of bowed lute and either has a long neck (typical of Africa, Asia, and the Middle East) or a short neck as found in Europe. Most spiked fiddles have one to three strings.

Medieval fiddles were replaced by the viol family and usually had three to five strings with both flat and rounded backs.

Fipple flute: This type of flute is held vertically and is winded from the end.

**Flute:** There are two types of flutes: the vertically winded fipple flute and the horizontally held transverse flute. The transverse is made of wood or metal stopped at one end. The player blows in a side hole, with notes made by closing holes along the flute's body.

**Gemshorn:** This is an ancient type of recorder made of chamois or goat horn.

**Gittern:** A medieval guitar.

**Glokenspiel:** This originated in Germany and was used in war bands.

**Gong:** A gong is a large metal plate that is struck with a mallet.

**Harmonica:** This instrument originated in Asia and China around 1100 B.C.

**Harp:** The harp is an ancient instrument. It consists of a sound box near the player and numerous strings that are each plucked to produce a specific tone.

**Harpsichord:** This is much like a keyboarded psaltery in that its keys cause the string to be plucked.

**Horns:** Horns have existed all over the world throughout recorded history. The earliest form was the animal horn or large sea shell. Most are end-blown, but some side-blown horns exist. Metal horns arose in the 14th century and were made of brass, copper, and occasionally silver. They were slender tubes 6 to 12 feet long, often coiled in several circles with a flared bell.

**Hurdy gurdy:** This mechanical instrument resembles a viola with a handle to crank. Cranking it causes a wheel to revolve under its four to six strings like an endless bow. A small keyboard is used to silence certain strings.

**Jew's harp:** This instrument is called a feugdtromp (child's trumpet) by the Dutch. It has no connection to the Jewish religion. It is a bottle-shaped wire frame with metal tongue held in teeth, allowing the mouth cavity to alter the sound it produces.

**Kazoo:** Although considered a humorous instrument today, the kazoo is of ancient origin.

**Kit:** A small violin.

**Koto:** The most famous Japanese instrument is the 13-stringed Japanese zither known as the koto. The instrument is played on the ground or while resting on a low table.

**Lira da braccio, lira da gamba:** These are Italian stringed instruments. The lira da braccio has seven strings and is played like a violin. The lira da gamba is a bass instrument held between the knees and has 11 to 16 strings.

**Lur:** The lur is an ancient trumpet of Scandinavian origin. It is made in pairs twisting in opposite directions to resemble horns or the tusks of an animal.

**Lute:** The lute is of Persian-Arabian origin and came to Europe at the time of the

crusades. The body resembles a pear split lengthwise. Thus, it has a curved back, a flat belly, and a fretted neck. It ranges in size from the large chitarrone and theorbo to the small mandora.

**Lyre:** The lyre has existed since 3000 BC. It has four components: a sound box, two arms, and a crossbar. Strings run from the cross bar down across the sound box.

**Mandoline or mandolin:** A lute-shaped, small stringed instrument.

**Metallophone:** This resembles a xylophone, but it has metal bars that are beaten with small hammers.

**Nakers:** These are small kettledrums of Arabian origin that came west during the crusades. They are made of metal or wooden bowls covered with skin and are used in pairs like bongos.

**Nightingale:** This toy whistle of glass is lowered into water to emit a bubbling sound not unlike the nightingale ( i.e., the bird).

**Ocarina:** This vessel flute is globular or pear-shaped with a mouthpiece on one side and holes cut in its body. The holes are opened and closed with the fingers.

**Organ:** An organ has pipes connected to a wind supply that is controlled by a keyboard. There are two types of organ pipes: flue pipes and reed pipes. Flue pipes produce sound like a whistle-flute. Reed pipes contain a thin strip of metal that vibrates. Organ pipes range from lengths of a few inches to 64 feet.

If an organ is keyed with the hands it is called a "manual," if played with the feet it is a "pedal boards."

**Pandora or Bandora:** This is the bass cittern; it has a flat back with wire strings and frets. It usually has three pronounced ridges, making it easy to identify.

**Panpipes:** Panpipes are simply a set of whistle-flutes supposedly invented by the god Pan.

**Posthorn:** A posthorn was used to announce the arrival of a mail coach. Most were straight, although a few were coiled.

**Psaltery:** This type of dulcimer has a square or triangular box over which are strings. It is held on the lap or against the chest and plucked.

**Rackett:** This is an early double-reed woodwind.

**Rattle:** A rattle can be made of a gourd, clay, wood, or leather, and it is filled with pellets.

**Rebec:** This is the stringed ancestor of the violin family. The rebec evolved from the Arabian fiddle but has a rounded back, unlike the fiddle. The body is pear shaped and has three strings. The rebec is played on the shoulder or against the chest.

**Recorder:** Also known as the English flute, the recorder is blown at the end. It has eight holes with which to alter the produced sound.

**Sansa:** The sansa is African in origin and has a metal or cane tongue attached to a wooden board or box. It is also called the thumb piano.

**Scraper:** When you scrape a stick over a series of notches in wood or bone, you have a basic scraper.

**Serpent:** This woodwind is shaped like a pronounced S.

**Shamisen (samisen):** This Japanese long-necked lute has a square wooden body. Its belly and bottom are made of cat skin and it has frets with three strings that are plucked hard.

**Shawm:** This early double-reed is an outdoor instrument that produces a loud

buzzing sound.

**Sheng:** This is a Chinese mouth organ.

**Sistrum:** The sistrum is an open, U-shaped rattle that contains metal discs or other objects that rattle when shaken.

**Sitar:** This three- to seven-stringed Indian lute was invented in Persia.

**Stamping stick:** One of the oldest known instruments is the stamping stick. It is simply a length of hollow wood or bamboo that is beaten on the ground. It was often used to beat grain or other food into pulp while providing simple music during work.

**Tabor:** This early side (snare) drum is usually slung from the waist. Smaller versions can be played with just the left hand while the bard plays a small whistle flute in the other hand.

**Tambourine:** The tambourine likely originated in Rome. It is a shallow wooden hoop parchment stretched over a frame that is struck with knuckles or rubbed with the thumb. The hoop has imbedded metal plates that jingle when shaken.

**Tam-tam:** Bronze gong of Chinese origin.

**Theorbo:** A double-necked instrument.

**Triangle:** A triangle is a steel bar bent into a triangle that is struck with a metal rod.

**Trumpet:** The Medieval trumpet was nonvalved and was played from the side or end.

**Violin:** This instrument evolved from the fiddle, rebec, and lira da braccio.

**Viols and Viol family:** These instruments produce a soft sound; they resemble violins. However, their shoulders slope, their backs are flat, their sound holes are C-shaped, they have broader necks, and they have six strings, not four.

**Wood block:** A Chinese percussion instrument made of a hollow wooden block that is struck with a stick.

**Zither:** The zither has a flat box that is strung with strings of metal or gut. It is plucked while resting on a table.

**Xylophone:** This consists of hardwood blocks that are hit with a mallet.

## Glossary of Sound

Although a degree in music isn't required to play a bard character, it often increases realism if such players know a few basics. This way they can role-play their characters with an air of authority, understanding, and authenticity. For this reason, a few common terms associated with many forms of music are defined below. By briefly studying this mini-glossary, you can breathe some new life into the vocabulary of your bard.

## Fundamentals of Music

**Accent:** To stress or emphasize a note.

| *Type* | *Stressed by* |
|---|---|
| Dynamic | Volume |
| Tonic | Pitch |

| | |
|---|---|
| Agogic | Value (see *Value* ) |

**Beat:** Unit of measure that sets the tempo. Beats are measured by tapping one's foot, the stroke of the conductor's baton, etc.

**Compass:** The range of a voice or instrument.

**Dynamics:** The gradations of loudness or softness with which music is performed.

| *Term* | *Meaning* |
|---|---|
| Pianissimo | very soft |
| Piano | soft |
| Mezzo piano | moderately soft |
| Mezzo forte | moderately loud |
| Forte | loud |
| Fortissimo | very loud |
| Forte piano | loud, then soft |
| Sforzando, sforzato | sharply accented |
| Forzando, forzato | sharply accented |
| Crescendo | gradually louder |
| Decrescendo | gradually softer |
| Diminuendo | gradually softer |

**Form:** Musical structure and how the musical elements are put together. The basic elements are individual pitches (notes), how they sound together (harmony), and how much time they take up in relation to one another (rhythm).

**Frequency:** Sound wave crests per second, which determines pitch.

**Intonation:** A performer's accuracy with respect to pitch.

**Measure or bar:** The base grouping of beats (usually there are 2, 3, or 4 beats per measure).

**Melody:** A group of musical tones in sequence making up a meaningful whole.

**Meter:** The number of beats per measure and the type of note that defines a beat. Common meters are 2/2 (two beats based on half notes), 2/4 (two beats based on quarter notes), 3/4 (three beats based on quarter notes), and 4/4 (four beats based on quarter notes).

**Motion:** The musical pattern created by successive notes. The motion might rise and fall smoothly or jump around.

**Pitch:** The highness or lowness of a musical tone. Pitch is determined by a note's frequency.

**Range:** The entire series of notes (from lowest to highest) that a voice or instrument can produce.

**Rhythm:** The movement of musical tones with respect to time. Rhythm combines the aspects of tempo (speed) and value (length of notes).

**Style:** The manner in which music is treated. A few of the numerous stylistic directives and their meanings are listed below.

| *Style* | *Meaning* |
|---|---|
| Affabile | smoothly and graceful |
| Affettuoso | tenderly with feeling |
| Agilmente | lightly and smoothly |
| Agitato | restlessly, in an excited manner |

| | |
|---|---|
| Angstlich | fearfully, in an anxious manner |
| Animato | lively, in a spirited manner |
| Appasionato | with intense feeling |
| Brillante | in a showy, brilliant manner |
| Brusco | abruptly, with harsh accents |

**Tempo:** The speed at which a piece is played or sung.

| *Tempos* | *Order of Speed* |
|---|---|
| Adagissimo | Very slow |
| Largo | |
| Lento | |
| Adagio | |
| Adagietto | |
| Andante or Moderato | Moderate |
| Andantino | |
| Allegretto | |
| Allegro | |
| Presto | Very fast |
| *Changing Tempos* | *Meaning* |
| Allentando | Slow down |
| Ritardando | Gradually slow down |
| Rallentando | Gradually slow down |
| Allargando | Slow down and play louder |
| Rubato | Free tempo |
| Accelerando | Gradually speed up |
| Calcando | Speed up |

**Tone:** Any sound of definite pitch. Also refers to the quality of sound.
**Value:** The duration of a note.
**Voice Range:** Range of voice. Each bard can be classified as one of the following:

| *Voice* | *Range* |
|---|---|
| Soprano | Highest female range |
| Mezzo soprano | Mid female range |
| Alto | Lowest female range, highest male range |
| Tenor | High male range |
| Baritone | Mid male range |
| Bass | Lowest male range |

**Volume:** Loudness.

## Common Musical Terms

**Accompaniment:** Musical material that supports the main melody or voice-part.
**Arrangement:** Rewriting of a composition for a new medium (instrument, voice,

group).

**Concert:** A public performance of music other than opera or church music.

**Conducting:** The art of directing a group of musical performers.

Conservatory or College: A school that specializes in musical instruction.

**Debut:** First public performance of a musician.

**Encore:** Audience's appeal for an additional performance.

**Movement:** A major section in a song.

**Notation:** A system for writing down music using notes.

**Musical Groups:**

*Group Composition:*

| *Group* | *Components* |
|---|---|
| Band | Brass, woodwind, & percussion |
| Choir | Group of singers |
| Chorus | Large choir having more than one singer per part |
| Ensemble | Any group of performers |
| Orchestra | Stringed, brass, woodwind, and percussion |

*Group Size:*

| *Name* | *Number of voices or instruments* |
|---|---|
| Solo | 1 |
| Recital | 1 or 2 |
| Duet | 2 |
| Trio | 3 |
| Quartet | 4 |
| Quintet | 5 |
| Sextet | 6 |
| Septet | 7 |
| Octet | 8 |
| Nonet | 9 |

**Part:** The music written for a single type of instrument.

**Passage:** Any short section of a musical composition.

**Score:** The written notes to be performed by all instruments or voices.

**Tuning:** Adjusting an instrument so it produces the proper sounds.

## Musical Items

**Baton:** The slender stick used by conductors to direct a performance.

**Metronome:** A device that produces regularly timed beats.

**Mute:** A device that muffles the sound of an instrument.

**Plectrum:** General name for any device used to pluck the strings of a musical instrument.

**Podium:** Raised platform on which the conductor stands.

## Types of Songs

**Air de cour:** A short song of several stanzas for one or more voices accompanied by lute or harpsichord.

**Anthem:** A short choral piece based on a religious text or source.

**Arabesque:** A short imaginative piece.

**Aria:** An elaborate solo song generally with instrumental accompaniment.

**Arioso:** A style of recitative that is more song-like and expressive than ordinary recitative.

**Aubade:** A piece of instrumental music played in the morning as opposed to the serenade, which is played in the evening.

**Ayre:** An English solo song accompanied by the lute, theorbo, or bass viol (and occasionally by two singers).

**Bagatelle:** A short piece for a keyboard instrument.

**Ballad:** A solo song that tells a story in simple verse. The same music is repeated for each stanza.

**Bandinerie:** A fast, dancelike piece.

**Canon or Fugue:** A musical composition in which a melody in one voice-part is imitated by other voice-parts that are slightly offset (*e.g.*, row, row, row your boat).

**Carol, Noel, or Weihnachtslied:** A song sung in honor of a holiday (*e.g.*, Christmas songs).

**Chant:** Usually refers to the music of churches.

**Fa-la:** An English song sung in nonsense syllables *(e.g.*, falala, fa la la).

**Fanfare:** A tune used to announce someone's arrival, the start of a parade, the start of a jousting tournament, etc.

**Folk music:** Music that is learned by word of mouth.

**Hymn:** Any song that expresses praise or love of a deity.

**Improvisation:** Composing a song or theme as it is being performed.

**Jig:** A lively dance.

**Lai:** A form of music and poetry developed in France in the 13th Century.

**Lament:** A composition that mourns someone's death.

**Lullaby:** A cradle song used by mothers to lull their babies to sleep.

**Lyric:** Means "songlike." Often used to describe instrumental pieces that are short and expressive.

**Medley:** A group of familiar tunes played one after another and loosely linked together.

**National anthem:** A song adopted by a kingdom as its official song.

**Ode:** A musical setting of a poem written in honor of a person or special occasion.

**Opera:** A play in which the characters sing rather than speak.

**Parody:** An exaggerated imitation of a composition, often to make fun of it.

**Program music:** A general term for music that tells a story.

**Psalm:** A musical composition based on the text from the book of Psalms.

**Recitative:** A style of singing that closely resembles speech, with little change in pitch and rhythm.

**Round:** A vocal composition with three or more parts that enter one after another,

repeating the same words (*e.g.*, canons and fugues).

**Serenade:** A love song sung during the evening below a beloved's window.

**Shanty:** A work song sung by sailors to help keep time during jobs that require teamwork.

**Swan song:** A term used for a person's final work before his death.

## Sample Songs

The following are a few sample songs to whet your appetite. If you would like to write your own songs for your bard to sing, it is suggested that you get a book of old, traditional folk songs, and replace existing words with those of your own choosing.

**Bonnie George Campbell (Scottish ballad)**

1. Hie upon Hielands, and laigh upon Tay,
Bonnie George Campbell rode out on a day.
He saddled, he bridled, and gallant rode he,
And hame cam his guid horse, but never cam he.

2. Out cam his mother, dear, greeting fu sair,
And out cam his bonnie bryde, riving her hair.
The meadow lies green, the corn is unshorn,
But bonnie George Campbell will never return.

3. Saddled and bridled and booted rode he,
A plume in his helmet, a sword at his knee.
But toom cam his saddle, all bloody to see,
Oh, hame cam his guid horse, but never cam he!

**My Gentle Harp (Irish love song)**

1. My gentle harp, once more I waken
the sweetness of thy slumb'ring strain,
In tears our last farewell was taken,
And now in tears we meet again.
Yet even then while peace was singing
Her halcyon song o'er land and sea,
Though joy and hope to others bringing,
She only brought new tears to thee.

2. Then who can ask for notes of pleasure,
My drooping harp, from chords like thine?
Alas, the lark's gay morning measure
As ill would suit the swan's decline.
Or how shall I, who love, who bless thee,

Invoke thy breath for freedom's strains,
When e'en the wreaths in which I dress thee,
Are sadly mixed, half flowers, half chains?

**Skye Boat Song (Scottish ballad)**

1. Loud the winds howl, loud the waves roar
Thunder clouds rend the air;
Baffled our foe's stand on the shore,
Follow they will not dare.

2. Though the waves leap, soft shall ye sleep,
Ocean's a royal bed;
Rock'd in the deep, Flora will keep
watch by your weary head.

3.Many's the lad fought on that day,
Well the claymore could wield
When the night came, silently lay
Dead on Culloden's field.

4. Burn'd our homes, exile and death
Scatter the loyal men;
Yet, e'er the sword cool in the sheath,
Charlie will come again.

*Chorus:*
Speed, bonnie boat, like a bird on the wing,
"Onward!" the sailors cry.
"Carry the lad that's born to be king
Over the sea to Skye!"

**The Minstrel Boy (Irish song of valor)**

1. The minstrel boy to the war is gone,
In the ranks of death you'll find him;
His father's sword he has girded on,
And his wild harp slung behind him.
"Land of song!" said the warrior bard,
"Though all the world betrays thee,
One sword, at least, thy rights shall guard,
One faithful harp shall praise thee."

2. The minstrel fell, but the foeman's chain
Could not bring that proud soul under;
The harp he lov'd ne'er spoke again,

For he tore its chords a sunder;
And said, "No chain shall sully thee,
Thou soul of love and bravery
Thy songs were made for the pure and free,
They shall never sound in slavery."

# Chapter 8: Role-Playing Bards

## A Bard's Mind Isn't Barred

Welcome to the mind of a bard. To play a bard, you must think like a bard. He is a dreamer, a romantic, and a part-time philosopher. A bard wants to be a master of all skills. He wants to try everything, know everything, and be everything. Unfortunately, most bards are mortal. The constraints of mortality keep a bard moving from one profession and activity to the next. He fears that if he spends too much time in one place or doing one thing, he will miss out on something else.

Pragmatists claim that bards suffer from "green pasture syndrome." This syndrome gets its name from cows. They constantly poke their heads over or through fences in an attempt to eat the grass on the other side. Farmers laugh at their livestock because the grass in their own pasture is often greener than the grass on the other side. But the cows have green pasture syndrome and always seem to think that things are better somewhere else.

Bards are easily excited about new developments, upcoming events, and change in general. If things aren't changing, they become bored very quickly. Thus, bards are not ones to hold down long-time jobs. When they do take jobs, they work at them at a breakneck pace at first. Then, as the job becomes routine, their pace slows and they spend more time pondering the future and where it will take them next.

All of this is also true for adventuring bards. They want to get going, attack now, stop listening at every door, rush forward and meet life head on. Bards don't always select the most effective spells or the most advantageous proficiencies. Instead, they select the most dramatic, the most fun, those that can be used in unique situations. A flashy spell, such as *color spray*, is always preferable to a boring one, such as *hold portal* or *sleep* .

Bards love crowds and love to be around people. They tend to have many acquaintances but few close friends. Some bards actually push away those who try to get too close. A binding friendship or relationship is like a root: It attempts to plant the bard in one place and lock him into the relationship. This is far more than just undesirable to most bards-it is downright frightening. Bards enjoy their freedom and don't want anything to jeopardize it.

Of all the character classes, none are as carefree and lighthearted as bards. These characters rarely own more than they can carry. To bards, all the world is their home and their imagination is the only limit to their aspirations. Although they can be profoundly moved by others' plights, bards recover quickly from any sadness they might feel. Often they deal with problems by leaving them behind and traveling on to some greener pasture.

If you are going to play a bard, remember at least this one rule of thumb: Your character's main goal is to, "move on and experience all that there is."

## Experience

According to the *Dungeon Master's Guide* (Chapter 2: Experience), bards gain experience for the following reasons:

**Table 21: BARD EXPERIENCE**

| XP | Reason |
|---|---|
| 200 | Per successful use of a special ability |
| 2 | Per gold piece value of treasure obtained |
| 5 | Per hit die of creatures defeated |
| Typ* | Monster experience |
| Typ* | Other group experience |

* "Typ" stands for a typical share of experience.

All of the above reasons are self-explanatory except for "successful use of a special ability." A bard's special abilities include his thief skills, his ability to read any written magical item, and his special benefits.

If you would like to tailor experience awards to better reflect the experiences of the bard class, the following is suggested.

**Table 22: COMPLETE BARD EXPERIENCE**

| XP | Reason |
|---|---|
| 100 | Per successful use of a thief ability |
| 200 | Per successful use of 10th-level ability to read any written magical device |
| 150 | Per successful use of a special benefit |
| 25 | Per spell level cast to overcome foes or problems |
| 100 | For each significant performance of the bard's entertaining talents |
| 500 | For each major performance of the bard's entertaining talents |
| 1 | Per gold piece value of treasure obtained |
| 5 | Per hit die of creatures defeated |
| Typ* | Monster experience |
| Typ* | Other group experience |

* "Typ" stands for a typical share of experience.

## Reputation

So how good is a bard's performance? It depends partly upon his skill and level, but most importantly, upon his reputation. The songs of a famous skald hailing from the icy north are met with great anticipation and acceptance. An infamous blade known for his many assassinations draws just as large a crowd to his daring performances of weaponry.

Reputation is an intangible aspect of any bard. As the bard travels the path of life, his reputation can grow into that of a great singing hero, it can be slandered so everyone thinks the bard is a cowardly oaf, or the bard's reputation can become an infamous cloak with which to frighten watchmen and thrill the crowds.

When you first generate your character, his reputation is based upon that of his family. From there, events and the way the bard is role-played continually adjust his reputation. Read on for the events that define a bard's reputation.

## Following a Performer

A bard's reputation is a variable that can change in an instant. Furthermore, reputation varies from one village or town to the next. A bard's initial reputation applies to his home town only. This is the center of the bard's reputation.

Let's follow the development of the great Hanalacious's reputation. She put on her first public performance in Greyhawk City at the age of 16. First impressions are extremely important and vary uncontrollably depending upon the mood of the audience, season, local events, *etc*. After her first performance, Hana became a "noted" member of the entertaining class.

To determine Hana's initial reputation, the following table was consulted.

**Table 23: INITIAL REPUTATION**

| 2d4 Roll | Index | Title |
|---|---|---|
| 2 | 0 | Unsung |
| 3 | 1 | Accepted |
| 4 | 2 | Known |
| 5 | 3 | Noted |
| 6 | 4 | Good standing |
| 7 | 5 | Liked |
| 8 | 6 | Well-known |

Hanalacious was pleased with her initial reputation, but she had aspirations of greatness. She looked upon those great bards who were her teachers, and she envied the reputations they had built for themselves. Some were popular, some were celebrated, a few were even acclaimed by the citizens of Greyhawk, but Hana wanted to attain a revered reputation for herself.

**Table 24: REPUTATION LADDER**

| Index | Title |
|---|---|
| 0 | Unsung |

| | |
|---|---|
| 1 | Accepted |
| 2 | Known |
| 3 | Noted |
| 4 | Good standing |
| 5 | Liked |
| 6 | Well-known |
| 7 | Admired |
| 8 | Prominent |
| 9 | Distinguished |
| 10 | Popular |
| 11 | Reputable |
| 12 | Honored |
| 13 | Celebrated |
| 14 | Illustrious |
| 15 | Eminent |
| 16 | Acclaimed |
| 17 | Prestigious |
| 18 | Famous/Infamous |
| 19 | Renowned |
| 20 | Revered |

Reaching for a revered reputation would be a long and delicate process for Hanalacious. She would have to watch her every action and word, being careful to avoid entanglements with the law, yet helping those in need. Of course, all this would mean nothing if she didn't also put on frequent performances of her musical talents.

Hana made a list of all the things that could both help and hinder her climb to fame on the ladder in Table 24. Among them she included the following:

**Table 25: REPUTATION MODIFIERS**

*Last performance was:*

| | |
|---|---|
| within the week | +1 |

| DM's option | +/-5 |

Hanalacious realized that there are two types of reputable performers, both of whom draw large crowds: those who are famous and those who are infamous. The famous person is looked upon as a public hero, upholder of good, and a generally law-abiding citizen. The infamous performer is well known as a courser, a romantic thief who lives above the law and leads a high-paced, romantic life (*e.g.*, Robin Hood).

Of course, Hana decided to walk the path to infamy, realizing that there is a huge gap between an infamous performer and a violent bully, ruthless thug, or evil villain.

Again, Hana made a list of those actions that gained a person the reputation of being infamous as opposed to those that gained a person fame.

**Table 26: FAME AND INFAMY**

**Fame Scale:**

| | |
|---|---|
| Calmed a violent situation | +2 |
| Made a hostile person look foolish | +1 |
| Turned a crowd's mood against evil | +3 |
| Prevented a crime from occurring | +2 |
| Upheld a good person's reputation | +1 |
| Upheld what's right vs. adversaries | +1 |

**Infamy Scale:**

| | |
|---|---|
| Blamed for a nonviolent crime | +1 |
| Avoided imprisonment | +2 |
| Escaped imprisonment | +3 |
| Make town watch look foolish | +1 |
| Created a political scandal | +3 |

For a bard trying to become infamous, performing acts on the infamy list improve the chances for building his reputation, while performing acts on the fame scale decrease these chances. The opposite is true for a bard who is attempting to become famous.

A bard's reputation is adjusted only in two situations: when he increases in level, and when he puts on a significant public performance (in which case it is checked just as the performance begins).

A d20 is rolled and any modifiers from the preceding three tables are applied to it only if their total is negative (if the net total modifier ends up being positive, it is simply

ignored).

If the result of the d20, adjusted by a possible negative modifier, is greater than or equal to the bard's current reputation, then the reputation increases one category. If the net result is a negative number, the bard's reputation is lowered by this amount (thus a net result of -3 would lower the bard's reputation by three places on Table 24). If the roll falls in between, nothing happens. However, no matter what, a natural roll of 20 always increases the bard's reputation by 1 and a natural roll of 1 always decreases it by at least 1 (more if there are negative modifiers).

No matter what the roll, all reputation modifiers reset afterward, and the bard once again has a net 0 adjustment.

Eventually, Hanalacious became infamously acclaimed (16) in Greyhawk City, but she felt stilted by performing for the same crowd over and over gain. What she wanted was a fresh audience; one that had heard of her infamous reputation, but that hadn't been to any of her performances. Thus, she contacted the bard college, known as the Society of the Silver Lute, in the nearby town of Hardby. She had several of the college's members advertise that the Infamous Hanalacious would soon be performing for the public.

Two weeks later, Hana arrived in Hardby. She was pleased to note that her reputation had somewhat preceded her. She wasn't acclaimed (16) like she was in Greyhawk City, but she was treated as an illustrious (14) personality. Of course, the distance from her established Greyhawk City base was responsible for the slight decline. Table 24 shows the decline in reputation as a bard moves away from his base, where he has an established reputation.

**Table 27: PRECEDING REPUTATION**

| **Distance from base** | **Reputation Decline** |
|---|---|
| 1 town or 25 miles | -2 |
| 2 towns or 50 miles | -4 |
| 3 towns or 100 miles | -6 |
| 4 towns or 150 miles | -8 |
| 5 towns or 200 miles | -10 |
| Farther | No reputation |

## Local Reputation

As noted earlier, a bard's initial reputation applies to his home town only. This reputation increases and decreases based upon reputation modifiers. Furthermore, the decision whether to become infamous or famous must be made. This selection determines how certain events affect the bard's reputation.

When a bard enters another village, town, or city, his reputation should be determined for that area. This is done by consulting Taable 27. The bard's closest established reputation is used as a base. An established reputation is defined as a place in which the bard has put on some form of entertainment performance. The closest established reputation is then adjusted by distance.

For example, if the nearest established reputation is two towns away, the bard's local

reputation is four levels lower. If the bard wishes to establish a local reputation, he simply puts on a public performance or series of performances (spread out over no more than a year's time). Each performance costs the bard 100 gp per 1,000 citizens in the town (*i.e.*, 1 silver piece per person). The bard then becomes an established performer in the community.

Once a reputation is established, it is never again influenced by other established reputations. Thus, after Hanalacious's big performance in Hardby, her reputation in Greyhawk City has no impact upon her reputation in Hardby. She thus has an independent, established reputation in both cities. Hana's player should write down the two city names and note Hana's reputation next to each name.

### Benefits of a Good Reputation

Reputation is treated much like a special proficiency, although no proficiency slots are (or can be) spent on it. When a situation arises in which the bard's reputation should be considered, 1d20 is rolled-this is called a reputation check. Any roll equal to or less than the bard's reputation level is considered a success. However, no such roll should ever replace role-playing. In fact, the bard player should role-play any situation before a reputation check is made. The Dungeon Master should then assign an adjustment to the reputation check based upon the role-playing.

If a bard is attempting to alter encounter reactions (*i.e.*, influence reactions or some similar ability), a successful reputation check indicates that the bard can adjust the reactions by two levels instead of the typical one.

A reputation can be used as an invisible key. A successful reputation check can get a bard into private parties or functions even when the bard isn't on the guest registry. A reputable bard will also find it easy to get a seat at the most prominent banquet hall in town, even if there is a long line and the bard failed to make a reservation.

Dealing with prominent public figures is also easier with a good reputation. A city's mayor is more likely to invite a reputable person to dinner than a commoner. Reputation can also be used to help smooth out deals, such as the price required to rent the public theater for a weekend's performance.

Many other uses of reputation exist and should be adjudicated by the Dungeon Master.

## The Performer

So what is it that makes bards such fantastic entertainers? Why is a bard with a 15 proficiency in musical instrument any better than a fighter, priest, or wizard with a 15? What makes bards so special? The answer to these questions and other questions are found in this section.

Unlike all the other character classes, bards are performers. This is a special trait common to all bards. There is no die roll bonus associated with this trait, it isn't listed under any kit's special benefits, and it isn't a proficiency.

Being a true performer is so fundamental to the bard character class that it isn't listed

at all. Instead, this fact influences almost every aspect of the character class. It is because of their performing nature that bards gain special abilities with music, song, poems, juggling, and so on (based upon the kit). Being performers is as fundamental to the bard class as being combatants is to the warrior class. It is the one element common to all the bard kits, the element that defines the essence of being a bard.

Back to the example of musical instrument proficiency. It is true that a warrior with a proficiency of 16 in musical instruments is able to play more precisely and more accurately than a bard with a 15 or less. However, playing music technically correct is only half the picture. Since bards are performers, they understand numerous hidden aspects relating to music. They are more in tune with their audience and adapt their performances appropriately. Bards are more aware of mood, feeling, tone, and the dramatic effects of stretching the music beyond the technicalities of precise playing.

A warrior who is a master musician (proficiency 20) can play the most complicated piece of music exactly as written. Moreover, every time he plays the piece, it sounds just as it did the last time. But a bard with only a 15 proficiency can entertain audiences far more successfully. Every performance is custom tailored to the occasion and the audience. The bard takes the liberty of interpreting the song and won't simply repeat it.

## The Effect on Role-Playing

As a role-player, if you can capture this performing aspect of the bard class, you will have captured the essence of your character. Everything should center around this aspect. The spells you choose should not always be chosen to maximize your character's effectiveness in combat. Rather, they should make the most dramatic impact upon those around him (including the adventuring party). Your bard lives to perform.

Likewise, when you select your bard's weapons, clothing, items, proficiencies, friends, allies, enemies, *etc*., you should try to examine these choices from a performer's point of view.

What weapon will compliment your bard's role as a performer, both on the stage and off? What color should his cape be? Which proficiencies will make him a more effective performer or a more memorable personality? Which spells produce effects in line with your bard's persona? How can these spells be used to build up the reputation of your bard? These are the questions to ask yourself.

Playing a bard can be a lot of fun. Play up the details. Add flavor to the game. Immerse the other players in the fantasy of the game. You should always play heavy on description and mood. For example, it isn't the success or failure of an attack that matters, it's the way in which it is made.

As a player you are succeeding at your job if your fellow role-players know the color of your bard's boots, what kind of weapon he wields, the name of his favorite song (better yet, the words to it), the material components to his most-used spells, the lesser details of his personality, his vocal range, *etc*. If they know your bard as if he were a real person, then you are a true bard role-player.

To establish such a realistic character, you must have a very solid mental image of your bard's appearance, personality, and mannerisms. For believability, these aspects must be predetermined, consistent, and you must portray them reliably.

Some role-players are skilled at establishing such a solidly defined character. Often

they base the bard upon a character in a movie or book that they know. Others spend hours mentally developing their bard and getting to know him as a friend. Some generate pages of notes to help them out. You can use any method you like and the following section should help you out with this process.

### Defining Your Bard's Personality

Most of the other Complete Handbooks present sample personality types. It can be very useful to read over these sections to help you define your character's personality. Although such descriptions are colorful and useful, they just begin to establish the many facets that you should define for a bard.

Generating complete examples of individual bard personalities would take pages of text and would result in only a dozen options for you to choose from. For this reason, personality types are not presented in this handbook. Rather, the following section contains many traits of a character's personality, along with several examples of each trait.

Although examples under each trait are numbered, you should only roll randomly if you are having a hard time selecting an appropriate trait. Also note that randomly rolling every trait will likely result in combinations that make little sense or are unplayable. So go through and carefully select your character's traits. Keep in mind his kit, alignment, race, other traits, and all other elements that you have already defined.

Note that the examples under each trait are not exhaustive. Feel free to select any other descriptive term that could define the trait. You can also select one or more traits within a specific category if they aren't contradictory. Also, note that the following list of traits is far from complete. Selecting the following traits will help define your bard's persona and is a good start, but you should expand these descriptive terms in your own mind or on paper. Examine your character as a whole, then fill in the gaps and add some extra details.

## Performances

Now that you have your bard fully defined, it is time to put on a show. Bards perform in every situation, from street shows to elaborate performances in the town's grand theater. This section contains the information you and your Dungeon Master need to determine the cost, turnout, and income from such performances.

In several places in this section, a proficiency check is asked for without the exact proficiency being specified. The actual proficiency depends upon the type of performance. If the bard is playing an instrument, use the musical instrument proficiency; if he is juggling knives, use the juggling proficiency; and if he is singing, use the singing proficiency. Thus, the proficiency check matches the performance being given.

## Street-side Performances

Street-side performances include any situation in which the bard plays for a changing audience in a public place. Bards can try playing on the sides of streets, in front of public buildings, in the town bazaar, *etc*.

All a bard needs to perform street-side is a coin collection device (a box, cup, or open knapsack), his performing implements, and some time.

In some towns and villages, the law considers street-side performers to be beggars and vagrants. In such towns a permit containing a wax seal set with the appropriate official's ring must be carried or the performer is likely to end up paying twice the amount he made and possibly spending a night in the town dungeon. The typical fee for such a document is 1 gp. The document is good as long as it lasts (which is usually 1d8 days, due to the fragile nature of the wax).

The big danger or thrill (depending upon point of view) of performing street side lies in the performer's exposure. Thieves consider street-side performers to be easy pickings; even beggars have been known to loot a bard's takings. On occasion a gang of ruffians will attack the performer in an attempt to gain his valuables (instruments are well worth such a risk).

Performing street side for money is considered a desperate act; a bard with a reputation of 10 or above loses two places on the ladder during any week in which he gives such a performance.

The income gained from a street-side performance is figured by rolling both a proficiency check and a reputation check. The number of successful rolls (0 {both fail}, 1, or 2 {both succeed}) is checked against the conditions, as determined by the Dungeon Master, on Table 29. The bard's total income from the performance is determined by multiplying the hourly income (found in Table 29) by the number of hours the bard performs that day. New checks are needed for each day's performance.

**Table 29: HOURLY STREET-SIDE INCOME**

| | **Successful Checks** | | |
|---|---|---|---|
| **Conditions** | **0** | **1** | **2** |
| Horrid | 0 | 1 cp | 1d2 cp |
| Poor | 0 | 1d2 cp | 1d4 cp |
| Fair | 1 cp | 1d4 cp | 1d8 cp |
| Good | 1d4 cp | 1d2 sp | 1d4 sp |

| | | | |
|---|---|---|---|
| Excellent | 1d10 cp | 1d4 sp | 1d8 sp |
| Fabulous | 1d4 sp | 1d8 sp | 1d4 gp |

## Booked Performances

A booking is an arrangement in which a bard entertains the crowd of some private business (usually a tavern). The tavern master and bard come to some prearranged agreement as to the income, hours, and type of entertainment. The bard (and his assistants if any) simply show up and perform. The tavern master always has a place set aside for the performer. Perhaps a small stage, a corner of the tavern floor, or even some old keyboard instrument.

Typically, it is the bard's responsibility to bring all the instruments required for his performance. Other than that, the bard has no set expenses. Drinks are usually on the house as long as the bard doesn't select the more expensive items. However, it is considered professional to tip the bar maids and wenches heavily when they bring a performer drinks (it sets a good example for the customers).

Few cities have any legal limitations on booked performances.

Although a booked performer is a bit more protected from snatch-and-run thieves, the danger from bar fights and brawls is almost as bad. It is unlikely that the bard will lose money in such situations, but his body and instruments can be severely damaged.

Bookings are considered a good starting place for bards. Such performances satisfy the requirement for a bard to perform locally in a town in order to maintain his reputation. However, highly reputable bards (13 or higher) suffer a -1 reputation adjustment for giving a booked performance in any but the most lavish surroundings.

The method of payment varies widely from tavern to tavern and from low to high social level. The tendency is for the tavern master to pay the bard a set salary once a night, week, or month. On top of this, wise tavern masters also allow bards to put out a collection bowl. This ensures that the bard gives his all during the performance.

Collection bowls gain money at the street-side performance rate specified on Table 29. The salaried income should be determined randomly on Table 30. The bard can then adjust this random result by one in any direction if he rolls a successful reputation check or a proficiency check, or by two if he succeeds with both checks.

**Table 30: BOOKED INCOME**

| D8 Roll | Salary |
|---|---|
| 1 | Free room |
| 2 | A free meal |
| 3 | Room and board |
| 4 | Double the collection bowl contents |
| 5 | 5 electrum per night |
| 6 | 5 gold per night |
| 7 | 2d8 gold |
| 8 | 2d12 gold |

## Carnivals

The term carnival is used here to include any circus, carnival, caravan, or other traveling form of entertainment. All of these groups arrive at most towns from time to time. During the local harvest season, circuses often arrive to join in the celebration and festivities. Holidays are often targeted by carnival bands. Occasionally the governing body of a large city actually contracts for a carnival as part of a fund raising drive.

Carnival bands are complex and expensive operations to run, and they include multiple performers. It is easiest for a bard to join in an existing carnival, but if he wants to start his own he has to invest some time and money. The base list of needed assets includes at least one wagon (though a one-wagon carnival is unlikely to see much success), horses or oxen to pull it, entertaining implements, portable performance area (a stage, tents, *etc.*), several high-quality performers, and the necessary support crew (teamster, cook, carpenter, *etc.*). Total outlay of gold for such an operation is in the thousands of gold pieces.

It is illegal in most towns and villages for a carnival to simply set up tents and begin performing (unless it is well outside of the town walls). Legal permission ranges from simple verbal approval to purchasing a carnival or circus permit from the town. Such permits typically cost 50 gold per tent, stage, or performing area and are generally good for one week.

The dangers a carnival faces are much the same as those faced by a traveling merchant: highway robbery, pirates (during water transport), and monster raids are common. Even within the walls of a town, a carnival is far from safe. Thieves and beggars are attracted to carnivals like flies. Although these lowlifes typically play the crowd, they aren't against making off with a valuable instrument or the carnival strong box. Even more dangerous are the rival carnivals and performers who are in competition for the same audience. Such groups occasionally resort to practical jokes, vandalism, employing bullies, or even hiring assassins to drive off the competition.

Performing in a carnival is considered quite reputable and satisfies the performance criteria of reputation up to and including a reputation of 17. If a more reputable bard performs for any but the most elite carnivals, he will suffer a -1 adjustment to his local reputation.

Carnival performers are given free room and board while on the road (typically some blankets and a mat to throw in, under, or around the wagon or tents at night and relatively good food from the traveling cook). On top of this, they make wages. The normal arrangement is that each performing night's income is divided up as follows: 50% to the carnival master and 50% to the crew. The crew's half of the money is not split evenly. Each member is assigned a number of shares. Typical shares are as follows:

**Table 31: CARNIVAL SHARES**

| **Position** | **Shares of Crew Income** |
|---|---|
| Performers | 3 + (# of successful checks)* |
| Cook | 4 |
| Carpenter | 3 |
| Teamster | 2 |
| Stage Hands | 1 |
| Guards | Level (generally 1-4) |

*Roll one proficiency check and one reputation check; the number of successful checks is used on this table and on Table 32 as well.

The night's total income is equal to the total number of attendees (attendees plus patrons) times the carnival fee.

Each performer draws in a number of attendees based upon a reputation and proficiency check. (These attendees are in addition to applicable patrons--see page 117 for more about patrons.) The number drawn by each performer should be checked separately (for simplicity, DMs may use the "1" column on Table 32 for all NPC performers). Roll both a proficiency check and a reputation check, then consult the following table to determine how many attendees that performer drew into the carnival. Note that this doesn't mean that this is the number that the performer entertains, as attendees drawn in by other performers wander around and observe all the acts.

The typical fee for a night at the carnival is one electrum piece per person (except infants, who are admitted for free). If this carnival's entrance fee is higher or lower, the Dungeon Master will take this into account when he determines the nightly conditions for the purposes of Table 32 (higher fees effectively improve the conditions, lower fees worsen the conditions).

**Table 32: NIGHTLY ATTENDANCE PER PERFORMER**

| | **Successful Checks** | | |
|---|---|---|---|
| **Conditions** | **0** | **1** | **2** |
| Horrid | 1d4 | 2d4 | 3d4 |
| Poor | 1d6 | 2d6 | 3d6 |
| Fair | 1d8 | 2d8 | 3d8 |
| Good | 1d10 | 2d10 | 3d10 |
| Excellent | 1d12 | 2d12 | 3d12 |
| Fabulous | 1d20 | 2d20 | 3d20 |

## Shows and Productions

Shows and productions are the big time for performers. These include any performance that takes place in an established building or place where the audience shows up specifically for the performance and nothing else. Some examples include plays and recitals given at the local theater or opera house, concerts at the local music hall, and productions put on at local bard colleges. Such a performance is either a regularly scheduled event or is accompanied by a lot of promotion and advertising.

The cost of putting on a show or production is large. Costs include advertising, facility rental, stage hands, performer's fees, *etc*. A typical outlay is 1d4 silver pieces times the maximum possible crowd (this is usually equal to the available seating).

Shows and performances are usually outside the domain of city laws. Even if there are fees, the owner of the facility is generally responsible for payment (typically an

additional silver piece per audience member).

A nice side benefit to such extravagant performances is the unlikely event of victimization. The only crooks who dare mess with such events are high-ranking master thieves or a fully planned hit by the local thieves' guild, though these are very rare occurrences.

It is considered an honor to perform in shows or productions. This satisfies performance requirements for any reputation level and actually boosts reputations of 10 or less by +1. However, it is rare for any performer below a 10 reputation to be invited to perform at such events. The standard auditions eliminate all but the best performers.

Of all performances, productions provide the greatest for potential income, but they are also the most risky. As with carnivals, the net nightly income is equal to the number of attendees times the admittance fee. Typical admittance fees to productions are 1 gold piece, although really elaborate performances put on in extravagant theaters can range up to a platinum piece or more.

Before the actual number of attendees is determined, the maximum possible number must be found. If the performance is to take place within a building, the maximum equals the building's seating capacity. Otherwise, some reasonable number will have to be settled upon between Dungeon Master and the involved players.

Once the maximum possible crowd is determined, each performer rolls both a reputation check and a proficiency check. Take the total number of successful checks from all performers and divide this by the number of checks that were rolled. This gives a number between 0 and 1, inclusive. Multiply this number by the maximum possible crowd to determine how many people actually show up.

If every performer succeeds at both checks, then the maximum possible crowd shows up. If only half of the checks succeed, then the number of attendees is only half the maximum. If 25% succeed, then 25% show up, etc. On top of this, bards have their applicable patrons show up.

Half of the net income (attendance fees minus production costs) goes to the facility's owner and the other half is divided among the performers and stage hands using the carnival's share system.

# Chapter 9: Comrades

Bards have many comrades throughout their lives. As they climb the ranks of fame toward a great reputation, they rely heavily upon the various bard colleges. These institutions contain fellow performers great and small. Bards meet those who serve as teachers, critics, peers, and friends within the bard colleges.

A bard who proves to be a good entertainer gains a pool of patrons who go out of their way to attend his performances and occasionally help him out. If a bard survives long enough, he eventually gains devoted followers.

## Bard Colleges

Bards often associate with one another, especially those who hold similar views and

practice similar forms of entertainment. If such a group becomes established, it is known as a college. Colleges are to bards what guilds are to most other characters. These are places in which skills, philosophies, beliefs, and talents are pooled together. However, colleges are too unique to be given the generic label of "guild."

Membership in most guilds is a permanent matter or at least a long-term one. If a thief joins the local thieves' guild, he is likely going to remain there until something drastic happens. This is not so with bards joining bard colleges.

Bards float from one college to the next. When they are visiting a particular city or village, they look up the local college and partake in its functions. Then when the bard's mood changes, he parts with that college and proceeds on his merry way. Colleges serve as a form of specialty inn-members come and stay for a while, then move on.

From one month to the next, the entire membership of a given college can change. As would be expected, this demands that bard colleges be set up in a very loose format. Most colleges have a set of rules posted in some easily accessible location (often just inside the entry way). These rules are amended, repealed, and redrafted as often as membership turnover causes a shift in philosophy.

The functions of a college are determined by the current members. Most meetings are called on an informal basis; those who show up partake in the discussion, practice, or seminar. Such meetings can evolve into a regular event (for a short while), fragment into smaller groups, or simply end in lieu of more exciting events.

Authority is treated as is everything else-in a very nonchalant way. If the current ranking member of the college is a neutral evil bard, authority is determined by age, power, and underhanded tricks. If a lawful neutral bard is in control, authority is governed strictly by a set of written laws and proceedings. Of course, as one leader departs the college and another comes into power, the rules and methods of determining authority are likely to change. A common saying among bards is, "If you don't like the way a college is run, wait a minute and it'll change."

## Common Events

There are numerous events that occur at any college. A few of the most common are performances, practices, debates, dress rehearsals, collecting dues, seminars, discussions, gatherings, and general meetings

Performances are given by one or more bards. These range from vocal solos to dancing duets to an entire cast of actors putting on a play. Some performances are restricted to audiences made up of friends or college members. Others are open to the public and help fund the college. Every decent college has a stage or other performance area, but many performances take place at the local theater or in the village square.

All bards are performers of one sort or another, and no performer can elevate his talents by study alone. Practice literally makes perfect for the skills of a bard. Thus numerous practices are held at the college. Here, bards can play before peers, gain the advice of a master, learn the latest techniques for stringing a harp, and so on. If optional training rules are used, college is where most bards train.

Since bards are romantic philosophers at heart, it is no small wonder that debates frequently crop up. Subjects range from the proper way to pluck a mandolin to the best philosophical alignment to hold when going through life. Although debate is defined as a controlled discussion in which two or more sides air their views, it is not uncommon for

such debates to boil into heated arguments ending when one side or another draws its weapons and threatens violence.

Before any professional production, a dress rehearsal must take place. This bridges the gap between practices and actual performances. The intent is to run through the entire performance without an audience or only a specially selected audience. This enables the bards to judge the length of the performance and make any last minute alterations. Occasionally, dress rehearsals are used as test performances before a small sample audience. The purpose of this is to determine if the subject matter is too volatile for the target audience.

Dues are usually collected as soon as a bard first enters a college. Typical dues are an electrum piece plus 25% of all income the bard makes while associating with the college (50% if the college is used to put on the performance). If a bard doesn't perform or draws in only small crowds, he will be asked to leave or contribute a platinum piece each week (his decision).

High-level bards often make money at colleges by planning seminars and other events and charging a cover fee (usually a few silver pieces). Seminars are events in which a small panel of bards (usually 1 to 3) presents information on some predetermined topic. Seminars are learning events; those who attend expect to have fun, learn something useful, and get a chance to ask questions of the masters. Seminar audiences should always be at least two levels below those of the panel. Thus, a bard must be at least 3rd level to put on a seminar.

Discussions are simply planned events in which a small- to medium-sized group (3-10) of bards get together and discuss a topic. The subject can be professional (acting techniques, how to clean instruments), relaxing (reminiscing about the good old days), or philosophical (discussing the lifestyle of the pixie). Discussions are very loose in format, and no one is necessarily in charge.

Gatherings are some of the most cherished events of a college. A gathering is rarely a planned formal event. Rather, it occurs when several bards begin talking about the same topic, such as the proper tempo for an epic poem. In other words, gatherings are acquaintance meetings. Stories are swapped, tales told, rumors shared, and laughs had by all. Occasionally a gathering is planned, such as an early brunch or late evening ball.

Finally, no college would be complete without the general college meeting. These are formal events held for the sole purpose of discussing the college, its policies, future, and other functions. Some college meetings are mandatory; a fine (1 sp) or penalty must be paid by those who do not show. Common topics include assigning personnel to cleaning and cooking details, discussing methods for advertising college performances, voting on whether or not to perform at a local duke's wedding, and so on.

## Patrons

As a bard's reputation grows, he begins to attract patrons. These people go out of their way to attend the bard's performances. Some even take up traveling with the bard on short performing tours. Such devoted patrons often serve the bard as stage hands.

Patrons should not be confused with followers. Patrons are more interested in a bard's performances than in the bard as an individual. They are caught up with the bard's artistic

talents. Some will travel miles to attend as many performances as possible, others donate silver and gold to ensure that their favorite performer can support his career. Devoted patrons love his performances so much that they are willing to help him out in order to get him on stage more often. Patrons are a valuable commodity to bards and are always treated with care.

## Initial Patrons

Acquiring, gaining, and losing patrons is based upon the optional reputation system presented in this handbook. If this system isn't used, substitute the bard's level for his reputation.

Once a bard becomes well-known (reputation 6) he gains his first patrons. To determine how many patrons the bard initially gains, roll 1d20 a number of times equal to the bard's maximum number of henchmen (a function of Charisma). Every result equal to or below the bard's reputation indicates that one more patron is acquired.

Note that patrons are not henchmen and do not count against this number.

## Gaining and Losing Patrons

The number of a bard's patrons fluctuates as the bard's reputation changes. Any time the bard's reputation increases, more patrons can be gained. The bard rolls 1d20 in an attempt to roll equal to or below his new reputation. He can keep rolling until he fails. The number of consecutive rolls equal to or below his new reputation is the number of new patrons gained. However, the number of a bard's patrons is limited by his maximum number of henchmen and by his level, as shown on Table 33. The number next to the bard's level is multiplied by the bard's maximum number of henchmen (see Table 6 in the *PHB* ) to determine the bard's maximum number of patrons.

**Table 33: NUMBER OF PATRONS**

| Bard's Level | Maximum # of Henchmen Times: |
|---|---|
| 1-4 | 1 |
| 5-9 | 2 |
| 10-14 | 3 |
| 15-19 | 4 |
| 20+ | 5 |

If a bard's reputation ever drops, he must check to see if any of his patrons leave him. This is done by rolling once for each patron. Any roll above the bard's new reputation indicates that the patron has lost his infatuation with the bard and is no longer a patron. A natural roll of 20 indicates that the patron is very upset with the bard and will have nothing more to do with him.

If you want to add even more detail to your bard's patrons, you can roll on the

following table for each one.

**Table 34: TYPE OF PATRON**

| 1d20 Roll | Type of Patron | Description |
|---|---|---|
| 1-10 | Fan | Attends every local performance. |
| 11-12 | Diehard | Attends every performance within 100 miles and insists on paying 1d4 times what others pay. |
| 13-14 | Booster | Attends all local performances and brings 1d6 friends along. |
| 15 | Enthusiast | Will serve as a stage hand without charge in exchange for free admittance. |
| 16 | Supporter | Roll 1d12; in that many months the supporter will donate 1d10 times the bard's level, in gold, to the bard. |
| 17 | Zealot | Zealots follow the bard around to every performance. Some have been known to secretly shadow the bard wherever he goes, even on dangerous quests (from which they seldom return). |
| 18 | Defender | Defenders are zealots who have taken it upon themselves to protect the bard, serving as body guards. |
| 19 | Extremist | Extremists attempt to mimic the bard as much as possible. They dress like him, act like him, learn his habits, and will even attempt to steal authentic items from him. Some extremists even attempt to befriend the bard's friends and lovers. |
| 20 | Fanatic | Fanatics are extremists, but if the bard ever rolls that a fanatic drops from the ranks of his patrons, the fanatic is 25% likely to attempt to assassinate the bard. |

## Followers

As stated in the *Player's Handbook*, the True Bard can attract 10d6 0-level soldiers at the 9th level, if he builds a stronghold. These followers arrive over a period of time and are not automatically replaced if lost in battle.

The above information is correct for the True Bard. Of the other kits, only the Skald and some Heralds receive such followers. The other kits receive followers as indicated below.

**Table 35: FOLLOWERS BY KIT**

| Kit | Followers |
|---|---|
| True | 10d6 0-level warriors |
| Blade | 3d6 (use Table 31 in the *PHB*) |
| Charlatan | 1d6 1st-level Charlatans |
| Gallant | 3d4 0-level warriors and 1 3rd-level squire |
| Gypsy-bard(1) | 3d6 gypsies (50% thieves, 20% fighters, 20% fighter/thieves, 5% thief/mages, 4% thief/mages and 1% special {fighter/mage/thief, |
| ranger, | bard, druid, bear, *etc.*}) |
| Herald(2) | 10d6 0-level warriors or 1d4 2nd-level warriors and 1d6 3rd-level |
| thieves Jester | No followers |
| Jongleur | 3d6 (use Table 31 in the *PHB*) |
| Loremaster(3) | 1d6 1st-level wizards |
| Meistersinger(4) | Up to 3 animal companions |
| Riddlemaster | No followers |
| Skald | 10d6 0-level warriors |
| Thespian(4) | 2d12 0-level actors |

1. To attract these followers, a 9th-level (or higher) Gypsy-bard must first purchase a wagon and two carts.

2. A Herald has two options. If he decides to build a stronghold of his own, he attracts 10d6 0-level warriors. However, if the herald is serving a lord as his agent, the lord donates a section of his fortress to the herald, along with 1d4 2nd-level warriors and 1d6 3rd-level thieves.

3. Loremasters do not build typical strongholds. Instead, they acquire a tower in the corner of some nobleman's keep, or a house in the scholarly quarter of town.

4. Meistersingers do not build typical strongholds. They construct a number of hidden cottages instead.

5. These actors do not have a class and do not gain levels. They pay for all of their own expenses and bring in an additional 1d6 gold each per month for the thespian.

## Appendix: Original Bards Table

* The bard has as many Hit Dice as he has previously earned as a fighter (plus the possible addition of those earned as a thief, if that class level exceeds the class level of fighter). All bard Hit Dice (and additional hit points) are additions to existing Hit Dice-none are lost for becoming a bard.

** The character may already know languages from his previous experience.

***Stands for "Legend Lore and Item Knowledge"

## Notes Regarding the Original Bards Table

- Experience points are strictly those gained as a bard. All previously earned experience points are not considered here.
- Experience level is that of the bard class only. There is no level beyond the 23rd. The bard gains druidic powers as a druid of the same level would, and he learns and casts spells exactly as a druid of the same level, but he does not progress beyond the 12th level of druid ability until the 23rd level (at which time he casts spells at the 13th level of ability). Bards can read scroll that contain druidic spells.
- At first level, the bard has as many Hit Dice as he has previously earned as a fighter (plus the possible addition of those earned as a thief if that class exceeds the class level of fighter). All bard Hit Dice (and additional hit points) are additions to existing Hit Dice-none are lost for becoming a bard.
- College is an important distinction to a bard; he will not associate with a bard of a lesser college. The exceptions to this rule are the *Magna Alumnae*, who will happily aid (by advice and suggestion) any bard of any level.
- The bard need not study to learn the additional languages indicated on the table-this process is subsumed as previous work.
- Charm percentage is the chance the bard has of successfully casting a *charm person* (or *charm monster*) spell with his music. It does not negate any immunities or saving throws vs. magic.

- Legend lore and item knowledge percentage shows the chance a bard has of knowing something about a legendary person, place, or thing, or of knowing what a particular magical item is. The latter ability is limited to weapons, armor, potions, scrolls, and those items of magical nature that the bard can employ or which bear magical inscriptions. All bards know runes, glyphs, characters, symbols, *etc*. Naturally, any knowledge gained by the bard while in his former classes is retained at all levels.

**Class Description**

As this character class subsumes the functions of two other classes-fighters and thieves-and tops them off with magical abilities, it is often not allowed by Dungeon Masters. Even though this presentation is greatly modified from the original bard class, it is offered as supplemental to the system, and the DM will be the final arbiter as to the inclusion of bards in the campaign.

A bard must have scores of 15 or better in the following abilities: Strength, Wisdom, Dexterity, and Charisma. He must also have an Intelligence score of at least 12 and a Constitution score of at least 10. The character must be either a human or a half-elf.

Bards begin play as fighters and must remain exclusively so until they have achieved at least the 5th level of experience. Anytime thereafter, and in any event prior to attaining the 8th level, they must change to the thief class. Sometime between 5th and 9th level, bards must leave the thief class and become a druid-at this time, they are actually bards under druidic tutelage. Bards must fulfill the requirements in *all* the above classes before progressing to the **Original Bards Table**. They must always remain Neutral, but they may be Good, Chaotic, Evil, or Lawful if they wish.

A bard always engages in combat at the level he attained as a fighter. Likewise, he is able to function as a thief of the level attained. All saving throws are made on the most favorable table, with the actual bard level considered to be that of a druid. He must always have a stringed instrument.

The bard's poetic ability raises the morale of associated creatures by 10%. It likewise can inspire ferocity in battle, so attack rolls gain a +1 bonus. Both effects require two rounds to inspire the desired effect, and they last for one turn. Note that the bard can engage in combat while engaged in this ability, but he cannot sing or cast spells.

A bard's singing and playing negates the song effects of harpies and similar attacks that rely upon song. It negates the sound of shriekers, who are soothed by the sound of the bard's instrument.

When the bard plays his instrument, creatures (not in the bard's party) within 4" of the bard must roll successful saving throws vs. spell or sit entranced while the bard performs. Even those creatures who are not charmed by the bard will still stop and listen for one round. Charmed creatures are subject to a suggestion (as the spell), and if the bard implants the suggestion in his song, the charmed creatures must roll a successful saving throw vs. spell with a -2 penalty or be subject to the full impact of the suggestion. Those who save are totally free of the bard's *charm* effect. Each creature is susceptible to this ability once per day. Loud noise or physical attack will negate the charm, but not the suggestion.

Due to his training, a bard has knowledge of many legendary and magical items after the 1st level of experience, and this knowledge improves with advancement. If some

legendary knowledge is appropriate and the dice score indicates that the bard has knowledge in that area, then his ability will deliver information similar to the magic-user spell, *legend lore*. Without actually touching an item, the bard also has a like chance of determining its magical properties and alignment. This latter ability is limited to armor, miscellaneous weapons, miscellaneous magical items (if usable by a druid, fighter, or thief-unless inscribed with magical writing, in which case the bard can read what is written at the least), potions, rings, rods *et al*. (if usable by a druid, fighter, or thief), and scrolls. Artifacts and relics are not considered "miscellaneous magical items."

Bards are able to use magical items that are permitted to druids, fighters, and thieves. Magical books/librams/tomes that pertain to the same are also beneficial (or baneful) to bards, and these items can raise fighting or thieving abilities beyond the norm. (If a writing is baneful, treat the bard as the least favorable of his classes.) Miscellaneous magical items of a musical nature are superior when employed by a bard, such as *drums of panic* (-1 to saving throws), a *horn of blasting* (50% greater damage), a *lyre of building* (the effects are doubled), and *pipes of the sewer* (twice the number of rats in half the usual time).

Bards may wear leather or magical chain mail only and may not use shields. They may use any type of club, dagger, dart, javelin, sling, scimitar, spear, or staff. They may also use a bastard, long, or short sword. They may employ oil, but never poison (unless they are Neutral Evil in alignment).

Bards will never serve as a henchman for longer than one to four months. They are unable to employ henchmen other than druids, fighters, or thieves of human, half-elf, or elf stock. It is possible for a bard to attract one henchman upon attaining 5th level, two at 8th level, three at 11th level, four at 14th level, five at 17th level, six at 20th level, and any number of them at 23rd level (subject to the bard's Charisma). Only bards of 23rd level may settle down and construct a stronghold of any sort.

**Note:** If bards are permitted in your campaign, there is a possibility that the DM will also include certain magical items that are usable only by bards.

# Introduction

What is a ninja? Everywhere you turn, you find a different definition, especially in the movies. Is the ninja a cruel supernatural assassin with godlike powers of invisibility, illusion, and teleportation? A modern, feeling Oriental man with family, job responsibilities, and an interesting double life? A stone-faced westerner who miraculously inherits the duties of an ancient ninja clan tradition when his adopted brother is slain? A martial arts practitioner celebrating hundreds of years of unbroken tradition?

In the AD&D® game, the ninja is a highly trained spy who is expert in matters of intrusion, sabotage, and elimination. He is part of a tight-knit clan whose profession and goals he shares. Some ninja are generalists, equally at home in matters of stealth and combat. Some are specialists, becoming adept at social skills, magic, or interaction with nature.

They're all exotic, secretive, and dangerous—just the thing for the player who's tired of stand-up fighters, clean-cut clerics, and nearsighted scholar-mages.

Ninja have been here before, in the pages of DRAGON® Magazine and the *Oriental Adventures* supplement. Now they return, slinking into the game's shadows in their night-suits, learning the balance of weapons and tools made a little unfamiliar by adaptation to AD&D® 2nd Edition rules. We've missed them, and it's high time to welcome them back.

*The Complete Ninja's Handbook* is a supplement to the *Player's Handbook*. It consists of optional rules that are intended to round out and add color to a campaign.

The key word here is "optional." No DM is required to introduce any of these rules into his campaign simply because they're in print. Likewise, any DM should feel perfectly at ease plundering these guidelines for rules and options he likes, whether or not he introduces ninja characters into the campaign. Ultimately, the DM, not this rulebook, is the final authority on what appears in the campaign.

## Arrangement of the Sourcebook

Chapter 1: The Ninja Class provides character class information for the ninja.

Chapter 2: Ninja Kits details kits that allow you to further customize ninja characters.

Chapter 3: Shinobi, Spies, and Killers introduces kits to create shinobi (adjunct members of ninja clans), spies (characters built with the ninja rules but employed by non-Oriental organizations, and killers (NPCs built with the rules of the ninja class).

Chapter 4: Proficiencies and Martial Arts details the roles of certain proficiencies used by ninja, adds new proficiencies, and expands on martial arts and weapon proficiency rules.

Chapter 5: Tools of the Trade describes weapons and armor available to the ninja character.

Chapter 6: Country and Clan discusses the role of the ninja character within his culture.

Chapter 7: Playing the Ninja provides information and tactics for the player who

intends to play a ninja character.

Chapter 8: Campaigning the Ninja talks about secrecy, missions, duties to clan, and other details, and gives hints for placing the ninja in existing campaigns.

Chapter 9: Examples is full of easily customized ninja characters.

Players should familiarize themselves with chapters 1 and 2, and at least glance through chapters 3-7. Players should not read Chapter 9 unless their DM invites them to do so.

The Dungeon Master should become familiar with chapters 1, 4, 5, and 8. These should give the DM a good idea of what to expect of a ninja PC in the campaign.

# CHAPTER 1
# The Ninja Class

In seventh century Japan, Prince Shotoku Taishi won a war against an enemy named Moriya. The prince's success rested on information brought to him by a spy named Otomo-no-Saijin, whom Shotoku Taishi honored with the name Shinobi, meaning "stealer in." It is probably from this incident that the use of the term shinobi has come to refer to highly trained, clan-based Japanese spies.

(In Japanese and Chinese, there may be two or more ways to pronounce the same written characters. An alternate pronunciation for shinobi is ninja.)

Japanese techniques of military intelligence, heavily influenced by espionage advisors from China and Sun Tzu's classic manual The Art of War, developed over a period of several hundred years.

During the Kamakura era, from the late twelfth to early fourteenth centuries, many samurai and their families fell out of favor with the court. Some of these families fled to distant Iga and Koga provinces and settled there in reduced circumstances to make their living as farmers. Among them were experts in military intelligence, who began selling their expertise to daimyo, Japanese feudal lords. It was in this setting that the modern idea of the ninja—an agent with espionage skills for hire but whose loyalty belongs first to his own clan—truly took hold.

In their isolated villages, the ninja clans developed specific espionage and combat techniques. These are collectively referred to as ninjutsu, though that term is also used to refer to only their unarmed and weapon combat techniques.

Spies and ninja found many opportunities for employment in the great anarchic periods of the twelfth to sixteenth centuries. In the more stable Tokugawa shogunate of the seventeenth through nineteenth centuries, they were used less often, and it is reasonable to assume that their numbers declined. Some modern historians believe that the last of the true ninja died during World War II (or earlier), while others believe that the modern combat and espionage techniques now being taught under the name ninjutsu are genuine, linear descendants of the real ninja skills.

## Ninja and Rogue

The ninja character class, like the thief and the bard classes, belongs to the rogue

group. However, the ninja's similarity to other rogues lies not in temperament (ninja do not believe that the world owes them a living, and are not known as carefree, happy-go-lucky people) but in skills. (Ninja are proficient in matters of stealth, intrusion, and investigation.)

Like other rogues, ninja combine traits from several character classes. They have many of the skills of the thief and some of the combat options of the fighter. A few are able to learn some magical spells.

### Table 1: Rogue Experience Levels

| Level | Ninja | Hit Dice (d6) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 1,250 | 2 |
| 3 | 2,500 | 3 |
| 4 | 5,000 | 4 |
| 5 | 10,000 | 5 |
| 6 | 20,000 | 6 |
| 7 | 40,000 | 7 |
| 8 | 70,000 | 8 |
| 9 | 110,000 | 9 |
| 10 | 160,000 | 10 |
| 11 | 220,000 | 10+2 |
| 12 | 440,000 | 10+4 |
| 13 | 660,000 | 10+6 |
| 14 | 880,000 | 10+8 |
| 15 | 1,100,000 | 10+10 |
| 16 | 1,320,000 | 10+12 |
| 17 | 1,540,000 | 10+14 |
| 18 | 1,760,000 | 10+16 |
| 19 | 1,980,000 | 10+18 |
| 20 | 2,200,000 | 10+20 |

## Ninja Experience Levels

Ninja earn experience levels as other rogues do. Table 25 from the Player's Handbook is reproduced on page 5.

One type of ninja, the Spirit Warrior (see Chapter 2) may learn magic spells and must earn more experience points to gain levels.

Ninja of experience levels 1–5 are genin, the lowest-ranking ninja. Those of experience levels 6 through 9 are chunin, the middle management of the ninja clan—sometimes getting their hands dirty and sometimes hobnobbing with the upper ranks. Those of experience level 10 and above are jonin, the upper management of the clan.

## Ninja Class Requirements

### Ability Requirements

Dexterity 13
Intelligence 10

**Prime Requisite**

Dexterity

**Races Allowed**

Human
Dwarf
Halfling

The ninja must have a Dexterity score of at least 13 (reflecting intensive training from childhood in ninja arts) and an Intelligence score of at least 10.

The ninja PC, regardless of race, must have been raised from youth by a human ninja clan. There are no demihuman ninja clans, and the DM and players will have to be very creative to account for a ninja clan's fostering of a dwarf or halfling. For exceptions to this requirement, see the section on "Spies" in Chapter 3.

The DM has the right to decide whether a player can run a ninja character. Ninja bring new levels of secrecy and intrigue into a campaign. The DM who does not wish to complicate the campaign to this extent may forbid the use of ninja PCs.

### Alignment

Technically, a ninja may be of any alignment. However, each ninja belongs to a clan (see Chapter 6), and each clan's members are restricted to a range of alignments. A player might be able to choose the character's clan but cannot then choose an alignment inappropriate for that clan.

The standard ninja clan allows its members to be of any lawful or neutral alignment (LG, LN, LE, NG, N, NE). The "lawful" aspect of the alignment applies to the rules of conduct of the clan, not those of the society or the nation.

### Weapons and Armor

The ninja can use any weapon, giving a much wider range of choices than a thief has. Armor choices are limited to leather, padded, studded leather, ring mail, brigandine, scale male, hide armor, and chain mail. The ninja can use a shield and fights as a rogue.

To avoid any adverse effect, ninja avoid wearing armor heavier than leather when they plan to use their thieving skills.

## Thieving Skills

Like other rogues, ninja can learn thieving skills. They are not as proficient in most of these skills as thieves are, but a ninja who becomes very experienced and specializes in two or three thieving skills can achieve great proficiency.

Table 2 shows the base scores for ninja thieving skills.

To these base scores, apply appropriate bonuses and penalties for Dexterity (Table 3, reproduced here from Table 28 in the *Player's Handbook*), for race (below), and for

armor worn (Table 5, replaces Table 29 from the *Player's Handbook* and is compatible with Table 38 in *The Complete Thief's Handbook*).

### Table 2: Ninja Thieving Skill Base Scores

| Skill | Base Score |
|---|---|
| Pick Pockets | 0% |
| Open Locks | 0% |
| Find/Remove Traps | 0% |
| Move Silently | 20% |
| Hide in Shadows | 20% |
| Detect Noise | 10% |
| Climb Walls | 40% |
| Read Languages | 0% |

• Dwarf: +10% Open Locks, +15% Find/Remove Traps, –10% Climb Walls, –5% Read Languages

• Halfling +5% Pick Pockets, +5% Open Locks, +5% Find/Remove Traps, +10% Move Silently, +15% Hide in Shadows, +5% Detect Noise, –15% Climb Walls, –5% Read Languages

Ninja receive extra training in their thieving skills as their careers progress. Each ninja at 1st level receives 60 discretionary percentage points to add to the base scores. (The ninja may put no more than 30 points into any one skill.) At each additional experience level, he receives another 30 points to distribute (and may put no more than 15 points into a skill).

As with the thief, the ninja cannot raise any skill above 95%, including all adjustments for Dexterity, race, and armor.

### Backstab

The ninja has the same backstab ability as the thief.

### Table 3: Thieving Skill Dexterity Adjustments

| Dexterity | Pick Pockets | Open Locks | Find/ Remove Traps | Move Silently | Hide in Shadows |
|---|---|---|---|---|---|
| 13–15 | — | — | — | — | — |
| 16 | — | +5% | — | — | — |
| 17 | +5% | +10% | — | +5% | +5% |
| 18 | +10% | +15% | +5% | +10% | +10% |
| 19 | +15% | +20% | +10% | +15% | +15% |

### Table 4: Backstab Damage Multipliers

| Ninja's Level | Damage Multiplier |
|---|---|
| 1–4 | x2 |
| 5–8 | x3 |
| 9–12 | x4 |
| 13+ | x5 |

## Clan Signs

Instead of thieves' cant, ninja know clan signs.

Clan signs form a language of hand-signs and written ideograms. Clan signs can convey entire sentences and complex sets of instructions. However, clan signs are not sophisticated enough to convey poetry, and do not include technical terminology unrelated to the ninja. (Topics such as philosophy, physics, and so forth are best left to normal spoken tongues.)

Each ninja clan knows its own secret set of clan signs. A member of one clan cannot understand the hand-signs or written symbols of another. The nonweapon proficiency Detect Signing (see Chapter 4) allows a character to detect when other clans' signs are being used, though the proficiency does not provide an interpretation of the signs' meaning.

## Table 5: Thieving Skill Armor Adjustments

| | No Armor | Leather | Elfin Chain | Studded/ Padded | Ring/ Hide | Brigandine/ Chain | Scale/ Splint | Banded | Shield |
|---|---|---|---|---|---|---|---|---|---|
| PP | +5% | — | –20% | –30% | –60% | –40% | –40% | –50% | –60% |
| OL | — | — | –5% | –10% | –50% | –15% | –15% | –20% | –20% |
| F/RT | — | — | –5% | –10% | –50% | –15% | –25% | –20% | –20% |
| MS | +10% | — | –10% | –20% | –30% | –40% | –40% | –60% | –10% |
| HS | +5% | — | –10% | –20% | –20% | –30% | –30% | –50% | — |
| DN | — | — | –5% | –10% | –10% | –20% | –25% | –30% | –10% |
| CW | +10% | — | –20% | –30% | –60% | –40% | –50% | –90% | –30% |
| RL | — | — | — | — | — | — | — | — | — |

*These numbers for the shield are all cumulative with other modifiers. Thus, climbing walls in chain mail with a shield yields
a –70% adjustment.
**This adjustment applies only if the character is tyring to pick pockets with the hand carrying the shield.
***This adjustment applies only to removing traps, not to finding them.

## Use Scrolls

The ninja does not automatically receive the thief's ability to use scrolls. However, the Spirit Warrior ninja kit (see Chapter 2) does impart this ability.

## Ninja's Followers

Ninja do not typically build citadels the way fighters and other classes do.

At 10th level, the ninja achieves the rank of jonin, a group leader within the clan. The clan leader assigns the jonin 2d6 followers who are members of the clan.

All followers are related by blood to the PC ninja. Some may be distant cousins never previously met, but many will be close cousins and the ninja's own younger brothers, sisters, and perhaps even sons and daughters.

Half of the followers (round up) will be of the ninja character class. The other half will be of other character classes bearing shinobi kits. (See Chapter 3.)

The DM rolls 1d6 to determine the experience level of each follower.

The ninja PC is responsible for teaching followers to be better, more effective ninja and shinobi. It's important to remember that the ninja PC has as many responsibilities to these followers as they have to him. They're members of his own family, so the PC should not risk their lives unnecessarily—only under the same circumstances he would expect his life to be risked by his superiors. (See "When a Follower Dies.")

With these followers, the ninja PC can begin to contribute more to the goals of the family. The ninja will now have to plan missions more carefully, deciding whether to undertake a mission alone, send one or more followers, or lead a number of followers in the assignment.

None of this precludes the PC from taking followers along when adventuring with other PCs. In fact, it's appropriate for the ninja PC to take one or more followers along on nonclan adventures to give them experience in the real world.

### When a Follower Dies

If a follower dies while obeying the orders of the PC, the clan lord will gather information and the testimony of witnesses. A clan lord who determines that the ninja was unnecessarily careless with the follower's life may punish the PC by taking all followers away until the PC demonstrates more sense. If the PC has been grievously negligent, demotion and permanent loss of all followers is a likely punishment.

Whenever a follower dies, the DM should make reaction rolls for all other followers present. Use Table 59: Encounter Reactions, from the *Dungeon Master® Guide*, under the "Friendly" column. If the PC was careless with the life of his follower, the DM should apply a +4 modifier to the roll and use the "Threatening" column. On any result of "Hostile," the ninja follower making the roll decides that the PC callously sent his minion to certain death, thus offending the family honor. This follower attacks the PC on the spot, fighting to the death. If the follower survives, he will be the PC's enemy forever.

## Nonweapon Proficiencies

The ninja PC receives initial weapon and nonweapon proficiency slots and earns additional slots as a rogue.

The ninja character class has the following nonweapon proficiency group crossovers: Rogue, Warrior, General. The ninja who selects nonweapon proficiencies from these

groups pays the listed number of slots. Proficiencies selected from other groups cost one extra slot per proficiency.

## Starting Money

Ninja receive the same starting money as other rogues: 2d6 x 10 gp. This rule is in effect regardless of the relative wealth of the ninja clan. Very poor clans save up enough money to give their agents an adequate stake, while rich ones choose not to spoil their members with excess funding.

## Multiclass Ninja

Demihuman ninja cannot be multiclassed. Even if the DM decides to ignore the character race restrictions on the ninja class—in order to have elf ninja or some other combination appropriate to the campaign—such ninja should still always be single-class characters.

## Dual-Class Ninja

It is not recommended that the DM allow dual-class ninja. Ninja have such a rich range of opportunities that allowing the dual-class option is overkill. However, if the DM is determined to allow dual-class ninja, here are the guidelines to use.

If the campaign uses ninja kits, characters switching to the ninja class can take only the Stealer-In or Shadow Warrior kit.

Ninja Class Becoming Another Class: A ninja clan will not allow one of its members to start out as a ninja and then switch to another class. Only the Lone Wolf ninja (see Chapter 2) can switch to another class.

Another Class Becoming Ninja Class: This can happen in one of two ways.

— The PC starts out as a shinobi (see Chapter 3) in a ninja clan and decides to switch to the ninja class. The clan leader will discourage this, but generally will not forbid it.

— A PC from outside the clan has become good friends with a ninja and asks to be taught the secrets of the ninja class. The ninja clan lord must be convinced tht the PC is sincere and loyal. The PC will be put through a variety of tests to determine his loyalty before being adopted into the clan. Not all the tests will be obvious ones, such as risking one's life to save a clan member or turning down a bribe from a member of another clan.

If the ninja candidate fails to convince the clan lord of his loyalty, the clan must eliminate him because he knows their secret. Naturally, the friend who sponsored the PC candidate will be assigned this task as a test of his own loyalty.

## Other Character Creation Notes

Players also need to decide their characters' names and determine their status in society.

### Status

On Table 6, players roll to determine the social status of their characters' clans. From highest to lowest status they are: samurai, farmer, artisan, merchant, nonperson.

The PC's clan status has little effect on his usefulness in a campaign. A ninja will always pretend to be of the social class appropriate to the current mission.

The DM may assign the PC's social class, particularly if the DM has already assigned the PC ninja to a clan. In a campaign where the players won't automatically stampede for the highest social status, the DM may allow the players to choose social classes for their PCs.

### Table 6: Clan Status

| 1d20 | Result |
|---|---|
| 1–2 | Nonperson (animal renderers, actors, prostitutes, etc.) |
| 3–6 | Merchant |
| 7–10 | Artisan |
| 11–18 | Farmer |
| 19–20 | Samurai |

### Names

A PC of the artisan, merchant, or farmer social class chooses a given names only. Such characters refer to themselves by appending their village, shop, or farm name to the given name. For example, Ai of Misasa village would be known as Misasa no Ai.

A character of the samurai social class chooses a family name and a given name. Most Oriental names are presented family name first.

The family name is not necessarily the same as the clan name. Only the close family of the clan lord bear the clan name as family name. The DM, rather than the player, should choose the name of the PC's clan.

# CHAPTER 2
# Ninja Kits

By using kits in a campaign, the DM can encourage players to further develop their characters and distinguish them from one another. A kit's package of requirements, bonuses, and penalties help to define the character more specifically than the broad archetypes of the *Player's Handbook*. Two characters belonging to the same class but taking different kits may have abilities and orientations almost as distinctive as characters belonging to different classes.

Kits are entirely optional; the DM does not have to use them in the campaign.

## Kit Descriptions

In this chapter, each kit is described in the following way:

**Qualifications:** Some kits require the character to have abilities beyond the ordinary demands of the character class.

**Description and Role:** This ninja is described in terms of his areas of specialty and prominence.

**Secondary Skills:** If the campaign uses secondary skills, the ninja must take the required skills listed here rather than choosing a different skill or rolling randomly.

**Weapon Proficiencies:** Some ninja receive bonus weapon proficiency slots devoted to specific weapons. Some are required to spend their normal allotment of weapon proficiency slots on specific weapons. Some are prohibited from spending weapon proficiency slots on certain weapons. Special ninja weapons are described in Chapter 5.

**Nonweapon Proficiencies:** Likewise, some nonweapon proficiency choices are granted as bonuses while others are required or prohibited. New nonweapon proficiencies introduced in this book are marked with an asterisk (*) and are described in Chapter 4.

**Special Benefits:** Many kits provide the ninja with additional options and benefits not granted to other ninja.

**Special Hindrances:** Most kits also impose additional restrictions on the ninja character. These restrictions may be added clan obligations or limits on abilities.

## Ninja Kits

All of the ninja kits are listed on the following pages. Additional kits for characters related to the ninja appear in Chapter 3.

### Stealer-In

**Qualifications:** None beyond normal ninja requirements.

**Description and Role:** This is the basic ninja. If your campaign uses kits but none of the more specialized ones appeal to you, use this one. This kit is identical to the basic ninja character class.

**Secondary Skills:** None required.

**Weapon Proficiencies:** *Required:* Ninja-to.

**Nonweapon Proficiencies:** *Required:* Blind-fighting.

**Special Benefits:** None.

**Special Hindrances:** None.

### Shadow Warrior

**Qualifications:** The Shadow Warrior must have a Strength score of 13 or better. This kit is available to only humans, dwarves, and half-elves.

**Description and Role:** The Shadow Warrior has more fighting abilities but weaker thief skills than the average ninja. The Shadow Warrior is more adept with weapons than other ninja and is able to convincingly disguise himself as a fighter.

**Secondary Skills:** None required.

**Weapon Proficiencies:** *Required:* Ninja-to.

**Nonweapon Proficiencies:** *Required:* Running.

**Special Benefits:** In a campaign that uses weapon proficiency rules, the Shadow Warrior can specialize in weapons and martial arts, but is much more limited in this than a fighter.

The Shadow Warrior may specialize in one weapon at 5th level, a second weapon at 9th level, and a third weapon at 13th level. (This follows the rate of improvement with the backstab ability.) He may not specialize in more than three weapons (or two weapons plus one martial art). He does not get the additional attacks per round of a weapons specialist (from Table 35: Specialist Attacks Per Round, in the Player's Handbook), nor receive any extra attacks per round like a fighter.

**Special Hindrances:** The Shadow Warrior can learn thieving skills but is not as good at them as other ninja. All his thieving skills begin at 0%, and he receives only 30 discretionary points at 1st level. The Shadow Warrior earns subsequent discretionary points at the same rate as other ninja (30 at each additional level).

## Intruder

**Qualifications:** The Intruder must have an Intelligence score of 13 or better.

**Description and Role:** This ninja's skills are optimized for espionage, particularly intrusion into dangerous sites.

**Secondary Skills:** Scribe.

**Weapon Proficiencies:** *Required:* Ninja-to.

**Nonweapon Proficiencies:** *Required:* Reading/Writing; Recommended: Quick Study*, Information Gathering.

**Special Benefits:** The Intruder can use all Intelligence-based Rogue and General nonweapon proficiencies that she possesses as though her Intelligence score were 2 points higher than it is. (Thus, if her Intelligence is 14 and she has Appraising proficiency, her skill is a 16.) Even with this bonus, however, the Intruder's proficiency cannot have a score higher than 18.

**Special Hindrances:** Unlike other ninja, who are occasionally called on to perform missions for the clan, the Intruder is always on duty. She is required to perform missions two or three times as often as other ninja, and even when not on a mission, she must report constantly on her movements and the activities of her allies. She is often placed in a position of juggling clan obligations with obligations to friends. A player should choose this kit only for a ninja with especially close ties to the clan (and only if the DM is willing to utilize the clan to that extent).

## Consort

**Qualifications:** The Consort must have a Charisma score of 14 or better. Charisma is not mere physical beauty. A Consort needs the ability to be charming and to arrest the attention of onlookers.

**Description and Role:** This ninja's skills have been optimized for social interaction. A Consort achieves mission goals through romance or seduction. Both male and female characters may take the Consort kit, but female Consort ninja have a special name in Oriental cultures: kunoichi.

**Secondary Skills:** None required.

**Weapon Proficiencies:** *Required:* None.

**Nonweapon Proficiencies:** *Required:* Acting, Etiquette, Enamor*; Recommended: Disguise.

**Special Benefits:** The Consort can use all Charisma-based Rogue and General nonweapon proficiencies as though his Charisma score were 2 points higher than it is. (If his Charisma is 15 and he has Etiquette proficiency, his skill is a 17.) Even with the bonus, however, his proficiency cannot have a score higher than 18.

**Special Hindrances:** This ninja must spend months in false identities wherein he consorts (so to speak) with NPCs being spied on. Though most of these missions can be presumed to take place outside normal campaign activities, the Consort is in constant danger of being recognized later by people he has known during these missions.

Periodically, the DM should decide if one of these previous victims shows up to complicate matters. The NPC does not automatically recognize the ninja, particularly with Disguise proficiency complicating things, but the ninja may find it necessary to take extraordinary steps in order to limit contact with the character.

### Pathfinder

**Qualifications:** None beyond normal ninja requirements. This kit is available to humans, half-elves, and halflings.

**Description and Role:** Pathfinder ninja possesses special wilderness experience and abilities.

**Secondary Skills:** Forester, Hunter, Trapper/Furrier (choose one).

**Weapon Proficiencies:** *Required:* Half-bow (hankyu), ninja-to.

**Nonweapon Proficiencies:** *Bonus:* Tracking. *Required:* Hunting.

**Special Benefits:** The Pathfinder receives extra bonuses to Tracking proficiency: +1 at 5th level, another +1 at 9th level, and another +1 at 13th level.

**Special Hindrances:** This ninja gathers no followers.

### Lone Wolf

**Qualifications:** None beyond normal ninja requirements.

**Description and Role:** The Lone Wolf ninja has no clan. Either he has disgraced himself before the clan and been exiled (or escaped before being killed), or his clan was wiped out by an enemy clan. Most Lone Wolf ninja wander the world, selling their skills to a variety of employers and trying to keep a step ahead of their enemies. They usually pretend to be thieves or warriors.

**Secondary Skills:** None required.

**Weapon Proficiencies:** *Required:* Ninja-to.

**Nonweapon Proficiencies:** *Required:* Survival.

**Special Benefits:** Because the Lone Wolf ninja has no clan obligations, he is not required to follow the dictates of a clan superior.

**Special Hindrances:** This ninja cannot call on the resources of a clan and will never have followers.

The Lone Wolf ninja begins play opposed by a powerful campaign enemy, normally an entire clan, that will haunt him throughout his career. If he is an exile, the enemy is his own clan. If he is the survivor of a massacre, his enemy is the clan that destroyed his.

Initially, a Lone Wolf will be far too weak to eliminate this enemy, but he is obligated to try to remove the threat once he's achieved a high enough level, learned enough

information, and gained the help of other powerful adventurers. He might renew ties with his clan or even assume its leadership, or destroy the clan that has haunted him throughout his career.

Guidelines for use of the Lone Wolf's campaign enemy appear in Chapter 7.

### Spirit Warrior

**Qualifications:** The Spirit Warrior must have an Intelligence score of 13 or better. This kit is available to humans and half-elves only.

**Description and Role:** The Spirit Warrior ninja possesses some magical abilities. Such characters can, at high experience levels, pass themselves off as low-level illusionists. Because of their magical powers, high-level Spirit Warriors sometimes accomplish missions that create superstitious dread in the average person and go down in local legends.

If you are updating ninja characters from the original Oriental Adventures game book, you'll want to use the Spirit Warrior kit for characters you feel must retain the extraordinary abilities provided by those rules.

**Secondary Skills:** Scribe.

**Weapon Proficiencies:** *Required:* Dagger or knife.

**Nonweapon Proficiencies:** *Required:* Reading/Writing, Spellcraft.

**Special Benefits:** The Spirit Warrior has access to proficiencies from the Wizard proficiency group without cost penalties.

At 5th level, the Spirit Warrior can walk across short distances of smooth water. In a single day, she can cross 10 yards of water per five experience levels (thus a 15th-level Spirit Warrior ninja can cross 30 yards of water), moving at a rate of 10 yards per round at a Movement Rate of 1). If the ninja is injured while walking on water, her concentration is broken and she falls in. If the ninja carries so much weight that her normal (land) walking rate would be 6 or less, she cannot walk on water regardless of her level.

At 9th level, the Spirit Warrior ninja may begin learning Illusionist spells. She may learn spells of the Illusion school only, plus the special ninja spells described later in this chapter. She learns spells at the same rate paladins do:

### Table 7: Spirit Warrior Spell Progression

| Ninja | Casting | Illusionist Spell Level | | | |
|---|---|---|---|---|---|
| Level | Level | 1 | 2 | 3 | 4 |
| 9 | 1 | 1 | — | — | — |
| 10 | 2 | 2 | — | — | — |
| 11 | 3 | 2 | 1 | — | — |
| 12 | 4 | 2 | 2 | — | — |
| 13 | 5 | 2 | 2 | 1 | — |
| 14 | 6 | 3 | 2 | 1 | — |
| 15 | 7 | 3 | 2 | 1 | 1 |
| 16 | 8 | 3 | 3 | 1 | 1 |
| 17 | 9 | 3 | 3 | 2 | 1 |

| | | | | | |
|---|---|---|---|---|---|
| 18 | 9 | 3 | 3 | 3 | 1 |
| 19 | 9 | 3 | 3 | 3 | 2 |
| 20* | 9 | 3 | 3 | 3 | 3 |

* Maximum Spell Ability

The Spirit Warrior also receives a thief's ability to read scrolls.

At 13th level, this ninja gains her ultimate power, the ability to pass through walls. She must spend three rounds concentrating and preparing before entering the wall. During this time she can take no other actions; if attacked or disturbed while concentrating, she loses the use of this power for the day. The power to walk through walls lasts for one round per the ninja's experience level. The Spirit Warrior moves 1 foot per round (1 foot per experience level). If the ninja is not completely through the obstacle at the end of the round, she dies inside it (so it is a good idea to be sure of the thickness of a wall before attempting to walk through it).

**Special Hindrances:** The Spirit Warrior has a limited selection of weapons. She may use only dagger, knife, tanto, yoroi-toshi, short sword, ninja-to, staff, dart, blowgun, or sling. The Spirit Warrior may wear only leather or padded armor and may not carry a shield.

The Spirit Warrior must earn the same amount of experience as a wizard but rolls six-sided dice for hit points and receives additional bonus hit points from 11th level up.

### Table 8: Spirit Warrior Experience Levels

| Level | XP Cost | Hit Dice (d6) |
|---|---|---|
| 1 | 0 | 1 |
| 2 | 2,500 | 2 |
| 3 | 5,000 | 3 |
| 4 | 10,000 | 4 |
| 5 | 20,000 | 5 |
| 6 | 40,000 | 6 |
| 7 | 60,000 | 7 |
| 8 | 90,000 | 8 |
| 9 | 135,000 | 9 |
| 10 | 250,000 | 10 |
| 11 | 375,000 | 10+2 |
| 12 | 750,000 | 10+4 |
| 13 | 1,125,000 | 10+6 |
| 14 | 1,500,000 | 10+8 |
| 15 | 1,875,000 | 10+10 |
| 16 | 2,250,000 | 10+12 |
| 17 | 2,625,000 | 10+14 |
| 18 | 3,000,000 | 10+16 |
| 19 | 3,375,000 | 10+18 |
| 20 | 3,750,000 | 10+20 |

## Ninja Spells

The Spirit Warrior ninja is able to learn some wizard spells. So can the Shinobi Mage and Shinobi Illusionist, described in the next chapter.

The following spells are known only by members of ninja clans. The Spirit Warrior can learn spells of the Illusion school only. The Shinobi Illusionist can learn all spells except those of Invocation/Evocation, Necromancy, and Abjuration. The Shinobi Mage can learn all spells.

Ninja spells are unlike most other types of spells because the only components they require are kuji-kiri finger exercises. These stylized hand manipulations, used by the ninja to enhance meditation, are usually performed from a kneeling position.

## First-Level Spells

### Face-Blur (Illusion)

Range: 0
Components: S
Duration: 1 hour/level
Casting Time: 4 rounds
Area of Effect: One creature
Saving Throw: none

The ninja casts this spell on himself or on another. It may be cast only on a willing target, who gets no saving throw.

The spell alters the target's features slightly, making them unremarkable—neither handsome nor ugly. The gaze of any witness slides right off the features of a ninja affected by this spell.

A person who is keenly and alertly looking at the faces of everyone he sees—such as a dedicated guard scanning a crowd to find someone who has just disappeared into it—gets a saving throw against the effects of the spell. If the observer makes his saving throw, he sees the ninja's actual features instead of the nondescript face. Immunity to the spell lasts the length of the spell duration, but the spell itself is not dispelled and will work on people who have not made their saving throws. The person who successfully saves against this spell has no idea that a spell is in effect; he does not see the false features fade away and feels no hint of magic.

This spell's success depends on the ninja's maintaining a mental attitude of dullness and boredom. When a ninja deliberately does something interesting while wearing this spell—if he attacks someone, saves a life, or robs a merchant—the spell ends and every witness can see his true features.

This spell can be canceled by a dispel magic spell.

### False Tracks (Illusion)

Range: 0
Components: S
Duration: 1 turn/level

Casting Time: 1 round
Area of Effect: the caster
Saving Throw: None

For the duration of this spell, the ninja leaves tracks appropriate to a common normal animal (herd beast, deer, fox, etc.). The ninja chooses the species when the spell is cast. His footprints will be those of an animal, moving at whatever pace the ninja maintains. (If the ninja is running, he leaves behind the running footprints of the animal.) If bits of the ninja's clothing become snagged on underbrush, they will appear to be bits of animal hide. However, if the ninja drops an item of equipment or a garment, this spell will not conceal its nature.

No saving throw is allowed. However, the spell can be removed by casting a dispel magic spell. If such a spell is cast on any part of the trail the ninja has left behind, the entire spell is canceled and all tracks revert to normal.

The effects of this spell are entirely illusory. When the spell duration ends, all affected footprints revert to normal.

Ninja use this spell to elude pursuers. When someone a ninja wishes to ambush is hunting a specific type of animal, the ninja will leave tracks of that animal for the quarry to follow.

### Find Direction (Divination)

Range: 0
Components: S
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: Special
Saving Throw: None

By performing kuji-kiri finger exercises, the ninja obtains a momentary understanding of her current direction. This can be very helpful when she has become lost.

The ninja understands the actual direction in relation to true north, south, east, and west; the presence lodestones will not affect the spell. The spell works underground, in darkness, when the ninja is upside down, and in any sort of disorienting circumstance.

### Lesser Distraction (Illusion)

Range: 5 feet/level
Components: S
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: Neg.

With this spell, the caster causes the victim to hear a faint noise or see something

indistinct out of the corner of his eye. The caster must decide if the illusion will be auditory or visual but cannot choose to further define the distraction. It will be a sound, but not a footstep or a low moan. Or it will be a glimpse of something, but not of a person.

The victim who does not successfully save vs. spell believes the sight or sound to originate from a direction of the spellcaster's choice. (The spellcaster cannot choose distance. A victim can be made to believe that he heard a sound behind him, but not that it was something moving 30 feet behind him. He can be made to think that he saw motion off to his right, but not that it was something moving at the top of a wall 50 feet from him.)

The victim is free to act as he chooses on the illusion. He may ignore it or may be moved by duty or curiosity to investigate.

Because the illusion is quick and not detailed, the victim has a –4 penalty to his chance to save. If he fails the saving throw, he believes the sight or sound to be real but does not know what made it. If he makes the saving throw, he assumes that he was "seeing things" or "hearing things" and does not act on the distraction. Even if he makes his saving throw, he does not know that he was the target of a spell.

This spell is used by ninja attempting an escape or infiltration. It is designed to encourage a guard to leave his post for a moment.

## Second-Level Spells

### Deepen Shadows (Illusion)

Range: 0 or 6 yards (see below)
Components: S
Duration: 1 hour/level
Casting Time: 5 rounds
Area of Effect: One 10'x10' area/spellcasting level
Saving Throw: None

This spell slowly, inconspicuously darkens the room where the ninja is. The change is gradual, taking five rounds (five minutes). With a successful saving throw at a –4 penalty, someone inside the room can notice that it is getting darker, but this observation does not affect the spell's progress.

When the spell is completed, the room is as full of shadow and darkness as possible without arousing suspicion. If it is daylight outside, it will seem that a cloud has passed over the sun. If it is nighttime, the candles and fire seem to have burned low. The dimming of the light does not appear at all menacing to people in the area, though a *detect magic* spell will reveal the presence of the deepen shadows spell.

The caster receives a +2% bonus per experience level to her hide in shadows roll within the effect of the deepen shadows spell. Only the caster receives this bonus, because only she has complete understanding of the way the shadows fall.

This spell is useful to a ninja who cannot use her ability to hide in shadows because the area is too bright. The shadows created by this spell can help ninja to escape, to infiltrate, to pull sleight-of-hand switches, etc.

If the casting ninja is in a portal or doorway between rooms, she may choose which room is darkened by this spell.

If the ninja is of sufficient level that she could cover more than the area of the room she occupies, the excess area is lost unless there is an open portal between the ninja's room and an adjacent room, and the ninja's spell can affect enough area to cover both rooms completely.

If the ninja is not of sufficient level to affect the entire area of a room, the spell automatically fails.

*Example: As a 10th-level Spirit Warrior, Noriko casts magic as a 2nd-level spellcaster and thus can cover a 10'x20' area with her deepen shadows spell. However, she is standing in a 20'x20' room and so cannot cover the entire area. If she attempts to cast her spell here, the casting will fail.*

### Featherfoot (Alteration)

*Reversible*

Range: Touch
Components: S
Duration: 1 turn
Casting Time: 5 rounds/level
Area of Effect: One creature
Saving Throw: None

The person affected by this spell gains the magical ability to move quietly and weightlessly at a normal walking pace or slower. If he tries to go any faster, the effect of the spell is lost.

While the spell is in effect, the character gains +30% to his move silently roll. (If he does not possess this skill, for the duration of the spell he performs as though he does possess the skill with a score of 30%.)

The person affected by this spell does not leave any footprints, nor does he set off weight- or pressure-based traps.

The reverse of this spell, leadfoot, affects one creature. The victim is allowed a saving throw to avoid being affected by the spell.

The victim of a leadfoot spell moves loudly and heavily. He cannot move silently or hide in shadows, and automatically sets off any pressure-based traps he steps on. (No roll is necessary.)

A leadfooted character inside the area of a silence spell moves normally; he can be heard if he fails to make a move silently roll.

## Third-Level Spells

### Age to Destruction
### Alteration/Necromancy)

Range: 2 feet/level

Components: S
Duration: Instantaneous
Casting Time: 1 round
Area of Effect: 1 object (3 cubic feet)
Saving Throw: Neg.

With this spell, the ninja can age any nonliving material (of a maximum volume of 3 cubic feet) by about 100 years. An object affected by the spell may make a normal saving throw vs. disintegration (see the Dungeon Master Guide, Chapter 6) to avoid the spell's effect.

An object that fails its saving throw suffers the ravages of a hundred years of aging, on the inside. On the outside it appears normal, but a little more weathered than before. Stone items are affected very little, but wood rots, metal rusts or corrodes through, and other materials suffer similar results. The next time an object affected by this spell is picked up or otherwise used, it crumbles into ruin. If the object is already under strain when the spell is cast on it, it gives way immediately.

This spell allows a spellcaster to sabotage crucial objects or pieces of equipment: a ladder rung, a wooden step, the sword of an enemy, etc. A fleeing ninja can use this spell to drop a portcullis, booby trap the stairway she has just descended, or destroy a weapon about to be wielded against her. It will not allow the character to sink a boat; the keel exceeds the spell's volume limitations. (However, a hull patch that does not exceed the volume limitation could be destroyed by the spell.)

This spell does not affect living creatures. It will not cancel the effects of a potion of longevity. If cast on such a potion, the spell permanently renders the potion useless. A potion of longevity is the only item that does not receive a saving throw against this spell.

### Detect the Living (Divination)

Range: 0
Components: S
Duration: 3 turns
Casting Time: 1 round
Area of Effect: 60 feet + 10 feet/level
Saving Throw: None

This spell acts much like a detect undead spell but allows the ninja to detect the presence of living beings.

The spell works on living beings belonging to animal species with half a hit die or more of hit points. Thus the spell will not detect members of very small animal species or any plant species.

The spell's area of effect extends in a path 10 feet wide and 60 feet long (plus 10 feet longer per spellcasting level of the ninja) in the direction the caster is facing. Scanning a direction requires one round, and the caster must be motionless except for the somatic element of his spell (kuji-kiri finger exercises). When the spell is successful, the caster sees a glow in the direction of the life-form; no one else can see the glow. The spell indicates direction only; it does not give specific location or distance.

This spell can detect living beings through walls and obstacles but is blocked by 1 foot of solid stone, 1 yard of wood or loose earth, or a thin coating of metal. The spell does not indicate the type (species or level) of creature detected, only that such a being is present.

Ninja use this spell to detect someone hiding behind a paper room divider or a false wall. They can then attack through the wall to surprise their prey. Such attacks, when they are successful, are startling and sometimes deadly, but even when aided by a detect the living spell, a ninja striking in this way suffers a –4 penalty to his attack roll.

### Greater Distraction (Illusion)

Range: 10 feet/level
Components: S
Duration: 1 turn/levels
Casting Time: 3
Area of Effect: One creature
Saving Throw: Neg.

With this spell, the caster causes the victim to become distracted by a sensation. The caster decides what the sensation will be before he casts the spell. Typical sensations include itching, the feeling that one's hands are grubby, or the need to answer nature's call.

If the victim fails the saving throw, the sensation will not stop distracting him until he deals with it (by scratching the itch, washing his hands, etc.) or until the spell duration ends. Once either of these conditions is met, the distracting sensation ends. If the victim makes the save, he feels the sensation momentarily but it goes away almost immediately. The victim is never aware that a spell was cast on him, whether he saves or not.

This is another spell used by intruding ninja to maneuver guards or intended targets out of position.

## Fourth-Level Spells

### Improved Featherfoot (Alteration)

Range: Touch
Components: S
Duration: 1 turn/level
Casting Time: 1 round
Area of Effect: One creature
Saving Throw: None

This spell improves on the 2nd-level featherfoot spell by additionally allowing the ninja to walk across still or gently moving water surfaces (the water of a pond or a slow river, for example).

Such travel leaves the bottoms of the ninja's feet wet, so she must take care to leave no trail after leaving the water.

### Improved Mirror Image (Illusion/Phantasm)

Range: 0
Components: S
Duration: 3 rounds/level
Casting Time: 2 rounds
Area of Effect: 30-foot radius
Saving Throw: None

This spell works much like the 2nd-level wizard spell mirror image, with some important differences.

The mirror images appear in the vicinity of the caster, but they can move up to 30 feet away. Although the images must face the same target or enemy (whichever one the spellcaster is facing), they do not have to perform exactly the same actions. They can draw different weapons or appear to choose different tactics in combat.

When struck in combat, these images collapse as if injured or killed, feeling solid to the person attacking them. Only at the start of the next combat round do "injured" images disappear.

Like the images created by a mirror image spell, these visions can do no actual damage. If they attack an enemy in combat, all their attacks seem to miss until they are struck or the spell duration ends.

To determine how many images appear, the DM rolls 1d4 and adds 1 for every three levels of the ninja's spellcasting experience.

## Fifth-Level Spells

### Shadow-Form (Illusion/Phantasm)

Range: Unlimited
Components: S
Duration: One hour or until struck
Casting Time: 5 rounds
Area of Effect: One creature
Saving Throw: None

With this spell, the ninja creates a transparent duplicate of himself. The duplicate, or shadow-form, appears adjacent to the spellcaster. It wears all the clothing and carries all the equipment that were in the ninja's possession when he cast the spell, leaving him unclothed and unarmed; the clothing and equipment are not transparent.

For the duration of the spell, the ninja controls the shadow-form's actions and sees through its eyes. It is an extension of him and possesses all of his physical and mental skills but not his magical abilities. (In other words, it moves, sounds, and fights just as he does but cannot cast spells.) The ninja sees through both sets of eyes at once. When the shadow-form is waiting or resting, the ninja can take actions on his own, but he cannot make both his real body and his shadow-form act at the same time.

If the shadow-form is hit in combat or struck with a *dispel magic* spell, it disappears—leaving behind all the clothing and equipment it was carrying. Also left behind is a handful of leaves inside the clothes, all that remains of the insubstantial body.

Spirit Warriors and spellcasting shinobi use this spell to perform particularly frightening short-term assignments. The shadow-form may be sent off to attack someone, to deliver a message, to scout a dangerous area, or to undertake any sort of action in which the ninja cannot afford to be caught. Usually the spellcaster dresses in a ninja night-suit before casting this spell, so that it is not readily obvious that the person within the clothing is transparent. When the shadow-form wears a night-suit and moves around in the dark, it is difficult to see that it is not a physical being.

## Sixth-Level Spells

### Sense Treason (Divination)

Range: special
Components: S
Duration: Instantaneous
Casting Time: 5 rounds
Area of Effect: the caster
Saving Throw: None

With this spell, a shinobi spellcaster can determine that the clan has been deliberately betrayed.

The DM determines what constitutes such betrayal, but the spell normally reacts when a clan member has deliberately taken an action that puts his own welfare above the clan's.

However, the spellcaster cannot determine the identity of the betrayer or reveal details of that betrayal. The spell has no range, so the traitor could be anyone in the clan.

The spell does not react to exiles, outcasts, or clan members the spellcaster believes to be dead.

This is a spell used most often by Shinobi Mage advisors to clan leaders. Though it is necessary to know about such betrayals in order to protect the clan, this spell can be as much a curse as it is a blessing, because it makes the clan lord and his advisors paranoid.

# CHAPTER 3
# Shinobi, Spies, and Killers

It's possible to have ninja-like characters who don't belong to the ninja character class, and to use the ninja character class rules without playing Oriental ninja characters. This chapter describes how.

## Shinobi

No ninja clan is made up solely of ninja. At most, half the people belonging to a ninja clan will be of the ninja character class. That means the other half are normal (zero-level) humans or, more commonly, representatives of other character classes. In the AD&D® game, we call these clan members shinobi.

In the Japanese language, the words ninja and shinobi have similar meanings. They are two different pronunciations for the same written word. In The Complete Ninja's Handbook, however, we make an artificial distinction between ninja and shinobi.

Here, ninja are people of the ninja character class who belong to a ninja clan. Shinobi are people of other character classes who belong to a ninja clan.

Shinobi are not ninja and cannot take ninja kits. Instead, they have their own kits. A shinobi who is a fighter must take the Shinobi Fighter kit; a shinobi who is a wizard must take the Shinobi Mage or Shinobi Illusionist kit.

With the DM's permission, players of non-ninja character classes may belong to ninja clans and take appropriate shinobi kits.

Shinobi have the same clan obligations as ninja. (See Chapter 6.)

### Shinobi Fighter

**Qualifications:** This kit is available to human, dwarf, and half-elf fighters (not paladins or rangers).

**Description and Role:** This character is a fighter belonging to a ninja clan. He is ordinarily not chosen for stealth-based missions but accompanies ninja on assignments where heavy-duty fighting is required (often in the company of ninja with the Shadow Warrior kit). In addition, the Shinobi Fighter may adventure out in the world the way other ninja do, so long as he does not reveal his ninja clan associations.

**Secondary Skills:** None required.

**Weapon Proficiencies:** *Required:* Ninja-to, daikyu (Oriental long bow) or hankyu (half bow).

**Nonweapon Proficiencies:** *Required:* Blind-fighting.

**Special Benefits:** The Shinobi Fighter is able to learn a few thieving skills. At 1st level he can move silently, hide in shadows, and climb walls with base scores of 10% each (modified by all racial bonuses and penalties). With each subsequent experience level, the Shinobi Fighter gets 10 discretionary points to divide among the three thieving skills.

**Special Hindrances:** None.

### Shinobi Ranger

**Qualifications:** This kit is available to human and half-elf rangers only.

**Description and Role:** The Shinobi Ranger is the clan wilderness specialist. However, this character's primary concern is neither protecting the wilderness nor making her livelihood there. The Shinobi Ranger's skills are used to scout enemies and lead clan members through the wilderness so they can perform missions successfully.

**Secondary Skills:** Trapper/Furrier.

**Weapon Proficiencies:** *Required:* Hankyu (half-bow).

**Nonweapon Proficiencies:** *Required:* Running.

**Special Benefits:** Like the Shinobi Fighter, the Shinobi Ranger can learn thieving skills. Her skills are move silently, hide in shadows, and detect noise, with the same base scores and progression as a Shinobi Fighter.

**Special Hindrances:** None.

### Shinobi Mage

**Qualifications:** This kit is available to human and half-elf wizards only, with minimum Intelligence scores of 12.

**Description and Role:** All ninja clans need members with more magical knowledge than the Spirit Warrior possesses. The Shinobi Mage is a normal generalist wizard who has a little bit of ninja training. Because his training has been divided between magic and ninjutsu, he is not quite as accomplished a wizard as those who do not belong to ninja clans.

The Shinobi Mage is often appointed as an advisor to the clan leader.

**Secondary Skills:** Scribe.

**Weapon Proficiencies:** *Required:* None.

**Nonweapon Proficiencies:** *Required:* Reading/Writing.

**Special Benefits:** The Shinobi Mage is able to learn a few thieving skills, receiving move silently, detect noise, and read languages at 1st level. Subsequently, he progresses in these skills in the same way as a Shinobi Fighter. The Shinobi Mage can also learn to use the ninja-to, but proficiency in this weapon requires two slots; he is not required to learn the ninja-to.

**Special Hindrances:** Because his training is divided between the study of magic and the practice of ninja skills, the Shinobi Mage cannot attain the same mastery of magic as a normal mage. To determine the Spell Level limit, Chance to Learn Spell, and Maximum Number of Spells per Level (all from the *Player's Handbook*, Table 4), treat the Shinobi Mage as having an Intelligence score 2 points lower than it actually is. (Thus a Shinobi Mage with an Intelligence score of 17 learns spells as though he had an Intelligence score of 15.)

*Note:* The followers of a Shinobi Mage are always Shinobi Mages, Shinobi Illusionists, and Spirit Warriors.

### Shinobi Illusionist

**Qualifications:** This kit is available to human illusionists only.

**Description and Role:** The Shinobi Illusionist has much in common with the Spirit Warrior ninja but chooses to concentrate more on magical skills than physical skills. This shinobi's special powers of illusion give the clan greater versatility and help embellish the frightening reputation of the ninja.

**Secondary Skills:** Scribe.

**Weapon Proficiencies:** *Required:* None.

**Nonweapon Proficiencies:** *Required:* Reading/Writing.

**Special Benefits:** In addition to those spells available to normal illusionists, the Shinobi Illusionist can learn some of the ninja spells described in the previous chapter. This shinobi is also able to learn a few thieving skills (move silently, hide in shadows,

read languages) at the progression rate described for the Shinobi Fighter. Like a Shinobi Mage, the Shinobi Illusionist can also learn to use the ninja-to.

**Special Hindrances:** Because her training is divided between magic and ninjutsu, the Shinobi illusionist cannot attain the same mastery of magic as a normal wizard. When consulting Table 4 in the Player's Handbook, treat the Shinobi Illusionist as having an Intelligence score 1 point lower than it actually is.

**Note:** The followers of a Shinobi Illusionist are all Shinobi Illusionists, Shinobi Mages, and Spirit Warriors.

### Shinobi Priest

**Qualifications:** This kit is available to human, dwarf, and half-elf clerics.

**Description and Role:** Although such characters are rare, there is nothing to keep a ninja clan from producing a cleric. A Shinobi Cleric must fulfill all normal clerical duties for his order, and additionally—and secretly—perform those services for his ninja clan.

The Shinobi Cleric will never receive a calling to the priesthood of any god whose worship would cause a division of loyalty between his clerical order and the ninja clan.

**Secondary Skills:** Scribe.

**Weapon Proficiencies:** No bonuses, requirements, or prohibitions.

**Nonweapon Proficiencies:** *Required:* Reading/Writing.

**Special Benefits:** The Shinobi Cleric can use any weapon allowed to other clerics and can use one-handed bladed weapons as well. This shinobi can also learn thieving skills as a Shinobi Fighter.

**Special Hindrances:** The Shinobi Cleric cannot use any armor providing better defense than scale mail or hide armor (though he may wear magical versions of these armors).

**Note:** Shinobi priests of specific mythoi can also be built using this kit.

### Shinobi Thief

**Qualifications:** This kit is available to humans, dwarves, half-elves, and halfling thieves.

**Description and Role:** In a ninja clan, the character who wants to have a good balance between fighting and thief skills becomes a ninja. The Shinobi Thief is a specialist in thieving skills, as dedicated to them as a graybeard scholar is to reading musty scrolls by candlelight. The Shinobi Thief's fighting skills are not on a par with that of the ninja or the ordinary thief, but his thief skills are superior.

The Shinobi Thief often works on missions side by side with true ninja and is a welcome brother-in-arms. In missions requiring several party members, the Shinobi Thief is the intrusion specialist, the one relied on for finding and removing traps and other security devices.

**Secondary Skills:** None required.

**Weapon Proficiencies:** Required: Ninja-to.

**Nonweapon Proficiencies:** No bonuses, requirements, or prohibitions.

**Special Benefits:** The Shinobi Thief starts out with thieving skills superior to those of a regular thief.

### Table 9: Shinobi Thief Base Scores

| Skill | Base Score |
|---|---|
| Pick Pockets | 20% |
| Open Locks | 15% |
| Find/Remove Traps | 15% |
| Move Silently | 20% |
| Hide in Shadows | 20% |
| Detect Noise | 20% |
| Climb Walls | 65% |
| Read Languages | 5% |

Like a regular thief, the Shinobi Thief receives 60 discretionary points at 1st level (no more than 30 points may be added to any one skill) and receives 30 points at each additional experience level. (No more than 15 points may be added to any one skill.)

Special Hindrances: The Shinobi Thief can wear only padded or leather armor, and can use only the same weapons as wizards (dagger, knife, staff, dart, sling). Like a wizard, the Shinobi Thief uses a four-sided die to roll for hit points.

## Shinobi Bard

Qualifications: This kit is available to humans and half-elf bards only.

Description and Role: The Shinobi Bard is specially trained to entertain people and to lend magical knowledge to a ninja mission. She is often paired with Intruder and Consort ninja, whose abilities are most suited to interacting with other people.

The Shinobi Bard is weaker in spellcraft than an ordinary bard but is somewhat better at thieving skills.

She is often called on to strike up a song or put on a show to distract people while her brethren carry out the quiet and sneaky parts of a mission. For this reason, a player who wants to be where the action is should not take this type of character, while a PC who likes being the center of crowd attention while his allies are doing the dirty work would have a good time in this role.

**Secondary Skills:** Scribe.

**Weapon Proficiencies:** No bonuses, requirements, or prohibitions.

**Nonweapon Proficiencies:** *Required:* Reading/Writing.

**Special Benefits:** The Shinobi Bard has a wider range of thief skills and generally higher starting values than an ordinary bard.

### Table 10: Shinobi Bard Base Scores

| Skill | Base Score |
|---|---|
| Pick Pockets | 10% |
| Open Locks | 5% |
| Find/Remove Traps | 5% |
| Move Silently | 5% |

| | |
|---|---|
| Hide in Shadows | 5% |
| Detect Noise | 30% |
| Climb Walls | 50% |
| Read Languages | 10% |

Subsequent progression of thieving skills follows the normal bard class.

**Special Hindrances:** The Shinobi Bard learns bard spells at a slower rate than ordinary bards. Treat her as though she were two experience levels lower when determining spell progression. Thus, a Shinobi Bard learns her first spell at 4th level.

## Spies

Naturally, not all cultures can have ninja clans. However, other cultures can have characters similar to ninja.

These characters are built with the ninja character class guidelines, but we call them spies.

Not every campaign setting should have characters of the spy (ninja) class; a setting should have spies only if the DM allows. Certainly, every culture can have rogues who perform espionage tasks, but for a culture to produce specialized spies belonging to their own character class, it must:

• Be considered culturally advanced and sophisticated compared to the cultural average for the world, and

• Have a tradition of attempting to resolve problems with cunning, guile, pressure, blackmail, trickery, and even treachery (in addition to that familiar old standby, war).

### The Foreign Service

Spies belong to the Foreign Service, a branch of the government whose specific task is to manage international relations. The Foreign Service's main task is to operate a corp of ambassadors and negotiators, but intelligence work also falls under its umbrella.

Unlike the ninja, the spy was probably not born to a family of spies. He or she was noticed by the Foreign Service during adolescence or early adulthood and recruited into the service.

However, in most ways the service is like a ninja clan. It is ruled by a powerful, autocratic leader. It has a goal, an alignment, a range of resources, a set of allies, a number of enemies. It demands loyalty of its agents and punishes betrayal. It sends its members out on life-or-death missions.

### Ninja Kits and the Spy

All ninja kits are available to the spy except for the Lone Wolf kit.

The Stealer-In, or basic spy, is actually uncommon. Spies prefer to specialize.

The Shadow Warrior, or fighting spy, is common but is almost always used in association with other spies. A Shadow Warrior spy is seldom sent on a solo mission or as the leader of a mission.

The Intruder is the most common sort of spy, and the type tapped most often to lead a

group or to undertake a solo mission.

The Consort spy is also very common, and is second most likely to lead a group or undertake a solo mission. When a mission leader is sent into an area, a Consort spy may already be in place, maintaining a cover identity established years earlier.

The Pathfinder spy is uncommon; spy missions tend to be more urban.

The Spirit Warrior spy is often used as a mission specialist, seldom as a mission leader.

### What the Spy Does

Chapter 8 includes notes on campaigning spy characters.

The spy goes on missions much like the ninja, but these missions relate more to national security than clan concerns. The spy is more prevalent in campaigns set in western cultures, and is perhaps most appropriate to campaigns settings somewhat like the European Renaissance.

### Demihuman Spies

Whereas ninja clans are always human clans, an intelligence agency employing spies can belong solely to another race. Because dwarves and halflings can be ninja, predominantly dwarf and halfling spy organizations can exist.

## Killers

Another type of character derived from the ninja character class is the killer. This variant NPC is a murderer who needs ninja abilities to get to his target.

Any culture can produce killer organizations. Killers with the Eliminator kit are best suited to the same types of cultures that produce spies, while those with the Punisher and Ravager kits most often appear in cultures considered foreign and exotic.

### Restrictions

Player characters cannot belong to the killer (ninja) class. These rules are included for the DM who wants to create extremely dangerous opponents for his PCs.

Killer Kits

There are three kits available for killers: Eliminator, Punisher, and Ravager.

### Eliminator

**Qualifications:** NPCs with good alignments cannot be Eliminators. The Eliminator must have an Intelligence score of 13 or better.

**Description and Role:** The Eliminator is a loner who assassinates high-profile, carefully protected targets. Eliminators are solitary hunters; they work in groups only when they feel it is impossible to get to the target alone.

Each Eliminator specializes in one specific technique of elimination, performing

assassinations with the same type of weapon every time. Highly egotistical Eliminators choose uncommon or unusual weapons as their "signatures."

**Secondary Skills:** None required.

**Weapon Proficiencies:** *Required:* None.

**Nonweapon Proficiencies:** *Required:* None.

**Special Benefits:** In a campaign that uses weapon proficiency rules, the Eliminator can specialize in weapons but is much more limited than a fighter.

The Eliminator may specialize in one weapon at 5th level, a second weapon at 9th level, and a third weapon at 13th level. He may not specialize in more than three weapons (or two weapons plus one martial art). He does not get the additional attacks per round of a weapons specialist (from Table 35 in the *Player's Handbook*), nor receive extra attacks per round based on level advancement like a fighter.

**Special Hindrances:** There are two types of Eliminator: free-lancers, who contract for killings on a mission-by-mission basis with many employers, and those belonging to criminal organizations.

Both types of Eliminator exist mainly as skillful opponents for the PCs. The most suspenseful sort of adventure involves PCs (perhaps some of them are spies) assigned to protect the target of an Eliminator.

Eliminators belonging to criminal organizations suffer the same clan obligations as ninja. (See Chapter 6.)

### Punisher

**Qualifications:** NPC only.

**Description and Role:** The Punisher belongs to an organization with a goal. The goal itself might not be evil, but the way the organization attempts to reach its goal—through a program of murder and terror—certainly is.

For example, two covert groups might have the same goal: to force a group of occupying invaders to withdraw.

One group, consisting of spies, would try to accomplish this goal by sabotaging enemy missions, planting spies within the enemy forces, subverting enemy leaders, and thwarting the enemy's military operations through superior intelligence.

A group consisting of Punishers, however, would not hesitate to send in agents to murder enemy leaders and their families.

Some Punisher societies are priestly orders following the dictates of evil gods. Such an organization is led by clerics or priests of the god, but most of the group's dirty work is carried out by killers with the Punisher kit.

Every Punisher organization has a signature weapon that its members use so that everyone will know that victims were killed by the organization. When a Punisher is initiated into the organization, a small symbol in the likeness of this weapon is tattooed in an inconspicuous place on his body.

**Secondary Skills:** None required.

**Weapon Proficiencies:** *Required:* Proficiency with the organization's signature weapon.

**Nonweapon Proficiencies:** *Required:* None.

**Special Benefits:** Members of the organization receive +2 to hit with the precise

weapon used as the symbol of the order.

**Special Hindrances:** Punishers suffer the same clan obligations as ninja. (See Chapter 6.)

### Ravager

**Qualifications:** A Ravager must be an NPC with a Constitution score of at least 13.

**Description and Role:** Ravagers have the same goals and methods as Punishers, but Ravagers do not have signature weapons. Instead, they consume dangerous potions before going on their missions. These potions make them fearless and unusually hard to defeat in combat.

**Secondary Skills:** None required.

**Weapon Proficiencies:** *Required:* None.

**Nonweapon Proficiencies:** *Required:* Endurance.

**Special Benefits:** The Ravager who partakes of the organization's potion before the mission starts receives several benefits. See the Ravager potion under "Miscellaneous Equipment" in Chapter 5.

**Special Hindrances:** The only types of armor a Ravager can wear are leather or padded armor plus shield. Ravagers suffer the same clan obligations as ninja. (See Chapter 6.)

In this chapter, we'll discuss weapon and nonweapon proficiencies and the combat styles of Oriental martial arts.

# CHAPTER 4
# Proficiencies and Martial Arts

## Weapon Proficiencies

These rules are adapted from the ones introduced in *The Complete Fighter's Handbook*.

Under the rules in Chapter 5 of the *Player's Handbook*, a DM can decide to use weapon proficiencies in his campaign. When using these rules, a character does not know how to wield a weapon well unless he spends a weapon proficiency slot on it. If he has proficiency with a weapon, he uses it normally; if he does not have proficiency, he suffers an attack roll penalty whenever he tries to use the weapon. (The penalty is –2 for warrior characters, –5 for wizards, and –3 for priests and rogues.)

With the new rules given here, a character can devote extra weapon proficiency slots to become proficient with an entire group of weapons.

There are two types of weapons groups: tight groups and broad groups. A tight group, usually consisting of three to eight weapons, includes weapons very closely related in function and effect (for example, fencing blades). A broad group, consisting of several tight groups, includes weapons that are more loosely related in function and effect (for example, all blades).

Table 11 shows the cost of purchasing proficiency with different categories of weapons.

## Table 11: Proficiency Costs

| Cost | For Proficiency With |
|---|---|
| 1 slot | One weapon |
| 2 slots | Tight group of weapons |
| 3 slots | Broad group of weapons |

## Broad and Tight Weapon Groups

Ninja characters can purchase weapon proficiencies in the broad and tight groups listed in the sidebar on pages 32 and 33.

You'll notice there's a little overlap between some of the groups; many weapons can found in more than one group. Both the medieval thief who is proficient with short blades and the Renaissance dandy who knows only fencing weapons are likely to be proficient with the dagger, for example. However, the PC who purchases several tight groups with overlapping sets of weapons receives no proficiency slot cost reduction.

These broad categories are very close to the related weapon groups from Chapter 5 of the *Player's Handbook*. The DM can use these categories as related groups. This helps determine whether or not a combatant gets the full attack roll penalty when he uses a weapon unfamiliar to him, or whether he receives only half the penalty for using a weapon similar to one with which he has proficiency.

## Table 13: Broad and Tight Weapon Groups

**Broad Group:** Arrow-Firing Missile Weapons
**Tight Group:** Bows
- Daikyu*
- Hankyu*
- Long bow
- Long bow, composite
- Pellet bow*
- Short bow
- Tight Group: Crossbows
- Cho-ko-nu (repeating crossbow)*
- Hand crossbow
- Light crossbow

**Broad Group:** Blades
**Tight Group:** Fencing Blades
- Dagger/Dirk
- Knife/Stiletto
- Main-gauche (CFH)
- Rapier (CFH)
- Sabre (CFH)

**Tight Group:** Long Blades
- Bastard sword
- No-daichi*
- Tetsu-to*
- Two-handed sword

**Tight Group:** Medium Blades
- Broad sword

Cutlass
- Katana/Bokken*
- Khopesh
- Long sword*
- Ninja-to*
- Scimitar

**Tight Group:** Oriental Blades
- Katana/Bokken*
- Ninja-to*
- No-daichi*
- Tetsu-to*
- Tanto/Yoroi-toshi*
- Wakizashi*

**Tight Group:** Short Blades
- Chopsticks*
- Dagger/Dirk
- Gaff/Hook (CFH)
- Knife/Stiletto
- Main-gauche (CFH)
- Parang*
- Short sword*
- Shuriken, large star*
- Nekode*
- Tanto/Yoroi-toshi*
- Wakizashi*

**Broad Group:** Chain/Rope Weapons

**Tight Group:** Chain Weapons
- Kau sin ke*
- Kusarigama*
- Manriki-gusari*
- Three-section staff*

**Tight Group:** Lash Weapons
- Scourge
- Whip*

**Tight Group:** Rope Weapons
- Bola
- Kawanaga*
- Kyogetsu-shogi*

Lasso* (not part of a tight group)
Net (not part of a tight group)

**Broad Group:** Cleaving/Crushing Weapons
**Tight Group:** Axes
Battle axe*
Hand/Throwing axe*
**Tight Group:** Clubbing Weapons
Club
Footman's mace
Hanbo*
Horseman's mace
Jo*
Kiseru*
Morning star
Tonfa*
War hammer
**Tight Group:** Flails
Footman's flail
Horseman's flail
**Tight Group:** Karate Weapons
Kama*
Nunchaku*
Quarterstaff/Bo*
Sai/Jitte*
Tonfa*
**Tight Group:** Picks
Fang*
Footman's pick
Horseman's pick
**Tight Groups:** Sickles
Kama*
Sickle
Scythe
**Tight Group:** Staves
Kumade*
Lajatang*
Quarterstaff/Bo*
Tetsu-bo*
Gunsen (war fan)*
(not part of a tight group)
Siangkam* (not part of a tight group)

**Broad Group:** Pole Weapons
**Tight Group:** Bladed Poles
Bardiche

Bec de corbin
Bill-guisarme
Fauchard
Fauchard-fork
Glaive
Glaive-guisarme
Guisarme
Guisarme-voulge
Halberd*
Hook fauchard
Lajatang*
Lucern hammer
Man catcher*
Military fork
Nagimaki*
Naginata*
Partisan
Ranseur
Sang kauw*
Sode garami*
Spetum
Trident*
Voulge

**Tight Group:** Lances
Heavy horse lance
Light horse lance*
Jousting lance
Medium horse lance

**Tight Group:** Spears
Awl pike
Chijiriki*
Harpoon
Javelin
Long spear (CFH)
Shakujo yari*
Spear
Trident
Uchi-ne*

**Broad Group:** Small Throwing Weapons

**Tight Group:** Bladed Throwing Weapons
Dagger (thrown)
Knife (thrown)
Stiletto (thrown)

**Tight Group:** Grenades
Eggshell grenades*

Nage teppo*

**Tight Group:** Shuriken
Bo shuriken*
Small shuriken*
Large star shuriken*
Dart (not part of a tight group)
Tetsu-bishi* (not part of a tight group)

**Tight Group:** Blown Weapons
Blowgun*
Fukimi-bari*
Metsubishi*
Needle*

**Tight Group:** Primitive Firearms
Arquebus

**Tight Group:** Slings
Sling*
Staff sling*

* Appears on weapon lists in this supplement.
CFH: Introduced in *The Complete Fighter's Handbook*.

### Weapon Specialization and Weapon Groups

It is not possible to specialize in an entire group of weapons except by spending an additional weapon proficiency slot on every weapon in the group. You cannot, for example, spend two proficiency slots to have weapon familiarity with the Oriental Blades tight group, and then an extra proficiency slot to specialize in every weapon in the group. You would need to spend one additional slot each for katana/bokken, ninja-to, no-daichi, tetsu-to, tanto/yoroi-toshi, and wakizashi, for a total of eight weapon proficiency slots.

## Nonweapon Proficiencies

As you'll recall from Chapter 1, ninja purchase nonweapon proficiencies from the General, Rogue, and Warrior groups without penalty, and from the Wizard and Priest groups with the standard penalties. Ninja with the Spirit Warrior kit can take proficiencies from the Wizard group without penalty.

### Table 12: Nonweapon Proficiency Groups

| Proficiency | # of Slots Required | Relevant Ability | Check Modifier |
|---|---|---|---|
| **General** | | | |
| City Familiarity | 1 | Intelligence | 0 |
| **Warrior** | | | |
| Style Analysis | 1 | Intelligence | –1 |

**Rogue**

| | | | | |
|---|---|---|---|---|
| Acting | 1 | | Charisma | –1 |
| Assimilation | 1 | | Intelligence | 0 |
| Detect Signing | 1 | | Intelligence | +1 |
| Enamor | | 1 | Charisma | –2 |
| Escape | 2 | | Dexterity | 0 |
| Feign/Detect Sleep | 1 | | Intelligence | 0 |
| Giant Kite Flying | 1 | | Dexterity | –3 |
| Hold Breath | 1 | | Constitution | 0 |
| Information Gathering | 1 | | Intelligence | Var |
| Night Vision | 1 | | Wisdom | –2 |
| Observation | 1 | | Intelligence | 0 |
| Toxicology | 2 | | Intelligence | 0 |
| Quick Study | 2 | | Varies | –3 |
| Underclass | 1 | | Wisdom | 0 |
| Voice Mimicry | | 2 | Charisma | Var |
| Water Walking | | 1 | Dexterity | –1 |

## Nonweapon Proficiencies from the *Player's Handbook*

Some nonweapon proficiencies are appropriate to all ninja characters. These include:

**General Group:** Artistic Ability, Cooking, Dancing, Direction Sense, Etiquette, Fire-building, Heraldry, Languages (Modern), Riding (Land-based), Rope Use, Singing; (from *The Complete Book of Dwarves*) Alertness, Locksmithing, Slow Respiration.

**Priest Group:** (with appropriate penalty) Engineering, Healing, Reading/Writing.

**Rogue Group:** Blind-fighting, Disguise, Forgery, Gaming, Juggling, Jumping, Musical Instrument, Reading Lips, Set Snares, Tightrope Walking, Tumbling, Ventriloquism; (from *The Complete Thief's Handbook*) Alertness, Information Gathering, Observation; (from *The Complete Bard's Handbook*) Acting.

**Warrior Group:** Running, Tracking.

**Wizard Group:** (with appropriate penalty) Languages (Ancient), Reading/Writing.

**Psionicist:** (from *The Complete Psionics Handbook*, with appropriate penalty) Hypnosis.

## New Nonweapon Proficiencies

Ninja know several nonweapon proficiencies that have not appeared in earlier *Player's Handbook* supplements. Many of these proficiencies are appropriate to other character classes as well as ninja.

### New Nonweapon Proficiency Descriptions

**Acting:** This proficiency, originally presented in *The Complete Bard's Handbook*, allows a character to skillfully portray another person. Although acting is usually considered a form of entertainment, it can be useful in helping the ninja accomplish mission goals. If the ninja has both the Acting and Disguise proficiencies, the proficiency

check for either is made with a +1 bonus.

Proficiency checks for Acting are required only if the actor must portray a particularly difficult character or is attempting to ad lib a role (a nonrehearsed role or a performance on short notice).

**Assimilation:** The character with this proficiency is able to study a different culture well enough to pretend to be a member of it. Assimilation allows the character to pick up cultural mannerisms (common rituals, expressions of speech, taboos, etc.). It is distinct from Acting but helpful to that proficiency. A character who has both Acting and Assimilation proficiency receives a +1 bonus to checks with either proficiency when portraying a member of another culture. (This is not cumulative with the Acting/Disguise bonus; if a character has all three proficiencies, she does not receive a +2 bonus.)

**City Familiarity (specific city):** A character with this proficiency is unusually knowledgeable about one specific community, chosen when the proficiency is purchased. City Familiarity gives the character a good knowledge of the important political and financial figures in the community, an understanding of which families (and criminal organizations) are most important and how they relate to one another and a good grasp of the city's main streets and byways. The character needs no skill check to call on this information. When the character wants more detailed information—such as the precise layout of streets when he's running away from city guards, the name of the number-two man in a specific crime organization, or the knowledge of which politicians are cheapest to bribe—the character must make a proficiency check with a difficulty modifier determined by the DM.

A character can must have lived in a city for at least three months before he can purchase the City Familiarity proficiency and—except for the town in which he grew up—he can do so only with DM permission.

**Detect Signing:** This proficiency allows a character to realize when ninja from other clans are communicating using their own clan signs. The character who makes a Detect Signing roll recognizes seemingly meaningless symbols as writing and ordinary speech as having special meaning, although she just will not know the content of the communication.

At the DM's discretion, a Detect Signing roll made by 2 or more will allow the character to recognize when other sorts of subtle communication are being used, such as thieves' cant.

If a character makes her Detect Signing roll by 6 or better, she can recognize one word or symbol in a specific communication and understand its meaning. The DM chooses which word the character recognizes. (This is an opportunity for the DM to pass an intriguing clue on to the ninja character.)

**Enamor:** This proficiency allows a ninja to trick an NPC into falling in love with him or her. It is more than the skill of knowing which flowers to send or garments to wear. Enamor proficiency allows the ninja to study his target like a thief studies a vault, looking for weak points to exploit.

Standard use of the Enamor proficiency takes a week of constant contact for a susceptible victim, a month or more for a more difficult target. The DM can allow bonuses to the proficiency roll for a PC who is thorough and clever in his research into the victim's psyche and who takes extra time, and can assign penalties to one who spends too little time or makes wrong assumptions.

At the end of the contact period, the DM rolls the Enamor proficiency for the ninja and compares the results with those listed in Table 14.

**Table 14: Enamor Proficiency Results**

| | |
|---|---|
| Ninja Lost by 4+ | The victim has been (accidentally) insulted during the romantic pursuit. The victim may attack the ninja, may arrange to have the ninja assaulted, may pretend to be seduced in order to cause the ninja some great harm later, etc. |
| Ninja Lost by 2–3 | The victim is not interested in the ninja and may become irritated with continued pursuit. |
| Ninja Lost by 1 | The victim is flattered but not convinced. The ninja can start over with a –2 penalty to his Enamor check, or can abandon pursuit, perhaps leaving behind some hard feelings. |
| Even Roll | The victim is flattered but not convinced. The ninja can start over or can abandon pursuit with no hard feelings. |
| Ninja Won by 1 | The victim is flattered but not convinced. The ninja can start over with a +1 bonus to his Enamor check, or can abandon pursuit with no hard feelings. |
| Ninja Won by 2–3 | The victim is infatuated by the ninja but will not change ethics, goals, or loyalties. |
| Ninja Won by 4–6 | The victim is in love with ninja and will help ninja in any way that does not violate important ethics and loyalties. |
| Ninja Won by 7+ | The victim is madly in love with the ninja and will abandon all ethics, goals, and loyalties. |

The DM, at his discretion, can additionally make a Wisdom check for the victim. If the victim makes the Wisdom check by more than the ninja made his Enamor proficiency check, the results are as for an Even Roll.

Ironically, the more complete the ninja's success, the more dangerous the situation becomes. A victim who is madly in love may do everything the ninja wishes, including betraying state secrets and turning traitor, but expects the character with Enamor proficiency to be just as much in love. The victim becomes dangerously jealous of potential rivals (seeing anyone remotely suitable as a potential rival) and could become murderous if he realizes he has been duped.

The relationship built by use of the Enamor proficiency need not be a romantic one. Depending on the situation, the relationship might be a friendship or the winning of someone's loyalty away from an enemy.

Although nothing prevents good-aligned characters from learning the Enamor proficiency, the first time they ruin a life with it may be the last time they use it.

**Escape:** This nonweapon proficiency allows a character to slip out of ropes and other types of bindings.

When a character is bound or tied, the DM assigns a penalty based on the type and circumstance of the binding. Table 15 shows standard penalties for a variety of situations. The character with Escape proficiency can try to use his skill in order to free himself. He

rolls his proficiency and applies the appropriate penalties. If the roll is successful, he can untie himself.

### Table 15: Escape Proficiency Penalties

| Binding Type | Penalty (Cumulative) |
|---|---|
| Standard rope | 0 |
| Rawhide, dry | –2 |
| Rawhide, soaked and shrunken | –4 |
| Wire | –3 |
| Fingers individually tied/taped | –4 |

| Circumstance | Penalty (Cumulative) |
|---|---|
| Binding character takes extra time/attention | –2 |
| Binding character takes little time/attention | +2 |
| Binding character is a thief or ninja | –3 |
| Binding character makes find/remove traps roll | –2* |
| Character with this proficiency tries to untie another character | +4 |
| Bound character with this proficiency tries to untie another character | –4 |

* The DM may assign a penalty equal to the number by which the binding character makes his find/remove traps roll divided by five. (For example, if the character has a 50% chance but rolls a 30, he has made the roll by 20. The penalty is a –4.)

*Example: Ichiro the ninja is bound back-to-back with his fighter friend Olaf. Ichiro has been bound with standard rope, but the character tying him spent extra time on the task and individually tied the ninja's fingers.Ichiro receives a penalty of –6 against his Dexterity –1 roll of 16. The ninja rolls an 11 and fails.*

Ichiro then tries to free Olaf. The penalty is the same, but he's trying to untie another person while he himself is bound, resulting in an additional –4 penalty for a total of –10. The ninja manages to roll a 6 and successfully frees his ally.

Escape proficiency does not allow the character to undo locks or escape other sorts of traps. Those tasks require the open locks and find/remove traps skills.

**Feign/Detect Sleep:** People who pretend to be sleeping seldom do it right. However, most people don't know how to tell the fakers from those really asleep. Characters with this proficiency are trained to feign sleep accurately and to determine when others are feigning sleep.

This skill is of special use to ninja on guard duty and those infiltrating a secure site. A ninja will use this skill when listening to seemingly sleeping guards and guests. If he detects one who is breathing wrong, he can take steps to capture or silence the faker. Likewise, a ninja can use this skill to convince an intruder that he is truly asleep, so that he can creep up on the intruder from behind when his back is turned.

Acting proficiency can convey the ability to feign sleep, but the Acting check is made

at a –4 penalty instead of the standard –1.

**Giant Kite Flying:** This proficiency is of use only to characters who intend to fly the unusual items called hito washi (human eagle) and yami doko (man-sized kite). It is an expensive skill and difficult to master, so there are very few practitioners. Without this proficiency, a character trying to use a giant kite is certain to crash and do himself great harm, if not kill himself. Even with this proficiency, the character is very likely to do so.

**Hold Breath:** This proficiency helps a character hold her breath for extended periods of time. (See the rules in the *Player's Handbook*, Chapter 14, for the amount of time a character can normally hold her breath.)

With Hold Breath proficiency, a character can hold her breath for half her Constitution score in rounds (rounded up). If the character is exerting herself, this time is halved (again rounding up). When attempting to hold her breath beyond this time, the character rolls the usual Constitution check each round. The first check has no penalty, but each subsequent check takes a cumulative –1 penalty. Once a check is failed, the character must breathe; if she cannot reach air, she dies.

**Information Gathering:** This proficiency, introduced in *The Complete Thief's Handbook*, represents the ability to gather information from the underworld, most commonly about roguish activities and personalities. A character with this proficiency, in appropriate circumstances, will be aware of any major rumors circulating among the lowlife of an area. With a successful proficiency check, he can gather specific information about a person or place. (The DM must decide how specific the information is.)

The following modifiers may adjust the proficiency check:

• Other characters' reaction adjustments (based on Charisma) benefit or penalize the roll.

• Thieves' guild members receive a bonus of +2; they have more contacts (and better-informed ones) than free-lancers.

• A character outside his own territory—usually his home city—suffers a –3 penalty to his check. This penalty can be worsened in territories very different from the character's, due to differences in language, culture or race.

Whenever a proficiency check is required for Information Gathering, the character must invest a small amount of money for bribes to avoid an additional –3 penalty. A total of 1d10 gp is typical for bribes, and is lost whether or not the desired information is learned. The character can continue his Information Gathering the next day, spending more money and making another proficiency check. The DM is free to increase the cost of using this proficiency as suits the situation or campaign.

**Night Vision:** This proficiency improves a character's ability to see in low-light conditions. It is not equal to infravision but is still useful.

To use his Night Vision, the character must spend five rounds in the type of light he will be moving or waiting in. Until he has spent that amount of time in the dark, this proficiency just does not work. (However, the character can be doing other things while letting his eyes adjust, so long as these other tasks do not expose him to varying light conditions.)

Once his eyes have adjusted, the character can use his Night Vision at any time. Whenever he looks at something, he must make a Night Vision proficiency check. With a successful check, the character's Visibility Ranges (from the *Player's Handbook*, Chapter

13) are doubled in the following conditions: Fog (dense or blizzard), Fog (moderate), Night (full moon), Night (no moon), Twilight. Thus, a character under a full moon at night would be able to spot movement at 200 feet rather than at 100 feet.

If the character with this proficiency is exposed to a change in illumination—such as by having a fireball go off within 500 feet or by having a torch or lamp waved in his face—his eyes are dazzled. His Night Vision is gone and cannot be regained until the character has again spent five rounds letting his eyes adjust.

**Observation:** This proficiency, introduced in *The Complete Thief's Handbook*, gives characters exceptionally acute powers of observation with all five senses. The DM may ask for a proficiency check (or secretly roll one) whenever there is a subtle clue that the character might otherwise overlook. The DM may also allow characters with Observation proficiency to increase their chance of finding secret or concealed doors by 1 in 6.

**Quick Study:** This proficiency allows a ninja to temporarily learn enough about a skill, a job, or an area of scholarship to pass as someone who belongs to a related profession.

When using this proficiency, the ninja spends one week (eight hours a day) studying the skill she wishes to learn. At the end of the week, the character has a working knowledge of the field studied. Over the next several days, she will be able to pass as a practitioner of that skill, though not as an expert.

When she has completed his study and must utilize the skill, the character makes a normal proficiency check with an additional –3 penalty. One week after the character has completed her study, she suffers a –2 penalty because she has forgotten some details of the skill. Each week thereafter, she takes another cumulative –2 penalty.

This proficiency will not allow a character to demonstrate an expert level of ability with the skill being simulated. If the character undertakes a task that, in the DM's estimation, calls for an especially broad or deep knowledge of the subject, the DM can decide that the character cannot perform the task. The character can then make a normal Intelligence check; success means that she realizes that she's in over her head and cannot succeed.

It is not possible to spend extra nonweapon proficiency slots on Quick Study to improve the roll. However, it is possible to buy the proficiency more than once in order to study two skills per mission.

**Style Analysis:** This specialized proficiency gives the character knowledge about (not skill in) armed and unarmed combat. After watching someone fight for at least one round, a character with this proficiency can make a Style Analysis check to learn some facts about his subject's fighting style.

If the character makes his check by the given amount, he learns the facts following that number.

| | |
|---|---|
| 0 | The general style used (e.g., karate, kenjutsu, fencing, etc.). |
| 2 | How good the practitioner is (e.g., a basic student, an expert, a grand master of the style, etc.). |
| 4 | Which school of the style is being used (e.g., Odo family sumo wrestling). |
| 6 | Superficial or transitory weaknesses that the practitioner is currently exhibiting (such as favoring an injured leg). The character with Style Analysis receives a +2 on all attack rolls when fighting the practitioner (unless the practitioner switches |

styles). The +2 wears off after one day.

8 Who the practitioner's teacher probably was (e.g., Odo Kusuke).

10 General weaknesses in the practitioner's learning (such as a tendency to favor left-side attacks over right-side ones). The character with Style Analysis receives a +2 on all attack rolls when fighting the practitioner. The +2 wears off after one year.

Naturally, there are limits to what the character can learn even at the best levels of success. For example, he cannot learn the true identity of a teacher who is not commonly known, though he might be able to identify a style as being the same as another character's, thus inferring a common teacher.

**Toxicology:** In the hands of the ninja, proficiency in Herbalism is bent toward knowledge of knockout drugs and poisons. A Toxicologist knows more about such drugs than an Herbalist with a similar Intelligence score (hence the lack of penalty), but will not know anything about other types of chemical compounds.

**Underclass:** This proficiency imparts an understanding of the way the underclass—the combination of poorer classes and criminal elements—works in a society. The character with this proficiency can roll an Underclass check to learn things about the underworld of any community he visits. The DM should assign time and check penalties based on cultural differences and the sensitivity of the information the character seeks. Attempting to buy an illegal weapon would take about an hour and result in a check penalty of 0 or –1. Looking for the secret hideout of the local master of crime might take weeks and would impose a penalty of –8 or worse.

**Voice Mimicry:** This proficiency, introduced in *The Complete Thief's Handbook*, is the art of convincingly imitating the voices of others. It is a demanding skill, requiring intense training of the vocal cords.

A character with Voice Mimicry proficiency can imitate any accent she has heard. Success is automatic, but if people who themselves speak in that accent are the character's listeners, a proficiency roll is required (with a +2 modifier).

To imitate a specific person's voice, the character must be familiar with that voice. A proficiency check determines if the imitation is detected, with modifiers based on the listeners' knowledge of the voice being mimicked. Success is certain if the listener has never heard the original voice. There is no modifier to fool an acquaintance of the original speaker, but the roll to fool a friend of the subject is penalized at –2. The penalty is –5 to fool a close friend of the subject, and –7 to fool someone who has had close contact with the person for years (a parent or spouse).

When Voice Mimicry proficiency is used in conjunction with the Disguise proficiency, the decision on which proficiency to check first depends on whether the character is first seen or heard. If the Disguise proficiency check is rolled first and is successful, the subsequent Voice Mimicry check receives a +5 modifier. (The listeners have already accepted the character's appearance, so they are less likely to doubt the voice.) If the Disguise check fails, it doesn't matter how good the Voice Mimicry is. If the Voice Mimicry check is rolled first and is successful, the subsequent Disguise check receives a +1 modifier.

**Water Walking:** This proficiency allows the character to correctly use mizugumo, the special pontoons that ninja use to walk across still water surfaces. The ninja must make a proficiency check each round. An unsuccessful check means the ninja falls into

the water with a big splash.

## Martial Arts

In a normal AD&D® game campaign setting, all characters know how to punch and wrestle. (See the *Player's Handbook*, Chapter 9.)

In a campaign based in an Oriental setting, the characters do not know mere punching and wrestling; they know martial arts.

These rules, introduced in *The Complete Fighter's Handbook*, allow your character to be proficient (or even a specialist) in eastern-style martial arts. These rules work like the existing punching and wrestling rules, but constitute a whole new set of maneuvers and tactics a skilled character can use in combat.

The martial arts described here aren't any specific real-world fighting style; they're a combination of generic martial-arts maneuvers.

### Martial Arts Results

Martial arts combat occurs when a character attacks with his bare hands, feet, or even head. No weapons are used, although a character holding a weapon in only one hand can attack with his weapon in one round and with his martial arts skill in the next.

The damage from any bare-handed martial arts attack is broken into two parts: 25% of the damage from the attack is normal damage; the remaining 75% is temporary damage. (See the *Player's Handbook*, Chapter 9, for a discussion of temporary damage.)

A character with martial arts skill makes a normal attack roll against the normal Armor Class of the target. (An armored attacker suffers the penalties from Table 57: Armor Modifiers for Wrestling, in the *Player's Handbook*.)

If the attack roll is successful, consult Table 16, using the original, unmodified die roll to determine the martial arts maneuver accomplished. The attacker may add any bonus for Strength to the damage done by the blow.

If, for example, the character rolls a 13 to hit, the result is a vitals punch doing 2 hp damage (plus the attacker's Strength bonus for damage).

Table 16 replaces the Martial Arts Results Table in *The Complete Fighter's Handbook*. It is arranged so that better blows result in more damage.

### Table 16: Martial Arts Results

| Attack Roll | Martial Arts Maneuver | Damage |
|---|---|---|
| 19—20 | Head Kick | 4 |
| 17–18 | Head Punch | 3 |
| 15–16 | Vitals Kick | 3 |
| 13–14 | Vitals Punch | 2 |
| 11–12 | High Kick | 2 |
| 9–10 | Side Kick | 2 |
| 6–8 | Body Punch | 1 |
| 3–5 | Low Kick | 1 |

| | | |
|---|---|---|
| 1–2 | Graze | 0 |

In an Oriental campaign, do not use the "%KO" column that appears with the equivalent table in *The Complete Fighter's Handbook*. Instead, knockout chances are covered by the Advanced Martial Arts rules under "Stunning and Incapacitating."

## Specializing in Martial Arts

Characters can specialize in martial arts by spending a weapon proficiency slot on the skill. Ninja, shinobi, and other fighters can specialize in martial arts regardless of restrictions on weapon specialization based on class or kit. No character is required to specialize in martial arts.

Note: Campaigns using the Advanced Martial Arts rules (described later) should not also use these specialization rules.

A martial arts specialist gains the following benefits:

- +1 bonus to all attack rolls with martial arts;
- +1 bonus to all damage with martial arts;
- +1 chart bonus with all martial arts attacks;
- One additional martial arts attack per combat round. The character may not hold anything in either hand to gain this benefit; and
- The character may pull the attack, not causing any damage, and may also refuse to do the +1 hp damage bonus for specialization.

It is possible for some types of ninja or other characters to continue to improve their martial arts abilities beyond the values given previously. This option is available to only single-class fighters, fighting-monks (from *The Complete Priest's Handbook*), and ninja with the Shadow Warrior kit.

A character who continues to devote weapon proficiency slots to martial arts after the initial specialization gets the following benefits. For each additional slot devoted to martial arts, the character gains:

- +1 bonus to all martial arts attack rolls;
- +1 bonus to all martial arts damage; and
- +1 chart bonus with all martial arts attacks.

The chart bonus allows the character to affect the location of the attack. When a martial arts specialist makes an attack, he can accept the location indicated in the middle column of Table 16, or adjust it up or down the chart by a number of lines equal to the chart bonus. For example, if a martial arts specialist hits with a roll of 14, the indicated blow is a vitals punch. By using the +1 chart bonus, the martial artist can change that blow into a vitals kick for more damage, or a high kick if some other effect is desired.

## Mixed Campaigns

In campaigns based around an Oriental culture, characters start play knowing martial arts.

In campaigns based around a more mainstream or western culture, characters start play knowing punching and wrestling.

In campaigns featuring characters from a mixture of backgrounds, each character

should start play with the type of unarmed combat appropriate to his culture. The character, if given an opportunity, can later learn an unarmed combat style originating in a different culture, and even specialize in it.

It takes a long time to learn a combat style. For game purposes, consider that it takes a year of average effort and devotion to learn martial arts at the basic (proficient) level and four years of average effort and devotion (plus reaching the 4th experience level or above) to specialize in martial arts, the equivalent of a black belt.

Any character can specialize in one unarmed combat style (punching, wrestling, martial arts). Single-class warriors can specialize in more than one.

## Advanced Martial Arts (Optional)

These rules are adapted from guidelines originally presented in Oriental Adventures. The DM is not required to allow the use of these rules, but they can expand character options and make for more colorful campaigns.

### Prerequisites to Learning Martial Arts

Learning an advanced martial art is like learning any other proficiency, with some important exceptions.

Martial arts styles are powerful abilities that require the expenditure of many proficiency slots to learn well. It takes only one slot to learn a specific art at its basic level, but it can take a character's entire stock of slots to learn an art at a very advanced level.

A character can learn any element of an advanced martial art by expending either a weapon proficiency slot or a nonweapon proficiency slot on it. A character learning a lot of martial arts elements could end up spending many weapon proficiencies and nonweapon proficiencies on it.

A character wishing to learn advanced martial arts must first know basic martial arts. Characters originating in an Oriental culture are assumed to have proficiency in basic martial arts, but foreigners must spend a proficiency slot to learn basic martial arts before entering advanced study.

Once that condition is met, the character must find a master to study under. A ninja receives training from childhood in the clan's special maneuvers and weapons but must seek out a master on his own if he desires to go beyond his clan's specialties. A Lone Wolf ninja who desires further training must also find a master to study with.

### Finding a Master

Finding a master is not necessarily an easy task. Many masters regard their skills as valuable secrets to be taught to only a select few. Many a style has disappeared because the master refused to reveal his art. Most masters do not advertise or even display their skill. They feel that to do so would be proud and boastful, characteristics that are undesirable in a master (and, incidentally, may incur the wrath of the gods). For many, the ultimate goal of training is to avoid having to use one's skills. Others feel that their art can be learned only in the most tranquil and secluded surroundings, deep in mountain

forests and the like. Such men seldom appear in civilized lands.

Politics are another reason masters can be hard to find. Conquered peoples may be forbidden to practice their arts lest they become troublesome and rebellious. Powerful temples (often the center of such training) may be destroyed by nervous emperors, warlords, or daimyos. The master and his students are forced to scatter with the winds and many disappear without a trace. In such cases, they may join or form secret societies, clandestinely meeting on rare occasions to train.

Not all masters are such recluses, or the skills of martial arts would long since have died away. A large town or city may have a school run by a master. If his skill is well known, potential students will travel great distances to study under him. As characters adventure in the campaign, they will undoubtedly hear of these schools or may even learn the whereabouts of one of the more secretive masters of the martial arts.

## Training Under the Master

After a character has been accepted by a master, the DM should determine the depth of the master's knowledge of his style.

**Basics:** A master automatically knows the basics of his style (which provide the Armor Class and other basic elements).

**Maneuvers:** The DM determines how many special maneuvers are available in the style (see Table 16) and rolls the smallest die that is equal to or greater than this number. The result is the number of maneuvers the master is proficient in. Masters are under the same restriction as characters for the order in which they learn special maneuvers, as discussed later.

**Weapons:** The DM determines how many weapons (if any) are used by the style, then rolls the smallest die that is equal to or greater than this number. (If the style uses five weapons, the DM rolls 1d6.) The number rolled is the number of style weapons the master is proficient in (and can teach).

Once these facts are determined, the master's abilities are known, and these are the only things the master can teach. The master never increases in knowledge unless the DM rules that special circumstances dictate otherwise.

## Learning the Style

Once the character has been accepted by a master, he must remain and study under him for at least one month.

At the end of this time, the character spends one proficiency slot and gains the basics of the style (Armor Class, number of attacks, and basic damage). He does not gain any of the special maneuvers or weapons that may be taught by the style.

After the initial month's training, the character does not need to remain with the master constantly; he is free to travel and adventure. However, he must practice his style for at least one hour a day and must spend an average of six hours per week working with his master. There can be some variance in his schedule, so long as the character spends 24 hours of study with his master per month. Characters who do not fulfill this obligation cannot add special maneuvers and weapons.

To learn the special maneuvers and weapons of a particular style, the character must

spend additional proficiency slots. For each proficiency slot expended, the character can add one special maneuver or weapon proficiency from the style. This does not mean the character instantly knows how to perform the maneuver or use the weapon, but assumes that he has been practicing prior to gaining the maneuver or weapon proficiency.

No more than two proficiency slots can be expended on a single martial arts style per experience level.

Special maneuvers must be learned in order of difficulty. All difficulty 1 maneuvers (see Table 19) must be learned before the character can progress to difficulty 2 maneuvers, and so forth.

When a character has learned all the knowledge the master possesses, there is no point in continuing to study under this master. The character can now go off in search of another master—one who knows more about the style or one who teaches a different style.

### Pre-Campaign Learning

The DM can allow the character to have learned some advanced martial arts before entering play in the campaign.

In such a case, the DM allows the player to purchase those elements of the martial art he will allow at the start of play. However, whatever the character buys is the limit of what his master could teach him. Once the character enters play, he will have to find a new master if he wants to further his martial arts training.

## Multiple Styles

Player characters can learn more than one style of martial arts at a time. This requires the character to find more than one master, have sufficient available proficiency slots, and possess great dedication.

When fighting, the character with multiple styles can change his style from round to round. When using one style, he gains all the abilities he possesses of that style, but no abilities of any other style he knows. He can use only the special maneuvers of the style he is currently using (unless they are special bonuses that are constantly in effect).

### Style Characteristics

Under these rules, the martial arts are classified by six different characteristics. Items 1-4 are called the basics.

1. Number of Attacks
2. Damage
3. Armor Class
4. Principal Attack Form
5. Special Maneuvers
6. Allowed Weapons

A combination of these six characteristics is called a style. There can be as many styles as there are possible combinations of these elements. Each style is different and must be learned separately.

Styles are often given descriptive or poetic names, based on how the style works, its appearance when used, or the source of its inspiration. There are animal names (Snake Style, Monkey Style, Tiger Style, etc.), poetic names (Eight Drunken Fairies), and descriptive names (Empty Hand, Springing Legs, Nine Fists, etc.).

In addition, styles are identified by the way they are used. Some are highly defensive, relying on the inner power of the user to overcome the opponent. Others are aggressive, stressing form and channeled power in hard and sudden attacks.

Table 17 lists some common styles and their characteristics.

## Explanation of the Chart

**#AT:** Add this bonus to the character's number of attacks per round when using this martial arts style—but only unarmed. If the character uses the style with a weapon, he receives only his normal number of attacks per round.

**Dmg:** This is the base damage done when using the style unarmed.

**AC Mod:** Add this bonus to the character's Armor Class when using the style. The bonus applies whether or not the character wears armor. It represents his ability to dodge and block attacks that someone with lesser training cannot counter. In some circumstances, however, the AC bonus doesn't help; see "Unarmed vs. Armor" later this chapter.

**Principal Attack:** This is the usual attack form of the style. When the Principal Attack of the style is "foot," a majority of attacks made with the style will be kicks. However, the style may include any other sort of attack.

**Special Maneuvers:** These special maneuvers, described later, are associated with the style. Each special maneuver costs one weapon proficiency slot to learn.

**Weapons Allowed:** The listed weapons may be used in combination with the special maneuvers of the style. For example, if a karate practitioner knows the iron fist maneuver and has knowledge of kama use, he can perform the iron fist maneuver with his kama. It costs one weapon proficiency slot to learn to use one entire tight group of allowed weapons with the special maneuvers of a martial arts style.

### Table 17: Common Martial Arts Styles

| Name | #AT | Dmg | AC Mod | Principal Attack | Special Maneuvers | Weapons Allowed (Tight Groups) |
|---|---|---|---|---|---|---|
| Aikijutsu | +1 | 1pt | –3 | Body | Lock 1,2,3<br>Block 1,2,3,4<br>Movement 1,3<br>Throw 1,2,3,4<br>Mental 1,2,3,4,5 | Staves<br>Fencing<br>Blades, Oriental<br>Blades, Medium Blades |
| Atemi | +1 | 1d4 | –1 | Hand/Foot | Block 1,2 | Clubbing |

| | | | | | | |
|---|---|---|---|---|---|---|
| Weapons, Staves | | | | | | |
| | | | | | Movement 1<br>Push 3<br>Strike 1<br>Vital Area 1,2,3 | |
| Jujutsu Blades, Oriental | +1 | 1d2 | –2 | Body | Lock 1,2,3,4 | Fencing |
| Medium Blades | | | | | Throw 1,2,3,4 | Blades, |
| | | | | | Movement 1,3<br>Vital Area 1,2<br>Mental 1,2,3 | |
| Karate Weapons | +1 | 1d4 | –1 | Hand | Strike 1,2,3 | Karate |
| | | | | | Kick 1<br>Block 1,2<br>Movement 1<br>Mental 1,4 | |
| Kung fu Group of | +1 | 1d3 | –2 | Hand | Lock 1 | Any Tight |
| Melee | | | | | Strike 1,2<br>Kick 2<br>Block 1,2,3,4<br>Mental 4,6 | Weapons |
| Ninjutsu Oriental | +1 | 1d2 | –2 | Legs | Kick 1,3 | Short Blades, |

| Tae Kwon Do Blades, Staves, | +1 | 1d4 | –1 | Foot | Kick 1,2,3 | Medium |
| Weapons | | | | | Strike 1 | Clubbing |
| | | | | | Throw 4<br>Block 1,2<br>Movement 4 | |

## Explanation of the Styles

All the styles listed in Table 17 are real-world martial arts.

**Aikijutsu:** This Japanese style dates back several centuries; it is one of the foundations of modern aikido. Though it includes more aggressive blows and techniques than aikido, it is still more a defensive than offensive style, principally concerned with throws and evasion. In some schools, sword and staff techniques are taught.

**Atemi:** This art was derived from the much older Chinese *ch'uan-fa* arts by the warrior caste of Japan. A technique for attacking vital points of the opponent, its usefulness faded as the Japanese sword arts developed. To the modern martial arts student, *"atemi"* is a generic term for certain types of blows.

**Jujutsu:** This art was systemized from earlier fighting styles in the sixteenth century. Though the modern form, judo, is principally thought of as a wrestling art, older jujutsu forms included more strikes, chokes, and even weapon techniques. It was a fall-back art for the warrior temporarily separated from his principal weapons.

**Karate:** This style, under the name of *te* ("hand"), was developed in Okinawa over a period of many centuries. This process was accelerated after the 17th-century conquest of Okinawa by Japan and subsequent laws banning weapons and martial arts. Te's development incorporated use of ordinary farming implements, such as the threshing nunchaku and scythelike kama, which were not banned. *Karate* ("empty hand") was not popularized in Japan until the 20th century, but it is not too much of a stretch to assume that a Japan-like fantasy culture will have a style like karate.

**Kung fu:** Systemized study of the fighting arts dates back into the mists of history in China, but legend attributes much of the origin of Chinese martial arts to Bodhidharma, a Buddhist monk from India. In the sixth century of the common era, it is said, he came to Shao-lin temple in China and taught his Indian style of boxing, which became the basis for many of the kung fu styles.

**Ninjutsu:** The martial art style of the ninja developed gradually in parallel to the ninja's espionage art. It is a deceptive style with hard and soft elements, a style in which it is as important to be able to throw down an opponent and run away as it is to damage him. A character proficient in Style Analysis can make a nonweapon proficiency check to determine that a ninja is using ninjutsu. It is therefore useful for a practitioner of ninjutsu also to know some other style, such as karate, at least at a basic level. That way, if forced into unarmed combat when in the presence of friends who are not ninja, the ninja character is less likely to give himself away.

**Sumo:** One of the most ancient forms of Japanese combat, sumo wrestling's origins vanish into Japanese mythology. Legend attributes the first sumo match to a fight between a mortal hero and a demigod. A more historical account describes a type of sumo match taking place in the first century of the common era. Though the goal of modern sumo calls for the opponents to try to push one another out of a ring, older forms included hand strikes, kicks, and head butts. The modern form still includes a painful and distracting slapping technique.

**Tae Kwon Do:** This Korean martial art was originally derived from Chinese techniques and systemized in the seventh century of the modern era. It is a hard style,

emphasizing punching and kicking.

Naturally, it is a gross oversimplification to lump all styles of kung fu, or karate, or most of the other styles described here under one set of maneuvers. A DM who knows enough about a martial arts style to object to the way it has been presented here is free to develop his own set of guidelines for it, using the rules presented next.

## Creating a New Style: Basics

In addition to the styles listed previously, the DM can create new styles for use in his campaign. These should be styles unique to the campaign world—some common, some mysterious and little known.

The DM creates a style by choosing its general characteristics, special maneuvers, and allowed weapons.

### Hard, Soft, or Hard/Soft

The DM first decides whether the style is hard, soft, or a combination of the two.

Hard styles emphasize the use of the muscles and bones for power. They usually use direct movements and are generally offensive, stressing the attack.

Soft styles rely more on the inner power of the character to provide the necessary energy, although they too require conditioning of the muscles. Their movements are more fluid and circular and are generally considered more defensive. These movements divert the attacker, using his own force against him, responding only after the enemy has committed himself. The training is more mentally oriented, showing the student how to focus and use his inner power.

Styles that combine both hard and soft aspects attempt to use the best practices from each. Circular and gentle defensive movements are combined with swift and direct attacks. Physical training is balanced with mental training.

### Principal Method

Next, the DM must choose the principal method, the fighting method most commonly used by the style. When a character attacks, he uses the principal method of the style more often than not.

Each principal method describes the most common means of attack. Those with kicking method use many kicks; those with throwing rely on grappling and leverage, etc.

However, every style incorporates moves from other methods, because reliance on a single form would certainly mean defeat.

### Martial Style Combinations (Basics)

Table 18 lists all the different choices available for creating the basics of a style. As the DM makes selections, his choices determine the Armor Class, number of attacks, damage, and principal attack form used most commonly by the style.

### Table 18: Martial Style Combinations

| Form | #AT Mod | AC Mod | Dmg Mod |
|---|---|---|---|
| Hard | +1 | –1 | 2 |
| Soft | +1 | –3 | 0 |
| Hard/Soft | +1 | –2 | 1 |

| Principal Method | Dmg Mod | Principal Attack |
|---|---|---|
| Block | 1 | Hand |
| Kick | 2 | Foot |
| Lock | 1 | Body |
| Movement | 1 | Legs |
| Push | 1 | Hand |
| Strike | 2 | Hand |
| Throw | 1 | Body |
| Vital Area | 2 | Hand/Foot |
| Weapon | By Weapon | Hand/Arm |

**Form/Principal Method:** The DM must select one form and one principal method for each style.

**#AT Mod:** All martial arts styles add 1 to the number of attacks per round the character can perform when fighting unarmed. If he uses the martial arts style with a weapon, he receives only his usual number of attacks.

**AC Mod:** Add this modifier to the character's Armor Class.

**Dmg Mod:** Total the Dmg Mod from the form and the principal method. Round this number up to the nearest die size used in the game. Thus, a total Dmg Mod of 5 equals 1d6; a total of 4 equals 1d4. This die roll constitutes the basic amount of damage done when fighting unarmed in the style.

**Principal Attack:** This part of the body is most commonly used with the listed principal method. Kicking relies on the feet, while throwing makes use of the whole body. So long as a character has the listed body part unbound or free to move, the character can still attack effectively with that principal method.

### Examples of Martial Arts

The basics of the martial arts described earlier were built this way:

**Aikijutsu:** Soft: #AT +1, AC –3, Dmg Mod 0). Throw: Dmg Mod 1, Body.

**Atemi:** Hard: #AT +1, AC –1, Dmg Mod 2. Vital Area: Dmg Mod 2, Hand/Foot.

**Jujutsu:** Hard/Soft: #AT +1, AC –2, Dmg Mod 1. Lock: Dmg Mod 1, Body.

**Karate:** Hard: #AT +1, AC –1, Dmg Mod 2). Strike: Dmg Mod 2, Hand.

**Kung fu:** Hard/Soft: #AT +1, AC –2, Dmg Mod 1. Strike: Dmg Mod 2, Hand.

**Ninjutsu:** Hard/Soft: #AT +1, AC –2, Dmg Mod 1. Movement: Dmg Mod 1, Legs.

**Sumo Wrestling:** Hard/Soft: #AT +1, AC –2, Dmg Mod 1. Push: Dmg Mod 1, Hand.

**Tae Kwon Do:** Hard: #AT +1, AC –1, Dmg Mod 2. Kick: Dmg Mod 2, Foot.

## Creating a New Style: Weapons

Most styles incorporate the use of melee weapons. However, not all styles use all weapons. The weapons that can be used with a style are listed in the "Weapons Allowed" section of Table 17.

In order to use a weapon with a martial arts style, a character must spend a weapon proficiency slot on the tight group that includes that weapon. Earlier, the character must have spent a slot for proficiency with the weapon if he wants use the weapon tight group with his martial arts style.

When the character spends his proficiency slot to use the tight group of weapons with his style, he can use any weapon he knows from the group with any special maneuver that permits it. The description of each special maneuver indicates the weapons that can be used with that maneuver

When the character uses a weapon with a special maneuver, he may choose whether he uses the damage for the maneuver or the damage for the weapon. Normally he chooses the one that is higher. In addition, he receives any benefits from the special maneuver. Additionally, on the rare occasions when it matters, the character using a weapon with his martial arts style gains any benefits arising from the size of the weapon and may suffer penalties for the speed factor of the weapon.

The special maneuvers listed under "Principal Method: Weapon" can be used only with weapons.

## Creating a New Style: Special Maneuvers

Special maneuvers are actions and abilities that require intensive study and skill to learn. In return, they give the user greater-than-normal results. Some maneuvers are actions that the character can attempt during the course of a fight (flying kick, one finger push, etc.). Others are constant abilities that, once learned, are always in effect (ironskin, blind-fighting, etc.).

Combat maneuvers are risky; failure often leaves the character in an exposed or dangerous position. A combat maneuver costs the character one or more of his attacks for the melee round. A movement maneuver counts as movement, preventing the character from making any attack that round (unless the maneuver notes otherwise).

### Table 19: Special Maneuvers

| Maneuver | Effects |
|---|---|
| **Principal Method: Block** | |
| 1. Basic Parry | Blocks 1 melee attack |
| 2. Parry All | Costs 2 attacks; blocks all melee attacks |
| 3. Grappling Block | Blocks 1 melee attack; pins weapon |
| 4. Arrow Parry | Costs 2 attacks; blocks all missile attacks |
| **Principal Method: Kick** | |
| 1. Circle Kick | Add 1d2 hp to basic damage |
| 2. Flying Kick | Leap; add 1d4 hp to basic damage |
| 3. Backward Kick | Kick person behind; basic damage |
| **Principal Method: Lock** | |

| | |
|---|---|
| 1. Choke Hold | Takes +1 round; victim passes out |
| 2. Locking Block | Pins weapon/limb; +4 to hit with other attacks |
| 3. Incapacitator | Add 1d4 hp to basic damage; limb useless |
| 4. Immobilizing | Victim immobilized |
| **Principal Method: Movement** | |
| 1. Feint | Costs extra attack; +3 to hit |
| 2. Prone Fighting | Suffer no kneel/sit/prone penalties |
| 3. Immovability | Save vs. paralyzation to not budge |
| 4. Leap | Leap great distances |
| 5. Speed | Check Dexterity; result/4 extra attacks |
| 6. Slow Resistance | Immune to slow spells |
| **Principal Method: Push** | |
| 1. Concentrated Push | Push foe 1'/level; knockdown if push over 3' |
| 2. Sticking Touch | While touching, +2 to hit, –2 to AC |
| 3. One Finger Push | Concentrated push at range |
| **Principal Method: Strike** | |
| 1. Iron Fist | 1d6 hp damage plus Strength bonuses with blows |
| 2. Crushing Blow | Break inanimate objects; 1 attack/round |
| 3. Eagle Claw | 1d8 hp damage plus Strength bonuses; 1 attack/round |
| **Principal Method: Throw** | |
| 1. Fall | Take half damage from falls |
| 2. Instant Stand | Stand quickly (negates 1-round penalty) |
| 3. Hurl | Throw target 1d4'; add 1d4 hp damage |
| 4. Great Throw | Throw target 1'/level; x2 base damage |
| **Principal Method: Vital Area** | |
| 1. Pain Touch | Victim –2 to hit, +2 to AC, for 1d3 rounds |
| 2. Stunning Touch | Save or be stunned for 1d4 rounds |
| 3. Paralyzing Touch | Save at –2 or be paralyzed for 2d4 rounds |
| 4. Distance Death | Pain, stunning, paralyzation, or x2 base damage at range |
| **Principal Method: Weapon** | |
| 1. Weapon Breaker | Automatically breaks normal weapons |
| 2. Steel Cloth | Wield 6'–10' cloth as normal spear |
| **Mental and Physical Training** | |
| 1. Meditation | 1 hour meditation=2 hours sleep |
| 2. All-Around Sight | Aware of attacks from all around |
| 3. Mental Resistance | +2 on saving throws against mental attacks |
| 4. Ch'i Attacks | Can hit as if a magical weapon |
| 5. Blind Fighting | Only –1 when fighting in darkness |
| 6. Ironskin | –2 to AC when not wearing armor |
| 7. Levitation Float | 5'/round/experience level |

## Principal Method Lists

Each special maneuver belongs to a list corresponding to one of the principal methods of fighting. For example, the principal method Kick has one set of special maneuvers,

while that of Weapons has another.

In addition to the maneuvers grouped under the principal method, there is the additional category of Mental and Physical Training. These special maneuvers can be learned in any style through the practice and discipline of the training.

## Number of Maneuvers In a Style

The DM determines the number of special maneuvers taught by the style. He can choose any maneuver from any of the lists, with one restriction: There cannot be more maneuvers from any list than there are from the list corresponding to the principal method of the style.

There should be no fewer than six special maneuvers in a martial arts style, and more than 15 is not recommended; the style becomes too unwieldy and characters have little chance of learning a majority of the special maneuvers.

When choosing maneuvers from one of the principal method lists, the DM does not have to choose a consecutive sequence starting at the #1 maneuver and progressing numerically from there. For example, when choosing from the Mental and Physical Training group, he might choose #1, #3, #5, and #6 for his martial arts style.

## Order of Learning Maneuvers

The special maneuvers of each method are ranked according to the difficulty of each maneuver. The lower the number of the maneuver, the easier it is to learn and execute.

Characters must learn available maneuvers from a principal method list in the order in which they are presented.

*Example: Kazuhiro is studying ninjutsu, which incorporates the special maneuvers Kick 1 (circle kick) and Kick 3 (backward kick). Before learning the backward kick, Kaz must learn the circle kick. (He does not have to learn Kick 2, the flying kick, and cannot learn it, unless he studies a different martial arts that includes this maneuver.)*

This restriction still allows characters learning the same martial art to develop very personal, individual forms of the art.

For example, Akira has decided to concentrate on the principal method of ninjutsu, learning all the movement maneuvers before learning anything else.

Koichi, however decides to learn all the basics first, picking up the maneuvers rated "1" before progressing on to any rated "2." Koichi will not have the movement expertise of Akira but will have a much better grounding in the overall art.

## Principal Method: Block

**Basic Parry:** The basic parry maneuver prevents melee attacks from hitting the martial artist. It does not work against missile attacks.

A character can perform the basic parry if he has not used both his martial arts attacks for that round. Even if his opponent has initiative, the martial artist can announce that he's using one of his attacks to parry. The martial artist rolls an attack against his opponent, taking into account all normal adjustments to his opponent's AC and the "Unarmed vs.

Armor" conditions described later this chapter. If the attack hits, the martial artist has parried the first blow struck at him this round by his opponent.

**When the Attack Roll Fails:** The incoming attack hits.

**Weapons Allowed:** Any. Characters using sai or jitte weapons receive a +2 bonus to hit with the basic parry maneuver.

**Parry All:** The parry all maneuver is a more advanced form of the basic parry. It requires two of the character's attacks for the round (the total number of attacks for most characters). With this expenditure, the martial artist gets to roll a block against every melee attack aimed at her this round, so long as she is aware of the attacks. She makes a separate attack roll against each oncoming blow.

**When the Attack Roll Fails:** The opponent's blow hits.

**Weapons Allowed:** Any. Characters using sai or jitte weapons receive a +2 bonus to hit with the parry all maneuver.

**Grappling Block:** With this advanced maneuver, the martial artist parries an incoming weapon attack and is able to grab the weapon, making it harder for the attacker to use it against him. If the martial artist is unarmed, the grappling block requires both his hands to perform; if he is armed, it requires his weapon hand.

The grappling block takes one of the martial artist's attacks, just like the basic parry. If it is successful, the martial artist and the attacker both have a grip on the weapon. The grip is never a dangerous one for the martial artist. For example, the grappling block allows the unarmed martial artist to clap the blade of a sword-wielding opponent between his palms, preventing it from striking.

In order to strike the martial artist with the weapon, the attacker must get it free. To do this, the attacker rolls 1d20 and compares the number rolled to his Strength score. If the attacker succeeds in his Strength check, he recovers his weapon. If he loses his roll by 4 or more, he loses his weapon (it is now in the martial artist's hand). Any other result leaves the two combatants still grappling for the weapon. The attacker may make as many Strength checks per round as he has attacks available, and can release the weapon voluntarily at any time.

The martial artist can make further attacks on his opponent with a +2 to his chance to hit, if the grappling block maneuver has left his principal body part free to make the attack. For example, if he used a chain to catch his opponent's attack, and his principal attack method is the kick, he can attack with a leg. But if he used a two-handed sword to catch his opponent's attack and his principal attack method is a fist strike, he has no hands free to attack. Additionally, any other character making an attack against either of the two combatants grappling for the weapon gets +2 to hit.

**When the Attack Roll Fails:** The martial artist has managed to foul his own weapon on that of his opponent. If his opponent can then make a normal attack roll against him—requiring no time and not costing him an attack—the opponent yanks his weapon free, leaving the character disarmed.

**Weapons Allowed:** Any. Characters using chain or rope weapons receive a +2 bonus to hit with the grappling block maneuver.

**Arrow Parry:** With this maneuver, the martial artist is able to parry thrown and missile weapons. This maneuver requires two attacks for the round and applies to all attacks that the martial artist is aware of.

**When the Attack Roll Fails:** The weapon strikes the martial artist.

**Weapons Allowed:** Any. Characters using shields receive a +2 bonus to hit with the arrow parry maneuver.

### Principal Method: Kick

**Circle Kick:** In this dramatic kick, the attacker builds up power and momentum by spinning in a complete circle before landing the kick (usually on the upper body). The maneuver can also be performed as a snap or thrust kick.

A successful kick (requiring a normal attack roll) adds 1d2 hp to the character's normal martial arts damage.

**When the Attack Roll Fails:** As she tries to recover his balance, the martial artist loses the next attack she would ordinarily be allowed. Her Armor Class is worsened by 2 points until the next round.

**Weapons Allowed:** None.

**Flying Kick:** This spectacular kick requires at least 5 feet of running space. The character leaps high into the air (4–6 feet upward, 5–12 feet forward) and leads with a powerful kick to the head or upper body. If the kick connects, the character adds 1d4 hp to the normal martial arts damage.

**When the Attack Roll Fails:** The attacker falls to the ground adjacent to the intended target and must spend one round getting back to his feet (unless he knows the prone fighting or instant stand maneuvers).

**Weapons Allowed:** None.

**Backward Kick:** This seemingly innocuous kick is extremely difficult to master. The character attempts a normal attack at any creature directly behind him, either kicking his foot forward and straight up (like a Radio City Music Hall Rockette), with his toe ending up behind his own head to connect with the enemy, or lashing out straight backward. He does not have to turn around and face his attacker. The kick does normal damage.

**When the Attack Roll Fails:** The attacker suffers no ill effects.

**Weapons Allowed:** None.

### Principal Method: Lock

Locking is the art of gripping an opponent in a way that prevents him from acting: twisting an arm so the joint is locked, applying pressure to choke off breathing and blood flow, etc.

**Choke Hold:** This maneuver teaches the correct way of applying pressure to render an opponent unconscious. To initiate a choke hold, the martial artist must make a successful attack roll. For the maneuver to work as intended, the martial artist must maintain the choke hold until the end of the next melee round. During that time he can take no other action and cannot attack again; he is entirely occupied in gripping and holding his opponent. The opponent can attempt to escape by making a successful attack roll with a –2 penalty. The escape attempt can be tried as many times as the opponent has attacks for the round.

If the opponent fails to escape, he falls unconscious at the end of that round and remains unconscious for 1d3 rounds. During the time the choke hold is in effect, the opponent cannot cry out for help or cast spells requiring verbal components.

**When the Attack Roll Fails:** The attacker suffers no ill effects.

**Weapons Allowed:** Chain weapons, rope weapons, lash weapons, axes (using shafts),

clubbing weapons, flails, karate weapons (using shafts), picks (using shafts), sickles, staves, bladed poles (using shafts), and spears (using shafts) tight groups.

**Locking Block:** This action can be attempted instead of a normal attack. It can be used against unarmed fighters or attackers using melee weapons.

The martial artist makes a normal attack roll. If successful, the attacker has trapped her opponent's weapon, arm, or leg in a scissors arm-lock; the trapped element cannot be used to make attacks. In addition, so long as the opponent is so trapped, the attacker can make other attacks (using the feet only) with a +4 to her chance to hit. The opponent can break the lock by expending an attack and making a normal attack roll for success. This attempt to break free does no damage. The locking block maneuver also causes no damage.

**When the Attack Roll Fails:** When used against an unarmed opponent, an unsuccessful locking block causes no ill effects except for the loss of an attack. However, when used against a weapon, an unsuccessful locking block results in damage to the martial artist: In attempting to make the block, the character is hit by the weapon. She takes normal damage for the weapon, not modified by the Strength bonus of the weapon wielder.

**Weapons Allowed:** medium blades, oriental blades, short blades, chain weapons, rope weapons, lash weapons, axes, clubbing weapons, flails, karate weapons, picks, sickles, staves, and spears tight groups. Characters using sai or jitte weapons receive a +2 bonus to hit with the locking block maneuver.

**Incapacitator:** By gripping the opponent and twisting his joints, the martial artist can render one finger, arm, or leg useless for 24 hours and cause 1d4 hp damage in addition to his normal martial arts damage.

If the incapacitator's attack roll is successful, the maneuver does the damage noted above and the opponent must make a saving throw vs. paralyzation. If he fails the saving throw, the appropriate limb is rendered useless. If he makes the saving throw, the damage remains but there is no paralysis.

Application of a cure wounds or remove paralysis spell will eliminate the paralyzing effects of this attack.

**When the Attack Roll Fails:** The martial artist suffers no ill effects.

**Weapons Allowed:** chain weapons, rope weapons, lash weapons, clubbing weapons, karate weapons, staves, and spears (using shaft) tight groups.

**Immobilizing:** With one hand the martial artist grips and holds an opponent in such a way that the opponent cannot take any action. The martial artist is still able to make attacks (using either his feet or his other hand), and even apply an immobilizing lock on another opponent. A successful attack roll must be made to initiate the immobilization, but the attack does no damage. Immobilized characters can attempt to escape by spending a melee attack to break the hold. However, the chance of success is modified by –6 to the die roll.

**When the Attack Roll Fails:** The martial artist suffers a –4 modifier on his next attack.

**Weapons Allowed:** chain weapons, rope weapons, and lash weapons tight groups.

### Principal Method: Movement

This method requires training to control and position the martial artist's own body—

posture, stance, and reflexes. From this method, students learn the importance of speed, sudden changes of direction, and footwork. It is seldom very offensive, but when combined with other styles creates a dangerous and deadly fighter.

**Feint:** The martial artist begins an attack in one direction and at the last moment changes it to another direction. Or he begins an attack but does not follow through, in order to draw his opponent off balance or make the opponent commit to a futile defense.

The martial artist makes a regular attack but adds the feint, which costs an extra attack and gives him a +3 to hit.

When the Attack Roll Fails: The martial artist's attack does not hit, but he suffers no other ill effects.

**Weapons Allowed:** Any.

**Prone Fighting:** Prepared for any circumstance, the martial artist who knows this special maneuver is able to fight effectively even sitting, kneeling, prone, or supine. This special maneuver requires no time and is always in effect; it applies any time the character is knocked from her feet or falls down. However, the character can perform no other special maneuver (except instant stand) when on the ground. She can still use her weapons and the basic damage from her martial arts style, and suffers no Armor Class penalty for being on the ground.

A character without this skill who fights from the ground is easier to hit than a standing character. Attacks against a kneeling character receive a +1 to hit; against a sitting character, +2 to hit; against a character who is flat on the ground, +4 to hit. The character who is down suffers equivalent penalties to hit when attacking someone who is standing: –1 to hit if the attacker is kneeling, –2 if he is sitting, –4 if he is lying flat. The character who knows prone fighting suffers none of these penalties.

**Weapons Allowed:** Any. Fighters are even trained to use two-handed and long weapons effectively from positions on the ground.

**Immovability:** By carefully positioning his feet and learning to tense and relax various muscles, the martial artist can avoid being knocked down, lifted, or thrown off his feet. Any time an attack would result in one of these consequences, the character is automatically allowed a saving throw vs. paralyzation. If the save is successful, the character remains standing.

**Weapons Allowed:** Any. The character using immovability does not attack with these weapons, but uses them to brace himself. They confer no bonus to his immovability.

**Leap:** The martial artist is able to perform extraordinary feats of springing and leaping by channeling his ch'i, or inner power, mentally making himself as light as a feather.

From a standing start, the character can leap 4 feet into the air and 3 feet forward, plus 1 foot up and forward for each experience level the character possesses. (Thus a 10th-level character with this special maneuver could leap 14 feet into the air and 13 feet forward.) He can also flip in midair to automatically change his facing.

Standing-start leaps do not take an entire melee round, costing instead only one attack allowed during the round. Thus a character could flip over an opponent, land behind him, and execute an attack from the rear with his next melee attack.

From a running start, the character can leap 8 feet upward and 10 feet forward plus 1 foot up and forward for each experience level the character possesses. The character must

have room to run at least 10 feet before making such a leap.

With either a standing start or running start leap, the character must make a normal attack roll vs. AC 10 to land safely. If the roll is successful, the leap is successful.

**When the Attack Roll Fails:** The character leaps the full distance but falls to the ground on landing. See the prone fighting maneuver described earlier for penalties to fighting from the ground.

**Weapons Allowed:** The character can carry any weapon when using the leap maneuver.

**Speed:** The martial artist has developed lightning-fast reflexes and powerful muscles. Once per day, the character can make a Dexterity check. For every four points by which she makes the roll (round fractions to the nearest whole number), she receives one extra attack, which may be used with weapons or martial arts. Such extra attacks last only one round.

*Example: Tamako has the speed ability and a Dexterity score of 13. In the midst of a deadly battle, she makes a Dexterity check and rolls a 4. Her check succeeds by 9 points. The result (rounded) of 9 divided by 4 is 2. In this round only, Tamako gets two extra attacks.*

This special maneuver is difficult and tiring. Once the battle is done, the martial artist must rest one turn per extra attack she has made, or be reduced to half her normal movement until she is able to rest.

**Weapons Allowed:** Any.

**Slow Resistance:** Having developed his body and disciplined his mind, the martial artist is automatically immune to slow effects. This condition is in effect all the time; it does not have to be activated like a combat maneuver.

**Weapons Allowed:** Not applicable.

### Principal Method: Push

Pushing is a soft form of combat, relying on the character's understanding of the forces of motion. Many pushing techniques turn the opponent's own force against him, deflecting his attack, throwing him off balance, or knocking him backward with a single touch. Learning this art takes great mental discipline but does not require great strength.

**Concentrated Push:** The character focuses his inner energy into his hands, giving great results even from a gentle push. On a successful attack roll, the opponent is knocked back 1 foot per level of the martial artist. If the distance is greater than 3 feet, the opponent must make a successful saving throw vs. paralyzation to remain on his feet. If the opponent hits a solid object, he suffers damage as if he had fallen the same distance. Those who know the immovability maneuver can resist being knocked back.

**When the Attack Roll Fails:** For the remainder of the round, all of the martial artist's opponents get a +2 bonus to their attack rolls.

**Weapons Allowed:** clubbing weapons, staves, bladed poles (using shaft), pole spears (using shaft), and spears (using shaft) tight groups.

**Sticking Touch:** The martial artist has so attuned her sense of touch that by lightly placing her hand on an opponent she can follow that person's every move. A normal attack roll must be made, and the touch does no damage. However, so long as the martial

artist remains in contact, she gains +2 on all subsequent attack rolls and her Armor Class improves by 2, because she is able to feel the impending moves of her opponent before they happen.

The touch can be broken only by the opponent moving in a way or at a speed beyond the abilities of the character. Thus, an opponent who knows the leap maneuver can use it to break contact. However, if both combatants know that maneuver, the martial artist can automatically choose to leap at the same time as her opponent, keeping the contact unbroken (unless the opponent's leap is longer than the character's).

**When the Attack Roll Fails:** The touch does not "stick."

**Weapons Allowed:** None; this is an unarmed maneuver only.

**One Finger Push:** This skill requires long and difficult practice. It is said that the student first learns to push a suspended heavy bell with the touch of a single finger. He concentrates then on touching it more and more lightly while making the bell swing even more. Finally, he reaches the point where he can make the bell move without actually touching it. His inner power extends out from his finger and pushes the bell. At this point he has mastered the one finger push.

One finger push gives the martial artist the power of concentrated push without having to touch the target. The character simply concentrates and points his finger at the opponent. The range is equal to 1 foot per character experience level. One finger push requires great concentration and is the only action that can be taken in the melee round regardless of the number of attacks the character can normally make. A normal attack roll must be made. If successful, the opponent is affected as if hit by a concentrated push.

**When the Attack Roll Fails:** The one finger push does not take effect.

**Weapons Allowed:** None; this is an unarmed maneuver only.

### Principal Method: Strike

**Iron Fist:** Through various toughening exercises, the martial artist hardens his hands so much that they feel like steel. The character does 1d6 hp damage from each attack (plus bonuses for Strength) if the principal attack uses the hands. If the principal attack is not the hands, the character does 1d6 hp damage on only one attack per melee round.

**When the Attack Roll Fails:** The blow does not land.

**Weapons Allowed:** Any melee weapon.

**Crushing Blow:** The martial artist is able to shatter or break hard objects-wood, ceramics, and masonry, but not metal—with a blow of the hand. The character can break a half-inch of wood or a quarter-inch of brittle stone per experience level. The DM can modify this based on the shape, hardness, and age of the object. If used against a living target, the character causes normal damage plus hit points equal to half his experience level (rounded down); Strength damage bonuses do not apply. (*Example: An 11th-level character who normally does 1d4 hp damage with his martial arts attack would do 1d4+5 hp damage per crushing blow*.)

The crushing blow requires great concentration and is the only action the character can take in a round regardless of the number of attacks normally allowed. In all cases a normal attack roll must be made. The DM must determine the number needed to hit a stationary object (assigning AC based on its hardness).

**When the Attack Roll Fails:** If the martial artist attempts to strike a hard object (such as stone) and the attack roll fails, he seriously injures his hand, suffering damage

equal to what he would do on a normal attack. The hand is unusable for 24 hours, even if healed before that time has elapsed.

**Weapons Allowed:** None.

**Eagle Claw:** Through physical exercise and concentration, the martial artist can summon immense crushing strength into his hands. On a successful attack roll, he can shatter objects (snap spear shafts, crush stones, etc.), crush metal items, and cause 1d8 hp damage (plus damage bonuses for Strength) per attack. This ability requires great concentration and is the only action the character can take during the round.

**When the Attack Roll Fails:** The attacker does not damage anything but suffers no ill effects.

**Weapons Allowed:** None.

### Principal Method: Throw

**Fall:** The martial arts student learns to fall and roll correctly, taking the impact of the fall on the safest areas of the body. Once learned, this maneuver is constantly in effect. Thereafter, the character suffers only half normal damage from any fall (if she is conscious and able to move).

**Weapons Allowed:** The character can carry any weapon when performing this maneuver.

**Instant Stand:** After learning to fall, the student learns how to gain her feet quickly, either by rolling up to a standing position or using an acrobatic jump. Normally, one round is required for a character to gain her feet, but a character knowing this maneuver can regain her feet automatically instead of making an attack. She may then perform other actions in the round if she has attacks available.

**Weapons Allowed:** The character can carry any weapon when performing this maneuver.

**Hurl:** This type of throw relies a great deal on strength and less on leverage. The martial artist can attempt to pick up an opponent and throw him to the ground 1d4 feet away. The attack adds 1d4 hp to the basic damage of the martial arts style. The attacker must make a successful attack roll for the hurl maneuver to work.

**When the Attack Roll Fails:** The attacker loses all remaining attacks for the round and automatically loses initiative for the next round.

**Weapons Allowed:** None.

**Great Throw:** Using leverage and his opponent's momentum, the martial artist is able to throw his enemy a great distance. The character must make a normal attack roll. If the opponent is stationary, the character can throw him 1 foot per experience level of the martial artist. If the opponent is charging, the distance thrown is 6 feet plus 1 foot per experience level of the martial artist. The opponent suffers double normal damage for the martial arts style.

**When the Attack Roll Fails:** The opponent counters the move and knocks the martial artist off his feet; the character automatically loses initiative the next round.

**Weapons Allowed:** chain weapons, rope weapons, lash weapons, staves, bladed poles (using shaft), pole spears (using shaft), and spears (using shaft) tight groups.

### Principal Method: Vital Area

This method relies on a blow for effect, much like a strike or kick. However, the

strength of the blow is not as important as the location where it lands. The vital area method teaches the martial artist where and how to strike at the weak spots on his opponent's body—throat, ears, foot, nerve points, and other places.

Because the training requires a knowledge of anatomy, the special maneuvers listed can be used against only human and humanoid opponents, unless the practitioner has bought a nonweapon proficiency related to the anatomy of a category of monsters (dragons, equines, etc.).

**Pain Touch:** Simply be pressing his finger against specific points of the body, the martial artist can cause great pain in his opponent. This can be done in place of a normal attack. The touch causes no damage, but if the attack roll is successful, the opponent feels as though he were on fire. Thereafter, he will suffer a –2 penalty to attack rolls and a +2 penalty to his AC. The effect lasts for 1d3 rounds.

**When the Attack Roll Fails:** There is no adverse effect on the opponent, and the attacker suffers no ill effects.

**Weapons Allowed:** Clubbing weapons tight group.

**Stunning Touch:** With a light slap of the fingers in the correct place, the martial artist can stun and daze her opponent. This can be done in place of a normal attack and causes no damage. The attacker must make a normal attack roll. If the attack is successful, the opponent is allowed a saving throw vs. paralyzation. The opponent who fails to save is stunned for 1d4 rounds, unable to take any action.

**When the Attack Roll Fails:** If the attack roll fails or the opponent makes the saving throw, the attack has no effect.

**Weapons Allowed:** Clubbing weapons tight group.

**Paralyzing Touch:** By placing pressure on specific nerve junctions, the martial artist can paralyze her opponent, leaving him unable to move for 2d4 rounds. The character must make a normal attack roll, but the attack does no other damage. The opponent is allowed a saving throw vs. paralyzation at a –2 penalty.

**When the Attack Roll Fails:** If the attack fails or the opponent makes a successful saving throw, no damage is done.

**Weapons Allowed:** Clubbing weapons tight group.

**Distance Death:** Also known as the dim mak attack or "death touch," this ultimate skill of the vital area method requires great practice and concentration. To learn this maneuver, the martial artist must practice at a pool of water, driving his finger at the surface without touching it. As he does so, he concentrates on his ch'i power, trying to extend it from his fingertip. When he can hear the echo of his thrust rebound from the water, he has mastered the maneuver.

Distance death requires great concentration and is the only action the character can make during a melee round. It has a range of 1 foot per experience level of the character.

To use this maneuver, the martial artist must make a normal attack roll. If the attack is successful, the character can choose to apply one of the following effects:

**Pain:** The opponent is not allowed a saving throw. The effect is identical to pain touch.

**Stunning:** The opponent is allowed a saving throw vs. paralyzation with a –2 penalty. The effect is identical to stunning touch.

**Paralyzation:** The opponent is allowed a saving throw vs. paralyzation, with a –4 penalty. The effect is identical to paralyzing touch.

**Double Damage:** The character does two times the basic damage for his martial arts style. No saving throw is allowed.

**When the Attack Roll Fails:** No special effects occur. The opponent takes no damage.

**Weapons Allowed:** None.

### Principal Method: Weapon

The martial arts often include training in a number of standard and unusual weapons. The maneuvers described below can be applied only when using weapons. They are exclusive to practitioners of the martial arts.

**Weapon Breaker:** Just as martial arts weapons are designed to catch and deflect the weapons of others, they are also capable of breaking them. The breaking action is a swift blow or twist with the weapon. The martial artist must be wielding a martial arts weapon and can use this maneuver only against melee weapons, not against unarmed fighters.

The character must make a normal attack roll. If the roll is successful, the opponent's weapon is broken (magical weapons are unharmed). This maneuver does no damage to living creatures or monsters.

**When the Attack Roll Fails:** The weapon is unharmed.

**Weapons Allowed:** Any melee weapon.

**Steel Cloth:** With this maneuver, the martial artist need never be without a weapon. If the character has a 6–10 foot piece of cloth, she can whirl it and snap it tight, keeping it in constant motion and giving it the rigidity of a spear.

The cloth is treated as a spear. If you own *The Complete Fighter's Handbook*, the cloth's length determines what type of spear it is. If it is 6–8 feet, it is a normal spear; above 8 feet, it is a long spear. Note that the steel cloth cannot be thrown. The instant it leaves the attacker's hands, it becomes a normal piece of cloth.

This maneuver is automatically successful. The martial artist does not need to make any sort of roll to turn a cloth into a weapon.

**Weapons Allowed:** One 6–10 foot length of cloth, or rope weapons tight group.

### Mental and Physical Training

The following abilities are gained by the martial artist in the course of training. They reflect superb control over mind and body. They do not belong to the categories of principal methods as they can be learned by practitioners of any method or style.

**Meditation:** This ability allows the martial artist to enter a mental state in which he can focus and regain his energies. For each hour the character spends in uninterrupted meditation, he gets as much rest as two hours of sleep. While meditating, the character is oblivious to hunger, thirst, heat, and cold (but he can still take damage from heat- and cold-based attacks). He remains conscious and aware of his surroundings, and suffers no penalties on surprise or initiative die rolls.

**All-Around Sight:** The martial artist's training makes him more attuned to his immediate surroundings. He is able to detect opponents on all sides, provided they are not invisible. The character can never be struck from behind or suffer a penalty from a back attack. This maneuver is constantly in effect.

**Mental Resistance:** The mental exercises and ordeals of the martial artist's training have toughened and strengthened her will. She receives a +2 on all saving throws against

mental attacks, including charm, illusion, and hold spells. This ability is constantly in effect.

**Ch'i Attacks:** With this ability, the martial artist summons his ch'i (life force energy) and can use unarmed martial arts attacks to hit monsters that could otherwise be hit only by magic. See Table 20. This ability is constantly in effect.

### Table 20: Ch'i Attacks

| XP Level | Character Hits As A |
|---|---|
| 1–4 | magical weapon |
| 5–9 | +1 magical weapon |
| 10–14 | +2 magical weapon |
| 15–19 | +3 magical weapon |
| 20 | +4 magical weapon |

**Blind-fighting:** Under his master's guidance, the martial artist has trained for long periods while wearing a blindfold or in darkened rooms, gaining the ability to detect foes with senses other than sight. The character suffers only a –1 penalty when fighting in darkness, when blinded, or when faced by invisible opponents. However, any of these in combination with a silence spell renders the character effectively blind. This ability is constantly in effect.

**Ironskin:** Rigorous physical training has toughened the martial artist's muscles to the strength of iron. The Armor Class of the character is improved by 2, but only when he is not wearing any other type of armor.

**Levitation:** This is perhaps the rarest of all the martial arts maneuvers because it requires the utmost concentration and mental discipline. Daily the martial artist practices at making her body feel lighter, using mental power to negate her own weight. Finally, the character succeeds in overcoming all her weight and can levitate for a number of rounds equal to her experience level. This maneuver requires one turn of concentration before it takes effect. Thereafter the character can move up, down, or sideways at a rate of 5 feet per round. She can take no actions while levitating and will fall to the ground if her concentration is broken. On completion of the levitation, the character must rest for one round before taking any other action.

## Armed and Armored Opponents

A character who knows martial arts is formidable but still suffers some penalties when facing an armed or armored opponent.

**Unarmed vs. Armor**

Not all martial arts skills are entirely effective against armored opponents. Table 21 shows which martial arts abilities suffer penalties against various types of armor. Compare the maneuver to the type of armor; the result is the penalty to hit.

If a maneuver is not listed on Table 21, it suffers no penalty against an armored opponent

**Unarmed vs. Weapons**

Likewise, unarmed characters fighting armed characters suffer penalties because they must cope with their enemies' greater striking range.

When an unarmed character fights an opponent with a melee weapon, give the unarmed character a penalty based on the length of the weapon he faces.

Above "Large," it becomes progressively easier for an unarmed fighter to slip within the enemy's effective range, hence the decreasing penalties.

### Table 21: Penalties and Bonuses Vs. Armored Opponents

| Maneuver | Leather*, Padded, Hide, Monsters** | All Chain and Mail Armors, Brigandine | Full Plate, Field Plate |
|---|---|---|---|
| Kick | | | |
| Circle Kick | — | –1 | –3 |
| Flying Kick | –1 | –2 | –3 |
| Backward Kick | — | –1 | –3 |
| Lock | | | |
| Choke Hold | –2 | –3 | –5 |
| Locking Block | –1 | –1 | –1 |
| Incapacitator | –1 | –2 | –4 |
| Immobilizing | +1 | +2 | +3 |
| Push | | | |
| Concentrated Push | — | –1 | –2 |
| Sticking Touch | — | +1 | +2 |
| Strike | | | |
| Iron Fist | — | — | –2 |
| Crushing Blow | –1 | –2 | –3 |
| Eagle Claw | –2 | –3 | –4 |
| Throw | | | |
| Hurl | –1 | +1 | +3 |
| Great Throw | –1 | –2 | –4 |
| Vital Area | | | |
| Pain Touch | –3 | –4 | –5 |
| Stunning Touch | –2 | –4 | –4 |
| Paralyzing Touch | –2 | –3 | –4 |
| Distance Death | — | –2 | –3 |
| Weapon | | | |
| Steel Cloth | –1 | –3 | –5 |

* Includes studded leather

** All monsters with an AC of 7 or better due to tough hide

### Table 22: Penalties Vs. Armed Opponents

| Opponent's Weapon | Penalty to Hit |
|---|---|
| Small (S) | –1 |
| Medium (M) | –2 |
| Large (L) | –4 |
| Giant (G) | –3 |
| Huge (H) | –1 |

## Stunning and Incapacitating

In addition to the basic abilities and the special maneuvers associated with martial arts styles, all styles have a chance of stunning or incapacitating a man-sized opponent.

Whenever the martial artist rolls an unmodified 20 on his attack roll, the opponent must make a saving throw vs. paralyzation. If the saving throw is successful, the opponent is not stunned or incapacitated (although he does take normal damage from the attack). If the saving throw fails, the opponent is either incapacitated or stunned. Compare the hit dice or level of the opponent to the die roll. If the number rolled is less than the hit dice or level of the target, the opponent is stunned for 1d6 rounds. If the number is greater than this, the opponent is incapacitated for 1d3 hours.

### Hit Locations

Players who like to visualize where their characters' blows are landing can use a variant of the Martial Arts Results Table (presented earlier).

Each time the character attacks with martial arts, he makes a die roll and consults Table 23 to determine the location of the blow. The principal method of the martial art determines the type of roll.

### Table 23: Martial Arts Hit Locations

| Principal Method | Die Roll |
|---|---|
| Block | N/A |
| Kick | 1d20 |
| Lock | 3d6 |
| Movement | N/A |
| Push | 1d10+6 |
| Strike | 2d6+6 |
| Throw | N/A |
| Vital Area | 2d6+6 |
| Weapon | 3d6 |

| Roll | Hit Location |
|---|---|
| 18–20 | Head |
| 17 | Throat |
| 16 | Shoulder |

| | |
|---|---|
| 15 | Upper Arm |
| 14 | Elbow |
| 13 | Lower Arm |
| 12 | Wrist/Hand |
| 10–11 | Chest/Back |
| 9 | Stomach |
| 8 | Groin |
| 7 | Thigh |
| 6 | Upper Leg |
| 5 | Knee |
| 4 | Lower Leg |
| 1–3 | Foot |

The hit location does not affect the damage or effect of the attack; it is for visualization purposes only.

# CHAPTER 5
# Tools of the Trade

Oriental cultures feature many weapons not commonly found in western cultures, and the ninja uses tools that are uncommon even within his own culture. This chapter describes many of the weapons and gadgets that the presence of ninja will bring to a campaign.

## Weapons

Some of the weapons are new to the AD&D® game, while others appeared previously in the *Player's Handbook*. The reason some weapons are repeated here is to show players which "normal" weapons are also available in Oriental cultures. A hand axe may have a different configuration and a different name in an Oriental setting, but it has the same weapon statistics as its cousin from a western setting.

### Entangling Attacks

When attacking with a weapon that makes an entangling attack (as noted in many of the weapon descriptions), the attacker must specify that he's aiming for either his opponent's upper body or lower body. If the attack roll succeeds, one end of the weapon wraps around that part of the body and pins it, at least for a moment.

If the upper body is entangled, the opponent cannot make attacks that require use of the arms. If the lower body is entangled, the opponent cannot make attacks that require use of the legs, nor can he move from that spot.

To break free of an entangling weapon, the opponent must make a successful saving throw vs. paralyzation in place of his next attack in combat. The weapon takes no damage. If he is unsuccessful, he remains entangled but can try again to break free on his next available attack.

Once an attacker has made an entangling attack, he can make other attacks on the same. If the attack was made against the opponent's lower body, the attacker can spend his next attack to yank the opponent's feet out from under him, throwing him to the ground. Also, if the attacker's entangling weapon has an attacking part at both ends, as do many of the weapons described in this chapter, he can make subsequent attacks against the target with the weapon's other end.

### Prone and Entangled Opponents

A character who is entangled is easier to hit; all attacks made against him get a +2 bonus to the attack roll.

When a character is on the ground, he is also easier to hit; all attacks made against him get a +2 bonus to the attack roll.

The poor character who is both entangled and on the ground suffers doubly; the bonuses are cumulative, and his attacker gets a +4 bonus to the attack roll.

### Table 24: Weapon List

| Item | Cost | Weight (lbs.) | Size | Type | Speed Factor | Damage S-M | Damage L |
|---|---|---|---|---|---|---|---|
| Axe, battle | 5 gp | 7 | M | S | 7 | 1d8 | 1d8 |
| Axe, hand *3* | 1 gp | 5 | M | S | 4 | 1d6 | 1d4 |

| Whip *1* | 1 sp | 2 | M | — | 8 | 1d2 | 1 |
| Yoroi-Toshi *2, 3* | 5 gp | 1 | S | P | 2 | 1d4 | 1d4 |

The "Type" category indicates bludgeoning (B), piercing (P), and slashing (S) weapons. The type of attack may alter the weapon's effectiveness against various types of armor. See the optional rule in the *Player's Handbook*, Chapter 9.

*1* May be used to make entangling attacks.
*2* +2 to hit vs. all metal armor because of its armor-piercing properties.
*3* May be thrown or wielded in hand-to-hand combat.
*4* Inflicts double damage when used from the back of a charging mount.
*5* Inflicts double damage when firmly set to receive a charge.
*6* These items weigh little individually. Ten of these weigh 1 lb.
*7* Intended for two-handed use only.

## Weapon Descriptions

**Arrows:** Arrows for use with the daikyu (great bow) or hankyu (half bow) come in a number of different shapes and styles.

Armor piercer arrows have a narrow spike-head and are designed to punch through different types of armor. They receive a +2 bonus to the attack roll when fired at metal armor.

Flight arrows are the most common sort of arrow, with a wedge-shaped head that is useful in both combat and hunting.

Frog crotch arrows have heads that form a V, the inner edge of which is sharp. These arrows are used to cut standards and armor cords, and inflict terrible wounds on anything caught between the jaws. To successfully use the cutting action, the archer must successfully hit a specific point. The DM assigns attack-roll penalties for difficult targets.

Humming bulb arrows are fitted with carved wooden heads that whistle loudly when fired. The sound can be heard up to one mile away. This type of arrow is normally used for signaling, but the bulb can also be fitted with oil-soaked cloth or straw and used as a fire arrow. When used this way, it causes an additional 1d3 hp damage from the impact and flame. It also starts fires in flammable materials unless put out quickly.

Sheaf arrows are fitted with broad heads designed to cause great injury. These arrowheads are often carved or pierced with artistic designs, making them works of art.

**Axes:** Oriental equivalents for the common western battle and hand/throwing axes are readily available.

**Blowgun:** Many ninja use blowguns, as light weapons or as distractions. Evil ninja may use blowguns as a means to deliver poisons. A blowgun dart is larger and heavier, and does more damage than a blowgun needle. The needle is less expensive but just as good at carrying poisons.

Blowguns can also be used as breathing tubes for swimming underwater.

Special reinforced blowguns are available. A blowgun costing 6 gp can also be used as a jo stick; a 7-gp blowgun can be used as a jo stick or the scabbard for a sword.

**Bo (staff):** This Oriental equivalent of the quarterstaff is normally 6–7 feet long. Its hard wood makes it difficult to cut or break.

**Bokken (wooden sword):** This is a wooden copy of the katana, designed to simulate that sword's weight and other characteristics. It is used to practice swordsmanship since it does not cause cutting injuries. Wielded aggressively, however, it can cause injury from the force of the blow. The bokken requires sword proficiency, not club proficiency; it shares a weapon proficiency with the katana.

**Bow:** See Arrows (various types), daikyu, hankyu, and pellet bow.

**Chijiriki (chain spear):** A length of weighted chain is added to the butt end of a normal spear. This weapon can be used as a normal spear, or the butt-chain can be swung out, entangling the opponent.

**Chopsticks:** Chopsticks can be used as a weapon in case of emergency. They are not very effective but are better than nothing, and they are commonly available.

**Chu-ko-nu (repeating light crossbow):** This crossbow is capable of firing several bolts before it must be reloaded. It is similar to the western light crossbow, but mounted on top is a magazine that can hold up to 10 light quarrels. The cocking and reloading action is worked by a single lever, pushed forward and then pulled back. This allows a faster rate of fire than normal. Up to two quarrels can be reloaded in the magazine per

round. Thus, five rounds are required to completely reload the chu-ko-nu. A character cannot fire and reload in the same round. The chu-ko-nu is heavier than a normal light crossbow and has a shorter range. (See Table 25.)

**Club:** Improvised clubs are as easy to make in the Orient as in western campaigns. Clubs are not commonly manufactured for combat use, so they are not available for sale. See instead the jo and hanbo.

**Crossbow:** Standard light crossbows are available in the Orient. See also the chu-ko-nu.

**Dagger:** Ordinary daggers are available in Oriental settings.

**Daikyu (great bow):** This is the largest type of bow found in an Oriental setting. In some ways, it is similar to the western long bow. It is 7 feet long and bent at the ends for greater power. Unlike most bows, the grip is closer to the bottom, not centered. This allows the bow to be fired from horseback and kneeling positions.

**Dart, thrown:** Ordinary darts are available in Oriental settings. Many ninja like them for their lightness and ease of concealment.

**Fang:** This heavy iron weapon is similar to a large-animal goad. It is about the length of a short sword. One end is sharp, with a heavy hooked point below it.

**Fukimi-bari (mouth darts):** These small darts are held in the mouth and blown into the face of an opponent as a surprise attack. Up to 10 of them can be carried in the mouth. They can be fired singly or all at once. When fired singly, a normal attack roll is made for each dart; a successful hit does 1d2 hp damage. When fired in bursts, the die equal to twice the number of darts fired is rolled to determine the damage. Thus, if four darts are fired at once, 1d8 is rolled to determine the damage.

Obviously, since the darts are carried in the mouth, they cannot be poisoned (unless the ninja is willing to suffer the effects of the poison as well). Furthermore, the darts have a very poor range and are almost never effective against any type of armor; wielders of this weapon suffer a –6 penalty to the attack roll when firing at an armored target. However, these darts do have the advantage of surprise and distraction because they are a hidden weapon.

**Gunsen (war fan):** This iron fan's main use is defensive, counting as a small shield. However, it can also be used to strike blows. It is normally considered a fallback weapon.

**Hanbo (half staff):** This 2-3 foot stick is used as a weapon; practitioners often carry one in each hand. The statistics for the hanbo are used when a sword sheath is used as a weapon. (See ninja-to.)

**Hankyu (half bow):** This is the small Oriental bow, often used by ninja.

**Jitte:** This tapered iron bar has a short hook projecting near the handle. It is not sharp. The jitte is used to block attacks and catch weapons. It can also be used to strike blows. The jitte shares a weapon proficiency with the sai.

**Jo (stick):** This stick weapon is about 4 feet long, between the bo and hanbo in size. It can be used one-handed and in pairs. The jo is a favorite weapon of ninja because it is innocuous; it is also called the shinobi-zue.

**Kama (sickle):** This straight-bladed sickle is a farmer's tool that can also be used as a weapon to great effect. Ninja like this weapon because it can be carried without arousing suspicion. The damage values given for it are for a freshly sharpened weapon. After use in the field for several hours, a kama will be considerably duller, and may, at the DM's discretion, have reduced values for damage.

**Katana (samurai long sword):** This single-edged, slightly curved sword ends in a chisel point. It is perhaps one of the finest types of sword made, noted for its superior construction and design. Great care is taken in making the katana, and the forging and construction of it is considered a rare and valuable art. The weaponsmith must labor long hours to achieve the correct temper of the blade. When correctly made, the blade is light, well balanced, strong, flexible, and resilient. The quality of the metal and forging allows the blade to be ground to a razor-sharp edge. In addition, such blades are often beautifully decorated with etched designs, prayers, or family lineages. Equal attention is given to the hilt, guard, and scabbard of the weapon. Katanas may have individual names, reflecting deeds of glory in which they have been used.

For the samurai character, the katana is more than just a sword. It is part of his honor and the honor of his family. It is his personal weapon, not to be used by others. To touch the scabbard of the sheathed katana is to insult the samurai. To draw the blade without permission is a graver insult. A single katana may have been in the same family for generations, becoming a treasured heirloom. To lose such a weapon is a shameful disgrace that can be swept clean only by the recovery of the weapon and the punishment of those who have taken it. Many samurai have given their lives to recover a family weapon.

The value of a katana can vary greatly depending on the quality of workmanship and the history of the weapon. The price listed in Table 24 is for an average weapon. Others may be of greater or lesser value, depending on the quality and artistic workmanship of the weapon.

**Kau sin ke (whipping chain):** This weapon consists of four to six short iron bars connected by several links of chain. Its origins can be traced to the agricultural flail. Used properly, it can be a deadly weapon; the iron bars can wrap around shields to land crushing blows. However, because it is not as flexible as a normal chain or rope weapon, it cannot be used to make entangling attacks.

**Kawanaga (grapnel):** This a length of rope, with a grappling hook at one end and a weight at the other, is both a tool and a weapon. It can be used as a weapon by swinging the hook or the weight at an opponent. The grappling hook can also be used for climbing, and the rope can be used to entangle an opponent. This type of weapon is popular with ninja because it has several uses and is easily concealed.

**Kiseru (pipe):** This is a tobacco pipe made of metal. Its innocent appearance disguises its use as a clubbing weapon. It is popular with peasants and monks because it is cheap and easy to make and does not appear to be dangerous. It can also be used for smoking.

**Kumade (rake):** This dual-purpose tool consists of a spear-length wooden shaft with a rake head fitted at one end. By setting the rake prongs in a crack, ledge, or sill, a ninja can climb up the shaft. The kumade can also be used as a weapon. Because the kumade has multiple uses and can be carried without arousing suspicion, it is a common item for ninja to use.

**Kusari-gama (chain-sickle):** This variation on the kama (sickle) was designed specifically for combat. It is a kama with a length of weighted chain attached to the butt end of the handle. The kusari-gama can be used in several ways: The user can attack with the kama in hand, he can club and entangle with the weighted chain, or he can whirl the kama at the end of the chain. This weapon is relatively easy to make and is favored by

both peasants and ninja.

**Kyogetsu-shogi:** This is a simple length of rope with a sharp hooked blade at one end and a heavy iron ring at the other. Its uses are similar to those of a standard chain weapon. The rope can be swung to attack with the blade or weight, snapped around the feet or arms to entangle, thrown to entangle, or held while striking with the blade. Although the rope is far easier to cut or break than a chain, the weapon is often used by ninja because it is almost silent. It is easy to conceal and can be worn as a belt or under a sash.

**Lajatang:** This rare weapon is most often found in the hands of a martial artist skilled in its use. It consists of a 3–5 foot shaft with a crescent blade fitted at each end. Some individual weapons have smaller barbs projecting downward from the outer edges of the crescent. The weapon is held with two hands, much like a bo.

**Lance, light horse:** This is the normal sort of lance available to horsemen in an Oriental campaign.

**Lasso:** This weapon does no damage in game terms but can entangle a target. It is used to unhorse riders and pull humanoid targets off their feet. When a lasso wielder attacks a horseman riding past, a successful attack roll automatically unseats the rider. A lasso attack made against the upper body of a humanoid on foot will pull the target off its feet on a roll of 1 on 1d4 if the target weighs no more than half what the attacker weighs, or on a roll of 1 on 1d8 if the target weighs up the attacker's weight.

**Man catcher:** This is a two-pronged polearm. Each prong is curved to encircle a humanoid creature of man size. Creatures larger or smaller than human size by 50% or more are unaffected by this weapon. The Oriental man catcher, unlike the western version, has spikes and sharpened edges to damage the opponent and prevent the use of hands and arms.

The victim of a man catcher loses all shield and Dexterity bonuses. Furthermore, the opponent can be pulled and pushed with the weapon. This pushing and pulling automatically causes 1d2 hp damage per round. There is a 25% chance for the opponent to be pulled off his feet, to either a kneeling or prone position.

Anyone caught in a man catcher can break out by making a successful roll to bend bars. Repeated attempts can be made, but the victim takes 1d4 hp damage unless heavy gloves or gauntlets are worn. Characters other than the one caught may rescue the victim by chopping through the weapon's haft (6 points of cutting damage required).

Commonly, the man catcher's wielder will capture an opponent with the weapon, then jerk the victim off his feet or horse, pressing the pole down to pin his neck to the ground. In such a situation, the captive is virtually helpless.

**Manriki-gusari (chain):** This simple length of chain with weights at each end can be whirled quickly, striking with hard blows from the weights. One end can be swung out to entangle an opponent, or the entire weapon can be thrown, entangling and causing damage at the same time. The manriki-gusari is popular in areas where the lord has forbidden the use or wearing of other weapons, or when secrecy is required. It can easily be worn as a belt or hidden under a sash. It is often used by ninja because it has a great number of uses.

**Metsubishi (blinding powders):** A small wooden device, similar to a short blowgun (1–2 feet long), is used to blow a puff of powder into an opponent's face. It has a mouthpiece at one end, a chamber for holding the powder, and a small tube at the other

end. The most common powders are peppers, ashes, and dust, described under "Miscellaneous Equipment." This weapon is often used by ninja for distraction and escape, and by city constables when attempting to capture a criminal.

**Long sword:** Several varieties of long sword are available in Oriental settings, chiefly the straight-bladed sword from which the katana evolved.

**Nage teppo (grenades):** These small grenadelike weapons are popular with ninja. The version detailed in Table 24 explodes on contact with a target. Other sorts of grenades are described later under "Miscellaneous Equipment."

**Nagimaki (horseman's halberd):** This shortened version of the naginata is used primarily by horsemen. It consists of a 4-6 foot shaft capped by a curved swordlike blade.

**Naginata (halberd):** This lightweight but strong polearm is 6–8 feet long and ends in a curved swordlike blade. It is used as a standard polearm. The naginata is often the preferred weapon of women; many female samurai and ninja become proficient with this weapon.

**Needle:** Although hardly an effective weapon, needles are occasionally carried by ninja for distraction or surprise. Like the fukimi-bari, they are carried in the mouth and fired by spitting or blowing (using the tongue as a blowpipe). Up to 20 needles can be carried in the mouth. The needles can be fired singly or all at once. When fired singly, a normal attack roll is made for each needle with a successful hit doing 1 hp damage. When fired in bursts, the die equal to the number of needles fired is rolled to determine the damage. Thus, if all 20 needles are fired at once, roll 1d20 to determine the damage.

Because needles are carried in the mouth, they cannot be poisoned (unless the ninja is willing to sacrifice herself to complete the mission). As with fukimi-bari, needles have a very poor range and are almost never effective against any type of armor. They suffer the same –6 attack-roll penalty when firing at an armored target.

**Nekode (climbing claws):** This dual-purpose ninja tool is a pair of straps or gloves fitted with spikes in the palm. By hammering the spikes into cracks in a wall or cliff to give a better grip, the user of nekode receives a +10% bonus to his climb walls skill.

Nekode can also be used to claw an opponent for small amounts of damage. While wearing nekode, a character can still wield other weapons without penalty. Nekode are usually worn only when needed, because they easily identify the user as a ninja.

**Ninja-to (ninja sword):** This is the ninja's standard sword. It is approximately the length of a short sword, making it easier to conceal on the body. The blade of the ninja-to is straight and of lower quality than that of a katana. However, in keeping with the ninja's methods, the sword and scabbard have multiple uses, which vary from ninja to ninja. Some of these uses include secret compartments in the hilt of the sword or tip of the scabbard for carrying powders, poisons, or daggers.

The scabbard is normally longer than the sword and open at both ends, allowing it to serve as a blowgun or breathing tube. The stiff, strong scabbard can also be used as a hanbo or the rung of a ladder. See the blowgun for the cost of this sort of scabbard.

Strong silk cord may be wrapped around the scabbard, to be unwound for climbing. Other devices can be attached or hidden within this weapon as the DM allows. See "Weapon Modifications" later in this chapter.

**No-daichi (two-handed sword):** This is the equivalent of the western two-handed sword. It is constructed more like the katana or ancestral long sword, having a narrow, slightly curved or straight blade and a minimal circular or octagonal guard, but has all the

characteristics of its western equivalent.

**Nunchaku (threshing flail):** This martial arts weapon is derived from the common agricultural flail. It consists of two lengths of hard wood or iron connected by a short chain or cord. The nunchaku can be used to parry attacks, club an opponent, or catch weapons. It is easily concealed.

**Parang (chopping blade):** The parang is both a tool and a weapon—a heavy-bladed machete capable of delivering chopping blows of great force. It is commonly found in the hands of primitive tribesmen, who use it for everything and are seldom found without it.

**Pellet bow:** Although almost identical in construction and use to a normal bow, the pellet bow has a small pocket in the bowstring for holding a stone or pellet of lead or clay. The pellet can be fired with more force than from a sling (giving the weapon extra range, though not extra damage). Pellet bows use sling ammunition: sling stones and sling bullets.

**Polearm:** See kumade, lajatang, man catcher, nagimaki, and naginata.

**Sai (short trident):** This weapon is almost identical to the jitte, and it is used in the same manner. The only difference between the two weapons is that the sai has two forward-projecting tines instead of one. The sai shares a weapon proficiency with the jitte.

**Sang kauw (two-headed spear):** This weapon comes in two forms. The basic form is a double-headed spear with a loop handle in the center, from which projects a dagger or crescent. The weapon is used with one hand to parry and attack. Its other form is almost identical; a small buckler is fitted in the center with the dagger blade projecting from it. When the second form is used, the character is considered to be using a small shield (for calculating Armor Class).

**Shakujo yari (staff spear):** This is a spear concealed within a sheath to look like a staff. It can be used as a bo when the sheath is in place. The shakujo yari can be carried on secret missions or when the character desires to look relatively defenseless.

**Short sword:** Many varieties of short sword are available in Oriental settings. Some are better-made parangs; others include the darn dien, a Chinese rapier (longer than the western short sword, but with a lighter blade).

**Shuriken (throwing star):** This small throwing weapon comes in many sizes and shapes. Three varieties are described here and detailed in Tables 24 and 25.

All shuriken are thrown by hand and have a limited range. They are easily hidden in folds of clothing or tucked into sashes. Spike shuriken can even be worn in the hair.

Spike shuriken look like large pins, tapering to a sharp point.

Large star shuriken are larger. They may also be gripped in the fist, with one sharpened point projecting between the fingers, and used as a punching weapon.

Small star shuriken have three or more razor-edged points, ensuring that at least one point will strike the opponent (if a successful attack roll is made).

**Siangkam:** This weapon hardly appears useful at all. It looks like a metal-shafted arrow with a small wooden handle replacing the feathers. It is normally used in pairs, one for each hand. The siangkam can be used to jab, thrust, slash, and parry. It cannot be thrown effectively, even though it has the appearance of an arrow.

**Sling:** Ordinary and staff slings are available in Oriental settings.

**Sode garami (sleeve entangler):** This highly specialized weapon is used to catch and entangle an opponent without causing great harm. It is normally made as a pole and

crossbar set with a large number of spikes and hooks. On a successful hit, it hooks and catches the clothing of the opponent, who is allowed a saving throw vs. paralyzation to escape. If the saving throw is unsuccessful, the character is entangled. When used specifically to catch an opponent, the sode garami does no damage. However, forceful blows can also be struck with the weapon, resulting in the same effect and the damage listed on Table 24. This weapon is often carried by palace guards or city constables.

**Spear:** See chijiriki, sang kauw, shakujo yari, trident, and yari.

**Sword:** See bokken, katana, long sword, ninja-to, no-daichi, parang, short sword, tetsu-to, and wakizashi.

**Tanto (dagger):** This dagger is made in the same style as the katana and wakizashi (curved blade, small or nonexistent hand guard). It shares a weapon proficiency with the yoroi-toshi.

**Tetsu-bishi (caltrops):** This are small caltrops, not melee or thrown weapons. Each is a ball or four-sided diamond of spikes, designed so that no matter how it lands at least one spike is pointing upward. They are used to stop or slow the movement of men and animals by making the ground extremely dangerous to walk on.

Because of the way tetsu-bishi are designed, they cannot be thrown at an opponent for any good effect. Rather, they are cast on the ground at the feet of an opponent when the wielder is being pursued. They are greatly favored by ninja since they increase the chance for a quick and unpursued escape.

When using tetsu-bishi, the character must state how many he will use and how much area he will cover. The base amount is 10 tetsu-bishi cast down in a 5'x5' area (25 square feet). Anyone entering the area must make a saving throw vs. paralyzation. A successful save means the character has avoided stepping on any of the tetsu-bishi. An unsuccessful save indicates the character has stepped on one tetsu-bishi (suffering 1d4 hp damage) and must halt his movement. If half the amount of tetsu-bishi are used in the same area, the opponent gains a +4 on his saving throw. For every five tetsu-bishi greater than the base 10 tetsu-bishi used in the given area, the opponent's saving throw is reduced by 2 and the opponent suffers an additional 1 hp damage (up to +6 hp damage). If the opponent is moving at greater than half his normal Movement Rate, he suffers a –2 penalty to the saving throw. One check must be made for every 5-square-foot section entered. However, characters who move cautiously (one third their normal Movement Rate) are not required to make any saving throws.

If a character (or creature) steps on a tetsu-bishi, he suffers the damage done by the weapon. If he does not stop and remove the weapon before continuing movement, he suffers the same damage for every 10 feet he moves. Removing tetsu-bishi requires one round.

In addition, each time he takes damage from tetsu-bishi, the character must make a second saving throw vs. paralyzation to see if he is temporarily lamed. If he fails the save, the character can move at only one third his normal Movement Rate, due to pain and discomfort. This restriction lasts for 24 hours or until the damage heals, whichever comes first.

**Tetsu-bo (iron staff):** This is a bo with at least half its length sheathed in studded iron strips. It is often used by travelers because it can also serve as a walking stick.

**Tetsu-to (iron sword):** This odd weapon is basically an iron bar shaped in the fashion of a two-handed Oriental sword. It is a heavy weapon used for strength training,

not combat, and is very slow to use. (It suffers a –3 attack-roll penalty because of its awkwardness.) However, when the tetsu-to does hit in combat, it does a lot of damage.

**Three-section staff:** This weapon is another derivative of the agricultural flail. It is made of three 2–3 foot sections of hard wood connected by short stretches of chain. It can be used to strike an opponent, block an attack, or catch and break a weapon.

**Tonfa (handle):** This is a hardwood rod with a small handle sticking out off-center from the side. The entire length is about 2–3 feet. It was originally the handle of a millstone. With this weapon, a trained fighter can block, catch weapons, break weapons, and attack effectively. The tonfa is often used in areas where normal weapons are outlawed.

**Trident:** Oriental versions of the trident are available.

**Uchi-ne:** This is a short, heavy javelin that looks like an oversized arrow. It can be thrown effectively for short distances or used for thrusting and jabbing. The uchi-ne is often carried by nobles when traveling.

**Wakizashi:** This is a short sword, similar in design and construction to the katana. Like the katana, the wakizashi may be named for some past deed or event. It holds almost as important a place in the samurai's honor as his katana. Those rules and guidelines concerning the katana and its care also apply to the wakizashi when it is part of a matched set.

The wakizashi and the katana are normally worn as a pair by samurai characters. This pair is known as daisho, or "long and short." In many lands, the two-weapon combination is a sign of samurai status. Anyone other than a samurai who wears the long and short swords together is subject to arrest or immediate execution.

**Whip:** To inflict damage, the whip must strike exposed or lightly covered flesh. Heavy clothing, thick hair, or fur gives considerable protection until torn away by repeated lashing. The type of armor determines how long it takes the whip to begin doing damage. With heavy clothing, damage begins on the third successful blow; thick hair or fur, on the second; padded armor, on the fourth; leather armor, on the fifth; hide armor, on the sixth. The whip can do no harm through armor heavier than that. Thick hide, such as that of an elephant or rhinoceros, will allow a slight sting at best, with no real damage inflicted.

However, the whip can also be used to entangle a target, and is often more effectively used in this way than for causing damage.

**Yari (spear):** This is the common Oriental spear, similar to the western spear.

**Yoroi-toshi:** This weapon is shaped like the tanto but is designed a bit differently. Its tip, rather than blade, is reinforced and sharpened. This makes the weapon good for piercing armor, and the yoroi-toshi gets a +2 bonus when striking against metal armor. The yoroi-toshi shares a weapon proficiency with the tanto.

### Table 25: Missile Weapon Ranges

| Weapon | — Range (tens of yards) — | | | |
|---|---|---|---|---|
| **Name** | **ROF** | **S** | **M** | **L** |
| Axe, hand | 1 | 1 | 2 | 3 |
| Blowgun dart | 2/1 | 1 | 2 | 3 |
| Blowgun needle | 2/1 | 1 | 2 | 3 |

| | | | | | |
|---|---|---|---|---|---|
| Bow, Daikyu | 2/1 | 7 | 14 | 21 | |
| Bow, Hankyu | 2/1 | 5 | 10 | 15 | |
| Bow, Pellet | 1 | 6 | 12 | 18 | |
| Crossbow, Chu-ko-nu | 3/2 | 2 | 4 | 6 | |
| Crossbow, Heavy | ½ | 8 | 16 | 24 | |
| Crossbow, Light | 1 | 6 | 12 | 18 | |
| Dagger, thrown | | 2/1 | 1 | 2 | 3 |
| Dart, thrown | 3/1 | 1 | 2 | 4 | |
| Fukimi-bari (mouth dart) | 1 | 3' | — | — | |
| Javelin, thrown | | 1 | 2 | 4 | 6 |
| Kawanaga, thrown | 1 | 1 | 2 | 3 | |
| Kusari-gama, thrown | 1 | 1 | 2 | 3 | |
| Kyogetsu-shogi, thrown | 1 | 1 | 2 | 3 | |
| Manriki-gusari, thrown | 1 | 1 | 2 | 3 | |
| Metsubishi, blown* | 1/3 | 3' | — | — | |
| Nage teppo, thrown | 1 | 1 | 2 | 3 | |
| Needle, blown* | 1 | 3' | — | — | |
| Shuriken, spike, thrown | 2 | 1 | — | — | |
| Shuriken, large star, thrown | 3 | ½ | 1 | 2 | |
| Shuriken, small star, thrown | 4 | ½ | 1 | 2 | |
| Sling bullet | 1 | 5 | 10 | 20 | |
| Sling stone | 1 | 4 | 8 | 16 | |
| Staff sling bullet | | ½ | - | 3–6 | 9 |
| Staff sling stone | | ½ | — | 3–6 | 9 |
| Spear, chijiriki, thrown | 1 | 1 | 2 | 3 | |
| Spear, trident, thrown | 1 | 1 | 2 | 3 | |
| Spear, yari, thrown | 1 | 1 | 2 | 3 | |
| Tanto, thrown | 2/1 | 1 | 2 | 3 | |
| Tetsu-bishi, thrown* | 1 | 5' | 10' | 20' | |
| Uchi-ne, thrown | 1 | 1 | 2 | 3 | |
| Yoroi-Toshi, thrown | 1 | 1 | 2 | 3 | |

* This weapon has a very limited range, measured in feet rather than the normal tens of yards value.

## Armor

Banded armor, chain mail, hide armor, leather armor, padded armor, ring mail, scale mail, splinted mail, and studded leather armor are all available in Oriental campaigns, as are bucklers, medium shields, and large shields.

Such campaigns do feature a few types of armor not found in mainstream fantasy settings:

| Type | Cost | Wgt (lb.) |
|---|---|---|
| Gunsen (war fan) | 5 gp | 1 |
| Kote (armor sleeves) | 2 gp | 2 |

Gunsen, described earlier under Weapons, are iron war fans. They are used to deflect blows and can also be used to strike them.

Kote are armored sleeves connected by a band of leather or cloth across the shoulders. The sleeves extend from the shoulders to the backs of the hands. They are normally made of mail; some have small metal plates sewn onto them. They can be plain or highly decorated. Kote can be worn inconspicuously under robes and in combination with other pieces of armor.

Both gunsen and kote are used like shields, reducing a character's Armor Class by 1 when used. However, only one Armor Class bonus from shield, gunsen, and kote applies to the character's Armor Class; he cannot get a –3 bonus to Armor Class for carrying all three.

## Miscellaneous Equipment

Ninja make use of many specialized gadgets and weapons to perform their missions.

### Table 26: Miscellaneous Equipment

| Item | Cost | Weight (lbs.) | |
|---|---|---|---|
| Clothing, ninja night-suit | 5 gp | 2 | |
| Clothing, tear-away, common | 2 gp | 1 | |
| Clothing, tear-away, good | 5 gp | 1 | |
| Clothing, tear-away, fine | 30 gp | 1 | |
| Eggshell grenade, dust | | 2 gp | 1/10 |
| Eggshell grenade, flash powder | | 25 gp | 1/10 |
| Eggshell grenade, pepper | 5 gp | 1/10 | |
| Eggshell grenade, smoke | 25 gp | 1/10 | |
| Hito washi (human eagle) | 75 gp | 50 | |
| Kama ikada (raft) | 20 gp | 20 | |
| Ladder, folding (per 10 feet) | 5 gp | 10 | |
| Mizugumo (foot pontoons, pair) | 50 gp | 6 | |
| Powder, ash | — | 1/10 | |
| Powder, dust | — | 1/10 | |
| Powder, pepper | 1 cp | 1/10 | |
| Ravager potion | | 250 gp | 1 |
| Rope, light (50 feet) | 10 gp | 8 | |
| Shinobi-bune (ninja boat) | 30 gp | 30 | |
| Thirst pills (per 5) | 10 gp | 1/10 | |
| Vaulting pole | 5 gp | 5 | |
| Yami doko (man-sized kite) | 100 gp | 40 | |

### Description of Equipment

**Clothing, ninja night-suit:** This is the outfit worn by ninja on intrusion missions. It consists of close-fitting trousers and tunic, split-toed footwear, gloves, and a hood.

Each ninja night-suit is designed to blend into a specific background. When worn

against the correct background, the night-suit gives the wearer +10% to his hide in shadows roll.

The standard night-suit is black with a hint of red. It provides its hide in shadows bonus when the character is in the equivalent of "night, full moon" or "night, no moon" lighting, as described in Chapter 13 of the Player's Handbook. In short, if the light is worse than twilight, the night-suit provides its benefits. The reddish tinge to the night-suit makes it harder to detect blood on the costume, which in turn makes it harder for a witness to determine that a ninja has been injured.

The wilderness night-suit is a camouflage pattern of brown and green. It provides its hide in shadows bonus when the character is surrounded by foliage—typically, in the woods—regardless of lighting conditions.

The arctic night-suit is white. It provides its hide in shadows bonus when the character is in snow or dense fog. The character can make his hide in shadows roll in such circumstances even when there are no shadows, if he remains still.

Other types of night-suits can be specially made for special circumstances. If a team must break into a palace where everything is decorated in red, it makes sense for the members to wear night-suits in the same color.

**Note:** Ninja do not commonly wear night-suits under their normal clothing or carry them around on ordinary missions. The possibility that someone will search a ninja or his baggage and find the telltale costume is too great. Night-suits are worn only when ninja are leaving a safe house for a specific intrusion mission and then returning to a safe house where they can change back into normal clothing. A 1st-level ninja automatically receive one standard black night-suit in addition to his starting gold.

**Clothing, tear-away:** This is a set of clothing worn by ninja as a disguise. Each set consists of a robe, or tunic/trousers combination, or dress, or other principal elements of an ensemble. These items look in every way like a normal set of clothing but are lightweight (1 lb. for the whole outfit) and can be torn off with a simple movement (no Strength roll necessary). Such clothing is ideal for a quick change into another costume or into the ninja night-suit.

**Eggshell grenades:** These weapons consist of an irritating or concealing ingredient sealed in an eggshell, a paper packet, a nutshell, or some other container that is small and easy to break. The grenades do not explode, but burst when thrown against the ground or into the face of an opponent. There are four standard types of eggshell grenades:

**Dust:** This grenade is thrown into the face of an opponent. All targets are treated as AC 6. (Eggshell grenades ignore the AC value of armor but must hit the upper chest or face area of an opponent.) On a successful attack roll, the grenade bursts in a cloud of dust. The opponent gets a saving throw vs. poison. If he makes the roll, he is unaffected (though covered by a light layer of dust). If he fails the roll, he is blinded for 1d6 rounds.

**Flash powder:** When this grenade is thrown into a fire, it explodes in a brilliant flash of light, blinding everyone who is looking in that direction. The blindness lasts 1d3 rounds. If the DM does not know where a character is looking, that character must make a saving throw vs. petrification. If the character is more than 10 feet away from the fire, he gets a +2 bonus to the roll; more than 20 feet away, a +4 bonus. Maximum range for the effect of the flash powder grenade is 30 feet.

**Pepper:** This grenade is thrown into the face of an opponent just like a dust grenade. If the attack roll is successful, the pepper gets into the character's eyes and up his nose.

The affected character must make a saving throw vs. poison. If he fails the roll, he is incapacitated for 1d6 rounds due to choking and sneezing.

**Smoke:** This grenade can be thrown against the ground or into a fire. When thrown against the ground, it creates a smoky area equivalent to light fog in a 5-foot radius. (If the ninja has his back to a forest or other escape route and has enemies to his front, he may throw a smoke grenade in front of him to give him a moment of distraction, allowing him a round to flee and make a hide in shadows roll.) When thrown into a fire, a smoke grenade creates a smoky area equivalent to dense fog in a 10-foot radius.

All eggshell grenades are fragile. If a character carrying these items falls 10 feet or more and suffers damage, the player must roll 16 or better on a saving throw vs. crushing blow (as a bone or ivory object) for each grenade carried (Dungeon Master Guide, Chapter 6). If the roll fails, the grenade bursts and is useless, but unless it was being carried near the character's face, it will do no harm.

**Hito washi (human eagle):** This is a primitive sort of hang glider made of wood, bamboo, paper, and fabric. Medieval aeronautics being a crude science, hito washi are unreliable and dangerous.

The ninja straps himself into the hito washi and launches from a high place (an altitude of at least 100 feet). Immediately on launching, the character must make a Giant Kite Flying proficiency check. If he fails, he falls straight to the ground and takes normal falling damage for that distance. (The character is unable to benefit from any proficiency or talent that keeps him from falling, as he is strapped rigid into a framework and unable to twist his body to avoid or mitigate the damage.)

If the character survives the liftoff, he can fly the hito washi in the direction he was pointed when he took off. For every 20 feet forward he travels, he loses 1 foot of altitude. (He can lose more altitude if he chooses.)

Every time the character maneuvers to change direction, he must make another Giant Kite Flying proficiency check or immediately crash to the ground, taking normal falling damage for the full distance he descended from the time he took off. A successful roll means he has changed to the correct direction.

Landing follows the same rules as changing direction. When the ground is close enough, the ninja maneuvers to land, but a failed roll means he crashes into the ground and takes full damage for the entire distance of his descent from the time he first took off.

The hito washi is used by ninja who have no better flight spells or magical items available and who must make an aerial intrusion. Ninja sometimes launch from portable towers to get over the walls of a citadel or encampment, or may launch from a nearby hilltop or mountain.

**Kama ikada (raft):** This is a small one-man raft that ninja can carry around with ease. It is normally used in conjunction with a collapsible pole such as the vaulting pole (described later). The kama ikada can carry 300 lbs. worth of characters and equipment.

**Ladder, folding:** This is a hinged ladder or rope ladder with hooks at one end. It is used by ninja for quick escapes or covert intrusions (especially important when the ninja party is escorting a character who does not have ninja climbing abilities).

**Mizugumo (foot pontoons):** These inflatable bladders have straps to hold them on the feet. A highly trained ninja (for example, one who possesses the Water Walking proficiency) can use them to walk across still bodies of water. The character walks at a rate of 10 yards per round. His chance for success is affected by his encumbrance. A

ninja on mizugumo can carry 20 lbs. of gear at his normal chance of success, but suffers a –2 penalty to his proficiency roll for every additional 20 lbs. he carries.

Because mizugumo are not widely recognized and look innocuous when not in use, ninja can often smuggle them into secure areas and then use them to cross water barriers such as moats or superheated ponds.

**Powders:** These are doses of ammunition for metsubishi. They come in three types: Ash, dust, and pepper. Dust and pepper behave just like dust and pepper eggshell grenades; ash behaves just like dust eggshell grenades.

**Ravager potion:** This is a preparation taken by NPCs with the Ravager kit (described in Chapter 3). It is a slow-acting potion, taking effect half an hour after being drunk and ending 1d3 hours later. While under the potion's influence, a character receives the following bonuses and penalties:

- He is immune to sleep and charm spells.
- He possesses two additional hit points per experience level (up to 10 levels).
- He receives a –2 modifier to individual initiative. If everyone allied with the character has drunk the potion, as is often the case, the modifier also applies to group initiative.
- He receives a –2 bonus to Armor Class.

At the end of the potion's effect, all benefits wear off, and the character must make a Constitution check. If he fails the check, he collapses in a coma for 3d6 hours. If the character has sustained enough damage that the sudden loss of the extra hit points brings him down to zero hit points or fewer, he dies (no saving throw).

**Rope, light:** This rope made of silk, horsehair, or human woman's hair is favored by ninja for its light weight.

**Shinobi-bune (ninja boat):** This small canoelike boat is used by ninja on covert missions. It is light and collapsible, hence easy to carry. The standard shinobi-bune can carry about 300 lbs. and includes a paddle for propulsion.

**Thirst pills:** Thirst pills are nonmagical medicine. The ingredients include only normal herbs and other plant products, but making up the pills requires great skill. The pills must then age for several years before they reach their full effectiveness.

When taken once per day, in a dose of five pills, the pills prevent the user from feeling the ill effects of thirst. This can be useful when the character is making long forced marches or is trapped in a situation where she cannot or must not drink.

However, the character still suffers from dehydration—she just cannot feel the effects. The effect of the pills wears off at the end of five days. If the character is not able to drink at least a quart of fluid at that time, she begins to die of thirst. Until she gets at least a quart of liquid, she must make a saving throw vs. paralyzation every hour or die of dehydration.

**Vaulting pole:** This collapsible pole is used for vaulting over obstacles (or for other purposes). Under normal circumstances, the pole is about 6 feet long. The wielder can telescope it out to 15 feet and lock it into place at the new length. Rules for pole vaulting appear under the Jumping proficiency in the *Player's Handbook*, Chapter 5.

**Yami doko (man-sized kite):** This kite is large enough to carry a full-sized human aloft but differs from the hito washi in several important ways.

The yami doko is launched and flown from the ground like a kite. When it is launched, it requires a character with the Giant Kite Flying proficiency to be on the

ground directing its flight, and that character must make one proficiency check for every 50 feet of altitude the kite gains, with the same results for failure as the hito washi suffers. When the controller decides to land the kite, it requires only one proficiency check to bring it down from whatever altitude it has attained.

Once the yami doko is successfully launched, its rider can cut free and glide away, flying it much as a hito washi. To do this successfully, he too must have Giant Kite Flying proficiency. The act of cutting free requires one proficiency check, as does each maneuver and attempt to land, as described for the hito washi. Note, however, that the yami doko's rate of descent is greater than that of the hito washi. For every 10 feet forward the yami doko moves, it loses 1 foot of altitude.

Yami doko are easy to spot, even when painted black, on nights with any moonlight. Use normal rules for visibility ranges (*Player's Handbook*, Chapter 13). Consequently, yami doko are most often used on moonless nights.

## Weapon Modifications

Ninja often pay to have normal weapons modified for special uses, or ordinary items modified to include weapons. The cost of such modifications is applied to the weapon being modified. (See Table 27.)

### Table 27: Weapon Modifications

| Modification | Cost (gp) | Weight Added |
|---|---|---|
| Chain in compartment | 5 gp | 3 lbs. |
| Pop-out knife blade | 20 gp | ½ lb. |
| Pop-out spear head | 30 gp | 2 lbs. |
| Secret compartment | 3 gp | 0 lbs. |

These modifications can be detected with the same chance any character has to detect a secret door, but only when a character is actively looking for changes in the standard item.

**Chain in compartment:** With this modification, part of the weapon is hollowed out and a manriki-gusari installed in the compartment. When the weapon bearer pulls off the compartment's cap, the chain spills out, remaining attached at one end to the weapon, with the cap acting as the chain weight. The weapon may then be used in its normal fashion or as a manriki-gusari (except that it cannot be thrown).

To accommodate a manriki-gusari compartment, the weapon or item must be at least equal to a spear in thickness and must have about 2 feet of length available to be hollowed and reinforced. (A dagger is too short to be equipped with a manriki-gusari compartment.)

Commonly, staff and stick weapons receive this modification, but other gear is suitable for chain compartments: the forearm portion of a set of kote, the area behind the grip of a buckler, a false book, etc.

**Pop-out knife blade:** With this modification, the wielder of the weapon can press a secret switch and pop out a spring-loaded knife blade. The blade has characteristics

identical to the common knife (Type P/S, Speed Factor 2, Damage 1d3 vs. S-M and 1d2 vs. L).

To accommodate a pop-out knife blade, the weapon or item must be at least equal to a knife hilt in thickness and must have about 6 inches of length available to be hollowed and reinforced. Normal daggers do have enough room for this modification.

The spring doesn't pop the blade out with enough force to make its emergence an attack; the blade must lock into place before it can be used. But for twice the cost listed, the blade can pop out with enough force to act as an attack.

**Pop-out spear head:** This modification is identical to the pop-out knife blade, except the weapon emerging is a narrow spear head, with characteristics identical to the normal spear (Type P, Speed Factor 6, Damage 1d6 vs. S-M, 1d8 vs. L).

To accommodate a pop-out spear head, the weapon or item must be at least equal to a spear haft in thickness and must have about 18 inches of length available to be hollowed and reinforced. Many sticks, staves, and batons can be modified in this way.

The hidden blade does not pop out with enough force to make its emergence an attack; it must lock into place before it can be used. But for twice the cost listed, the spear head can be modified to pop into place with enough force to act as an attack.

**Secret compartment:** This modification creates a secret compartment within the object being modified.

The standard secret compartment modification requires that the weapon or item have an area at least equal to a spear in thickness and about 2 feet of length available to be hollowed and reinforced. This provides a secret compartment large enough to hold about 3 lbs. of small weapons, scrolls, or other small items.

It is possible to create smaller or larger compartments as well. A knife hilt could hold about half a pound of gear, for instance. Smaller compartments cost the same as standard compartments because of the difficulty of working in smaller areas.

Larger areas hold more gear. For every additional 3 lbs. of gear the compartment is to hold, the modification costs +100% of the original cost.

## Magical and Special Treasures

Many magical items and other special treasures are found only in Oriental settings.

The DM can use the magical item tables (Tables 88–110) from the *Dungeon Master Guide* with little modification.

## Miscellaneous Magic

Whenever the DM rolls up an item on one of the standard miscellaneous magic tables (Tables 95–104 in the *Dungeon Master Guide*) and finds that it does not suit the setting, he can substitute one of the following items instead.

*Book of One Art*
*Book of One Maneuver*
*Book of One Weapon*
*Dragon Fog Globe*
*Dust of Creaking*

*Feather Tabi*
*Invisible Ink*
*Painter In a Box*
*Talking Paper*
*Yami Doko of Takeichi*

**Books:** A book from this list could instead be a set of scrolls or a series of tablets, as the DM chooses.

**Book of One Art:** This item does not perform any magical functions. A detect magic spell cast on it reveals the presence of magic, but that magical energy comes entirely from the veneration bestowed on the volume by generations of students.

The *Book of One Art* contains all information necessary to learn every element of a specific martial arts style. (The DM decides before a character obtains such a book which style it describes.) It does not instantly bestow any part of that art on a character. Instead, it acts as a martial arts master who knows the entire art. A character with this book can learn an art at the usual rate and through the usual expenditure of proficiencies, but without the necessity of seeking out a martial arts master.

**Book of One Maneuver:** This magical volume contains knowledge of one special maneuver. (See the rules for "Advanced Martial Arts" from Chapter 4.) If a character is a student of a martial art that allows the use of this maneuver, reading the book will grant him knowledge of that special maneuver (if he does not already know it). After the student reads the book, all the pages become blank and the book will never function again. If a character is not a student of a martial art that allows the maneuver, or already knows the maneuver described in the book, both he and the book are unaffected if he reads it.

**Book of One Weapon:** This magical volume contains knowledge on the use of one specific weapon. (The DM decides must decide which weapon it describes.) A character reading the book receives a weapon proficiency with the specific weapon, whereupon the enchantment vanishes from the book.

If the character is not already proficient with the weapon, he obtains basic proficiency. In addition, if he is a practitioner of a martial art that permits use of this weapon (see "Advanced Martial Arts" in Chapter 4), the character receives the ability to use the weapon with the art if he does not already possess that knowledge.

If the character already possesses proficiency with the weapon, he becomes specialized in that weapon (if he is capable of weapon specialization). In addition, if he is a practitioner of a martial art that permits use of the weapon, the character receives the ability to use the weapon with the art if he does not already possess that knowledge.

If the character does already possess proficiency with the weapon but is not capable of specialization, or if the character is unable to use the weapon described by the book, he gains nothing from reading it, and the book's magic does not vanish.

**Dragon Fog Globe:** The Oriental dragon is an immortal, beneficent creature associated with the sea and rainfall, and this magical item reflects these associations. The *dragon fog globe* is a delicate glass globe filled with smoke, the breath of an Oriental dragon. When the globe is shattered, the smoke inside spill outs, increasing in area and density, slowly following the patterns of the wind and contours of the land until it occupies an area one mile in diameter and 20 feet high.

This creeping fog is the equivalent of natural dense fog and moves into place so slowly and naturally that it seems to be perfectly ordinary ground fog. A detect magic spell will reveal its magical nature, but a dispel magic spell will not affect it; this fog is the captured spirit of an immortal being, after all.

Ninja love these very rare *dragon fog globes*, which help them accomplish difficult missions.

**Dust of Creaking:** This is a small amount of dust normally found in a small silk purse. Such a purse will contain 2d6 doses of the dust.

One dose of dust can be spread over a 10'x20' area of ground or flooring. Thereafter, for the next 24 hours or until it is swept or washed away, the dust will creaked on if stepped on, exactly as would an especially creaky wooden floor.

This dust is often used by powerful leaders to give them advance warning of an intruder.

**Feather Tabi:** This is a magical pair of split-toed boots of the sort worn by ninja. The enchantment on these tabi prevents the wearer from transferring much pressure to whatever he walks on. This gives the character a +10% bonus to move silently rolls and prevents her from setting off pressure-based traps, triggers, or other items (such as dust of creaking).

**Invisible Ink:** *Invisible ink* comes in a small bottle or other container holding 2d20 doses, each good for the writing of a message up to one page in length.

The message, when written, is completely visible. However, the next word the writer speaks over the message becomes its "control word." When the writer speaks the word, the letters vanish, and no chemical method will reveal them. Thereafter, when anyone speaks the control word over the paper, the message reappears. It will disappear again if the word is spoken again. The ink will disappear a total of 10 times; thereafter, it reappears and will not disappear again.

Messages created with *invisible ink* cannot be read by a *read languages* spell. A *detect magic* spell will reveal faint traces of magic. A *dispel magic* spell cast on such a message will make the letters go away forever if they are currently invisible, or fix them in place, never to disappear again, if they are currently visible.

Ninja and other sneaky characters use invisible ink to send messages to confidants. The bearer of the message may be carrying the control word (in his memory; it is not written down), or the recipient of the message may already know it.

Tricky users of this ink might write a message in it, say the control word to make the message disappear, then write another message in the same ink and use the same control word. Thereafter, until the ink runs out of magic, saying the control word will cause the two messages to "trade places" on the surface of the parchment or paper. Once the ink runs out of magic, both messages appear, making the letter unreadable.

**Painter in a Box:** This is an intricate miniature diorama contained in a beautiful lacquered box about 1'x2'x6". When opened out, the diorama reveals a small (12 inch) puppet painter with paints, brushes, and a canvas scaled to his size. The wielder of the painter in a box orients the miniature painter toward some scene or view, then speaks the command word associated with the box.

Over a period of only one round, the puppet paints an accurate reproduction of the scene it sees before it.

This item is a valuable tool to a ninja who needs to sketch troop layouts or the faces

of lords attending a conference of conspirators. It is also a good way to produce charming little presents for someone whom the character wants to impress.

The painter in a box can be used 2d6 times before it runs out of magical canvases. These canvases cannot be restocked.

**Talking Paper:** A set of *talking paper* consists of two identical pieces of expensive paper at least 2'x3'. Whatever is said in the presence of one piece of paper is magically reproduced in the vibration of the other. If a character can sneak one piece of the paper into a room, he can sit in the presence of the other piece and hear whatever is said in that room.

The paper will transmit anything said (and any other noise made) within 20 feet of it, if the noise does not originate beyond an intervening wall or barrier. The matching paper will pick up and reproduce that noise if the papers are within 10 miles of each other.

Both pieces of paper must be stretched rigid on frames. For this reason, and because of the need to keep the item inconspicuous, talking paper is often embellished with a beautiful painting or calligraphed proverb, which is presented to the intended victim of the espionage.

The piece of paper that is placed with the person being spied on is called the "listening" piece, and the piece kept by the spy is called the "talking" piece. But those names are not precise, because both pieces of paper act as listeners and talkers. Anything said in the presence of the talking piece can be heard by someone in the presence of the listening piece. For this reason, the talking piece is usually placed in a room where no one is allowed to speak.

A detect magic spell will reveal the presence of an enchantment on the paper. Talking paper is very rare.

**Yami Doko of Takeichi:** Named after the wizard who created it, this man-sized kite is capable of far more than the ordinary yami doko.

The *yami doko of Takeichi* provides its rider and operator with a +3 bonus to Giant Kite Flying proficiency checks, or it can be flown by anyone with a default proficiency score of 12. It loses altitude at a much reduced rate: –1 foot of altitude for every 50 feet traveled. It weighs only 20 lbs. and collapses down into its own backpack case with one round of effort.

## Magical Weapons

The following magical weapons are especially suited to Oriental campaigns. Any of them can be modified according to the Intelligent Weapon rules in Appendix 3 of the *Dungeon Master Guide*.

**Weapon List**

*Arrow, Shouting Humming Bulb*
*Bo, Barrier*
*Chu-ko-nu, Self-loading*
*Fukimi-bari, Loyal*
*Gunsen of Blinding*
*Gunsen of Summoning*
*Kama of Revealing*

*Katana, Blinding*
*Katana, Honor*
*Kawanaga, Crawling*
*Kiseru of Smoke*
*Nekode, Monkey Paw*
*Serpent-Chain*
*Shaping Stick*
*Shuriken, Hunting*
*Shuriken, Sawing*
*Tetsu-bishi, Explosive*
*Tetsu-bo, Earthquake*

## Weapon Descriptions

**Arrow, Shouting Humming Bulb:** This object looks like a normal humming bulb arrow. However, it is not carved to shriek or whistle while flying. Its user can speak over it before firing it, and it will repeat what it is told in a voice equivalent to a man's shout. First, the user tells the arrow how many times it wants the statement repeated—for example, "Three times I tell you" means "Repeat this three times." Then, he makes a simple statement of 10 words or less, which the arrow will repeat. The arrow shouts out the statement once while it is in the air. After it has hit its target, it repeats the statement once per round until the number of times has been reached (up to a maximum of 100 times).

There is a 1-in-10 chance that the arrow will break when it hits its target, and it is easy to break by anyone meaning to do so. Once broken, the arrow will no longer repeat its statement.

This item is a good diversionary weapon. It can make guards believe that someone has penetrated their walls or make hunters believe that their quarry has gotten past them.

**Bo, Barrier:** This weapon looks like an ordinary bo staff. However, when it is twirled and its command word spoken, the wielder can release the weapon and it will continue whirling in midair. It continues to whirl for 10 rounds, behaving in many ways like the priest spell blade barrier. Any creature attempting to pass through the bo barrier suffers 4d6 hp damage, with no saving throw allowed. The wielder of the bo can decide whether the plane of rotation is horizontal, vertical, or at some angle in between. The barrier is 7 feet in diameter, so it is best used to block a narrow door or hallway. Once the 10-round duration has expired, the bo returns to the hand of its wielder, flying to that character at a Movement Rate of 24.

**Chu-ko-nu, Self-loading:** This enchanted repeating crossbow cocks itself, giving it a firing rate of two shots per round.

**Fukimi-bari, Loyal:** These enchanted mouth-darts look out for their owner in an interesting way. Poison spread on these fukimi-bari will not affect the owner when the fukimi-bari are held in the mouth. When held in anyone else's mouth, the poison on them acts normally. A batch of such fukimi-bari are tied to a command word chosen by the wizard who creates them. When a character speaks the command word before putting the fukimi-bari in his mouth, the darts treat him as their owner.

**Gunsen of Blinding:** These war-fans are polished to a magical shine; they glow brilliantly even in darkness. For this reason, ninja use them only infrequently, and carry

them inside sealed bags when they are not in use. Once per round, the wielder can turn the glow on an enemy's face. The wielder must make a normal attack roll but treats all enemies as though they were AC 6. An enemy who is hit must save vs. petrification (with a +2 bonus if wearing a helmet). Success means he is unaffected, but failure means he is blinded for 1d3 rounds. The wielder of a *gunsen of blinding* is in some danger himself. On any natural roll of 1, he accidentally blinds himself for 1d3 rounds (no saving throw possible). An enemy can use a mirror or highly polished shield to reflect the glow of a gunsen of blinding against the wielder.

**Gunsen of Summoning:** This war-fan is enameled with a beautiful illustration of one type of monster or animal. When its command word is spoken, the gunsen casts a variant *monster summoning III* spell, calling forth one example of the type of creature represented in enamel.

There are rumors of the existence of gunsen of summoning enchanted with *monster summoning IV* or even more powerful summoning spells. Regardless of the power level, though, the gunsen will summon forth only one creature.

The magical function of the *gunsen of summoning* can be used once per day. It can be used as a normal gunsen at any time.

**Kama of Revealing:** This weapon has powers related to its original purpose. To use its magical functions, the wielder hurls the kama at a grain field. The kama goes to work, flying on its own volition, cutting down the grain in the field (to a height of 6 inches) at a rate of 400 square feet (equivalent to a 20'x20' area) per round. It continues to do this until its wielder calls it back or an area of 1,000,000 square feet has been cut down.

The *kama of revealing* can be used in this way once per week. The rest of the time, it can be used as a normal kama. While the threshing power can certainly be destructive to the local economy, in times of danger it can reveal small armies hiding out in nearby fields, and at harvesting time it can save one community a lot of work.

**Katana, Blinding:** This sword has a blade so polished that it can be used to blind an opponent. The rules for its use are identical to those for the *gunsen of blinding*. Wakizashi and tanto blades can also be enchanted in this way.

**Katana, Honor:** An *honor sword* is the katana representing a family or clan. In a fantasy setting, honor swords are almost always created using the rules for intelligent weapons, and they are always the object of desire or avarice. The family that loses its honor sword will do everything it can (within the range of its ethics) to retrieve the sword. This could mean that the finder will be hunted by vengeful family members or by family representatives willing to pay him a fabulous amount. If all the members of the blade's original family are dead, someone else is most certainly hunting the sword: the slayers of the family, ruthless masters who want to learn the secrets possessed by the mind in the blade, etc. *Honor swords* can be wakizashi as well, or daisho (katana/wakizashi pairs).

**Kawanaga, Crawling:** This weapon looks like an ordinary kawanaga except for one important difference. Instead of a grappling hook, there is an articulated metal hand at one end. The hand understands simple commands (such as "Hold on to what you are now touching and don't let go") and has a 90% climb walls thief skill. Crawling kawanaga built with the intelligent weapons rules could follow much more involved commands.

*Crawling kawanaga* have no move silently skill, so they are not quiet when crawling up walls.

The metal hand is the enchanted part of the weapon. If the rope is cut, the hand will still function.

**Kiseru of Smoke:** This pipe instantly emits a large cloud of dark smoke when its command word is spoken. The smoke is equal to dense fog and fills an area up to 30 feet in diameter; it lasts for five rounds. The smoke itself is nonmagical and so cannot be dispelled.

The *kiseru of smoke* can issue its smoke cloud twice per day.

**Nekode, Monkey Paw:** These nekode are very reliable, giving their user a 99% climb walls skill roll while worn.

**Serpent-Chain:** This is a manriki-gusari with a difference. When thrown to entangle, it grips with the strength of a snake spirit, making it especially hard to break out of (a –3 penalty to the saving throw vs. paralyzation). Once it is cast free, or when commanded by its wielder, the serpent-chain crawls back to its wielder with the speed of a serpent (MV 9).

**Shaping Stick:** This magical device is a tool kit of weapons. In its normal form, it appears to be a bo (staff), but the wielder who knows its command word can make it take different configurations. At his command, it can turn into a three-section staff, a pair of jo, or a pair of hanbo. A repetition of the command word returns the weapon to bo form. No matter what form the *shaping stick* takes, it fights as a +2 magical weapon.

**Shuriken, Hunting:** These magical throwing stars have a +2 bonus to hit and damage and a much-improved range (10, or 100 yards, treated as Short range; there is no Medium or Long range). In addition, if a *hunting shuriken* is touched with an object belonging to a character just before it is thrown, and that character is within range, the shuriken will fly unerringly to that character and strike him (no roll needed to hit).

**Shuriken, Sawing:** These throwing stars behave normally if thrown at living targets but have a special effect if thrown against inanimate object. When thrown at a nonliving target, a sawing shuriken will hover in place, spinning like a buzz saw blade, and gradually cut its way through that substance. The *sawing shuriken* cuts a notch through five square inches of wood, one square inch of soft stone, or a half-inch square of hard stone or soft metal per round; it will not affect harder substances. After 10 rounds, the shuriken stops sawing and cannot be used again that way for a full day. These weapons are of great use when the character needs to get through a doorway, soft metal bars or chain links, or another obstacle he cannot otherwise affect.

*Sawing shuriken* are roughly as quiet as a circular saw; this is not a stealthy tool to use.

**Tetsu-bishi, Explosive:** These items look like normal tetsu-bishi but are enchanted to explode when stepped on by living creatures. The explosion does 1d8 hp damage to the victim, and the saving throw vs. paralyzation to avoid being lamed is made at a –4 penalty. The victim must then pull out the fragments of the explosive device or take an additional 1d4 hp damage for every 10 feet walked.

**Tetsu-bo, Earthquake:** This iron-shod staff acts as a +1 weapon when used against normal targets, but has a special power when hammered against the ground or floor: It causes a very strong but localized earthquake. The blow does 3d6 hp damage to the surface it hits. The resulting earthquake affects everything within a 60-foot radius. Every wall in that area must make a saving throw vs. crushing blow, with failure resulting in collapse of the wall. Every person in the area takes 1d6 hp damage (saving throw vs.

petrification for half damage) and falls down (making the same saving throw prevents this result). However, the wielder of the earthquake tetsu-bo does not suffer these effects.

The earthquake power of this weapon can be used only once per week.

# CHAPTER 6
# Country and Clan

## Land of the Ninja

The historic ninja appeared in medieval Japan hundreds of years ago. The ninja we are familiar with from fiction and film are distinctly Japanese—even non-Japanese ninja in bad films seem to follow Japanese traditions—and would seem very much out of place if they arose in a fantasy campaign that resembled Viking Sweden or Moorish Spain.

In short, when settling ninja in a campaign, the DM should place them in a nation that substantially resembles medieval Japan, preferably in a larger setting that resembles the Orient of several hundred years ago. This does not, however, restrict ninja from traveling to other lands and cultures.

## Classes of Society

Class divisions of the Japanese people varied from one time period to the next. In the Tokugawa period (17th-19th centuries), the population of Japan was divided into several distinct classes. In descending order of importance they were: samurai, farmers, artisans, merchants/traders, and outcasts (the eta or "untouchables").

In designing a culture for ninja characters, the DM should include the basic traits of a rigid class structure, an obsession with duty and protocol, and a heavy military presence.

### The Samurai Class

The word "samurai" basically means "servant" or "retainer." In spite of the lowly sound of the name, though, the samurai were the warrior class of Japan—the master class. Technically, though, they were all servants of the emperor, hence the name.

The samurai class was the only portion of the population allowed to wear the daisho, or two-sword combination (katana and wakizashi). They were encouraged to live sober and frugal lives, though not all were adept at this. Samurai made up only 6%–7% of the nation's population.

Even within the samurai class, there were divisions of rank. In descending order of importance, they included:

**Emperor:** The emperor was descended (as legend would have it) from the goddess of the sun and was theoretically the ruler of all Japan. In reality, though, some emperors were rulers and some were puppets of the shogun.

**Shogun:** The shogun was the military dictator of Japan, subordinate to the will of the emperor. In some periods, the shogun was the de facto ruler of the nation, keeping the puppet emperor firmly under his thumb.

**Daimyo:** These lords were given rulership of large areas of land by the emperor or

shogun. Daimyo, like the barons of medieval England, tried to be as independent as possible, often waging war on one another or challenging the current holder of the throne for the title of emperor. Daimyo maintained their own castles, but in various periods had to send hostages to stay in the care of the emperor or shogun. In some periods, daimyo had to spend one year out of two living in the capital, and had to leave their families in the capital when they returned to their own holdings. The richest daimyo governed lands producing more than a million koku per year; the poorest, lands producing about 10,000 koku per year. (A koku equals five bushels of rice, worth about 25 gp in game terms.)

**Samurai:** Samurai filled many roles in Japanese society, as warriors and military commanders, as bureaucrats and ministers, as bodyguards and inspectors, as town leaders and policemen. They lived in the castles of their lords or in towns near the castles. Those who administered lands lived in the town or village of that region. In AD&D® game terms, particularly powerful or favored samurai got annual salaries of up to 200,000 gp and a couple of acres to build their homes on. More typical valued samurai received around 50,000 gp and one acre, while the most common samurai received only about 25 gp annually and lived communally with others at their economic level. (These lowest samurai, often the policemen of their communities, tended to supplement their income through acceptance of gifts. This is akin to bribery but was not censured except when the samurai demonstrated excessive greed.)

It is important to remember that the word samurai refers to a social class and not a profession. Roughly half the samurai class was made up of women, some of whom were trained in combat, particularly with the naginata.

**Ronin:** This was an odd class of samurai. These men had no lord and received no salary, but retained the rights of the samurai out of hereditary position or for some other reason. (Some ronin were normal samurai enduring a temporary sentence of exile for a crime.) Many served as soldiers or bodyguards; some were teachers.

## The Farmer Class

Most people in medieval Japan belonged to the farmer class. The support of the entire nation was on their shoulders, but they were looked down on by the samurai and by townspeople, who regarded them as illiterate rubes.

Farmers lived a difficult life, paying taxes amounting to around 50% of their annual production. Some tided themselves over in rough periods by selling their daughters to brothels in the towns. This was not a shameful fate for the daughters, cultural attitudes being different from the west, but was still not the course most of them would have preferred.

At various times, farmers were not allowed to carry weapons, to sell their land, or even (in the most restrictive periods) to leave their land.

## The Artisan and Merchant Classes

Artisans were, for the most part, townsfolk who provided services and goods to the government and for sale. Some craft professions included:

| | |
|---|---|
| Blacksmith | Sawyer |
| Carpenter | Sculptor |
| Cooper | Shingler |

| | |
|---|---|
| Dyer | Silversmith |
| Lacquerer | Spinner |
| Matmaker | Stonemason |
| Miller | Sword sharpener |
| Paperer | Thatcher |
| Plasterer | Tiler |
| Potter | Weaver |
| Sake brewer | Wood worker |

Merchants included the traders and money-changers necessary to handle transactions between people in different regions who used different systems of coinage. Because of the Japanese contempt for greed and its results, the government classed merchants below farmers and artisans when it officially structured Japanese society. However, the merchant class gradually gained in power and wealth, by and large employing the artisans and unofficially becoming more powerful and higher in status than the farmers.

Merchants and artisans, unlike farmers, were allowed to carry a single sword.

### Nonpersons

People in this lowest of categories, the eta, included exiles, who would reenter the class systems once they were allowed to return home; entertainers (including actors and prostitutes); and beggars. Certain people, such as those who handled the dead, could theoretically reenter the class systems once they left their professions. But the eta inherited professions that the Japanese considered repugnant (particularly those dealing with animal carcasses) and therefore could never become part of ordinary Japanese society.

### Outside the Class System

Several groups of professions remained outside the class structure described above.

Some privileged professions, ranking high in society, included priests, poets, and doctors. Many were allowed to wear single swords and were accorded respect deriving from their celebrity rather than their class.

## Loyalty and Obedience

In medieval Japanese culture, a character owed first loyalty to his or her lord, second to his or her parents. A woman owed her third loyalty to her spouse and her fourth to her firstborn son.

In the samurai class, unquestioning obedience to one's lord was the norm. This did not mean, however, that all samurai were completely loyal to their lords.

In the DM's campaign, a Japan-like culture will have similar emphasis on the loyalty a character owes to his lord and clan over other considerations. Western culture promotes self-advancement and individuality over conformity, so the introduction of this element will strongly reinforce to the players that this is a very different setting.

## The Role of Women

Female ninja, called kunoichi, were often very important elements in ninja missions. Kunoichi, like women samurai, were sometimes trained in combat, and any female ninja in an AD&D® game is certain to be among those so trained.

In a game campaign it's not inappropriate to have a higher proportion of female samurai and ninja in important combat and governing roles. Female warriors of considerable skill and influence are a mainstay of Oriental legends and modern cinema.

## The Ninja Clan

Every ninja (except the Lone Wolf) and shinobi belongs to a ninja clan. Every character who is not technically an Oriental ninja but who is built with the ninja character class rules belongs to an organization with an unusual goal and some distinctive techniques it uses to achieve that goal.

The choice of that clan or organization, as much as anything else, defines a ninja character's role in a campaign.

Before the DM can assign a PC ninja to a clan, or allow him to choose his own clan, he must know which clans are part of the campaign setting and what ninja clans are like.

To design a ninja clan or similar organization, the DM must determine the following information.

### Name

A ninja clan usually bear the name of its major family. If the most powerful family in the ninja clan is the Isobe family, the ninja clan will probably be called the Isobe clan.

This does not mean that the clan is widely known to be a ninja clan. Publicly, the Isobe clan may govern a large district and rule many other allied and related families. Members of the Isobe family and its most closely allied families will know that it is a ninja clan; families more loosely allied may not. The mysterious ninja clan operating in the district will be referred to by its nickname.

### Nickname

Many ninja clans also bear intriguing nicknames, often based on local geography or the clan's exploits. A ninja clan based on a tall, black mountain, could be the Black Mountain ninja or the Long Shadow ninja. An NPC clan famous for its poisons might be the Venom ninja or the Serpent ninja. Those known for their intrusion skills might be the Need-No-Doors ninja.

### Known For

Each clan will have a particular skill for which it is known, at least among its own members, and perhaps among other ninja and those in position to hire ninja.

Ruler

The clan or organization leader should have a name, personality, and background. The PC ninja is ultimately responsible to this character, so the clan ruler is one of the

most important people in the PC ninja's life.

### Symbol

Every ninja clan should have a distinctive symbol. Ninja of the clan do not wear the symbol on their ninja night-suits or carry it on ordinary missions. They display the symbol only when they intend to advertise the clan's involvement in a mission. For example, a ninja might leave a medallion or cloth patch bearing the clan's symbol on an enemy's pillow while he sleeps, in order to warn the potential victim that the ninja clan can penetrate his defenses whenever they wish.

Typical representative symbols appear with the sample clans in Chapter 9.

### Territory

This is where the clan lives and the area on which it exerts a substantial influence. Small clans will live in some out-of-the-way place (such as a mountaintop) and exert influence on a small area (typically one village not too far away), while large clans may occupy a regional capital and influence the entire region.

Exerting an influence on an area is not the same as ruling it. A ninja clan might effectively rule the villages nearest its stronghold, but if it is located in a large city, it will probably exert the same degree of influence as would a powerful thieves' guild.

### History

The DM should develop the history and background of the ninja clan. Some details that the history should include are:

Why the clan became a ninja clan. Most were military service clans with many members who were spies and tacticians. When the clan fell out of favor with the current ruler, its leaders ordered a retreat to some inaccessible place in order to survive. The clan then made their living selling spy services and evolved into a ninja clan.

Which wars the clan participated in, and on which side. Whenever there are wars, ninja clans are hired to perform espionage missions. Deciding which side this clan helped during the various wars in a campaign allows you to determine something about the clan's nature. Does the clan work for whoever pays best? Does it stick with one or two ruling houses regardless of whether those houses are right or wrong? Does it always side with the underdog? (If so, see Poor and Dirt-Poor under "Resources.")

Who were the famous ninja of the clan. Even if the clan ninja are not well known outside the family, the clan's history will always provide tales of members whom today's ninja must live up to. The DM should develop a detail or two about some of the clan's famous members of the past: "Shigeru, who developed the use of the springboard to an art form, and killed the daimyo by bouncing over the imperial palace's wall and releasing one perfectly placed dart; Miyoko of the Three Faces, who could change identities faster than you and I can change our minds."

### Goal

A clan or organization might pursue some lofty aim, be interested mostly in self-protection, or be motivated by purely selfish goals. Sample goals include:

Destroy a Rival Clan
Support a specific ruler/daimyo
Keep an Evil Monster From Waking Up
Keep Foreigners From Becoming Powerful in the Homeland
Promote the Worship of a Specific God
Spy for the Nation to Protect It

The DM must be very careful in the choice of a goal for the ninja clan. It should not be too whimsical ("Promote the Spread of a Revolutionary Style of Artwork"). If the DM intends to assign a PC to this clan, (rather than letting the player choose his ninja character's clan), the clan's goals should not be directly opposed to the character's nature unless the DM wants to put the character in conflict with the clan. Such conflict can result in an unhappy, frustrated player.

## Alignment

A ninja clan should have an alignment just as a character does. This alignment reflects the clan's tactics and practices, as well as the way the clan is regarded by those who know of its existence.

Lawful-Chaotic Axis. For ninja clans and similar organizations, a choice of "lawful" does not generally mean "law-abiding." Ninja clans practice outside the law of the land. Non-ninja criminal organizations certainly do.

The choice of "lawful" vs. "chaotic" relies more on whether the clan or organization follows a set of honorable and known rules of behavior.

Imagine a ninja clan that lives near a well-traveled road, upon which its members often perform acts of banditry. If the bandit-ninja give their victims a chance to surrender before attacking, and treat prisoners honorably (ransoming them honestly and not harming them), the clan is probably lawful. If they sometimes attack from ambush and behave in a more civilized manner at other times, without any predictable pattern, they are chaotic. If clan members do the honorable thing only when it is in their best interest, they are neutral.

A lawful clan is more likely to have interesting traditions relating to prisoners, such as the right to challenge the clan champion to ritual combat and go free if victorious.

A neutral clan is likely to have more self-serving traditions. A prisoner sentenced to death might be able to challenge a clan champion to combat. If he kills the champion, he will be allowed to join the clan but must remain with it forever rather than be killed.

A chaotic clan can have traditions that are entertaining but pointless. Prisoners might be run through an obstacle course, climbing ropes and running through booby-trapped buildings, just to see how fast they get through. Prisoners who are successful would get no reward greater than a good meal, the event having no bearing on their imprisonment.

Good-Evil Axis. Interestingly, whether an organization counts as good or evil has little to do with its goal. For example, promoting the worship of a specific god sounds like a good aim. But if the god is one who demands the ritual murder of anyone who

stands in his way, the clan should be considered evil. Likewise, destroying a nation's ruling family might be considered an evil aim. But if the family at one time in the past was bad, and the nation lives under a curse until the family is destroyed, then the goal falls somewhere between neutral and good.

Remember that morally ambiguous questions like these make life more interesting for the PC who is a member of the clan. (What if a ninja falls in love with someone and then discovers that this person is secretly a member of the family destined for destruction?)

The DM can ask several questions when deciding whether a clan is good, neutral, or evil: What does the clan do with hostages? What do ninja on a mission do to guards who get in the way? (If the standing order is "Kill anyone who sees you," the clan is probably evil. If the standing order is "Incapacitate if possible; kill if you have to," the clan is more likely to be good.) What do ninja on a mission do to sleeping people in the rooms they pass through? Does the clan take revenge for actions against it? Is this revenge taken only for major insults or also for minor slights? Is the revenge visited on innocents or only on the person responsible for the insult? What about the clan's attitudes toward its own members? Does it casually sacrifice its ninja (an evil clan), do so only when the return is greater than the loss (a neutral clan), or do so only when there is no other choice (a good clan)? The answers to these questions should be weighed when deciding whether a clan or organization is good, neutral, or evil.

Usual Alignment Choices. In general, the alignments of ninja clans will break down like this:

### Table 28: Ninja Clan Alignments

| Alignment | Percentage | d20 Roll |
|---|---|---|
| Lawful-Good | 5% | 1 |
| Lawful-Neutral | 25% | 2-6 |
| Lawful-Evil | 25% | 7-11 |
| Neutral-Good | 5% | 12 |
| True Neutral | 15% | 13-15 |
| Neutral-Evil | 5% | 16 |
| Chaotic-Good | 5% | 17 |
| Chaotic-Neutral | 10% | 18–19 |
| Chaotic-Evil | 5% | 20 |

If you're doing a quick design on a ninja clan and don't care what its alignment is, roll 1d20 and check Table 28.

### Table 29: Clan Member Alignments

| If the Clan Alignment Is: | Allowed Alignments Include: |
|---|---|
| Lawful/Good | All but NE, CE, LE |
| Lawful/Neutral | All |
| Lawful/Evil | All but LG, NG, CG |
| Neutral/Good | LG, LN, NG, N, CG |
| True Neutral | LN, NG, N, NE, CN |
| Neutral/Evil | LE, N, NE, CE |

| | |
|---|---|
| Chaotic/Good | LG, NG, N, CN, CG |
| Chaotic/Neutral | All but LG and LE |
| Chaotic/Evil | LE, N, NE, CN, CE |

## Range of Alignments

Not every member of a ninja clan must have the same alignment as the clan. Most clans permit a wide range of alignments in their members. The question is: How wide a range?

Lawful clans, surprisingly, are more likely to permit members of all alignments, because they are more likely to keep faith with family tradition (and, inevitably, there will have been family members of opposing alignments in the family history). Because Oriental philosophy involves themes of self-enlightenment, a lawful clan will generously allow members of other alignments the opportunity to learn how to correct their behavior. However, clan members of non-lawful alignments are more likely to be closely watched.

Neutral clans tend to act in their own self-interest, and so are likely to deal harshly with the family members who cause trouble for the family. Neutral clans might allow opposed alignments, but not members whose alignments are strongly opposed to the clan alignment or goals.

Chaotic clans are unlikely to have formulated an established policy on member alignments. They are more likely than neutral clans, but less likely than lawful clans, to have members with opposed alignments.

Good clans do not allow evil members, nor do evil clans allow good members. Neutral clans allow members of both good and evil persuasion.

See Table 29 for an overview of clan alignments and the allowable alignments for individual members.

The DM must decide how the clan deals with alignment dissenters. Does it banish them or kill them? Either way, having developed an alignment opposed to the clan alignment is one good origin for a character with the Lone Wolf kit.

## Races

In a ninja clan, most members are humans, with an occasional halfling or dwarf. Such demihumans (which are often foundlings or changelings) are raised as part of the clan, and often receive special training to take full advantage of their small size. There are no all-dwarf or all-halfling clans.

In a more unusual sort of organization, such as a secretive clerical society or a spy network, members of other races, using shinobi kits, are allowed.

## Size

Ninja clans can be quite large or very small.

A large clan will have one lord and one or two other leaders of high rank called jonin. Beneath them will be 50 or 60 chunin, or middlemen, each of whom rules a family including 30 or so genin (bottom-ranking ninja) and 30 or 40 other family members (most of whom are non-adventuring types or low-level characters possessing one of the shinobi

kits).

A small clan will be about the size of a chunin family from one of the larger clans: two or three jonin, including the clan lord; three to five chunin; around 20 genin; 30 or 40 other family members.

Some small clans have low numbers because they are in decline, their population depleted by warfare or failed missions. Some may have standards so demanding and rigorous that dangerous training and banishments keep the numbers low.

Even the largest of ninja clans simply cannot afford to launch a mission in which dozens of its members get killed. When such things happen, it's usually because:

• A powerful ruler hired ninja from lots of clans for a mission and has thrown them away on a difficult target. No one ninja clan will be destroyed because of the mission's failure.

• The clan is a huge one, possibly one that teaches its secrets to students from non-ninja families, and consequently has more ninja of inferior training to throw away on such missions. Or,

• This is the do-or-die adventure for the clan, the mission in which its ultimate goal will be accomplished or the family will perish.

Other types of organizations—the types described in Chapter 3—also tend to fall within the size ranges described here. The intelligence division of a large western empire can be quite sizeable, while that of a smaller nation or principality, or the private intelligence team of a specific nobleman, will be much smaller.

## Resources

It's not important to know the exact nature of a clan's resources—how many pieces of gold there are in the treasury, how many swords in the armory. What is important is knowing what sort of resources the clan has for various types of missions. For each type of mission, the DM should decide the level of financial support the clan will provide.

**Major/Critical Operations:** These missions are crucial to the clan's goal. Such missions include final confrontations with enemy clans, operations to retrieve priceless artifacts, attempts to prevent the assassination of the clan leader, etc.

**Important/Profitable Operations:** These missions help accomplish a clan's goals; failing in three or four of them is like failing in one major or critical operation.

**Typical Operations:** These are standard missions; each one successfully completed helps the clan achieve its goals, but no single mission is likely to determine the fate of the clan. Most missions performed by a clan fall into this category.

**Minor Operations:** These missions are of little consequence to the clan (loose threads to tie up, sloppiness from a previous mission to clean up, etc.).

**Nonmission Requests:** Requests for resources may be made by clan members who are not currently on clan missions (such as when a ninja PC asks for weapons or information about someone he is investigating in order to help his fellow PCs).

For each type of mission, the DM assigns the clan's usual expenditure of resources. Such expenditures can be Lavish, Good, Adequate, or Inadequate.

Lavish expenditures include equipment (loaned, not given, to the character) of any nonmagical sort, delivered very quickly after being requested; equipment (loaned) of lesser magical or more rare varieties delivered as soon as another ninja can acquire it;

enough money for the PC to maintain the illusion that he is a very wealthy person; the employ of many common hirelings for assault missions or to make up the character's retinue.

Good expenditures include equipment of any nonmagical sort (with a limit of two or three special or rare items per mission) delivered fairly quickly after being requested (from a day to a week after the request); enough money for the PC to maintain the illusion that he is of the noble class; the employ of one to three hirelings to assist in assaults or to aid the character in his endeavors.

Adequate expenditures assume a mission budget of around 100 gp. If the ninja needs more than this, he must steal or otherwise acquire the extra resources himself.

Inadequate expenditures equal a mission budget of around 10 gp. If more is needed, the ninja is on his own.

See Table 30 for an overview of clan wealth categories, mission types, and resources expended.

A clan can be of one financial category but provide resources as though it were from a lower category if the clan leader is notoriously tight with his money.

A clan can also have variations in these recommended expenditures based on internal policies. For example, a clan or organization with a firm policy against the use of resources on nonclan activities will provide Inadequate resources for nonmission activities even if the clan is fantastically rich.

### Table 30: Ninja Clan Resources

| Wealth of Clan | Type of Mission | Resources Expanded |
|---|---|---|
| Fantastically Rich | Major/Critical | Lavish |
| | Important/Profitable | Lavish |
| | Typical | Good |
| | Minor | Good |
| | Nonmission | Good |
| Wealthy | Major/Critical | Lavish |
| | Important/Profitable | Good |
| | Typical | Adequate |
| | Minor | Adequate |
| | Nonmission | Adequate |
| Average | Major/Critical | Good |
| | Important/Profitable | Adequate |
| | Typical | Adequate |
| | Minor | Adequate |
| | Nonmission | Inadequate |
| Poor | Major/Critical | Good |
| | Important/Profitable | Adequate |
| | Typical | Inadequate |
| | Minor | Inadequate |
| | Nonmission | Inadequate |
| Dirt-Poor | Major/Critical | Adequate |
| | Important/Profitable | Inadequate |

| | |
|---|---|
| Typical | Inadequate |
| Minor | Inadequate |
| Nonmission | Inadequate |

## Clan Status

Most ninja clans belong to the farmer class. Some are artisan or craftsman clans. A few have retained samurai status, which is of considerable benefit to a clan member. He is accorded the rights pertaining to a samurai and his cover identity cannot be penetrated. A family belonging to the "nonperson" class may be publicly known as a ninja clan and would probably live in a remote, easily defended, place.

## Allies

Ninja clans are often allied with other families—sometimes officially, sometimes secretly. The DM should decide which families the clan counts among its friends, and whether the ninja clan is superior, equal, or subordinate in the relationship.

Sometimes the ninja clan will be the sponsor and ruler of a smaller family; sometimes the relationship will be one of genuine friendship and alliance between clans that count themselves as equals; sometimes the ninja clan will be beholden to a more powerful clan.

## Enemies

Likewise, ninja clans often have longstanding enmities with other families and organizations. The DM should establish at least one enemy family for each ninja clan; many clans have lots of enemies.

For each enemy, the DM should also decide whether the goal of the clan dispute is competition or extermination.

When it is competition, the two clans are in a protracted rivalry. They may be competing for the same clients for their services, or they may simply want to show one another up. When members of the two clans encounter one another, they endeavor to embarrass each other at every opportunity. This rivalry should not escalate into duels or degenerate into practical jokes. The two clans might maneuver one another into tricky situations, such as by pretending to want an "important" mission and allowing the other family to win the contract, only to reveal that the mission is dangerous and unprofitable—or silly and pointless.

When the goal is extermination, there is blood hatred between the clans. When members of one clan encounter those of another, they try to kill each other. These attempts may be honorable attacks and duels, or wicked attempts at assassination, depending on the alignment of the feuding clans and the individual ninja involved.

## Demands

Each ninja clan imposes certain demands on its members, including ninja PCs.

Demands almost all clans make of their members include:

**Silence.** The ninja must never admit that he is a ninja. If the character's clan is known

to be a ninja clan, he may not even acknowledge that he belongs to that clan. There are exceptions: The ninja can ask the clan leader if he might be allowed to acknowledge his true class and nature to an ally, especially when that ally's help is crucial and will best be served if he knows the truth. But such permission is rare. If a character admits to someone outside the clan that he is a ninja, he places that person above his clan in importance (to the clan's way of thinking, anyway). The clan, if it finds out, may decide to eliminate the person who is now in the know, as well as eliminate the ninja with the big mouth.

**Missions.** The clan can order the ninja character to embark on missions. Refusal to carry out a mission is considered betrayal of the clan. And, yes, a clan leader who doesn't like one of his clan members might try to get rid of that member by sending him on mission after deadly mission.

Demands some clans make of their members include:

**Choice of Spouse.** The clan leader, not the ninja, chooses whom the ninja will marry. Usually, the spouse is another clan member or someone from an allied clan, chosen for political suitability and for the potential of strengthening the clan. Love matches are rare, and the worst thing a ninja could do would be to tell the clan leader that he or she is in love with someone specific. The clan leader will automatically choose someone else to be the ninja's mate, because romantic love is considered a dangerous thing that has led to the downfall of many a good warrior.

This whole situation is a great opportunity for role-playing in a campaign. However, players in a campaign making this demand should play ninja only if they can role-play a cultural attitude very different their own, or if they don't care whom their characters marry.

**Delivery of Treasures.** The ninja is required to submit all accumulated treasure to a superior member of his clan for evaluation. He must arrange a meeting with his superior every three months, and immediately after any rich haul (if possible).

The clan will select those items and coinage it needs and take them away from the character without compensation. Typically, the clan takes about half the magical and other special items the character acquires. Any items that remain after this "tax" belong to the character and are not subject to confiscation later. The more money the ninja clan has, the less likely it is to take any of the character's. But a ninja from a poor family may be required to hand over 50%–75% of all his treasure profits so that the clan will have operating capital for other ninja and other missions.

If the ninja character withholds any treasure and the clan later find out about this betrayal, the ninja will be suitably punished.

**Cost-Accounting.** The ninja character must keep an accurate accounting of all his mission expenditures, right down to the last copper piece (or campaign equivalent).

Of course, the DM can make up any other demands he sees fit for a clan to impose.

Examples of several types of ninja clans appear in Chapter 9.

## The PC and the Clan

Ultimately, the DM determines which clan a PC ninja belongs to. Typically, he does this by:

1. Creating several ninja clans to serve as background details for the campaign

setting.

2. Deciding which ninja clans PCs can come from.

3A. Letting the player do a rough design of his ninja character and then deciding which clan that PC best suits; or

3B. Giving the player details of the available clans and allowing him to choose a clan for his character, then making sure he designs a PC ninja suited to it.

Details of what the PC does for his clan appear in Chapter 8.

# CHAPTER 7
# Playing the Ninja

Because the ninja is so secretive, role-playing this type of character involves an unusual amount of work for the player. At the very least, the character must keep secret from the outer world the fact that he is a ninja. He may also try to keep that secret from his party mates and close friends. Even in a party made up entirely of ninja and shinobi from his own clan, the character might have secret orders from the clan lord, directives that no others may share.

## Ninja in the Outer World

Most of a ninja PC's life takes place away from the clan. The ninja is off in the world, exploring new lands, establishing identities in distant cities, and performing missions to benefit the clan.

The ninja character is usually among people who don't know his secret. Here, expressed as advice to the ninja character, are some ways to maintain a secret identity.

### Don't Impress People

It is easy to impress people with your ninja skills. The problem with this is that people remember being impressed. The more people who remember unusual things about you, the greater the chance they will add stray facts together to reach a conclusion you don't wish them to reach.

It's especially foolish to demonstrate traits that do not belong to your cover identity. If you are pretending to be a normal fighter do not offer to pick a lock. If you are pretending to be a common thief, do not ever wear chain mail or any armor too heavy for practitioners of that profession.

Don't demonstrate the full level of your experience. You are at your most dangerous when enemies underestimate you. Even if you are a veteran ninja with many years of experience, pretend to be a green warrior. Once you have established this background, don't ever let on that it is not true. The temptation to do so can be great, especially when it becomes possible to impress a potential lover through tales of your prowess.

### Go Without Your Ninja Tools and Weapons

This sounds like a cruel punishment—when you have spent so many years learning

the basic skills of the ninja profession, why should you not have its potent tools readily at hand?

But remember this: If you are captured, you may be searched. Tools such as the ninja-to, nekode, metsubishi, and many others are clear evidence that you are a ninja. Even cunningly disguised tools can be found. But tools that are not present cannot be found.

Therefore, you should carry your ninja tools only when you wear the ninja night-suit and are on a stealth mission. At other times, use gear that it similar but not so telling: Carry a wakizashi instead of a ninja-to, a kawanaga instead of nekode, and so forth.

If you plan to be on the road for several weeks or months, it is best not to carry any ninja gear. The opportunities for discovery are too great. When you visit cities where your clan has set up contacts and safe houses, you can borrow gear for specific missions.

## Establish a Safe House or Cache

When you plan to be in a city or castle for an extended period of time, you can set up a safe house or cache for ninja tools and weapons.

Depending on the size of your ninja clan, there may already be a contact and a safe house in the city or castle you are sent to visit. It is no great task for you to ask your clan lord to send some of your gear to that contact. This is not a safe or automatic process. Your gear will be handed over to a low-ranking ninja of the clan, who will deliver it to its destination, putting him in great danger of discovery and death. This ninja is your brother or cousin, so such requests should not be made trivially.

If there is no contact already established in the place to which you are headed, you can prearrange to have your gear delivered to a specific rendezvous, at the same risk to personnel and material as above.

After you reach the new site but before your rendezvous is to take place, you should establish a cache, a secret place to leave your ninja gear where its discovery will not compromise you. (It is against all common sense to set up your cache beneath your bed.)

Ideally, a cache should be in some place that is easily visited by anyone; the fewer people who can visit it, the shorter the list of suspects if the cache is discovered. In this public place, the cache should be well hidden and difficult to approach casually. Here are some possibilities:

- A barrel in the back of an easily accessible but seldom-visited storeroom
- An old crack in a wall a dozen feet up
- Beneath the floorboards of an abandoned temple
- A box covered with a shallow layer of earth in an overgrown field
- A porcelain jar submerged in an untended pool

Remember to leave inconspicuous signs, visible from a distance, to assure you that your cache has remained undisturbed since your last visit. Someone may have found your cache, then returned everything to its original condition, alerted the local lords, and arranged to ambush whoever comes to get the equipment.

For example, if your cache is in a storeroom barrel, you could place a spot of glue on the seal of the barrel. When you visit, glance casually at the spot; if it is broken, you can be certain the cache has been found and that you should not try to retrieve your gear. If your cache is in a crack in a wall, you can dust the surface of the wall below and above with a little soot, which will certainly be disturbed if someone has been there.

These techniques can save your life.

## Once Established, You Become a Safe House

Do not forget that once you are set up in a new identity, you become a safe house for other ninja of your clan. From time to time, allied ninja passing through your region or coming to the same city or castle to set up identities will seek out your help. You are obliged to provide reasonable amounts of help at the ninja's request. Of course, you are obliged to provide even unreasonable help at your clan lord's request.

## Spy On Your Friends

You should honor a true friend with true friendship, but you should also know your nonclan friends better than they know you. You must learn all you can about them. Find out what their interests are, what their true identities are, who their lovers are, what their letters say, why they carry the mementos and other items of sentiment they do, and what truly drives them.

To a young ninja, this may sound like a cruel betrayal of people who intend you no harm and may have saved your life. In a sense, it is. But there are compelling reasons to take this course.

First, it may reveal enemies. Despite your instincts, it may be that an ally is your enemy—and not even because of a personal reason. He may be on a secret mission that would thwart your own mission, or may have a longstanding grudge against another ninja of your clan.

Second, you can often do your friends good by knowing all there is to know about them. In spying on a friend, you may discover some secret need he dares not express, or someone else may be investigating him, pointing to an enemy he did not know about. So long as your friends remain friends, your investigations can ultimately do them only good.

Third, consider this: Although you bear no ill will toward your friends, you have an agenda that is different from theirs, an agenda that is hidden from them. If you are ordered to betray them by your clan lord, that is what you must do. If this is true of you, it could be true of one or more of your friends as well. You need to know the circumstances under which one of your trusted friends could become an enemy.

Fourth, and last: Spying on your friends acts as a constant reminder of your priorities. When you take this course, you can never let your allegiance slip from family to friends. You are always on guard against letting your cover identity become your true identity. This is best for the clan, and so it must be done.

This spying should not be accomplished quickly. Your current assignment is another task with a different target, so your researches into your friends constitute a hobby and should be pursued at a slow, comfortable pace. You might be in the company of these people for months or years; pace your investigation accordingly. Nothing will give you away as easily as undue haste.

It is here that maintaining an identity as a poet or writer is useful to you. It will give you a higher level of credibility when you ask people questions about their careers and exploits. However, it will not help you if you ask so many questions that your friends

come to consider you a nosy person.

Do not be compulsive about your investigations, however. If you fall into a pattern of espionage that your friends can detect and take steps against, you doom yourself.

## Always Have a Reason

At every time of night or day, have in mind an explanation for any unusual thing you are doing. Remember that excuses for friends can be different from those presented to the authorities. Friends will keep secrets for you and will believe things that the authorities will check out for themselves. Here are some examples:

"Why are you wandering the halls of the daimyo's palace, off-limits to the likes of you?" Answer for a friend: "I saw a shadow slip into this area and, curious, I followed. There may be a spy loose in these halls." Answer for a guard: The same, but wait for a moment of distraction on his part and hurl a pebble or smoke grenade into some dark corner to give him something to react to and to convince him that there is an intruder loose.

"Why were you following me?" Answer for a friend: "I've had a premonition about you all day. I think you are in danger." Answer for someone in authority, who may be asking why you were following someone else: "I was not. Why were you following me?" or "I was admiring the material from which his robe was made. See the flow of colors, the expert cut of the cloth . . ."

Sometimes a ready excuse will be more useful to you than a plausible one. Hesitation can doom a good lie, while calm confidence and quick response can carry a bad one.

## Ninja in a Non-Ninja Party

Of course, the advice previously given is from the perspective of a ninja clan lord, who naturally places clan obligations above all other considerations, as will most people from the ninja's culture of origin. The ninja himself may not feel quite so sure about some of those dictates, particularly the ones about spying on his friends.

The ninja character traveling with a party of people who do not share his secret can do many things to maintain his good relationship with them.

## Greed Is Out of Place

Ninja accompanying non-ninja groups will often travel in the guise of thieves. This allows them to utilize most of their ninja abilities without causing consternation among their friends. But it's a bad idea to carry the thief identity too far. A ninja should not steal from his friends (except under clan orders). To do so is to demonstrate greed (a very uncharacteristic fault) and to sow dissension among the party. One important ninja role is to sow dissension among the enemy, and to do so among his allies is the same as considering them the enemy.

## Courage is Not Out of Place

The culture from which the ninja originate places a high premium on fearlessness.

Ninja are not supposed to fear death any more than samurai do. Consequently, when a ninja is pretending to be a samurai warrior, he should demonstrate the same kind of courage the samurai does. Even when a ninja is pretending to be a common thief, if he demonstrates courage rather than self-preservation, he will gain respect in the eyes of his comrades. They will trust him more, and he will be able to trust them more.

### Strong Alliances Help Everyone

Although ninja clan lords caution young ninja against putting nonclan considerations over the goals of the clan, they do not discourage ninja from forging friendships with people who are not of the clan. There are two reasons for this, both of which are very practical.

First, if a ninja becomes friends with non-ninja, the clan has ties to those people, some of whom may become powerful adventurers, merchants, and even rulers. Ninja clans benefit from such alliances, even when the non-ninja are not aware of their friend's ninja background and when there is no profit motive involved. The clan might be able to obtain favors such as economic concessions, trade secrets, or military and economic help in times of crisis. And should the ninja clan be attacked and scattered by armies of the shogun or emperor, the clan leader might be able to send several members of the family to the ninja PC so that they can seek sanctuary with an allied non-ninja ruler.

Second, if the ninja forges real friendships with other members of the party, it helps him keep from turning into a paranoid wreck. If he has no real affection for any member of the party, he will be a more suspicious and less trustworthy member; others in the party may sense this.

## When Friends Find Out

Sometimes a ninja character's true identity and nature will be discovered by another member of the party. This could come about by happenstance (catching the ninja just as he's climbing out his window in his night-suit) or by design (spying on the ninja in much the same way as he's spied on them). Either way, it puts the ninja character in the delicate position of deciding what to do about his friends.

### He Could Confess To Them

The ninja could confess at least part of the truth to his allies, admitting that he is a ninja and he has other allegiances in addition to his friendship with them. He would have to convince them that he is no danger to them and has genuinely been their friend in spite of his divided loyalties.

Under no circumstances should the ninja divulge the name of his clan. People who know something about ninja would realize that he would not do this, but might ask him anyway as a sort of test; if he provides an answer, he is probably lying.

A ninja character who takes this course will ask his friends to keep his secret. His life is in their hands; all they need to do is betray his secret to his enemies and he will probably be captured or killed. If they are true friends, they will keep faith with him.

### He Could Convert Them

A final and dramatic measure when dealing with a friend who has found out a ninja's secret is to try to bring the outsider into the ninja clan. This can come about only when several conditions are in place.

First, the character under consideration for adoption must not be part of any existing clan. If the character is an orphan, survivor of a destroyed clan, or an exile with no hope of return to his original family, he is eligible. (To adopt someone who is part of an existing clan is to invite him to betray his other clan. If he is willing to betray that clan, he will someday be willing to betray the new one.) It is possible to adopt someone who is from another culture if that character expresses the desire to foresake his former life and devote himself to the ninja clan.

Second, the friend must be eager to join the ninja clan. It's not enough just to be willing; a ninja character will be interested in adopting only someone who will bring enthusiasm and loyalty to the clan.

Third, the ninja character must be able to convince the ninja clan leader that his friend is worthy. This will inevitably result in the friend being put through rigorous and potentially deadly tests of skill and loyalty.

Ninja clan lords become far more suspicious when a ninja brings forward an entire party of people requesting admission into the clan. It's best to try to convert only one character who has learned the secret.

### He Could Lie To Them

The ninja could lie to his allies, telling them that he's an imperial spy infiltrating a ninja clan, or some other fabrication.

There are disadvantages to this approach. The characters will already be suspicious of the character. He's lied to them in the past, so they will subject everything he has to say to much scrutiny. The ninja may find that his friends want him to prove his new assertion to them, and he will probably be unable to do so.

### He Could Abandon Them

Having been found out, the ninja character could just leave the characters at his earliest opportunity, return home, and ask for a different mission.

This offers a simple advantage: It makes it difficult for his former allies to exact revenge on him. But it has a couple of serious disadvantages as well.

First, the ninja clan lord will want to know why the ninja abandoned his identity and mission. If the ninja answers honestly—which he should—the ninja clan lord must now decide what to do about the ninja's former allies. He may decide he has to eliminate them, and he'll certainly want to use the ninja who knows the most about them (the PC) to do so. This is also a good opportunity for the clan lord to impose a test of loyalty on the PC ninja. No ninja wants to see his allies exterminated for such a reason, and there is always the chance that the heroes who found out the secret will be skilled and tough enough to kill ninja sent against them.

Second, such abandonment doesn't settle in the ninja's mind what action his former allies will want to take. If he just leaves them, he cannot influence their actions or persuade them not to immediately turn him in to the authorities.

### He Could Become Their Enemy

The ninja could decide to eliminate the people who have found out his secret. This is a drastic measure, taken only when a ninja thinks his clan is immediately and seriously endangered by the discovery of his secret. For that to be the case, the allies must already know the name of the ninja character's clan and have declared an intent to destroy the clan. Such allies could be no more than mere companions, not true friends. A lesser set of circumstances doesn't warrant the ninja character becoming the enemy of his former allies.

If he is convinced that his former allies intend the destruction of his clan, the ninja should get away, then attempt to destroy these enemies as soon as possible. But make no mistake; circumstances such as these are rare.

## An All-Ninja Party

Things are easier when the ninja character is accompanied by ninja from his own clan. There is no danger of trouble resulting from the sudden discovery by another party member that one character is a ninja.

When a party of ninja is traveling out in the wider world, it is a good idea for them to maintain their cover identities at all times. They should not utilize ninja hand-signs in casual conversation or discuss mission parameters unnecessarily. Ninja know that their enemies sometimes employ wizards (who could have wizard eyes floating through the room), and often employ ninja of their own (one could be hanging from the rafters even now, listening to every word).

### Playing The Lone Wolf

The ninja with the Lone Wolf kit has his own obligations to fulfill, and the DM should remind him of them if he strays for too long from the path dictated by his choice of ninja kit.

Lone Wolf characters (and ninja and shinobi who are created as part of a ninja clan but later survive its destruction) are obliged to achieve one (or both) of two goals. The Lone Wolf must:

• Recreate the clan, finding an appropriate spouse, starting a family, collecting allies and followers, and protecting them all.

• Wage war on the destroyers of his clan until he perishes or the enemy does.

It's not practical for a Lone Wolf to leave his old life behind and ignore clan obligations. Inevitably, his enemies will track him down in order to finish the job of destroying his clan. The Lone Wolf will eventually have to fight or die.

# CHAPTER 8
# Campaigning the Ninja

This chapter is for the DM. It deals with all sorts of game-mastering concerns brought on by the introduction of ninja into a campaign. Players are also welcome to read this chapter. It will give them a better idea of what to expect from their DMs.

## Secrecy Within the Campaign

When the DM allows ninja characters within a campaign, he must decide what sort of security to institute. After all, the ninja is a character with a secret, often run by a player keeping the same secret. All these layers of secrecy can make the running of a campaign much harder if not dealt with carefully and intelligently.

There are three types of security for this sort of campaign:

1. The ninja's secrets are kept from the other characters and from the other players.
2. The ninja's secrets are kept from the other characters but not from the other players.
3. The ninja's secrets are known to the other PCs but not to the world at large.

Each approach requires the DM to make different arrangements for his campaign.

### Keeping Secrets From the Players

The hardest approach is for the player of the ninja character to keep the truth about his character class and goals from the other characters and from the other players. This requires a fair amount of setup work on the part of the player and the DM.

#### Redesign Character Sheets

If the campaign's players use a uniform character sheet format, the DM should change it. In the new format, the only character information that appears in public view should be:

- The PC's name
- A list of the PC's visible gear. This list should indicate only the type of item, such as "long sword," not magical bonuses or special attributes.
- THAC0
- Armor class

It's pointless to conceal the PC's THAC0 and Armor Class, as most players can work out these values without effort by comparing die rolls to results in combat.

The back of the character sheet should include information on class, level, hit points, and saving throws.

If the campaign allows players to choose their own format for character sheets, the player of the ninja should utilize a format such as this. The DM should encourage other players to do the same, to prevent the players from concluding that the one character demonstrating some secrecy must obviously have something to hide.

#### False Character Sheets

Even with the additional security offered by the new character sheet format, the player of the ninja should work up an alternate, "public" character sheet for his ninja. This sheet should reflect the character's statistics and abilities as accurately as possible while still maintaining the illusion that the character belongs to a different character class (typically a fighter or a thief). This subterfuge will prevent discovery when a player gets the occasional accidental look at his neighbor's sheet.

In campaigns where everyone starts out at 1st level, it will be hard for a ninja character to maintain the illusion that he's a 1st-level thief; his thieving skills just aren't as good as those of a thief. He can help sustain the pretense by learning what thieving skills

are mostly likely to be used in the campaign and pouring more discretionary points into them (at the expense of other skills), and by never letting another player see his thieving skill values long enough to add them up.

**Paranoia Notes**

The DM should promote the use of paranoia notes in his campaign. Paranoia notes are nothing more than written communications passed between player and DM to allow them to exchange information the other players don't need to know. The ninja player will have to utilize such a technique in order to communicate privately with the DM. If he is the only player to do so, the other players will become suspicious. But if the DM persuades the other players to routinely use notes, the ninja player's activities will not seem out of the ordinary.

**Solo Activities**

Finally, there's the problem of the ninja character's individual goals. The ninja will have clan goals assigned him by the clan leader. Some of these missions can be carried out while the character is in the presence of his non-ninja allies, but sometimes the ninja will have to go out on his own and conduct private missions of stealth.

The best way to do this is to arrange private time with the DM for the player of the ninja, perhaps before or after the regular game session.

Things become trickier when the ninja character must perform a private mission in the middle of an ordinary run. The DM should avoid such situations whenever possible, allowing the player to do this only when the story's plot absolutely cannot progress until the ninja has done his investigating.

Typically, the DM will have to take the ninja player aside where the others cannot hear in order to play out the event. Such mid-game missions should be kept as short as possible so that the other players do not become bored or suspicious. It also helps if the DM can combine these game events with normal interruptions such as dinner breaks.

For time reasons, these mini-missions should avoid combat—but that should be no imposition, as ninja prefer to avoid combat when stealth will suffice.

Finally, the DM should arrange for other players to have short solo events. If every player gets the occasional interlude of this sort, it will keep suspicion from falling on the player of the ninja. Additionally, it will give each player the occasional opportunity to explore some hobby or interest not shared by the others, which is good for enhancing role-playing in any campaign.

**Multiple Ninja**

In a campaign arranged along these lines, two or more players could run ninja from different clans and not even realize it. Each would probably be too concerned with maintaining his own secret to realize that other players are doing the same thing.

## The Players Know, The Characters Don't

An approach that is considerably simpler to implement and live with, involving no major changes to campaign structure, requires that all players in the campaign be able to role-play a certain amount of ignorance on the part of their characters.

With this arrangement, the players all know the major facts about characters who keep secrets. Every player will get solo time in which his character can perform individual tasks and missions, but the difference is that this one-on-one time with the DM is conducted in front of the other players.

This is a cinematic approach, with the players not involved in a scene acting as its audience.

## The Characters Know

Finally, another easy approach is to run a campaign in which all the characters know that one character is a ninja.

Such a campaign can be brought about in any of several ways:

The party could be made up entirely of members of the ninja's clan.

The ninja's secret could be revealed to the party before he even enters the campaign. For example, a party member or NPC patron could hire a ninja for a specific purpose. In such a case, the fact that the character is a ninja would be known to the others, but his real identity—his true name and the name of his clan—would remain a secret.

The ninja's secret could be revealed in the course of the campaign. However, this would come as a modification to an already established campaign rather than the way the campaign was originally set up.

## The Best Approach

Of these three approaches, each one is the best choice for a different type of campaign.

If most of the players are very competitive and their characters do not mesh well as a team, you'd be best off following choice #1. (The ninja's secrets are kept from the other characters and from the other players.) This keeps them from becoming anxious about what other players' characters have or know that their own characters do not.

If the players are good at role-playing, are trustworthy, and do not let their characters act on information that the players have but the characters don't (a common problem with novice role-players), you'll probably find that the most satisfying approach is choice #2. (The ninja's secrets are kept from the other characters but not from the other players.) This will allow you to play out "secret" scenes in front of the players, not excluding them from the campaign's story line, and be safe in the knowledge that they won't use the information they receive in an unfair way.

Choice #3 (the ninja's secrets are known to the other player-characters but not to the world at large) is best used at a later point in one of the other campaign approaches. Characters may gradually learn that one of their party members is a ninja; eventually everyone knows. If they allow the ninja to remain in the party, choice #3 becomes the campaign structure. Starting out from the beginning of a campaign with choice #3 deprives the characters of the opportunity for discovery, and for interesting role-playing as various party members try to keep secrets.

## The Character Mix

A campaign involving ninja PCs can include any of several different types of PC groups. The three different types of character mixes we'll discuss here include one or two ninja passing as normal adventurers in a larger party, a party made up of nothing but ninja, and the rare solo ninja campaign.

## Ninja Passing

In this campaign, one or two PCs are ninja adventuring with a normal group of heroes. Most or all of the non-ninja are unaware of the backgrounds of the ninja characters, believing them to be ordinary fighters or thieves.

### Typical Adventures

Even with ninja added, the campaign's adventures do not have to change.

The ninja PC is ordered by the clan lord to accompany the heroes and participate in their adventures, making regular reports back to the clan. From time to time, the PC ninja will receive special orders pertaining to the current adventure.

*Example: The PCs have been hired to clean out the abandoned Tsuburaya Temple, which is now inhabited by ghosts. The ninja clan lord, learning of this, sends a secret message to the ninja PC: "Find out if one of the ghosts is that of Kagabu, a member of our clan who disappeared there 10 years ago. If so, before your allies destroy him, you must ask him privately if he obtained the Sword of Clan Hayata. Perhaps he will recall enough clan loyalty to answer you. If possible, obtain the sword and send it to me. If not, find out what Kagabu remembers."*

Such an approach gives the ninja character individual goals pertaining to his clan background without interfering with the goals of the PC party. A task like this one forces the PC to do some solo actions, such as entering the temple alone the night before the others perform their raid.

Naturally, all these little missions must eventually add up to a big result. Every so often, the message from the ninja clan leader should explain what the ninja PC has been up to for the last several months.

*Example: "Your delivery of the Sword of Clan Hayata, the powder of the mountain goblins, and the information concerning Hayata Sho have given us the edge we need in our struggle with the Gushiken daimyo, Eizo the Unkillable.*

*"Eizo now besieges Castle Hayata. Persuade your friends that, despite Eizo's promises of great wealth, greater honor is to be found in aiding the Hayatas.*

*"On the hill overlooking Castle Hayata is a dead cherry tree. Buried beneath it on the east side is a box in which rest the sword and powder you retrieved. Obtain them and then sneak them through the Gushiken lines. Present them to Hayata Sho with the information that by sprinkling the powder on the blade he can enchant his weapon to kill Eizo the Unkillable. But before he challenges the daimyo, you must return to the outside and kill Eizo's champion, Sawao, who would otherwise fight the match for him.*

*"Because the actions of our clan cannot be recognized in this event, you must make these actions the goal of your band of famous companions. Make up whatever story you*

*wish to account for finding the Sword of Clan Hayata. I recommend you tell the others that the spirit of a long-dead ancestor told you where to find it and what to do with it."*

To the other PCs, this looks like a help-the-underdog adventure initiated by an encounter between a member of the party and a helpful spirit, while the PC ninja knows that it is the culmination of several months' worth of planning the elimination of an enemy of the clan.

If the campaign takes place at a great distance from the ninja clan, such as when adventurers return to distant lands and the ninja PC accompanies them, the ninja clan leader will be unable to direct the actions of the ninja PC.

In such a case, before he departs his homeland, the ninja character must be given a goal, something he can accomplish by himself over several months or years while adventuring in the lands of the foreigners.

It's best if the goal is a nebulous one, such as discovering the meaning of a prophecy or investigating a faint trail of clues leading to those distant lands.

*Example: The ninja clan lord has learned from a priest that the survival of his clan is bound up with the survival of one of the foreign friends of the PC ninja, but that's the only detail available. The clan lord assigns the PC to protect his friend, but surreptitiously, and to find out what forces are conspiring against the friend and why the fate of the friend is tied up with the fate of the clan. This is a nebulous goal that, as the PC ninja uncovers clues, will resolve into a clearer picture, eventually leading the PCs back to the lands of the Orient for the final chapter.*

**As the Campaign Ages**

In such a campaign, the PCs will eventually begin accumulating followers, building strongholds, and doing all the other things that high-level adventurers do, as will the ninja PC.

If the campaign is destined to return to foreign lands to stay, the ninja PC has several options.

He could be commanded to plant a branch of the ninja clan in that foreign land, a hedge against the possibility that the main clan will someday be destroyed. This is easier to do if there is already a community of Orientals in that foreign land. If there is not, the PC might have to disguise the clan resettlement within a larger migration of his countrymen.

He could be permanently exiled for some crime against his clan, effectively becoming a Lone Wolf ninja and choosing to return to his friends' foreign home. He would probably have to abandon his followers, who are still subject to the clan lord's wishes.

Or, the ninja could bid his old allies a reluctant farewell when they make their final return to their homelands, with the ninja leaving the campaign or the campaign splitting into two.

If the campaign's future is to be in the Orient, different options become available.

Foreign heroes electing to stay in the Orient could achieve the status of samurai and attain great political power through alliances with the daimyos of the land. Meanwhile, the ninja PC will be rising to prominence in his own clan, perhaps becoming its lord. He will have to direct the actions of his ninja in the field (a task handled in behind-the-scenes

correspondence between the DM and the player) while engaging in the politics of his land. He will use his resources to strengthen his clan, to aid his friends, and to promote causes he considers just, while keeping his clan's ninja background a secret and covertly working against the clans who oppose him. Such machinations requires political alliances, so the ninja's old friendship with other PC lords is particularly advantageous.

**Notes**

In a campaign where the ninja PC leads a double life, every character should have the opportunity for a private interest involving occasional role-playing and solo missions. These undercurrents will add to the complexity of the campaign, resulting in more work for the DM, but will also add to the richness of the campaign setting.

### Ninja Group

This campaign type, mentioned earlier, has a cast of PCs who all belong to the same ninja clan. Remember that they do not all have to be of the ninja class. They can be of other classes as well, all of them bearing shinobi kits.

**Typical Adventures**

At the start of the campaign, the ninja party will be sent out with a specific goal. They may be asked to accomplish one mission and return home, or to set themselves up in false identities in a specific town or castle and perform a series of missions there.

Types of missions appropriate to this sort of campaign are described under "Ninja Missions."

**As the Campaign Ages**

In this type of campaign, the missions that the PCs are assigned to accomplish will become more and more challenging and daring.

At a certain point, the ninja will begin attracting followers. Once most or all the ninja in the group have followers accompanying them, the clan lord may decide that they should set up a separate branch of the clan—a hedge against elimination of the main branch.

Ultimately, one of the PCs will be in a position to become the clan lord. In fact, the later stages of the campaign may involve a great deal of maneuvering between several high-level PCs all of whom want to become lord of the clan.

## Ninja Solo

One way to use *The Complete Ninja's Handbook* without making changes to an existing campaign—indeed, without even sending the characters to the Orient for a brief stay—is to run a solo ninja campaign.

Such a campaign consists of one DM and one player. Neither the DM nor the player has to worry about keeping secrets from other players, or that the goals of other PCs will interfere with the ninja's current mission.

The player, if he does not already possess an experienced ninja character, should create one. Use the normal rules for character creation, then advance the ninja PC to at

least the 8th level of experience—a little higher or lower if the DM wishes.

This super-ninja should receive double the usual number of weapon and nonweapon proficiencies at creation and for his experience level.

He should receive 3d4 magical items of the DM's choice (preferably an even mix of weapons, armor, and miscellaneous magical items, but no cursed or useless items), whatever normal gear he wants (within his ability to convince his clan lord of his need for them), and 9d6 gold pieces.

This results in a very skillful character, one appropriate to a lone ninja (or lone spy) movie. Because of his extra skills, the character is unsuited to be integrated into a normal campaign later. (If the DM wants the character to appear in his regular campaign at some point, he should not double the character's proficiencies.)

The campaign start and typical adventures are similar to those for Ninja Group campaigns, described earlier.

## Ninja Adventures

For ninja characters, the DM will want to create ninja missions. Here, we'll talk about what sorts of adventures those are.

Most of these types of adventures are appropriate to campaigns where all PCs are ninja (or solo ninja campaigns). Some of them are more difficult to implement for a mixed team of ninja and non-ninja. In such campaigns, the ninja's task is to convince his fellows that carrying out this mission is the best way to accomplish an existing goal of theirs, or to persuade them to a related task that will allow him to accomplish his mission. Subtlety, persuasiveness, and discretion thus become important weapons in the arsenal of the ninja.

### Intelligence Gathering

The most common sort of task given a ninja is to find out information that somebody would prefer not be known.

Such tasks include:

- Scouting out the position of an enemy army,
- Discovering why a lowly farm girl is being kept locked away in the daimyo's castle,
- Determining which lords a specific daimyo is conspiring with,
- Finding out a shogun's weaknesses of character so they can be exploited,
- Determining a minister's schedule so he can be ambushed and kidnapped.

There are many different ways to acquire this sort of information. Scouting the location of an army might call for one ninja running around in the forest for a night. A more involved mission might call for setting up a false identity and befriending an NPC until the ninja can ferret out the character's secrets.

### Theft and Covert Delivery

Ninja are sometimes called on to steal an important object from its current owner. The object could be an artifact, a book or scroll containing important information, enough money to perform another mission, evidence one person is using to blackmail another,

papers confirming a lord's ownership of a piece of land or of the contract of a concubine, a letter proposing an alliance, etc.

Just as crucial to some long-range ninja plans are missions where the ninja plants an object rather than taking it. The steps of the mission are the same, but the ninja leaves something behind instead of taking it away. The ninja might have to:

- Leave a duplicate of some priceless object already stolen,
- Return a stolen object before its loss is discovered,
- Plant a piece of evidence incriminating a minister,
- Get a message to a deep-cover agent who is already suspected, and so on.

A theft could be as simple as slipping a paper off a table when no one is looking. A more standard theft could involve putting on the night-suit and creeping through secure areas after dark. The most difficult sorts of theft adventures might call for a multistage plan: The ninja would have to set up an identity giving him access to the castle, spend enough time there to map it out thoroughly and time its guard patterns, assemble a team to accompany him, assign specialists to take care of specific tasks, insert his entire team into the castle, deal with guards, open a sealed vault, and escape through some route the castle owner has not covered.

## Elimination

Sometimes the ninja clan objective cannot be achieved while a particular NPC remains at liberty. In such cases, the ninja is assigned a mission of elimination: He must kill or kidnap the obstructing NPC.

This mission is like a theft mission, with the difference that the character must attack a target instead of stealing an object.

Historically, ninja performed some missions of assassination, but this is inappropriate to a heroic fantasy campaign. AD&D game ninja, who cannot reveal their skill to the people around them, often choose to do so when facing a target of elimination. Instead of assassinating a helpless or unsuspecting target, the campaign ninja will penetrate all defenses to get to him and then challenge him to personal combat. The ninja may stack the deck by depriving his target of bodyguards, magical weapons, and the like, but there should be some element of fairness to the attack.

Some missions of elimination are kidnappings. These are even more dangerous for the ninja, who must acquire the target without killing him or her (this sometimes requires the ninja to do things not in his immediate self-interest, such as defend his target from accidental damage) and then get the target from to a safe place (often doubling the danger the ninja faces). Kidnap victims can be ransomed back to their families for handsome rewards; just as often, they are kidnapped to keep them from doing things the ninja clan wishes them not to do, and may be released once the critical point is past.

## Protection

Ninja sometimes find themselves acting as bodyguards for less-adept members of their clans (such as consort ninja who are more experienced at manipulation than at combat) or for people the clan wants to protect from assassins or kidnappers.

A ninja is not as good at personal protection as a samurai; he is not as good a fighter

as a samurai of equal level. But a ninja is better at site security and at predicting the types of attacks that might occur. A ninja protecting a target might spend time figuring out how to break into the target's home or through his defenses and then set up additional, more secretive defenses along those routes.

### Sabotage

Ninja are especially adept at sabotage. Such missions can involve setting fire to castles, sinking ships, ruining defenses, damaging siege engines, and causing other sorts of confusion.

Minor forms of sabotage can be used for diversionary effects. For example, sabotaging a daimyo's coach so he must spend some time beside the road while repairs are made might be a mission of sabotage setting up a mission of elimination.

### Sowing Dissent

Often the best way to defeat an enemy is to allow it to defeat itself.

Ninja are sometimes ordered to infiltrate combined armed forces and then cause friction between their discrete elements. This causes petty lords to quarrel and reduces the effectiveness of a fighting force.

A ninja might ingratiate himself with a daimyo and then demonstrate, through convincing logic and carefully arranged situations, how that lord's good friend of many years is betraying him to another lord. The most skillful of ninja can make the daimyo believe all these conclusions are the lord's own.

### Smoking Out Traitors

The clan lord might ask a PC ninja to help him discover who in his own clan might be a traitor.

One technique used for this purpose is "putting dye in the water." The clan lord gives each of his confidants a variation of the same supposedly important information. The PC ninja would then have to infiltrate the household of an enemy to find out which variation of the information was reaching the enemy, thus pointing to the traitor in the ninja clan.

Another, more difficult, technique involves situations where the clan lord is certain that one of his confidants plots to kill him. The trick is to figure out the circumstances under which the traitor will choose to kill the lord, to convince the suspects that those circumstances have come about, and to keep the clan lord from being killed when the assassination attempt results.

### Testing Ninja

A clan lord might send his ninja on a mission that serves as a screen for the lord's true intention, to determine whether the PC is loyal to the clan. Other tests brought about by the clan lord include trials for outsiders wishing to be adopted by the clan and "graduation" tests for new ninja. Here are some ways these scenarios can be played out.

**The Uncounted Box of Gold**

The clan lord discovers the ninja PC's secret desires and then presents him with the opportunity to satisfy some of them at the clan's expense.

For example, if the PC is exhibiting an untoward affection for money, the clan lord might tell him this story:

*"The samurai Takuji is a secret miser. He has acquired quite a considerable horde of gold from presents he has accepted—400 koku in value. Find his horde and deliver it to me. Make sure not one coin is lost, for I need just that amount for another operation. He cannot report the theft, for then he would have to admit that he accumulated that much gold, which his daimyo will frown upon."*

The samurai Takuji could be just what he appears to be, or could actually be a ninja from another branch of the clan, one whom the PC does not know. Either way, the ninja clan already knows exactly where the gold is and how much there is.

When the PC acquires the horde of gold, he is obliged to count it—his lord did say that he needed a precise amount, and if the horde does not contain that much, the ninja will need to report it or make up the difference. But the ninja finds that Takuji's horde is a quarter again as big as reported. He knows that Takuji cannot report the theft, so there is no way for the ninja clan lord to know if the PC decides to keep the extra . . . or so he thinks.

The ninja who steals from his clan will soon be either dead or a Lone Wolf ninja.

Naturally, a PC ninja could be on the other side of such a test, helping the clan lord test the loyalty of a ninja under suspicion.

**The Lover With a Secret**

The PC ninja, in the course of his adventures, finds love with an NPC. (Remember that the medieval Japanese considered love to be an unlucky emotion, a cause for affairs and tragedies but certainly not the basis for marriage. This didn't stop the medieval Japanese from falling in love, of course.)

At some time after the NPC is well established in the campaign, he or she tells the PC a secret:

*"My family is not native to this area. We originally came from a small farm near the village of [name of the main village of the PC's ninja clan]. Several years ago, my uncle Kenji went to the village and returned that same day, frightened nearly to death. He said that he had discovered something awful about our daimyo [actually the head of the ninja family] and that we all must flee. Uncle Kenji gathered up his wife and children, and persuaded my father to do the same. We left the village that night, under cover of darkness. When we arrived here, we took false names and tried to begin life anew. I don't know what terrible secret Uncle Kenji discovered. All he will say about the daimyo is, "'He is lord of more than we ever realized.'"*

It should be obvious to the ninja that Uncle Kenji somehow discovered that his daimyo was the head of a ninja clan. Possession of this knowledge is very bad for the NPC family. But the ninja should also know that his lover is devoted to Uncle Kenji and would be crushed by his death. This puts the ninja in a bad position. The ninja must either kill his lover's beloved uncle (for it seems obvious that the knowledge this person acquired has not spread), or tell the clan lord (which will just as swiftly result in the uncle's death). Or, the ninja can keep the lover's secret.

The first two choices are the correct ones. Through them the ninja demonstrates loyalty to the clan over loyalty to a lover. The ninja who chooses to keep the secret places a lover's feelings above the protection of the clan.

The truth is that the NPC lover is a distant member of the ninja clan, or possibly an actor hired by the clan lord. The same is true of the lover's entire family. The lover has been instructed to tell this story at a specific time, and "Uncle Kenji" is now being watched over by a very skilled ninja of the clan.

The PC ninja who does not quickly move to eliminate this threat to the clan is fated to be given a dangerous mission of apology and redemption—or a sentence of death.

The important thing to remember when setting up this situation is to be patient and to establish the scenario over a long period of time. The PC should find the lover in the course of other adventures. Their meeting and the flowering of their affection must appear completely natural. (The NPC lover may be torn by divided loyalties as well, but this character knows a test is in progress and will probably remain loyal to the ninja clan.)

**The Lover Shoved Aside**

A simple, if cruel, test for a ninja's loyalty is for the ninja lord to wait until the character has fallen in love and decided to marry. Before the ninja can ask the lord's permission to wed, the lord chooses a marriage partner for the ninja.

**Bright Young Ninja**

A type of test that doesn't involve determining loyalty is the graduation. If the DM wishes, he can put every ninja PC through one or several graduation tasks.

The standard graduation mission takes place when the ninja is first created. It celebrates and confirms the ninja becoming 1st level. This is a relatively simple test in which the ninja must cross an area of forest that is extensively trapped. At the end of the path, he must scale a wall or assail some other difficult obstacle in order to retrieve a token that signifies completion of the mission. The DM can spice up the graduation test by making the traps devious and interesting and by adding encounters with ninja armed with bamboo and padded weapons that do no real damage. The PC ninja should be similarly equipped.

The DM can add additional graduations at level 6 and level 10, the points at which the ninja achieves the ranks of chunin and jonin. These tests should be much more difficult, involving traps that damage as well as entangle and lower-level ninja opponents armed with live steel instead of bamboo.

The objective of these tests is to challenge the PC ninja and determine the level of his skill, not to kill him. But it should be possible for a test to kill the character who behaves stupidly. This is a way of weeding out unsuitable ninja before they can become weak links in the chain of the ninja clan.

**Adoptees**

In the rare event that a non-ninja/non-shinobi PC discovers the clan's existence and wants to join, the ninja clan lord (if he wishes to consider the possibility at all) will conduct a series of tests to determine the applicant's skills and loyalty.

The skills portion of the test will be at least equivalent in danger and difficulty to the chunin graduation test.

The loyalty portion of the test will be especially devious. The clan lord will come up with one test that is, on its completion, obviously a loyalty test, but that's the easy part.

If the applicant passes all the preliminary tests satisfactorily, he is accepted as a provisional member of the clan. Later, perhaps during the new clan member's third or fourth mission, the clan leader will conduct a further test of the character's loyalty. This test will involve the character's background and former loyalties, and should be both compelling and undetectable as a clan test. Each such test will have to be custom-tooled to the character in question, so there's no point in presenting a set of generic tests here.

## Ninja Kits in the Campaign

Each ninja kit is a little different, and there are ways for the DM to add entertaining elements to his campaign through exploitation of most of them.

### Lone Wolf

The most important plot element for the Lone Wolf involves the clan that is his enemy. This is either the ninja's own clan (from which he has been banished for some transgression) or is the family that destroyed his clan (and they need to finish up the job by eliminating him).

When the Lone Wolf character is first created, the DM must decide if the enemy is his own clan. The DM can consult with the player or base his decision on what he knows of the player. The rule of thumb is this: Don't have the enemy be the ninja's own clan unless the player likes to suffer. The DM would be shirking his role-playing duty if he did not include poignant encounters with the Lone Wolf's brothers, sisters, and cousins. They are not, after all, just faceless NPCs who pop in to get killed. They're people the PC is supposed to have cared for and considered family at one time.

Early in the ninja's career, the Lone Wolf will occasionally bump into enemy ninja who are on his trail or who recognize him while about other tasks. The resultant duels with skilled adversaries will alert the other PCs in the party that the Lone Wolf character has a powerful enemy. They may realize early on that the enemy is a ninja clan but should not automatically identify the Lone Wolf as a ninja; many characters have reason to count ninja among their enemies. (But the players will probably figure it out quickly.)

As the campaign progresses, the enemy will become more and more adept at tracking down the Lone Wolf, particularly if he accompanies the same group of PCs all the time. The Lone Wolf and his friends will be endangered by ninja attacks with increasing frequency. The leader of the enemy clan may contact the other PCs and peacefully invite (or induce) them to abandon the Lone Wolf, or may automatically count them among the clan's enemies and seek their deaths as well.

Eventually, the conflict between the Lone Wolf and the clan must reach a resolution. Several resolutions are possible.

The Lone Wolf could leave his allies for a time and perform a final assault on his enemy, resulting in his death or theirs. (The number of ninja in the clan might have been whittled down over the years, after all.)

He could accept help from his friends and perform the same mission.

If the enemy clan is his own family, he could find some way to rejoin it—perhaps by

performing a mission of expiation, or by killing the clan leader in single combat and taking over. Such a resolution might be a solo mission or could involve his friends.

Either way, by late in the Lone Wolf's career it will probably be evident to his friends that he is a ninja. He might end up having to fight one or more of them if some accept his profession and some do not.

**Becoming a Lone Wolf**

It's also possible for a ninja PC to become a sort of lone wolf after having been created with another kit. This can happen if the ninja is banished or sentenced to death by his clan (perhaps for failing one of the tests of loyalty described earlier).

When another type of ninja is separated from his clan, he does not take on the Lone Wolf kit. He keeps all the traits, bonuses and penalties of the kit with which he was created, with the following exceptions:

**Clan Benefits:** All ninja lose any benefits they might have derived from belonging to a clan.

**Clan Obligations:** Ninja are no longer expected to meet any obligations as members of the clan. However, many PCs who are good role-players may choose to meet some of those obligations—helping favorite family members achieve their personal goals and dreams, for instance.

**Intruder:** This type of ninja, will no longer be required to meet unusually high levels of clan demands.

**Spirit Warrior:** This type of ninja cannot learn any new ninja spells unless he does so by stealing a spell book containing them.

**Becoming a Pack Wolf**

On the other hand, if a Lone Wolf ninja is permitted to rejoin his old clan (or, even more rarely, join a different ninja clan), he simply takes on all benefits and hindrances resulting from clan association. He is no longer called a "lone wolf" but does not take on some other kit, not even the Stealer-In.

## Shadow Warrior

This fighting ninja is better suited for missions of protection than intrusion. However, because he is somewhat better at combat than the average ninja, he is also better suited to establishing and sustaining an identity as a fighter. He might take on an identity as an itinerant ronin in order gain employment in the personal guard of a daimyo, for example.

## Intruder

This ninja is best suited for missions where he must think on his feet, improvising tactics and resolutions to rapidly changing situations. He should be put in situations where quick thinking and political maneuvering, rather than a dagger in the dark, will save the day. If he is played properly, the Intruder is a good choice for party leader.

## Consort

Consort ninja occasionally run into people who might recognize them. The DM should remember a few things when utilizing this plotting tool.

First, the person who might recognize the Consort from his or her previous false identity doesn't do so automatically. That person should make an Intelligence check with several penalties and bonuses:

- –2 for each year that has elapsed since the encounter.
- –3 if the encounter was casual.
- +2 if the two worked closely together.
- +3 if the person fell in love with the ninja (but no penalties for time are applied).
- A penalty (minus) equal to the amount by which the Consort made his or her Disguise check that day.
- A bonus (plus) equal to the amount by which the Consort failed his or her Disguise check.

The DM is free to add more penalties or bonuses if desired.

Second, the character who might recognize the Consort should be one who cannot be conveniently disposed of. He might be a daimyo always surrounded by guards. He might even be a crucial part of the ninja's plans; to eliminate him would wreck the mission.

Third, the character who might recognize the Consort may do so and yet not immediately expose the ninja. The character might have reasons to keep this knowledge to himself. He might not yet be convinced that the ninja is truly the one he met before. He may realize that the Consort is up to no good and feel that he can blackmail the ninja. He may still be in love with the Consort.

The DM should introduce such a character to make things tense for the Consort ninja. The drama such encounters inject into the campaign shouldn't be removed quickly or easily.

### Pathfinder

Naturally, adventures with the Pathfinder character should often involve wilderness treks.

### Spirit Warrior

Spirit Warriors should be assigned missions that make use of their magical knowledge (once they acquire some). The Spirit Warrior should be given the occasional mission that no other character can accomplish by himself, a mission requiring exactly his mix of skills and spells. Being given such a mission doesn't mean that the character will automatically accomplish it, of course, just that the character may be the only one who can accomplish it.

## Ninja Clan Resources

As Chapter 6 mentions, each ninja clan has its own resources—in particular, money, personnel, and knowledge.

A ninja is expected to accomplish his mission with the resources he has been given or can acquire in the field. The DM should provide the ninja with resources appropriate to

the task: Money enough to do his job or the opportunity to acquire such money, enough people to accomplish the task or the means with which to acquire such people, etc. When things get sticky, the ninja should not run back to the clan to ask for more resources.

Even worse is the ninja who undertakes a personal mission and decides he must ask the clan for help. If the ninja makes an enemy of a daimyo because of a personal insult, he can't expect the clan to come to his aid. He must get out of the situation on his own. In fact, to come running to the clan could be considered a sign of treason. The ninja could lead enemy spies back to his home, endangering the entire clan.

However, there are ways for the ninja to earn the right to clan resources above and beyond what he has been allotted.

**When the Rules Change**

A ninja should be able to request additional resources if, in the course of a mission, he discovers that his clan lord didn't have a complete grasp of the severity of the situation, and if the situation is of crucial importance to the ninja clan.

*Example: The ninja Rinjiro is sent to a daimyo's castle to find out why a fellow ninja, part of the castle guard, has not made a report in several weeks. Rinjiro discovers that all the castle guards seem badly trained, and none of them knows the disguised ninja in question. He finds out that these are replacement guards, recently hired from the ranks of the ronin. The real guards are even now making a march on the castle of a rival lord who is an ally of the ninja clan.*

Under such circumstances, Rinjiro can ask for additional resources in order to resolve the situation to his lord's satisfaction.

**Resource Points**

The ninja can also earn resource points which he can later trade in for additional resources.

Whenever the character goes into a situation where the rules change (as described above) and then solves it without calling for additional resources, he earns a resource point.

Whenever the character is granted substantial resources for a mission, solves the mission without using many of them, and returns the remainder to his clan, he earns a resource point.

If the ninja earns a reputation for being frugal with his resources, he can make a request for resources beyond those allotted him, perhaps for use on a personal quest. By spending one resource point, he will receive at least a portion of what he has asked for. (The DM is free to restrict the awarding of additional resources.)

If, in the clan lord's opinion, the request is unreasonable, the resources may be refused. The resource point is still spent, but the clan lord is not offended by the request.

The DM, not the player, keeps track of resource points.

## Spy Campaigns

Most of what we've discussed in this chapter applies to non-ninja spy campaigns as

well.

Campaigns can be set up with a spy character keeping his identity secret from his friends, with a party of spies, or even with a high-powered solo spy conducting missions on his own.

The types of adventures described for ninja pertain to spies as well, except perhaps the "graduation test."

In spy campaigns, it's not as important for the spy to keep his true occupation from his allies. In some forms of spy adventure, characters rely on their notoriety as spies in order to provoke enemies into premature action. The DM should decide whether the agency employing the spy demands total secrecy.

The advice for using ninja kits also pertains to spies using those kits, as do the guidelines for using resources.

# CHAPTER 9
# Examples

In this chapter you'll find a number of sample ninja and ninja organizations. These examples demonstrate how to use this supplement's rules. These sample characters and organizations can also be dropped, whole or modified, into your own campaign.

All character examples that follow presume that the campaign uses weapon and nonweapon proficiencies and the Advanced Martial Arts rules from Chapter 4, and that Intelligence modifies the number of nonweapon proficiency slots a character receives.

## Examples of Ninja Characters

No clans are specified for the following characters, except for the Lone Wolf character. You can add them to any clan (of the appropriate alignment) where they can be of use. Naturally, some are better suited to be ally ninja; others make good enemies.

### Kyoji the Dancer

**History:** The Yano clan was locked in a decades-old war with the Nishi clan (the Serpent Ninja). The Yano had suffered greater losses than the Nishi, and the final attack, an all-out raid by the Serpent Ninja, wiped out the Yano clan completely.

Or so they initially thought. But Kyoji, the youngest son of the clan leader, told by his dying father to avenge the clan and if at all possible to bring it back to life, made it out to the rice fields and beyond. He was miles from the farm site when the Serpent Ninja realized that he'd escaped.

When his clan was destroyed, Kyoji was 13 years old, a charming youth who showed great promise as a possible Consort or Intruder ninja. And though he no longer had the benefit of clan teachers to instruct him, he took with him several books pertaining to the family arts. His stubbornness and natural desire for revenge enabled him to learn his family arts through research and practice.

Kyoji made his living as an actor and entertainer, developing the artistic skills he'd

just begun to learn when the attack came. Initially hopeless as an entertainer, he gradually became quite accomplished.

Today, 10 years later, Kyoji is constantly on the move, always on the prowl for information he can use against the Serpent Ninja. He often takes an identity as a dancer, moving from troupe to troupe and welcome everywhere. The Serpent Ninja are still on the lookout for him, so he abandons each identity as his enemies discover it.

**Description:** Kyoji is a little below average height and not particularly muscular. He moves gracefully, with a deliberate dancer's stride that he abandons when performing missions in his night-suit. His features are handsome and cheerful, and in spite of the grimness of his history he is not an angst-ridden man. He intends to establish an identity that has nothing to do with the arts—perhaps as an itinerant merchant—and take a wife willing to be part of the genesis of the new Yano ninja clan.

**Combat:** Kyoji is a loner; team tactics are beyond him. He prefers hit-and-run strategies in locales of his own choosing, areas typically tricked out with a variety of traps.

**Kyoji the Dancer**, hm, Ninja4: AC 8 (leather armor), AC 6 (with ninjutsu); MV 12; hp 16; THAC0 19 (17 with katana); #AT 1 (2 with ninjutsu); Dmg 2d6+2 (katana +2 two-handed), 1d2 (ninjutsu); SZ M (5'4" tall); ML 13; AL NG.
S 11, D 13, C 11, I 15, W 9, C 15.

**Special Equipment:** *Katana +2*, *book of one art* (Yano clan ninjutsu, normally kept in a cache).

**Proficiencies:** Weapon: hankyu, oriental weapons (tight group). Nonweapon: Acting (Charisma –1); Basic Ninjutsu; Dancing (Dexterity); Disguise (Charisma –1); Juggling (Dexterity –1); Survival (Intelligence, two slots); Tumbling (Dexterity). (Kyoji receives four proficiency slots for Intelligence.)

**Thief Abilities:** PP 0, OL 0, F/RT 30, MS 75, HS 65, DN 10, CW 60, RL 0.

**Kit:** Lone Wolf ninja.

### Michiko the Imposter

**History:** Born 18 years ago to a neutral ninja clan, Michiko discovered early her ability to take on the mannerisms of others. This talent brought her to the eye of the clan leader. Since the age of 15, she has been sent on missions of infiltration. To provide Michiko a suitable model for her imposture, her clan attacks a procession including a young samurai woman of her age and approximate build. The young woman is captured and imprisoned, with Michiko her "nurse and servant." Michiko spends a considerable amount of time with the prisoner, learning her mannerisms and as much as possible about her. After a year or more, Michiko appears in the area of the captive's home, bearing an uncanny resemblance to the missing girl but professing to remember nothing before a year ago, when she awoke injured and confused in a rice field.

Sometimes the family does not believe her to be the missing girl, but her acting is usually sufficient for them to believe that she is a noblewoman who has lost her memory. Her similarity to their lost family member is enough to give her access to the family so she can accomplish her mission there.

**Description:** Michiko is of average height and very pretty. She looks younger than

her years. Makeup allows her to age when she needs to pretend to be someone older.

**Combat:** Michiko is an average fighter, with perhaps more training in unarmed combat than people expect. When a combat situation arises, she stays in character, fighting or fleeing as the character she is impersonating would. If her impersonation is discovered, she flees if possible.

**Michiko the Imposter**, hf, Ninja6: AC 9 (bonus from Dexterity), AC 7 with ninjutsu; MV 12; hp 21; THAC0 18; #AT 1 (2 with ninjutsu); Dmg 1d8 (naginata), 1d2 (ninjutsu); SZ M (5'2" tall); ML 12; AL N.
S 9, D 15, C 10, I 12, W 11, C 18.

**Special Equipment:** One set of *talking paper*.

**Proficiencies:** Weapon: basic ninjutsu, dagger, naginata. Nonweapon: Acting (Charisma –1/+2, max 18); Disguise (Charisma –1/+2, max 18); Enamor (Charisma –2/+2 max 18); Etiquette (Charisma +0/+2, max 18); Observation (Intelligence); Voice Mimicry (Charisma +0/+2, max 18, two slots). (Michiko receives three proficiency slots for Intelligence and a +2 bonus to Charisma-based General and Rogue proficiencies from her Consort kit.)

**Thief Abilities:** PP 0, OL 40, F/RT 0, MS 60, HS 90, DN 50, CW 40, RL 20.

**Kit:** Consort ninja

### Yoshi the Purist

**History:** As a child, Yoshi became fascinated with the beauty and purity of the ninjutsu martial arts practiced by members of his clan. He began to study them almost to the exclusion of everything else. His other ninja skills never rose to match those of his relatives, but he became quite proficient at ninjutsu—unbeaten among the children of his age. He also studied a few unusual skills to help make him more valuable in the eyes of his clan lord.

His lord, rather than punish him for inadequacy, has decided to exploit Yoshi's obsession, sending him out on missions where he can study the martial arts of potential enemies and perhaps bring back knowledge about ninjutsu to enrich the family.

**Description:** Yoshi is of greater than average height and lean, with fiery eyes that bespeak the intensity of his study. He is handsome but unaware of it. He is interested only in martial arts and will marry without qualm whomever his lord assigns to him. When on missions that require him to pretend to be a normal person, he remains quiet and distant. He can't discuss his one fascination with a non-ninja because only ninja study ninjutsu.

**Combat:** If Yoshi must fight while obliged to maintain his cover identity, he grits his teeth and does as the party leader tells him, typically getting around behind the enemy line and charging archers and magicians. When on a night-suit mission, he seeks out any opponent who demonstrates martial arts prowess and challenges him to battle.

**Yoshi the Purist**, hm, Ninja1: AC 7 (Dexterity bonus and leather armor), AC 5 with ninjutsu; MV 12; hp 6; THAC0 20; #AT 1 (2 with ninjutsu); Dmg 1d8 (wakizashi), 1d2 (basic ninjutsu), 2d2 (ninjutsu circle kick); SZ M (5'10" tall); ML 15; AL N.

S 14, D 15, C 12, I 13, W 12, C 10.

**Special Items:** None.

**Proficiencies:** Weapon: oriental blades. Nonweapon: Basic Ninjutsu; Ninjutsu Circle Kick; Ninjutsu Feint; Pole-Vaulting (Dexterity); Running (Constitution –6); Set Snares (Dexterity –1). (Yoshi receives three proficiency slots for his Intelligence.)

**Thief Abilities:** PP 0, OL 0, F/RT 0, MS 10, HS 10, DN 0, CW 10, RL 0 (all lower than normal due to the Shadow Warrior kit).

**Kit:** Shadow Warrior ninja.

## Hanako the Ghost

**History:** At the age of three, Hanako was the prize in a grisly game of death. The daughter of a farming family who had nothing to do with ninja, she watched helplessly as a rowdy band of ronin barged into her home, demanded food and service, and chose to take offense at the poor provisions given to them. The ronin slaughtered her parents and siblings, then played hide-and-seek with Hanako, laughing as they chased her from hiding place to hiding place, intending to kill her as well when the game grew dull.

She made it as far as the forest near her home. The laughing ronin chased her into the trees. Then they died, one by one, as a jonin, a senior member of a ninja clan, killed them for their coarseness and brutality.

The ninja took Hanako back to the clan and raised her as a member of his own family. She grew up in the ninja tradition and gradually lost the feeling of being an outsider, though the sense of loss she felt at her family's murder never went away. When she exhibited the characteristics of a magical adept, the clan lord decided to give her training as a wizard instead of a ninja. With this training, she could resume her true name (an identity that could not be penetrated because it was not false) and return to the outer world on missions for the clan. She has chosen to specialize as an illusionist, concentrating on spells of concealment and invisibility.

**Description:** Hanako is a pale, willowy young woman. She gives an impression of physical weakness that is far from the truth. Her eyes are an unusually pale brown, her expression always grave. She is kind to children, but there is a merciless streak to her, the core of which was undoubtedly formed when she watched her family die. She will kill without remorse for her adopted family.

**Combat:** When danger lurks, Hanako uses her spells to make herself hard to find. She may use her magic to position herself so that she can make a deadly strike, or she may fire missile attacks from a position of concealment. She carries many throwing knives.

**Hanako the Ghost**, hf, Ill5: AC 8 (Dexterity bonus); MV 12; hp 14; THAC0 19; #AT 1; Dmg 1d3 (dagger) or by spell; SZ M (5'3" tall); ML 11; AL NG.

S 11, D 16, C 13, I 16, W 10, C 13.

**Special Equipment:** *Feather tabi, dagger +2*.

**Spells (5/3/2):** 1st—*detect magic, feather fall, phantasmal force, read magic, spook;* 2nd—*deepen shadows, hypnotic pattern, invisibility*; 3rd— *monster summoning I, wraithform.*

**Proficiencies:** Weapon: dagger. Nonweapon: Acting (Charisma –1, two slots from Rogue group); Engineering (Intelligence –3, two slots); Feign/Detect Sleep (Intelligence, two slots from Rogue group); Herbalism (Intelligence –2, two slots); Observation

(Intelligence); Reading/Writing (Intelligence +1). (Hanako receives five proficiency slots for her Intelligence.)

**Secondary Skills:** Scribe.

**Thief Abilities:** MS 10, HS 50, RL 10.

**Kit:** Shinobi Illusionist.

### Kozo the Madman

**History:** At the age of six, Kozo, child of a ninja clan, slipped off a cliff while playing with his brothers and fell 60 feet. Though seriously injured, he miraculously survived. As he got older, he decided that he was living on time granted him by the gods and that he must exploit their gift to the fullest. He has chosen to learn the strangest and most dangerous of skills, which makes him a valuable specialist to his ninja clan. But his native recklessness sometimes makes him the weak element of a plan.

**Description:** Kozo is unusually tall and strongly built, with a merry expression that only hints at the craziness his clan knows to expect from him.

**Combat:** In combat, Kozo gravitates to the biggest, meanest-looking opponent and trades blows. His fearlessness sometimes lets him cow more powerful opponents, but it often keeps him in combat long after his allies would prefer that he leave. Sometimes they must drop smoke grenades and bodily drag him from a battle scene.

**Kozo the Madman**, hm, Ninja7: AC 4 (Dexterity bonus and magical armor); MV 12; hp 38; THAC0 17; #AT 1; Dmg 1d8+2 (with ninja-to +2); SZ M (5'11" tall); ML 17; AL CN.

S 14, D 15, C 18, I 13, W 6, C 12.

**Special Equipment:** *Leather armor +3, ninja-to +2, rope of climbing*.

**Proficiencies:** Weapon: hankyu, oriental blades. Nonweapon: Giant Kite Flying (Dexterity –3, two slots); Hunting (Wisdom –1); Riding/Airborne (Wisdon –2, two slots); Tightrope Walking (Dexterity); Tracking (Wisdom, bonus proficiency from Pathfinder ninja kit, +1 bonus for 5th level); Water Walking (Dexterity –1).

**Secondary Skills:** Hunter.

**Thief Abilities:** PP 0, OL 0, F/RT 70, MS 60, HS 60, DN 60, CW 80, RL 0.

**Kit:** Pathfinder ninja.

## Examples of Ninja Clans

Here are several types of ninja clans the DM can use in the campaign.

Players, take note: DMs who plan to use the following clans in their campaigns are free to change names and other details about them. Don't choose a clan from those listed here for your character and expect that the clan in your DM's campaign will be identical.

In the descriptions that follow, no enemies or allies are listed for the clans. The determination of enemies and allies must be based on the clans existing in the DM's campaign.

### Isobe Clan

**Nickname:** Black Mountain Ninja.

**Known For:** Smuggling skills.
**Ruler:** Isobe Jotaro.
**Symbol:** Falcon.
**Territory:** A difficult-to-scale mountain in the darkest, nastiest corner of the empire, and one defensible valley below; includes a few viable rice paddies and a village.
**History:** Ten years ago, the Isobe clan was a samurai clan that supplied many skilled warriors and military advisors to the army of the shogun. Secretly, it was also a ninja clan of great antiquity. Its leaders intended eventually to topple the shogunate and seize control of the empire.

However, enemies of the Isobe clan discovered that the clan leader was a ninja lord. They assembled evidence against him and presented it to the shogun, who responded by stripping the Isobes of all lands and titles, then sending a large army to destroy them.

The Isobes who survived the attack fled to the distant reaches of the empire, land surveyed by a long-dead clan lord and never claimed or developed. They used their ninja skills to build a fortification at the top of an inaccessible mountain. Allied mages and illusionists improved the citadel, making it dangerous for the shogun's wizards to approach.

In the years since, the Isobes have acted overtly as a ninja organization. They sell their services to whomever will pay for them. They have become adept at smuggling agents out past the loose cordon of shogunate spies and guards and smuggling food in through the same lines. Many of these techniques involve the use of clan wizards. There is a disproportionately high number of spellcasters among the Isobes, and many of their spells and magical items are geared toward smuggling.

Naturally, all Isobe ninja traveling in the outer world must adopt cover identities that do not associate them with the Isobe name.

**Goal:** The Isobes are slowly trying to create a new "cover" clan with samurai status. This involves forging an alliance with a now-impoverished samurai clan, intermarrying and merging with it, and covertly using ninja techniques to make it rich and powerful. The clan leader expects this process to take decades.
**Clan alignment:** Neutral.
**Range of alignments:** LN, NG, N, NE, CN.
**Races:** Human only (so far).
**Size:** Jonin/Leaders: 2 (Jotaro and his brother Toyo). Chunin/Middlemen: 12. Genin/Low-Ranking: 208. Others/Shinobi: 364.
**Resources:** *Wealth:* Average (once Fantastically Wealthy, now still possessing substantial cash reserves but with a much reduced income). Available Resources by Mission Type: Major/Critical Missions: Lavish. Important/Profitable Missions: Good. Typical Missions: Adequate. Minor Missions: Inadequate. Nonmission Activities: Inadequate.
**Clan Status:** Nonperson.
**Demands on members:** Delivery of treasures, cost-accounting. The Isobes do not insist on choice of spouse. In fact, the clan actively promotes the forging of links with clans and heroes all over the empire.

## Nishi Clan

**Nickname:** Serpent Ninja.
**Known For:** Poisons.
**Ruler:** Nishi Saburo.
**Symbol:** A stream of water cutting through rock.
**Territory:** A large, wealthy holding, rich in rice production, belonging to an allied samurai daimyo who knows the secret of the clan.
**History:** The Nishi clan got its start a century ago, when a band of samurai decided to strike out on their own after their treacherous lord turned against the shogun and was defeated. These samurai fled the aftermath of that defeat and turned ronin. After due consideration, they decided that wealth and greed were far more agreeable than the blind devotion that had resulted in their exile.

They tallied the skills available to them—including one that proved to be of immense help, the skill with herbs and poisons possessed by the wife of one of the men—and began offering all these skills, not just their swords, for sale. They pooled their earnings and brought in a specialist, a drow spy who could teach them even more salable skills, and eventually persuaded him and his immediate relatives to ally with the ninja clan.

These men were crude and greedy but smart; they continued to plow some of their profits back into training and acquisition of favors and knowledge. Over a period of several decades, they acquired all the skills of older and better-established ninja clans.

Over time, they became the favorite doers-of-deeds of one noble clan, the family they are still associated with. This clan gave them farmland to support the stable identities they needed for security. They do not work solely for this daimyo, but do offer him their services at a courteously reduced rate.

**Goal:** Accumulation of wealth; expansion; domination of sake brewing.
**Clan alignment:** Lawful Evil.
**Range of alignments:** LN, LE, N, NE, CN, CE.
**Races:** Humans and half-elves (of drow descent).
**Size:** Jonin/Leaders: 3 (Nishi Saburo and subordinate family heads Igarashi Junzo and Shimada Eiichi). Chunin/Middlemen: 23. Genin/Low-Ranking: 468. Others/Shinobi: 712.
**Resources:** *Wealth:* Wealthy. Available Resources by Mission Type: Major/Critical Missions: Good. Important/Profitable Missions: Good. Typical Missions: Adequate. Minor Missions: Adequate. Nonmission Activities: Inadequate.
**Clan Status:** Farmer.
**Demands on members:** Choice of spouse, delivery of treasures, cost-accounting (the last two being very important to these money-conscious ninja).

### Motoyoshi Clan

**Nickname:** Need-No-Doors Ninja.
**Known For:** Intrusion skill.
**Ruler:** Motoyoshi Haruhiko.
**Symbol:** A calligraphic brush with an oversized cherry leaf as its paper.
**Territory:** The Motoyoshi clan rules no territory, operating out of the shogun's capital.
**History:** Forty years ago, a military advisor to the old shogun had a vision—or

perhaps it was a hallucination. He saw himself visited by the god of truth, who announced that henceforth the man's allegiance would be to the god instead of the shogun, and that the man must use the tools of deception so as to be on guard against those same dangers. The man retired from military service and became a priest of the god, but brought up his grandchildren as ninja, the better to accomplish the goals of the clan.

**Goal:** The Motoyoshi clan is devoted to truth for its own sake. Its members exist as gadflies constantly stinging the shogunate bureaucracy. Their tactic is to ferret out all secrets and expose them for the other lords of the land to learn. This makes it more difficult for the shogun to keep the lords at one another's throats. The more secretive the shogun and his government become, the more offended the Motoyoshi presume the god to be, and the more strenuously they perform their missions.

*Clan alignment:* Neutral Good.

**Range of alignments:** LG, LN, NG, N, CG.

**Races:** Human only (so far).

**Size:** Jonin/Leaders: 1 (Motoyoshi Haruhiko). Chunin/Middlemen: 5 (Haruhiko's sons and a promising grandson). Genin/Low-Ranking: 10. Others/Shinobi: 23.

**Resources:** *Wealth:* Average. Available Resources by Mission Type: Major/Critical Missions: Good. Important/Profitable Missions: Adequate. Typical Missions: Adequate. Minor Missions: Adequate. Nonmission Activities: Inadequate.

**Clan Status:** Samurai.

**Demands on members:** No special demands.

## Other Ninja-Type Organizations

As Chapter 3 indicates, the ninja character creation rules can be used to create spies and killers as well. Such characters are often grouped into organizations such as the two described below.

### Her Majesty's Ministry of Intelligence

**Nickname:** The Peepers.

**Known For:** Panache.

**Ruler:** Sir Trevor Draken.

**Symbol:** The black stone Ministry tower.

**Territory:** The Ministry controls no specific territory; it is a subset of some imperial government in the DM's campaign world.

**History:** Her Majesty's Ministry of Intelligence was created 30 years ago by Sir Larris Draken, father of the current minister. The elder Sir Draken, an old military intelligence officer of the army, argued persuasively before the Crown that the nation's rulers needed a small, highly trained, highly motivated unit of spies who were more adept at missions of intrusion and sabotage than the individual doers-of-deeds employed by each military leader.

The Crown agreed and lavished an enormous budget on the Ministry. In the years since, some rulers have used the Ministry as a valuable tool for finding out crucial information about the nation's friends and enemies, while others have looked on it as

merely a form of entertainment. (It is for this reason that all Ministry agents are chosen for and trained in dash and daring. The more entertained the king and queen are by their exploits, the more money the Ministry receives to perform its duties.)

**Goal:** To protect the Crown through acquisition of secrets kept by foreign powers.

**Organization alignment:** Neutral Good.

**Range of alignments:** LG, LN, NG, N, CG.

**Races:** Humans and half-elves.

**Size:** Leaders: 1 (Sir Trevor Draken). Middlemen: 3 (divisional leaders: Foreign Division, Domestic Division, Court Division). Low-Ranking: 60. Others: 100.

**Resources:** *Wealth:* Fantastically Rich. Available Resources by Mission Type: Major/Critical Missions: Lavish. Important/Profitable Missions: Lavish. Typical Missions: Good. Minor Missions: Good. Nonmission Activities: Good.

**Clan Status:** Noble.

**Demands on members:** No special demands.

## The Priests of Ya'ang-Keegor

**Nickname:** Those Madmen

**Known For:** Doing the impossible.

**Ruler:** Balabath the Occluded.

**Symbol:** The sun being quenched as it descends into the ocean.

**Territory:** This organization, which can have branches in any civilized land infected by contact with its nation of origin (which can be any ancient land from the DM's campaign world), controls lands in many inaccessible regions. It prefers mountain plateaus and, if the terrain supports it, mesa summits. The regions controlled by the Priests of Ya'ang-Keegor are heavily agricultural areas.

**History:** Centuries ago, a mad mage named Ya'ang-Keegor had relatives in two nations that were going to war. He tried to persuade the warring rulers that war was folly, but couldn't. Both rulers were so convinced that the war was necessary that they told him he could not prove something that was so patently untrue.

He asked each of them to write down three impossible things and asked them to agree to a trial: If he could perform all six impossible tasks, they would concede that they were wrong and stop the war.

According to legend, the war raged on for a year. Then Ya'ang-Keegor reappeared, seized both kings, spirited them away to a distant cave, and performed all six tasks. Only the three of them were present, so there were no witnesses to the tasks and the exact list of deeds has been lost. Scholars amuse themselves by assembling lists of likely events; playwrights concoct plays showing these events with different tasks. Popular beliefs have the wizard squeezing an elephant through the head of a pin without shrinking the elephant or enlarging the pin, winning the war for each ruler without bloodshed, turning off the sun or moon for a day, demonstrating mathematically that no number is equal to itself, and other deeds.

The wizard ended the war and acquired many followers. He never taught them how to do impossible things; he just told them nothing was actually impossible if they figured out all the angles and approaches. He set himself his own impossible task, that of becoming a god, and kept about it for the rest of his life while being followed around by

admirers. Over the years, those admirers did begin setting bigger and harder tasks for themselves, with no regard to morality or functionality. They stopped wars and broke up tightly bonded clans, stole carefully guarded treasures and found lost ruins, arranged for peasants to become kings and kings peasants, settled disputes that even the gods failed to resolve, sank unsinkable ships, and more.

Today, centuries after the mage's disappearance or death, his memory is kept alive by this odd priesthood of men and women who exist mainly to cause trouble. Most members of the priesthood are spies (ninja), while a few are clerics, wizards, and members of other classes taking shinobi kits.

Ironically, should the mage Ya'ang-Keegor have achieved apotheosis, he will never approach his priests. Before he died, or departed on the path to godhood, he told his followers that any god coming to them and calling himself by the name of Ya'ang-Keegor must be a fake. They have taken his words to heart and will show no particular interest in a god identifying himself as their god.

**Goal:** To demonstrate man's worthlessness by showing as false every one of his claims; to demonstrate man's greatness by showing how he can accomplish everything he imagines. (The paradox is typical of the order's thinking.)

**Organization alignment:** Chaotic Neutral.

**Range of alignments:** NG, N, NE, CG, CN, CE. (Lawful types need not apply.)

**Races:** Human.

**Size:** Leaders: 20 (high priest Balabath the Occluded and his immediate subordinates). Middlemen: 126. Low-Ranking: 1,533. Others: 2,217.

**Resources:** *Wealth:* Average. Available Resources by Mission Type: Major/Critical Missions: Adequate. Important/Profitable Missions: Adequate. Typical Missions: Inadequate. Minor Missions: Inadequate. Nonmission Activities: Inadequate. (The priesthood has reasonable resources but uses them to live well rather than to accomplish its peculiar goals.)

**Clan Status:** Priesthood (whatever that means in a specific culture).

**Demands on members:** Choice of spouse; the choice is always someone who is an impossible choice (someone who hates the character, someone who cannot be allowed to marry the character, etc.).

# The Complete Psionics Handbook

"What do you think I am, a mind reader?" As a matter of fact, you might be, if you're an AD&DR game character with the right stuff. All you need is brainpower, discipline, and *The Complete Psionics Handbook*. Psionics-the practice of extraordinary psychic powers-was included in the original AD&D game. Some players favored psionic powers; others found them confusing. Psionics was not included in the AD&D 2nd Edition game. Now psionics is back by popular demand, and it's better than ever. Powers this great may not be for everyone, so psionics is a completely optional addition to the AD&D 2nd Edition rules. But if you're ready to put mind over matter-to test the limits of inner space-then this book is for you. *The Complete Psionics Handbook* is not a reprint of the old psionics rules; it's a complete revision. If you remember the original AD&D rules, you'll find much that seems familiar here. Beware: old words may have new meaning. We've kept a lot of the terminology, but changed the definitions. Read this book carefully before you assume an old rule still applies or jump to conclusions about what certain powers can or cannot do.

## What's Changed?

This book contains five major revisions to the original AD&D psionics rules:

1. *The psionicist is a character class.* Characters cannot pick up a psionic power here and there just because they have a superior brain. Psionicists are extraordinary characters who develop their powers through arduous training. (While members of other classes may occasionally boast a psionic power or two, such characters are mere shadows of true psionicists.) An NPC psionicist has the potential to stand his own against any other class. As a PC in a team of adventurers, the psionicist will complement other classes well. Most of the psionicist's powers are unique. He advances slowly, at a rate somewhere between the fighter and mage. At low levels, however, the psionicist has the potential to be powerful.
2. *The list of psionic powers is greatly expanded.* Original rules included a menu of 50 powers. This book has over 150.
3. *Psionic powers are organized differently.* All psionic powers are grouped into six disciplines: clairsentience (expanded senses), psy-chokinesis (moving matter through space), psychometabolism (altering the body), psy-choportation (psionic travel), telepathy (mind-to-mind contact), and metapsionics (an advanced discipline). Within each discipline are major powers, called "sciences," and minor powers, called "devotions" Characters can only learn powers from the disciplines they have access to. At 1st level, a character has access to only one discipline, but with experience he gains access to more.
4. *Psionic powers are treated much like proficiencies.* Psionic powers do not work automatically. A power is essentially a skill, and using it properly requires a power check.
5. *Psionic strength points are not divided into attack, defense, and generic batches.* All of a character's psionic strength points come from a single pool. Numerous other changes, both major and minor, have been made. To avoid confusion, players are urged to read this book carefully.

## How Does This Fit My Campaign?

There's no reason why adding psionics to an existing campaign should disrupt anything. As a class, psionicists are no more or less powerful than any other. Guidelines on how to introduce psionics without trauma are given in Chapter 9. Remember, everything in this book is optional; none of it is part of the core of the AD&D game. If something in here doesn't suit a particular campaign, rule it out.

# Is Psionics Magical?

Many people assume that psionics is just another type of magic. The AD&DR game already has two types of magic-one wielded by wizards and the other by clerics. So it is not unreasonable to ask, "Does the game need a third type of magic?" The answer is no, the game probably does not need a third kind of magic. But the question is misinformed because psionics is not magic. Magic is the ability to shape, control, harness, and utilize natural forces that infuse the game world and surround the characters. It is based on the principle that, through the use of words, gestures, and catalyzing materials of unique power, these external energies can be controlled. The key element of that statement is *external energy*. Magical effects are produced externally by manipulating outside forces. The power does not come from inside the wizard or priest but from somewhere else. Psionics is the complete opposite of this. The psionicist shapes, controls, harnesses, and utilizes natural forces that infuse his own being. His effort is focused inward rather than outward. He must be completely in touch with and aware of even the tiniest workings of his body and mind. This type of knowledge comes from long and intense meditation coupled with physical extremes. The psionicist finds enlightenment in both complete exhaustion and complete relaxation, in both pain and pleasure. The mind and body are only parts of a much greater unity. Indeed, discussing one without the other, as so many people do, seems nonsensical to a psionicist; they cannot be separated. The body produces energy and vitality, the mind gives it shape and reality. Neither does the psionicist study or pray for his powers. He carries them with him wherever he goes. As long as his mind and body are rested-i.e., as long as he has not depleted his psionic strength-his powers are available to him. More than a character of any other class, the psionicist is self-contained. Unlike the fighter and thief, he needs no weapons or tools to practice his art. Unlike the priest, he needs no deity. Unlike the wizard, he relies on no outside energies. His power comes from within, and he alone gives it shape. The psionicist strives to unite every aspect of his self into a single, powerful whole. He looks inward to the essence of his own being, and gains control of his subconscious. Through extraordinary discipline, contemplation, and self-awareness, he unlocks the full potential of his mind.

## Requirements

This section describes the requirements all characters must meet to become a psionicist, including restrictions based on ability scores, race, and alignment. The DM may waive these requirements in special circumstances, but players shouldn't count on it.

| **Ability** | | |
|---|---|---|
| **Requirements:** | Constitution | 11 |
| | Intelligence | 12 |
| | Wisdom | 15 |
| **Prime Requisites** | Constitution, Wisdom | |
| **Races Allowed** | human, halfling, dwarf, gnome, elf, half-elf | |

**Ability Requirements:** To be eligible for the psionicist class, characters must have ability scores equal to or greater than those listed above for Constitution, Intelligence, and Wisdom.
**Prime Requisites:** The pursuit of psionics requires strict mental and physical discipline, so the psionicist has two prime requisites: Wisdom and Constitution. Wisdom-the measure of enlightenment and

willpower-is the psionicist's primary mental characteristic, not Intelligence. Reasoning and memory (two hallmarks of Intelligence) are indeed crucial to this class. However, the essence of psionic ability is the understanding and mastery of the inner self. Although psionic powers are centered in the mind, acquiring and controlling those powers demands physical fitness. Meditative study places tremendous physical strain on the psionicist, not to mention the sheer drain of projecting psychic energy out of ones body. The psionicist need not be muscular, or even exceptionally strong, but he must maintain his health and fitness at a high level to fully exercise his powers. That's why Constitution is also a prime requisite for psionicists.

**Racial Restrictions:** Humans, halflings, dwarves, and gnomes often have a high degree of psionic talent. Elves and half-elves also exhibit some natural psionic ability, but they are unable to pursue it to high levels.

**Multi-class Characters:** As usual, only demi-humans can be multi-class characters. Half-lings and dwarves can combine psionics with other classes as shown below. Gnomes, elves, and half-elves cannot be multi-class psionicists; characters of these races develop their psionic powers at the expense of all others.

| Multi-class | |
|---|---|
| **Halflings** | **Dwarves** |
| fighter/psionicist | fighter/psionicist |
| thief/psionicist | thief/psionicist |

**Dual-class Characters:** Humans can be dual-class psionicists within the normal rules and restrictions for dual-class characters. (See "Multi-class and Dual-class Characters" in Chapter 3 of the *Player's Handbook*.)

**Racial Level Limits:** Humans can reach the highest possible experience level as psionicists. Characters of other races have limits, as shown on Table 1. Because of their experience limitations, half-elf and elf psionicists are best suited as NPCs. Players who don't mind this "diminished potential" may still play such characters, however. (The DM may amend these level restrictions for characters with exceptionally high Wisdom and Constitution scores; see the optional rule under "Exceeding Level Limits" in Chapter 2 of the *DUNGEON MASTER Guide*.)

| PSIONICIST RACIAL LEVEL LIMITS | |
|---|---|
| Halflings | 10 |
| Gnomes | 9 |
| Dwarves | 8 |
| Half-elves | 7 |
| Elves | 7 |

**Alignment:** Psionicists have only one alignment restriction: they cannot be chaotic. Discipline is the foundation of all psionic power. A character whose creed is chaos cannot achieve the level of self-control that psionicists require. This restriction applies to a character who becomes chaotic for any reason. Such a character will quickly lose his psionic powers. Every day in which his alignment is chaotic, the character must make an ability check against one-half of his Wisdom score, rounded down. Each time he fails one of these Wisdom checks, the character loses access to one of his disciplines, selected randomly by the Dungeon Master. Furthermore, a chaotic character cannot recover psionic strength points.

(Disciplines and psionic strength points are explained below.) If the character's alignment returns to normal-or even to another, nonchaotic alignment-he can recover his disciplines, one per day, by successfully making the same halved Wisdom check.

**Other Qualifications:** If a character meets all the requirements above, and the player wants to play a psionicist, the PC is assumed to exhibit psionic potential. Nothing else is required.

**Initial Funds:** When psionicist characters begin play, they have 3d4xl0 gold pieces. As usual, skill and luck will determine what they make of it.

## A Psionics Primer

All psionic powers belong to one of six disciplines: clairsentience, psychokinesis, psy-chometabolism, psychoportation, telepathy, and metapsionics. Within each discipline are major powers, called *sciences*, and minor powers, called *devotions*.

- *Clairsentient powers* allow characters to gain knowledge that is beyond the normal capacity of human senses. For example, some clairsentients can see and hear events that are miles distant, while others can sense poison.
- *Psychokinetic powers* move objects- from molecules to missiles-across space. A psychokineticist can throw a rock without touching it, or agitate molecules in a piece of paper until it bursts into flame.
- *Psychometabolic powers* affect the body. Biofeedback, healing, and shape-changing are just a few of the powers known.
- *Psychoportive powers* move characters or creatures from one location to another without crossing space. The traveler simply ceases to exist in one location, and begins to exist somewhere else. He may even travel to another plane of existence or to another time.
- *Telepathic powers* involve direct contact between two or more minds. Examples include mind reading, personality swapping, and psychic attacks.
- *Metapsionic powers* amplify, augment, or enhance other psionic abilities. This is an advanced, demanding discipline.

**Psionic Strength Points:** Characters use psionic powers much like proficiencies, with a few significant differences. Every time a psionicist uses a psionic devotion or science, he must pay its "cost." This cost is deducted from the character's total *psionic strength points*, or PSPs. PSPs are similar to hit points, except that the psionicist spends them willingly, and he can recover them much faster than lost hit points. (Psionic strength points are explained more fully in a section below.)

**Power Scores:** Like a proficiency, every psionic power that a character knows has a score. In other words, a psionic power score represents the character's aptitude in using that particular power. Power scores are devised exactly like proficiency scores. Every psionic power is associated with one of the character's basic attributes (Strength, Wisdom, etc.). The psionic power score equals the character's score for that attribute, plus or minus a specific amount. For example, a psionic power with a score of "Intelligence - 3" has a score three less than the character's Intelligence.

**Power Checks:** When a character wants to use a psionic power, the player makes a *psionic power check* by rolling ld20. If the number rolled is equal to or less than the power score, the character succeeds. (In other words, he does what he intended.) The player subtracts the cost of the power from his character's total pool of psionic strength points. If the roll exceeds the psionic power score, it means the character tried to use his power, but failed. *Failure has a price.* The player must subtract half the cost of the power, rounded up, from the character's psionic strength points. In most cases, the psionicist can try to use the same power again immediately (in the next round). For exceptions, see the individual power descriptions in this book. Like a proficiency check, a psionic power check yields specific results on a die roll of 20 or 1. A "20" always indicates failure. A "I" always indicates a minimum level of success, regardless of the

character's power score. In other words, even if a character's score has been reduced to a negative number by penalties, a roll of "I" still succeeds. That doesn't mean a "I" (or any low number) is the best re- sult. A "I" means the power works-but often with a quirk or drawback. See the individual power descriptions for specifics. Players may use the optional "skill score" rule for psionic powers, too. If the die roll for the power check equals the character's power score, special results occur. Chapters 3 through 8 provide the details.

## Advancement

**Experience Levels and Awards:** A psionicist earns experience points and advances in level just as members of other classes do. Table 2 outlines a psionicist's advancement. The *DUNGEON MASTER Guide* includes an optional rule for individual experience awards. (See DMG Chapter 8.) Table 3 expands that rule to include psionicists.

| PSIONICIST EXPERIENCE LEVELS | | |
|---|---|---|
| **Psionicist Level** | **Experience Points** | **Hit Dice (d6)** |
| 1 | 0 | 1 |
| 2 | 2,200 | 2 |
| 3 | 4,400 | 3 |
| 4 | 8,800 | 4 |
| 5 | 16,500 | 5 |
| 6 | 30,000 | 6 |
| 7 | 55,000 | 7 |
| 8 | 100,000 | 8 |
| 9 | 200,000 | 9 |
| 10 | 400,000 | 9+2 |
| 11 | 600,000 | 9+4 |
| 12 | 800,000 | 9+6 |
| 13 | 1,000,000 | 9+8 |
| 14 | 1,200,000 | 9+10 |
| 15 | 1,500,000 | 9+12 |
| 16 | 1,800,000 | 9+14 |
| 17 | 2,100,000 | 9+16 |
| 18 | 2,400,000 | 9+18 |
| 19 | 2,700,000 | 9+20 |
| 20 | 3,000,000 | 9+22 |

| INDIVIDUAL CLASS AWARDS | |
|---|---|
| Psionic power used to overcome foe or problem | 10 XP/PSP |

| | |
|---|---|
| Psionic power used to avoid combat | 15 XP/PSP |
| Defeat psionic opponent | 100 XP/level or hit dice |
| Create psionic item | 500 XP x level |

**Gaining Disciplines:** Every psionic power belongs to one of the six disciplines listed previously. Before a character can learn a psionic power, he must have access to the appropriate discipline. *Psionic characters begin play with access to only one discipline*. As they progress to new experience levels, they gain access to additional disciplines. Table 4 shows how many disciplines a character has access to at each experience level.

| PSIONIC POWER PROGRESSION | | | | |
|---|---|---|---|---|
| **Experience Level** | **Total Disciplines** | **Total Sciences** | **Total Devotions** | **Defence Modes** |
| 1 | 1 | 1 | 3 | 1 |
| 2 | 2 | 1 | 5 | 1 |
| 3 | 2 | 2 | 7 | 2 |
| 4 | 2 | 2 | 9 | 2 |
| 5 | 2 | 3 | 10 | 3 |
| 6 | 3 | 3 | 11 | 3 |
| 7 | 3 | 4 | 12 | 4 |
| 8 | 3 | 4 | 13 | 4 |
| 9 | 3 | 5 | 14 | 5 |
| 10 | 4 | 5 | 15 | 5 |
| 11 | 4 | 6 | 16 | 5 |
| 12 | 4 | 6 | 17 | 5 |
| 13 | 4 | 7 | 18 | 5 |
| 14 | 5 | 7 | 19 | 5 |
| 15 | 5 | 8 | 20 | 5 |
| 16 | 5 | 8 | 21 | 5 |
| 17 | 5 | 9 | 22 | 5 |
| 18 | 6 | 9 | 23 | 5 |
| 19 | 6 | 10 | 24 | 5 |
| 20 | 6 | 10 | 25 | 5 |

**Gaining Sciences and Devotions:** Every new, first-level psionicist knows four powers within a single discipline: one science (major power) and three devotions (minor powers). With each new experience level, a psionicist gains new powers. Sometimes he gains both sciences and devotions; at other times, only devotions. (See Table 4.) A player can select new powers for his character as soon as the psionicist reaches a new experience level. These new powers can be chosen from any discipline the character can access, including a discipline that was just gained. Note: If the optional training rule is in play, characters must train with a mentor until they reach 7th level. To find the training time in weeks, subtract the mentor's Wisdom score from 21. Beyond 7th level, psionicists can train themselves if they pass the

necessary checks to qualify as instructors. The training time for a psionicist instructing himself is doubled. Players must follow two simple rules when choosing new powers for their characters:

- Within a single discipline, the number of devotions that a character knows must be at least twice the number of sciences.
- The first discipline chosen is the character's *primary discipline*. A character can never learn as many sciences or devotions in another discipline as he currently knows in his primary discipline.

*Example:* Lena's primary discipline is clair-sentience. She knows three sciences and seven devotions in that discipline. This means: a) she must learn an eighth clairsentient devotion before she can learn a fourth clairsentient science, and b) at her current level, she cannot know more than two sciences or six devotions in any other single discipline.

**Advancing Mid-adventure:** Most Dungeon Masters award experience points at the end of adventures rather than in the middle, so experience levels are rarely gained in mid-adventure. In the unusual event that a new level is gained in the middle of an adventure, however, the character should have to wait at least until he has a chance to rest and recuperate-long enough to recover all his psionic strength points-before gaining any new psionic powers.

**Raising Psionic Power Scores:** A character can increase a psionic power score when he reaches a new experience level by "relearning it." (He repeats his studies, and learns something new about a familiar power. ) Instead of learning a new devotion, the character can add one point to his power score in a devotion he already knows. Similarly, he can exchange a new science for a one-point increase in a science he already knows.

## Psionic Strength Points (PSPs)

Psionic energy comes from within the character. This energy is measured in psionic strength points, or PSPs. When a character uses a psionic power, he expends psionic strength points. The exact cost depends on which power is used, and how long the character uses it. The total number of psionic strength points that a character has depends on four factors: his Wisdom, Intelligence, and Constitution scores, and his experience level. Wisdom, Intelligence, and Constitution determine the psioni-cist's inherent potential. (Wisdom is the primary factor.) Experience determines how well the character has developed that potential. Follow these steps to calculate a character's total PSPs:

- Find the character's Wisdom score on Table 5, then get his base score from that.
- Add the appropriate ability modifiers for the character's Intelligence and Constitution scores to his base score. This final adjusted number is the character's inherent potential.

*Example:* Rowina's ability scores are Wis 17, Con 16, Int 12. Her inherent potential is 25 (24 points for her Wisdom score with a +1 modifier for her Constitution score). At 1st level she has 25 PSPs.

| INHERENT POTENTIAL | | |
|---|---|---|
| **Ability Score** | **Base Score** | **Ability Modifier** |
| 15 | 20 | 0 |
| 16 | 22 | +1 |
| 17 | 24 | +2 |
| 18 | 26 | +3 |

**Gaining Psionic Strength Points:** Every time a character advances to a new experience level, he

expands his total pool of psionic strength points. To determine how many PSPs he gains, find the modifier on Table 5 that corresponds to his Wisdom score. Add this number to 10. The result equals the total PSPs gained.
*Example:* Rowina has just advanced to a new level. Her Wisdom is 17. According to Table 5, the modifier for this score is +2. Rowina can add 12 PSPs (2 + 10) to her total pool.
**Recovering Psionic Strength Points:** A character who has expended psionic strength points can recover those points by "taking it easy"-which means engaging in no hard physical activity and refraining from using psionic powers (i.e., from expending any more PSPs). After each *hour* in which a character expends no psionic strength points, check Table 6 to determine how many PSPs the character recovers. A character can never recover more PSPs than he lost. A character's rate of recovery depends on how much physical exertion he experienced during the hour in question. Psionicists recover the most points when they sleep or meditate for the entire hour of rest. Light activity, such as walking or riding, diminishes the speed of recovery. Rate each hour according to the *most* strenuous physical activity undertaken, even if it lasted only a few minutes.
**Option:** DMs may allow characters to recover points per turn of rest rather than per hour. These rates are also listed on Table 6.

| PSIONIC STRENGTH RECOVERY | |
|---|---|
| **Physical Activity** | **PSPs Recovered** |
| Hard exertion* | none |
| Walking, riding | 3/hour (1 every 2 turns) |
| Sitting, resting,reading | 6/hour (1/turn) |
| Rejuvenating**,sleeping | 12/hour (2/turn) |

*"Hard exertion" includes fighting, running, digging ditches, walking while encumbered, climbing a rope, scaling a mountain, exploring a dungeon, swimming, and any other activity the DM wants to include.
**This refers to use of the psionicist's Rejuvenation proficiency.

## Defense Modes

Psionic *defense modes* are special powers which all psionicists acquire naturally in time. All defense modes belong to the telepathic discipline. Psionicists learn these powers automatically as they gain new experience levels-regardless of whether or not they have access to the telepathic discipline. Defense modes do not count toward the psionicist's maximum number of powers as listed in Table 4. Nor are they counted when characters determine the relative number of sciences and devotions they can acquire within a given discipline.
There are five psionic defense modes:

- mind blank
- thought shield
- mental barrier
- tower of iron will
- intellect fortress

Each is described in Chapter 7, "Telepathy." All psionicists automatically know one of these powers at 1st level (player's choice). They learn another defense mode of the player's choice every other level-at 3rd, 5th, 7th, and 9th.

## Special Abilities

In addition to ordinary psionic powers, which are the hallmark of the class, psionicists have several special abilities. These include their saving throws, THACOs, and psionic powers that operate continuously.

**Maintaining Powers:** Certain psionic powers can operate continuously. (Chapters 3 through 8 specify which ones do.) Such powers can be "switched on" and kept on without interruption, until the user decides to (or is forced to) "switch them off." This is called *maintaming* powers. Each power that is maintained is handled separately. In many cases, maintenance entails expending PSPs by the hour or turn rather than the melee round (the norm for psionic combat).*If a psionicist is expending PSPs to maintain a power, he cannot recover psionic strength points that hour.* A character cannot spend PSPs to maintain a power when he is sleeping or unconscious; no continuous power that requires strength points can operate during sleep. A character can maintain any number of powers at one time, but he can "switch on" or initiate only one per round. When maintained powers are deactivated, the character can drop all maintained powers at once, or one per round. He cannot drop two or more in one round and maintain others.

**THACO and Saving Throws:** As shown on Table 7, a psionicist's THACO advancement equals that of a rogue. Table 8 lists saving throws. *Psionicists gain a +2 bonus on all saving throws vs. enchantment/charm spells and the like*. This is in addition to their magical defense adjustment for high Wisdom.

| PSIONICIST CALCULATED THACOs | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| **Level** | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 |
| **THACO** | 20 | 20 | 19 | 19 | 18 | 18 | 17 | 17 | 16 | 16 | 15 | 15 | 14 | 14 | 13 | 13 | 12 | 12 | 11 | 11 |

| PSIONICIST SAVING THROWS | | | | | |
|---|---|---|---|---|---|
| **Level** | **Paralyzation,Poison, or Death Magic** | **Rod, Staff, or Wand** | **Petrification or Polymorph[1]** | **Breath Weapon[2]** | **Spell[3]** |
| **1-4** | 13 | 15 | 10 | 16 | 15 |
| **5-8** | 12 | 13 | 9 | 15 | 14 |
| **9-12** | 11 | 11 | 8 | 13 | 12 |
| **13-16** | 10 | 9 | 7 | 12 | 7 |
| **17-20** | 9 | 7 | 6 | 11 | 9 |
| **21+** | 8 | 5 | 5 | 9 | 7 |

[1] Excluding polymorph wand attacks.

[2] Excluding those which cause petrification or polymorph.

[3] Excluding those for which another saving throw type is specified, such as death, petrification,

polymorph, etc.

## Followers

At 9th level (which is sometimes called "name" level), a psionicist becomes a contemplative master. He can build a sanctuary (usually in an isolated place), and use it as his headquarters. Most importantly, he begins to attract followers. One neophyte psionicist (1st or 2nd level) will arrive each month, coming to study at the feet of the master. These neophytes will arrive regardless of whether or not the master builds a sanctuary. If the master does have a sanctuary, however, he will attract a maximum number of followers equal to his Charisma score. If not, the maximum number is halved (rounded down). These followers want only to learn. They will serve in any capacity the master chooses. In return, the master must spend at least 10 hours per week instructing his followers, or they will leave. Restrictions Like members of other classes, psionicists must abide by restrictions when choosing weapons and armor, and in selecting nonweapon proficiencies.

**Weapons:** Psionicists tend to disdain weapons of any sort, given the crudeness and imprecision of such tools compared to psychic weaponry. Still, a good sidearm is indispensable for a last-ditch personal defense, and it's essential when a display of psionic power would be inappropriate. Also, in the rough-and-tumble frontier areas where adventurers are common, appearing in public without a weapon often invites ridicule and trouble. Psionicists can use any of the common weapons listed below. Essentially, these are most small- or medium-sized weapons weighing 6 pounds or less.

| | |
|---|---|
| short bow | throwing axe |
| hand crossbow | horseman's mace |
| light crossbow | horseman's pick |
| dagger | scimitar |
| dirk | spear |
| knife | short sword |
| club | war hammer |
| hand axe | |

**Armor:** Psionicists can don armor made of padded leather, studded leather, or hide. They can also carry a small shield. A psionicist can use his powers while wearing a helmet that is psionically active, or one featuring magical enchantments that affect or simulate psionic powers. But if the psionicist is wearing a normal helmet of any sort, he cannot use his powers. Removing a normal helmet won't affect the character's armor class, but it may have other effects defined by the Dungeon Master. For example, a thief who approaches the psionicist from behind may find the psionicist easy prey. Or, if the DM allows called shots, the character's bare head might present a tempting target.

**Optional Rule:**A DM may allow psionicists to wear any sort of armor, but impose penalties for heavy armor that's made of metal. (See Table 9.) This rule creates an across-the-board reduction in psionic power scores when a psionicist wears inappropriate armor.

| PSIONICIST ARMOR PENALTIES | |
|---|---|
| **Armor** | **Psionic Power Score Reduction** |
| Padded, leather, studded leather, hide | 0 |
| Brigandine, ring, scale, splint mail | -1 |

| | |
|---|---|
| Chain, banded mail | -2 |
| Plate mail | -3 |
| Field plate | -5 |
| Full plate | -7 |

## Proficiencies

Psionic powers function like proficiencies, but they do not replace them. Psionicists can learn the usual weapon and nonweapon proficiencies regardless of their powers. Proficiencies are acquired at the rate shown on Table 10. Psionicists can learn a weapon proficiency for any weapon they can use. They can learn any nonweapon proficiency from the "General" group (see proficiency rules in the AD&D® 2nd Edition *Player's Handbook*, page 54, Table 37) or from the Psionicist group, described below. If the optional proficiency rules in the *Player's Handbook* are in use, psionicists can gain extra nonweapon proficiency slots based on their Intelligence scores. See Table 4, "Intelligence" in the Players Handbook to determine these bonus proficiencies (Chapter 5, page 16). Characters can use these extra slots for languages or nonweapon proficiencies, but never additional psionic powers.
**Initial** refers to the number of weapon or nonweapon proficiency slots received by psionicists at 1st level.
**# Level** sindicates how many levels a psionicist must advance before he receives a new weapon or nonweapon proficiency. Thus, psionicists receive a new weapon proficiency every five levels - i.e., at levels 5, 10, 15, 20, etc. They receive a new nonweapon proficiency every three levels - i.e., at levels 3, 6, 9, 12, etc. Penalty is the modifier to a psionicists attack rolls when he fights using a weapon he isn't proficient with. This penalty is subtracted directly from the characters rolls to hit.

| **PSIONICIST PROFICIENCY SLOTS** | | | | | |
|---|---|---|---|---|---|
| **Group** | **WeaponProficiencies** | | Penalty | **Nonweapon Proficiencies** | |
| | Initial | #Levels | | Initial | #Levels |
| **Psionicist** | 2 | 5 | -4 | 3 | 3 |

**The Psionkist Group:** Table 11 lists seven nonweapon proficiencies which psionicists can easily learn. These proficiencies-the "Psionicist group"- are an extension of Table 37 in the AD&D 2nd Edition *Players Handbook.*

| **PSIONICIST NONWEAPON PROFICIENCIES** | | |
|---|---|---|
| Proficiency | #Slots Required | Relevant Ability |
| Gem Cutting | 2 | Dex -2 |
| Harness Subconscious | 2 | Wis -1 |
| Hypnosis | 1 | Cha -2 |
| Rejuvenation | 1 | Wis -1 |
| Meditative Focus | 1 | Wis +1 |
| Musical Instrument | 1 | Dex -1 |
| Reading/Writing | 1 | Int +1 |

| | | |
|---|---|---|
| Religion | 1 | Wis +0 |

**Harness Subconscious:** This meditative proficiency lets the psionicist temporarily boost his total PSPs. In effect, the proficiency lets him tap into energy reserves that lie deep in his subconscious-reserves which are usually unavailable to him. It's like enjoying a shot of psychic adrenalin. Before he can harness subconscious energies, the psionicist's PSP total must be at its maximum. He then must spend two days (48 consecutive hours) gathering this energy, taking only necessary breaks for eating and sleeping. At the end of that time, the character makes a proficiency check. If he passes, he increases his PSP total by 20%, rounded up. The increase in PSPs lasts 72 hours. At the end of that time, the character loses as many strength points as he initially gained, regardless of his current total. This loss can never reduce his total below 0 points, however. During the 72 hours of heightened strength, the character cannot recover PSPs if his current total equals or exceeds his usual maximum. Once his current total drops below his usual maximum (i.e., once he has spent all bo- nus points), he can begin regaining PSPs normally. He cannot recover the lost bonus points, however; he can only recover enough points to return to his usual maximum.

**Hypnosis:** With this proficiency, a psionicist can hypnotise another character-placing the subject into a relaxed state in which he is very susceptible to suggestions. However, hypnosis is not possible unless the subject is willing and knows he is being hypnotised. Psionicists with this proficiency can hypnotize humans and demihumans with ease. Nonhumans can be hypnotized, too, but the DM should assign a penalty to the proficiency check. The size of the penalty depends on how inhuman the subject is. A half-ore, for example, could be hypnotized with a - 2 modifier, while a lizard man could be hypnotized only with a -8 modifier to the psionicists proficiency check. The act of hypnotizing someone takes about five minutes. The subject is then very relaxed and willing to do almost anything that isn't very dangerous or against his alignment. Note, however, that a hypnotized subject can be easily fooled; the subject may be convinced that he's doing one thing, while he's actually doing another. Lawful or good psionicists who trick their subjects in this fashion should beware. Psionicists who use hypnotism to make people do chaotic or evil things may find themselves with alignment problems of their own. Hypnotism can have the following (or similar) effects:

- A character can be induced to remember things he has forgotten by reliving a frightening or distant event.
- A character can be made calm and unafraid in the face of a specific situation that he has been prepared for.
- A character can be cured of a bad habit or addiction (but not of curses or magical afflictions).
- A character can be prepared to impersonate someone by thoroughly adopting that individual's personality.

**Rejuvenation:** This proficiency allows a character to recover PSPs while he meditates, as quickly as if he were sleeping. The character achieves a state of deep concentration, in which he focuses and regains his energies. He is still conscious and aware of his surroundings, so he does not suffer any penalties on surprise or initiative rolls, and he is not helpless if attacked. (He still can't *expend* PSPs, however.)

**Meditative Focus:** Through this proficiency, a psionicist can focus his mental energy on one particular discipline. As a result, his power scores in that discipline temporarily increase, while those in other disciplines decline. The proficiency requires the character to meditate, *uninterrupted*, for 12 hours. The last four hours of this meditation are spent in a deep, sleeplike trance. The psionicist can recover PSPs normally during the entire period. When the meditation is complete, the player makes a proficiency check. If the character passes the check, he has successfully focused his mind on one particular discipline (which was chosen when the process began). All of the character's psionic power scores in that discipline are increased by two points for the next 24 hours-or until the character's PSPs have been reduced to zero, whichever comes first. All of his power scores in other disciplines are reduced by one for the same

period.
**Gem Cutting, Musical Instrument, Reading/ Writing, Religion**: See the *Player's Handbook* for a description of these proficiencies.

## Wild Talents

A wild talent is someone from any other character class who has natural, latent psionic potential. This potential can be present in any character, regardless of class, alignment, or race. Wild talents can never approach psionicists in skill, but they do boast at least one psionic power-which is known as a "wild power" among psionicists. Any character can test for wild powers. (The character should be forewarned: such efforts are not without risk, as explained below.) A character can test for wild powers only at specific times: when the character is first created; when the character's Wisdom increases to a higher point than it has ever been; the first time the character goes to a psionicist who can perform psychic surgery on him; when psionics is first introduced to the campaign. Every character (and NPC and monster, if the DM wishes) has a base chance of 1% to possess wild powers. This is modified as shown below:

| | |
|---|---|
| Each Wis, Con, or Int score of 18 | +3 |
| Each Wis, Con, or Int score of 17 | +2 |
| Each Wis, Con, or Int score of 16 | +1 |
| Character is 5th-8th level | +1 |
| Character is 9th level or higher | +2 |
| Mage, cleric, or nonhuman* | X $^1/_2$ |

* Round fractions up. Apply this penalty only once, even if more than one of these descriptions fits (e.g., a "nonhuman mage").
Once you've determined the character's chance to be a wild talent, roll percentile dice. Subtract 2 from the roll if the character is under the guidance of a psychic surgeon (see "psychic surgery" in Chapter 8). If the result is less than or equal to the modified chance, the character has at least one wild power. If the number is 97 or higher, the character suffers dire consequences. See "The Risks" below.
*Example:* Consider a 3rd level dwarf cleric with a Wisdom of 17, Intelligence of 9, and Constitution of 16. His chance to be a wild talent is 1 (base chance) + 2 (Wis 17) + 1 (Con 16) x 0.5 (because he's a dwarf). The final result equals 2 %. The dwarf has a 2 % chance of being a wild talent. The player rolls a 3 on percentile dice. The dwarf has no talent. Hypnotism cannot be used to increase a character's attributes, give him powers or abilities he does not naturally possess, let him do things that are beyond his capabilities, or give him information that he couldn't possibly know. **Determining Powers:** If a character is a wild talent, the player should roll percentile dice again and consult Table 12, "Wild Devotions" to determine exactly what the character's psi-onic powers are. Most wild talents have only one power. A lucky few (those with high-rolling players) boast more than one. Furthermore, if a character gains any power with a prerequisite, he automatically gains the prerequisite, too. For example, if the wild talent knows a telepathic power which requires contact (an important telepathic power), he automatically knows contact, too.
**Strength Points:** Like an actual psionicist, a wild talent has psionic strength points. He receives the minimum number of PSPs necessary to use the power (or powers) once. If a power can be maintained, he receives enough additional points to pay the maintenance cost four times. Afterward, the character

receives four additional PSPs every time he gains a new experience level (he receives no bonus for levels he already has).

**The Risks:** Characters who attempt to unlock their psionic potential are tampering with things they cannot begin to understand. If the dice roll is 97 or higher, the character suffers the following consequences:

| Dice Roll | Result |
|---|---|
| 97 | Save vs. death or Wisdom reduced by ld6 points-permanently |
| 98 | Save vs. death or Intelligence reduced by ld6 points-permanently |
| 99 | Save vs. death or Constitution reduced by ld6 points-permanently |
| 00 | Save vs. death with -5 penalty or Wisdom, Intelligence, and Constitution are all reduced to 3-permanently. |

Combat featuring psionicists is no more complicated than a fight between one or more wizards. In fact,

its similar. During a battle, psionicists and wizards tend to employ the same tactics: they avoid enemy hackers and slashers, and focus their efforts on the strongest opponent or shore up defenses where needed. A lone psionicist caught by enemy fighters is in serious trouble. Unless he can summon, create, dominate, or otherwise garner some help, he probably will be overpowered. For this reason, psionicists-especially NPCs- rarely travel without an escort if they are expecting trouble.

## Using Powers

In general, a character can initiate only one psionic power per round. There are two key exceptions:

- Once a power is initiated, a character can maintain that power for as long as he can continue paying the maintenance cost. (This assumes that the power has a maintenance cost; if no such cost is mentioned in the description, the power cannot be maintained beyond its initial duration.)
- Psionic defense modes (mind blank, thought shield, mental barrier, intellect fortress, and tower of iron will) do not count against the one-power-per-round limit. A character can always use a defense mode and initiate one other psionic power in the same round.

## Power Checks

The power check is fundamental to psionic combat. *In general, no psionic power functions unless the character first makes a successful power check.* (Chapter I explains how the check is made.) Modifiers apply for some powers. Furthermore, several powers require an additional power check before they'll yield a specific result. Check the individual power descriptions in Chapters 3-8 for details.

## Psychic Contests

Psionic powers often clash "head-on." For example, one psionicist may make a psionic attack against a character with an active psionic defense. Which power prevails? Does the attack break through the defense, or bounce off? A psychic contest determines the answers. Resolving a psychic contest is simple when both powers are initiated in the same round. The two contestants just compare the die rolls for their power checks. The character with the *higher successful roll* wins the contest. If neither character's power check succeeds, or if both rolls are equal, the defender "wins" by default. (In other words, a tie goes to the defender.)
*Example:* An attacker is using ego whip. The defender has erected a thought barrier. The attacker's ego whip power score is 15, and the defender's thought barrier score is 12. The table below shows several possible outcomes of the psychic contest between these powers.

| Attack Roll | Defense Roll | Result |
|---|---|---|
| 11 | 6 | Attacker wins because his die roll is higher. |
| 3 | 9 | Defender wins because his die roll is higher. |
| 4 | 18 | Attacker wins because his attack roll succeeded and the defender's roll did not-in effect, there is no defense this round. |
| 16 | 10 | Defender wins because his defense roll succeeded and the attacker's failed. |
| 19 | 15 | Neither power check succeeded. The defender "wins" by default simply because the attacker didn't. |

| | | |
|---|---|---|
| 8 | 8 | Tied rolls. Again, the defender wins by default because the attacker didn't beat the defense roll. |
| 15 | -- | The attacker wins this automatically. His power check succeeded and his roll is higher than the defender's power score, so NO roll will let the defender win. |

**Maintained Powers:** In the example above, powers were initiated in the same round as the conflict. Some psychic contests involve a power that is being maintained-i.e., a power that was initiated in a previous round. In this case, the player whose character is maintaining the power must make a new power check strictly to resolve the contest. He gains a +1 bonus to his power score because the power is being maintained. If the contest roll "fails," it doesn't mean the power fails. It's still being maintained-just not very well. For the contest, the character ignores the "failed" check and instead receives a "successful" result of 1.

**Multiple Conflicts:** In the thick of battle, a psionicist may be involved in more than one psychic contest per round. If he's using more than one power, the player must make a separate die roll for each power used that round. If he's using a single power against more than one opponent, the player can make a separate die roll for each opponent. As soon as he rolls a number he likes, the player may use that result for all remaining psychic contests involving *that power*, in that round. (In other words, once he gets a power really well "tuned in" during a given round, he can stop "fiddling with the dial".) This rule applies to telepathic defense modes, as well as other powers.

## Psychic Lock

In some psychic contests, there is no clear-cut defender. For example, two characters may try to use psychokinesis on the same object simultaneously. (They do a little psionic arm-wrestling.) In such a case, the character with the higher successful die roll still wins the contest that round. In our example, the winner would control the object. If the power checks indicate a tie, however, the characters are deadlocked-or *psychically locked*. Neither character wins that round. To resolve the conflict, both characters should maintain the same powers during the next round, and engage in a new psychic contest. If either character fails to maintain his power (effectively giving up), he suffers a backlash and loses 4d4 PSPs immediately. In any case, victory may be fleeting. If conditions are right, the loser can challenge the winner to a "rematch" in the next round.

## The Combat Round

Psionic conflicts follow the standard AD&D game combat sequence. All psionic powers-excluding defense modes-are used in order of initiative. For example, if a psionicist wants to attack, or plans to teleport to safety, he can do so when his normal chance to attack comes around. Psionic defenses work throughout the entire round, starting at the very beginning. Unlike spells, psionic powers do not have initiative modifiers. Psionic powers require a certain amount of concentration. A character who uses one during a combat round can move at only half his walking rate. Furthermore, he can be disrupted like a mage casting a spell. A power that is being maintained from a previous round cannot be disrupted this way, nor can telepathic tangents that were established in previous rounds (see below). If a power is disrupted during a preparatory round, the time invested in preparation is lost. No PSPs are expended when a power is disrupted.

# Telepathic Combat

Before a psionicist can use a telepathic power, he must establish contact with the recipient's mind. "Contact" is a telepathic devotion which paves the way for other telepathic powers. Usually, a single use of this devotion is all that's required; the psionicist uses contact first, then follows up with another telepathic power. Beings with little or no psionic talent, including wild talents, can be contacted in this way. So can psionicists and psionic creatures, *provided they cooperate*. The contact devotion never works against a psionicist (or psionic creature) who does not allow it to work. This is true even when he's sleeping or unconscious. Psionicists normally have *closed minds*. Before the contact power can work against them, they must intentionally open their minds. They can be selective, allowing contact with a friendly power while closing their minds to hostile characters or strangers. When a subject's mind is closed, he can only be contacted through telepathic combat. The text below describes five telepathic assaults, or *attack modes*, that are used to establish contact with a closed mind. It also describes five telepathic defenses, which can help prevent such attacks from succeeding. Lastly, it explains what happens when these opposing powers clash.

# Telepathic Attack Modes

There are five attack modes: mind thrust, ego whip, id insinuation, psychic crush, and psionic blast. (See Chapter 7, "Telepathy," for a complete description of each.) Against a mind that is open to contact, each of these powers has specific effects. For example, ego whip can make a character feel so worthless that he suffers a penalty to all of his die rolls. None of these effects occur unless the subject's mind is open to contact, however. If the subject's mind is closed, an attack mode only serves to erode his resistance. If he is repeatedly struck with an attack mode, his mind can be forced to open, and contact will be established. (See "Tangents" below for details.)

**Learning Attack Modes:** A psionicist learns attack modes in the same way he learns other powers. The character must first have access to the telepathy discipline. Then he must allot one of his devotion slots to the power (only psionic blast is a science). A character could devote himself completely to learning the attack modes, and know all five by 2nd level. Or he could learn dozens of telepathic powers without ever picking up a single attack mode. This is the players option.

**The One-Two Punch:** Attack modes differ from most other psionic powers in one key regard: a character using an attack mode gets one bonus attack with that power each round. (An attack mode packs a one-two punch.) The player rolls two power checks. Each of these rolls constitutes a separate attack and, if opposed, is conducted as a separate psychic contest. *Both attacks must be directed against the same target*. The initial cost of an attack mode includes this double attack.

# Telepathic Defense Modes

A character with psionic powers is not defenseless against telepathic attack modes. Five telepathic powers, known as *defense modes*, help protect characters from unwanted contact. These powers are mind blank, thought shield, mental barrier, intellect fortress, and tower of iron will. (See Chapter 7 for a description of each.) Although these powers belong to the telepathy discipline, they are common to all members of the psionicist class. Psionicists develop these powers naturally as they gain experience levels, regardless of whether they have access to the telepathy discipline. (See "Defense Modes" in

Chapter I for an explanation.) When a character activates a telepathic defense mode, it becomes effective at the beginning of the round. The character conducts a psychic contest against every attack mode coming his way. (The initial cost of the defense mode covers all attacks in the round.) At any point during the round, if he rolls a number he likes, he can keep it for the rest of the round. Defense modes have no effect against any psionic powers other than attack modes.

## Attack Modifiers

Each attack mode is more effective against some defense modes than others, and vice versa. This is represented by modifiers which apply to the attacker's power score. Table 14 lists these modifiers. When an attack mode clashes with a defense mode, cross-index the attack with the defense on Table 14. The resulting modifier is applied to the attacker's power score. Thus, positive modifiers are bonuses and negative modifiers are penalties.

**ATTACK VS. DEFENSE MODES**

| | Mind Blank | Thought Shield | Mental Barrier | Intellect Fortress | Tower of Iron Will |
|---|---|---|---|---|---|
| Mind Thrust | +5 | -2 | -4 | -4 | -5 |
| Ego Whip | +5 | 0 | -3 | -4 | -3 |
| Id Insinuation | -3 | +2 | +4 | -1 | -3 |
| Psychic Crush | +1 | -3 | -1 | -3 | -4 |
| Psionic Blast | +2 | +3 | 0 | -1 | -2 |

## Tangents

Each time an attack mode overcomes a defense mode (or an attack mode succeeds against someone who was not using a defense mode), the attacker has established a partial contact called a *tangent*. Three tangents equal full contact. Thus, establishing contact with someone's mind through combat requires three successful attacks. (In common parlance, a single tangent is often called "one-finger contact" and two tangents "two-finger contact.") Remember that an attack mode allows two attacks per round, so it is possible to establish two tangents per round. A tangent has no direct effects in and of itself, no matter which attack mode helps to establish it. It is only a "foot in the door." When the door is open-i.e., when three tangents have succeeded-full contact is established. This contact is the same condition that is achieved when the contact power is used successfully against a nonpsionicist. (In other words, the three effective attacks simply take the place of one successful use of contact.) The tangents no longer apply when contact is established. (That's why there's no such thing as "three-finger contact") When full contact is established, the attacker can make no more attacks against the defender that round. In the next round, he can use any telepathic power against the defender that he chooses-provided he's within range and pays the power cost, of course. Having contact does not make the use of another telepathic power automatic; it only makes it possible. Still, the subject is incredibly vulnerable once contacted. His only means of protection is an overwhelming counterattack (probably a nontelepathic attack) or ejection, which is quite risky. A contacted mind can be dominated, mindwiped, affected by any number of other telepathic devotions, or crippled by another assault.

**Maintaining Tangents:** Maintaining tangents (one or two) costs 1 PSP per round. A psionicist can maintain tangents with only one mind at any time. He can maintain *full contact* with any number of

minds, however. A tangent is broken only when 1) the attacker voluntarily breaks it by simply announcing he is doing so; 2) the attacker fails to pay the maintenance cost of I PSP per round; 3) the attacker uses an attack mode against a different target, or; 4) the attacker is incapacitated.

## Other Considerations

**Line of Sight:** Unless the description states otherwise, psionicists require a line of sight to their target when using a psionic power. Clair-sentient powers are an obvious exception, as are many of the telepathic powers which list power score modifiers for targets which are outside the psionicists field of vision.
**Touch Attacks:** Psionic powers with a range of "touch" can be used in combat, but they require a physical attack roll in addition to a power check to succeed.

## Combat Cards

*The use of combat cards is optional, but strongly recommended.* A combat card is a 3" x 5" index card (or something similar) listing pertinent information for one psionic power. Each player makes one card for each power his character knows. Pertinent information includes the power score, initial cost and maintenance cost, range, preparation time, area of effect, and a brief description of the power's effect. Combat cards serve three purposes. First, they're a handy reference collection-a sort of "psionic spellbook" for a character. Second, they help speed up the game when psionic powers are used during combat. And third, they make psychic contests more equitable. If a character intends to use a psionic power during combat, the player thumbs through his combat cards until he finds the card for that power. Then he places the card in front of him, face down on the table. When the power takes effect, he flips the card face up. This way, if two psionicists do battle, neither psionicist can detect what his opponent is doing before he chooses his own action. If a character maintains a power from round to round, the card remains face up on the table as a reminder. Combat cards can also be used to hide psionic activity from other players. When a psionic power is put into use, the player can select the combat card and show it to the DM only, instead of announcing aloud something that he may not want everyone to know.

---

# Understanding Power Descriptions

Statistics. Each power in Chapters 3 through 8 begins with the following terms:

- Power Score. This number or less must be rolled on a d20 whenever a character makes a power check. (See Chapter 1.) A character always makes a power check when attempting to activate a power.
- Initial Cost. The number of PSPs expended when the power is first used. If a character fails his power check, he must expend half this many PSPs. Some telepathic powers list "contact" as their initial cost. That means the contact power must be established before these powers can be used. (See "Contact" in Chapter 7.)
- Maintenance Cost. The number of PSPs expended per round (unless another time period is stated) to keep a power operating from the previous round. Maintaining a power does not require a new power check. If no maintenance cost is listed, then the power cannot be maintained. (A character could reactivate it round after round, however, making a new power check each time.)
- Range. The maximum distance from the psionicist (psionics user) at which the power can have an effect. "Touch" means the psionicist must touch the target.
- Preparation Time. How many rounds a character must spend preparing to use a power, before he can actually try to use it. For example, if a power has a preparation time of "I," the character must spend one full round preparing. (He can't initiate other powers during that round, but he can still maintain them.) After one round of preparation-i.e., in round number two-he can make a power check. If that check fails (or is delayed), the character can try to use the power again in round three. A power that has been prepared can be held ready for just one round; if it isn't used after that, preparation time is wasted (no PSP cost).
- Area of Effect. The physical area or number of beings which the power affects. "Personal" means the power only affects the psionicist.
- Prerequisites. Other sciences or devotions which a character must know before he can use this power.
- Optional Results: Each power description ends with a section marked "Power Score" and another marked "20" The former describes what happens if a player rolls his character's power score exactly when making a power check. The latter describes what happens when the player rolls a natural 20 when making a power check. Both results are optional. DMs can use these results-or devise something similar-to add spice and a small element of risk to psionics.
- Psionicists. The power descriptions in this book are written with psionicists in mind. Psionic creatures and wild talents often use these powers too-just as psionicists do.

---

# Clairsentient Sciences

| Aura Sight | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | 9 |
| Maintenance Cost: | 9/round |
| Range: | 50 yds. |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

An aura is a glowing halo or envelope of colored light which surrounds all living things. It is invisible to the naked eye. A creature's aura reflects both its alignment and its experience level. When a psionicist uses this power, he can see auras. Interpreting an aura requires some concentration, however. With each use of this power, the psionicist can learn only one piece of information-either the subject's alignment or experience level, but not both simultaneously. A psionicist can examine up to two auras per round. (He must be able to see both subjects.) Alternately, he can examine the same aura twice, to verify his first impression with a second reading or to pick up remaining information. In any case, the psionicist must make a new power check each time he attempts to interpret an aura. The psionicist can be reasonably discreet when he uses this power. He doesn't have to poke at the subject or give him the hairy eyeball. However, he does need to gaze at the subject intently. Since the range of this power is the range of vision, the psionicist can go unnoticed by maintaining his distance. If he tries to sense auras on the people he is conversing with, they certainly will notice that he is staring and probably will be uncomfortable. The level of the character being analyzed affects the psionicists power check. The higher the subject's experience level, the tougher it is to interpret the subjects aura. This translates into a -1 penalty for every three levels of the subject, rounded down. For example, a psionicist reading the aura of an 8th level character would suffer a - 2 penalty. If the die roll for the power check is a I, the psionicist's reading is incomplete or slightly incorrect. For example, the psionicist may learn only the chaotic portion of a chaotic neutral alignment. Or he may interpret the character's level with an error of one or two levels.

***Power score:*** The psionicist can examine up to four auras per round instead of two.

***20:-*** The initiator can't use this power again for 24 hours.

| Clairaudience | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 6 |
| Maintenance Cost: | 4/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | special |
| Prerequisites: | none |

Clairaudience allows the user to hear sounds from a distant area. The psionicist picks a spot anywhere

within range. He then can hear everything that he would be able to hear normally if he were standing in that spot. If the psionicist has enhanced senses, the senses apply to clairaudience as well. The farther the "listening spot" is from the psionicist, the more difficult it is to use this power. The table below gives specifics.

| Range | Power Score Modifier |
|---|---|
| 100 yards | 0 |
| 1,000 yards | -2 |
| 10 miles | -4 |
| 100 miles | -6 |
| 1,000 miles | -8 |
| 10,000 miles | -10 |
| Interplanetary* | -12 |

* Players with the SPELLJAMMERR boxed set should note that clairaudience works only within a given crystal sphere or plane. Using clairaudience does not screen out background noise around the psionicist. If something in his own neighborhood is raising a racket, he may have trouble hearing what is happening somewhere else. Clairaudience also does not give the psionicist the ability to understand a foreign or alien language, nor does it help him interpret sounds. For example, if the psionicist hears furniture scraping across the floor, he can only guess whether it's a chair or something else-just as if he heard it while blindfolded.

***Power Score:*** The psionicist automatically gains clairvoyance of the area as well.

***20:*** The psionicist is deaf for ldl2 hours.

| Clairvoyance | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 7 |
| Maintenance Cost: | 4/round |
| Range: | unlimited |
| Preparation Time: | 0 |
| Area of Effect: | special |
| Prerequisites: | none |

Clairvoyance allows the user to see images from a distant area. The psionicist picks a viewing spot anywhere within range. He can then see anything that he could normally see if he were standing in that spot. His field of vision is no wider than usual, but he can scan the area by turning his head. Clairvoyance does not replace the character's normal eyesight. The psionicist can still "see" what is actually before him, but the distant scene is superimposed. For this reason, most clairvoyants close their eyes to avoid the confusion of images. The more distant the viewed area is, the more difficult it is to use clairvoyance. The table below shows how the range to a viewed area can diminish the psionicist's power score.

| Range | Power Score Modifier |
|---|---|
| 100 yards | 0 |
| 1,000 yards | -2 |

| | |
|---|---|
| 10 miles | -4 |
| 100 miles | -6 |
| 1,000 miles | -8 |
| 10,000 miles | -10 |
| interplanetary* | -12 |

*Players with the SPELLJAMMERR boxed set should note that clairvoyance works only within a given crystal sphere or plane. Clairvoyance does nothing to enhance the character's vision. Unless some other power or magic is at work, he still cannot see objects that are invisible, hidden in shadow, or behind other objects. This power also provides no sound, so the character actually sees a kind of silent movie (without subtitles, of course). Once the viewing spot is chosen, it is fixed in space. To enjoy the view from another location, the psionicist must use this power another time, and make a new power check. The psionicists clairvoyant presence is undetectable by normal means. It cannot be dispelled, repelled, or kept away by any form of magic.

***Power Score:*** The psionicist automatically gains clairaudience, too, for the duration of the clairvoyant vision.

***20:*** The psionicist is blind for ld4 hours.

| Object Reading | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | 16 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 1 |
| Area of Effect: | touch |
| Prerequisites: | none |

Object reading is the ability to detect psychic impressions left on an object by its previous owner, including his race, sex, age, and alignment. The power can also reveal how the owner came to possess the item, as well as how he lost it. The amount of information gained depends on the result of the power check. If the psionicist's power check is successful, he learns the information listed beside that result in the table below, plus all the information listed above it.

| **Power Check Result** | **Information Gained** |
|---|---|
| 1-2 | Last owners race |
| 3 | Last owner's sex |
| 4 | Last owner's age |
| 5 | Last owner's alignment |
| 6-7 | How last owner gained and lost item |
| 8+ | All this information about all owners |

An object can be read only once per experience level of the psionicist; additional readings at that level reveal no additional information. When the clairvoyant gains a new experience level, he can try reading the same object again, even if his object reading score has not changed.
***Power Score:*** The psionicist automatically learns all information on the table above.
***20:*** The psionicist becomes obsessed with the object; he strives to keep it until he can attempt to read it again.

| **Precognition** | |
|---|---|
| Power Score: | Wis -5 |
| Initial Cost: | 24 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 5 |
| Area of Effect: | na |
| Prerequisites: | none |

Precognition enables the psionicist to foresee the probable outcome of a course of action. This foresight is limited to the near future-no more than several hours from the time he uses the power. Furthermore, the character must describe the intended course of action in some detail in order to establish the course of events. The DM makes the power check secretly. If the check fails, the character gains no information. If the roll is 20 exactly, the character sees himself meeting his own death in a particularly nasty and grisly way and must make a saving throw vs. petrification. If the character fails the save, he is so completely shaken up by the vision that all his psionic power scores are reduced by three for ld6 hours. If the power check succeeds, the character sees the most likely outcome of the actions described. The DM has some liberty in describing the scene and should use the d20 roll as a guide to how much detail to include. High rolls get more detail. Even when its successful, precognition offers no guarantees. The psionicist sees only one possible (albeit likely) outcome to a specific course of action. If the characters involved deviate from the actions the psionicist describes, then they are changing the conditions and the lines of time, thereby making other outcomes more likely. Die rolls (particularly for surprise, initiative, and normal combat) also play a large part in a precognition's inaccuracy. The DM cannot be expected to engineer die rolls to the players' advantage, and even events with 95% certainty fail to occur 5% of the time. Anyone who relies on precognition to the exclusion of caution and common sense is asking for trouble.
Precognition is tiring. Regardless of the outcome, a psionicist who has used this power must rest for at least one turn before he can use any other clairsentient powers (the use of other disciplines is not affected).
***Power Score:*** The psionicist's player may reroll three die rolls to maintain the precognition's validity.
***20:*** See above. (Not an optional result.).

| **Sensitivity to Psychic Impressions** | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 12 |
| Maintenance Cost: | 2/round |
| Range: | 0 |
| Preparation Time: | 2 |

| | |
|---|---|
| Area of Effect: | 20-yard radius |
| Prerequisites: | none |

With this power, a psionicist gains a sense of history. He perceives the residue of powerful emotions which were experienced in a given area. These impressions offer him a picture of the locations past. Battles and betrayals, marriages and murders, childbirth and great pain-only events which elicited strong emotional or psychic energy leave their impression on an area. Everyday occurrences leave no residue for the psionicist to detect. To determine how far into the past a psionicist can delve, divide the result of his power check by two and round up. This is the number of strong events which he can sense. Only one event can be noted per round, however, beginning with the most recent and proceeding backward through time. The character's understanding of these events is vague and shadowy, as if he were viewing a dream. The dominant emotion involved-anger, hate, fear, love, etc.- comes through very clearly.
***Power Score:*** The character gains an unusually clear understanding of each event.
***20:*** An angry ghost comes forward and attempts to use magic jar against the psionicist.

## Clairsentient Devotions

| **All-Round Vision** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 6 |
| Maintenance Cost: | 4/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

This power gives the psionicist "eyes in the back of his head"-and in the sides and top, as well. (Of course, this is figurative; he does not literally sprout eyeballs.) In effect, the character can see in all directions simultaneously. Besides its obvious application when combined with the clairvoyance power, all-round vision prevents anyone from sneaking up on the character without some sort of concealment. On the down side, the psionicist suffers a -4 penalty against all gaze attacks while using this power.
***Power Score:*** Infravision is also gained.
***20:*** The psionicist is blind for ld4 hours.

| **Combat Mind** | |
|---|---|
| Power Score: | Int -4 |
| Initial Cost: | 5 |
| Maintenance Cost: | 4/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

A character using this power has an unusually keen understanding of his enemies and their fighting tactics. As a result, the psioni-cist's side in combat gains a -1 bonus when making initiative die rolls. This is cumulative with any other modifiers which may apply.
***Power Score:*** The psionicist (but not his companions) also gains a +1 AC bonus.
***20:*** The psionicist and his companions suffer a +1 initiative penalty.

| **Danger Sense** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 4 |
| Maintenance Cost: | 3/turn |
| Range: | special |
| Preparation Time: | 0 |
| Area of Effect: | 10 yards |
| Prerequisite: | none |

When using danger sense, a psionicist will experience a slight tingling sensation at the back of his neck\when a hazard or threat is near. The DM must make a successful power check on the psionicist's behalf before the character detects the danger. This power does not give the psionicist any specific information about the type of danger. He does not learn how or when it will strike. However, he does learn the general direction of the threat (i.e., to the right, left, ahead, or behind). The characters power check results determine how much warning he gets. If the roll is 12 or more, he knows whether danger is lurking anywhere in the immediate area. If the roll is 8 or more, he enjoys a full round of warning before that danger strikes. If the roll is 7 or less, however, the psionicist isn't alerted until moments before danger strikes. If the roll is I exactly, he still has several moments' warning but the direction is off; e.g., if the attack is coming from the left, he thinks it is coming from ahead, behind, or the right (DM's option). If the psionicist and his companions have enough warning, they can do something to prepare-getting into defensive positions, preparing spells, or running away, for example. If they have less than one round of warning, the DM must decide how much preparation is possible. In any case, they always gain a +2 bonus on their own surprise rolls.
***Power Score:*** The psionicist learns how far away the danger is.
***20:*** The psionicist cannot sense danger successfully for ld6 hours.

| **Hear Light** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 6 |
| Maintenance Cost: | 3/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | special |
| Prerequisites: | none |

This extrasensory power resembles "feel light," but it relies on the characters hearing rather than his sense of touch. A character who has been blinded, either artificially, naturally, or by an injury, can "see" with his ears. Any light waves which reach him are converted to sound, and he "hears" the image. The

image his mind perceives is just like an image offered by normal sight, and the character suffers no penalties for anything requiring vision.
***Power Score:*** The psionicist can "hear" in the dark, as if he had infravision.
***20:*** Bright light causes deafness, and all other light is just a buzz.

| **Feel Light** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 7 |
| Maintenance Cost: | 5/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | special |
| Prerequisites: | none |

This extrasensory power allows the psionicist to experience light through tactile sensations (by touch). His entire body becomes a receiver for light waves. In effect, his body replaces his eyes; he can see what his eyes would normally reveal. (His field of vision does not change.) This power does not allow him to see in the dark, since there must be light for him to feel. Nor does it counter magical darkness, which actually destroys or blocks light waves. The character gains a +4 bonus when saving against gaze attacks.
***Power Score:*** The character can feel light in all directions.
***20:*** The psionicist becomes overly sensitive to light for ldIO rounds. Exposure to light causes I point of damage per round, and the character cannot see.

| **Know Direction** | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 1 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

The psionicist becomes his own compass. By paying I PSP and making a successful power check, he knows which way is north.
***Power Score:*** The power is automatically maintained for one day.
***20:*** The psionicist is disoriented; he cannot use this power again for ld6 hours.

| **Feel Sound** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 5 |
| Maintenance Cost: | 3/round |
| Range: | 0 |
| Preparation Time: | 0 |

| | |
|---|---|
| Area of Effect: | special |
| Prerequisites: | none |

This power is almost identical to feeling light, but it makes the psionicist's body sensitive to sound. It allows him to continue hearing when his ears are disabled. This power does not detect sound where there is none, however, nor is it effective inside magical silence. The psionicist gains a +2 bonus against sonic attacks or effects, including a siren's song.

***Power Score:*** The psionicist can detect noise like a thief of the same experience level.

***20:*** For ld4 rounds, any sound causes I point of damage per round and is garbled.

| **Know Location** | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 10 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 5 |
| Area of Effect: | personal |
| Prerequisites: | none |

This power is useful to characters who frequently travel by using teleportation, gates, or via other planes of existence. When it works, the power reveals general information about the characters location. The information is usually no more detailed than the response of a simple farmer when asked, "Where am I?" Typical answers include "a few miles south-west of Waterdeep ...as the crow flies," "in the house of Kilgore the taxidermist," or "adrift on the Blood Sea." The higher the result of the power check, the more precise the location will be. If the die roll is 8 or more, the location is specified within a mile or less. If the roll is 7 or less, the location is specified within 10 miles. The character can get additional information that is less specific than the initial answer if his player asks for it. (The psionicist does not make another power check.) For example, if the DM's first response is "you're in the house of Kilgore the Taxidermist," the player might then ask where the house is. The DM might answer by saying Kilgore's house is in Chendi, in the Kingdom of Furyondy.

***Power Score:*** The psionicist learns the exact location he's trying to determine.

***20:*** Nothing within 100 miles can be located with this power for 24 hours.

| **Poison Sense** | |
|---|---|
| Power Score: | Wis |
| Initial Cost: | 1 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 1-yard radius |
| Prerequisites: | none |

This power enables a psionicist to detect the presence of poison and identify its location within I yard of his body (or his presence, if he is using clairvoyance or traveling astrally). The type of poison is not

revealed, only its presence. Any poison, including animal venom, can be detected.
***Power Score:*** The psionicist determines the exact type of poison.
***20:*** If poison exists, the sense of it mentally overwhelms the psionicist. The effects match those of actual exposure to the poison.

| **Radial Navigation** | |
|---|---|
| Power Score: | Int -3 |
| Initial Cost: | 4 |
| Maintenance Cost: | 7/hour |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

As long as this power is in use, the psionicist knows where he is in relation to a fixed starting point. In other words, no matter how or where he moves, he still knows the exact direction and distance to his starting point. He cannot necessarily tell someone how to get back to that starting point, however. If he is in a maze or dungeon, for example, he may know the starting point is 500 yards north, but he cannot retrace his steps through the maze automatically. Radial navigation does enhance his ability to do so, however. Every time the character comes to a decision point-e.g., "should I turn right or left?"-the DM makes a power check for him. If the check succeeds, the character knows which way he came. If the roll fails, he isn't sure. (He can still maintain the power normally, however.) Radial navigation can be helpful in several ways that are not obvious. For example, tele-portation and other extraordinary means of travel become simpler. Let's say a character cannot see a particular location because he's blindfolded. He leaves that location, but uses radial navigation to get a fix on it. That means he can still teleport back there. Furthermore, if the character has a fix on a place, he can reach it through the astral plane in just seven hours, the minimum possible (assuming of course that he can travel through the astral plane). And he can reach the same location by dimension walking (see the psychoportation discipline) with no chance of getting lost. Radial navigation can aid in telepathy, too. If the psionicist wants to make telepathic contact, and he has a fix on the target's location, he doesn't suffer the usual penalties for range. If the character stops maintaining this power, he loses his fix on the location. He can get it back by resuming this power and making a successful power check within six hours. After six hours, the location is lost. Only one location can be fixed at a time unless the character pays the maintenance cost individually for each.
***Power Score:*** The psionicist can automatically retrace his steps to the starting point.
***20:*** The psionicist forgets where he is for ld4 rounds.

| **See Sound** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 6 |
| Maintenance Cost: | 3/round |
| Range: | special |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

This power enables a character to perceive sound waves visually-with his eyes-by converting the sound waves to light impulses. (It works in much the same way as feel light.) Only a character who can see normally can use this power. The psionicist can see sound even in darkness, because sound waves do not require light. The character can still be "blind-ed" by silence, however.
***Power Score:*** The psionicist can maintain this power for I PSP per round.
***20:*** Loud sounds cause "blindness," and all other sounds are as disturbing as bright lights.

| **Spirit Sense** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 10 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 15-yard radius |
| Prerequisites: | none |

Using this power allows the psionicist to sense the presence of "spirits" within 15 yards-meaning ghosts, banshees, wraiths, haunts, and other noncorporeal undead. If a spirit frequently haunts the location at hand, the psionicist will know it. He will also know when a spirit is within 15 yards, but he won't be able to pinpoint its location.
***Power Score:*** The psionicist knows the exact location of the spirits he senses.
***20:*** The psionicist has aggravated the spirits (DM determines exact result).

---

# Psychokinetic Sciences

| Create Object | |
|---|---|
| Power Score: | Int -4 |
| Initial Cost: | 16 |
| Maintenance Cost: | 3/round |
| Range: | 20 yards |
| Preparation Time: | 0 |
| Area of Effect: | special |
| Prerequisites: | telekinesis |

A psionicist with this power can assemble matter from air and the surrounding area to create a solid object. This object remains in existence as long as the psionicist pays the power's maintenance cost. When he stops maintaining it, the object breaks into its constituent parts. An object created this way can have any shape, color, and texture the psionicist desires, provided it fulfills at least one of the following conditions:

- Fits entirely within a sphere no more than 4 feet in diameter.
- Fits entirely within a cylinder no more than 20 feet long and I foot in diameter.
- Fits entirely within a cylinder no more than 2 feet high and 6 feet in diameter.
- Weighs no more than 10 pounds.

Only available materials within 20 yards of the psionicist can be used in the construction. However, these materials can be rearranged or restructured if the psionicist also has the power of molecular rearrangement. By combining these two powers, he could manufacture diamonds from coal dust or a sword from rocks containing iron ore. If the power check result is a I, the item contains a flaw-e.g., a sword breaks when struck, a diamond contains impurities obvious to a jeweler, and so on.
***Power Score:*** The object is permanent. No cost is expended to maintain it.
***20:*** The power backfires, and a personal belonging (chosen randomly) disintegrates.

| Detonate | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 18 |
| Maintenance Cost: | na |
| Range: | 60 yards |
| Preparation Time: | 0 |
| Area of Effect: | one item, 8 cu. ft. |
| Prerequisites: | telekinesis, molecular agitation |

Some psionicists can make a bush self-destruct, or cause a zombie to explode. With the detonate power, latent energy inside plants or inanimate objects can be harnessed, focused, and released explosively. The power even works against animated undead (skeletons and zombies). It does not affect noncorporeal undead, such as ghosts, because they aren't material. Furthermore, the science has no effect on animals of any sort, including intelligent creatures such as humans, or undead with free will. The detonation inflicts

ldIO points of damage upon all vulnerable objects which the psionicist chooses to attack, within 10 feet. A saving throw vs. breath weapon reduces damage to half. To determine what percentage of the object was destroyed, multiply the result of the psionicists power check by 10. If the product is 100 or more-i.e, 100% or more- the target has been completely destroyed. Anything less means a few significant chunks remain. No more than 8 cubic feet of material can be destroyed with this power. A portion of a wall can be blown out, for example, but if the wall is 10 inches thick, an opening about 3 feet square will appear.
***Power Score:*** Damage and range double, to 2dl0 points and 20 feet, respectively.
***20:***The air surrounding the initiator detonates; everyone within 10 feet of him is attacked.

| **Disintegrate** | |
|---|---|
| Power Score: | Wis -4 |
| Initial Cost: | 40 |
| Maintenance Cost: | na |
| Range: | 50 yards |
| Preparation Time: | 0 |
| Area of Effect: | one item, 8 cu. ft. |
| Prerequisites: | telekinesis, soften |

The disintegrate science reduces an item or creature to microscopic pieces and scatters them. Anything is vulnerable unless it is protected by magical shielding such as a minor or regular globe of invulnerability or by an iner-tial barrier. The psionicist chooses his target, but he can disintegrate no more than 8 cubic feet of material with one use of this power. If the target is an inanimate object, it must save vs. disintegration; success means it is unaffected. If the target is a living creature, character, or an undead creature with free will, it must make a saving throw vs. death magic. If it succeeds, the creature feels only a slight tingle, but is otherwise unaffected. If the save fails, the creature is disintegrated (or 8 cubic feet right out of its center, which should be enough to kill most anything).
***Power Score:*** The power affects 16 cubic feet and saves are made with a -5 penalty.
***20:*** The power backfires and it affects the initiator (save with +5 bonus).

| **Molecular Rearrangement** | |
|---|---|
| Power Score: | Int -5 |
| Initial Cost: | 20 |
| Maintenance Cost: | 10 per hour |
| Range: | 2 yards |
| Preparation Time: | 2 hours |
| Area of Effect: | one item |
| Prerequisite: | telekinesis, molecular manipulation |

Molecular rearrangement is the psionic equivalent of alchemy. By toying with an objects molecular structure, the psionicist can change its fundamental nature or properties. This power cannot create matter or mass from nothing, however. Nor can it change a materials state from liquid to solid, gas to liquid, and so on. It is best suited to converting one sort of element into another, but it can also be used for more complex operations-neutralizing a poison, for example. Converting one element to another is usually a

simple operation, in which one ounce of material can be changed each hour. Typical conversions of this type include steel to lead, or any metal to gold. More complex rearrangement, like changing a metal to glass or changing a wooden goblet to a ruby goblet, takes four times longer. The creation of gold coins from other metals is possible, but its no way to get rich quick. At the rate of one ounce per hour, it would take 16 hours-about two work days-to change 10 copper pieces into 10 gold pieces, for a net profit of 9 gold pieces. Molecular rearrangement is often used to create superior weapons. A psionically tempered weapon may receive a+1 on damage rolls (see "Weapon Quality" in Chapter 6 of the DMG). The process is time-consuming, however. For example, a typical short sword takes at least 40 hours to temper psionically. (The average short sword weighs 3 pounds, or 48 ounces, most of which is the blade.) A psionically tempered weapon does not automatically offer a +1 attack-roll bonus. In order to receive that bonus, the psionicist must

1. have the weaponsmithing proficiency and
2. make a successful proficiency check when he fashions the weapon.

The psionicist makes his power check when the process is complete. If it fails, he did not waste all his effort. The difference between the character's die roll and his power score, multiplied by 10, equals the percentage of work which must be redone. If the roll is I, the item seems perfect but contains a hidden flaw which will cause it to break, or fail, or simply look wrong when it is put to use (the ruby goblet might leak, for example, or the sword might contain a soft portion which causes it to bend). This power has no effect against living creatures weighing more than one ounce. Creatures weighing one ounce or less are killed if their molecules are rearranged.

***Power Score:*** The new material is extraordinary (DM's arbitration).
***20:*** The item is seriously flawed and utterly useless.

| **Project Force** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | 10 |
| Maintenance Cost: | na |
| Range: | 200 yards |
| Preparation Time: | 0 |
| Area of Effect: | na |
| Prerequisites: | telekinesis |

Some psionicists can push, shove, and otherwise bully an opponent from afar. Project force allows the psionicist to focus a psycho-kinetic "punch" against a target up to 200 yards away. If used offensively, this punch causes damage equal to ld6 points plus the target's armor class (negative armor classes reduce the damage). For example, a target with armor class 5 would suffer 6 to II points of damage (I to 6 points, plus 5). A successful save vs. breath weapon reduces the damage by half. This rather unsubtle blow can also be used to trigger traps, throw levers, open doors (if they aren't locked or latched), break windows, and the like.

***Power Score:*** The blow also knocks down the target if it is roughly man-sized or smaller.
***20:*** The blow strikes the initiator.

| **Telekinesis** | |
|---|---|
| Power Score: | Wis -3 |

| | |
|---|---|
| Initial Cost: | 3+ |
| Maintenance Cost: | 1 + /round |
| Range: | 30 yards |
| Preparation Time: | 0 |
| Area of Effect: | single item |
| Prerequisite: | none |

Telekinesis, or "TK" for short, is the ability to move objects through space without touching them. All telekinetic efforts tend to be physically taxing, because they involve real work. Moving small, light objects is relatively easy. As the objects become more massive, the task becomes significantly more difficult. The costs above (3 PSPs initially and I per round of maintenance) assume that the object being moved weighs 3 pounds or less. For heavier objects, these rules apply:

- The initial cost equals the objects weight in pounds.
- The maintenance cost is half the initial cost, rounded down.
- The characters power score is decreased by one-third of the objects weight in pounds, rounded down. For example, to telekinetically snatch a 15-pound battle axe from a rack, a psionicist must pay 15 PSPs and make a power check with a -5 modifier to his score.

A psionicist using TK can move an object up to 60 feet per round. The object can serve as a weapon. In this case, the character attacks using his own THACO score, with a penalty equaling the object's weight modifier (one-third its weight, rounded down).
***Power Score:*** The character can lift a second item of equal or lesser weight simultaneously for the same cost.
***20:*** The psionicist "fumbles" the item, knocking it over, etc.

## Psychokinetic Devotions

| **Animate Object** | |
|---|---|
| Power Score: | Int -3 |
| Initial Cost: | 8 |
| Maintenance Cost: | 3/round |
| Range: | 50 yards |
| Preparation Time: | 0 |
| Area of Effect: | 1 object, 100 Ibs. |
| Prerequisites: | telekinesis |

Inanimate objects can be "brought to life" with this devotion. The objects are not actually alive, but they move under the psionicist's control as if they were. For example, chairs may walk, trees may dance, and stones may waddle around. The object being animated must weigh 100 pounds or less. The material being animated affects the difficulty of the task; stronger or more brittle materials are harder to animate than weak or floppy materials. Once animated, however, all materials become flexible to some extent.

| **Material** | **Power Score Modifier** |
|---|---|
| Cloth, paper | 0 |

| | |
|---|---|
| Live wood, dead animal | -1 |
| Dead wood | -2 |
| Water | -3 |
| Thin metal | -4 |
| Thick metal | -5 |
| Stone | -6 |

Fluid motion is not common. The animated item moves more like a puppet. Its movements are jerky and clumsy, and if the item was rigid to begin with, it makes a loud creaking, groaning, or grating sound. It can move 60 feet per round (movement rate 6), in any direction chosen by the psionicist. It can attack as a club with a THACO of 20.
***Power Score:*** Animation is smooth and lifelike.
***20:*** No additional effect.

| **Animate Shadow** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 7 |
| Maintenance Cost: | 3/round |
| Range: | 40 yards |
| Preparation Time: | 0 |
| Area of Effect: | 100 sq. ft. |
| Prerequisites: | none |

With this devotion the psionicist can animate the shadow cast by anyone or anything and make it seem to have life of its own. The shadow can even move away from the person or thing that cast it. It must, however, remain flatly cast along a surface. It can never be more than two-dimensional. An animated shadow can't really do anything other than startle or amuse someone. It cannot attack or disrupt a mage's concentration. In this regard, it is similar to a cantrip's effect. It can serve as a diversion by entertaining someone or attracting a guard's attention.
***Power Score:*** The range increases to 100 yards.
***20:*** The shadow disappears completely for one round.

| **Ballistic Attack** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | 5 |
| Maintenance Cost: | na |
| Range: | 30 yards |
| Preparation Time: | 0 |
| Area of Effect: | 1 item, 1 Ib. |
| Prerequisites: | telekinesis |

This power can make any psionicist a "David" when he's facing "Goliath." It's a special variation of the telekinesis science. Instead of moving any object relatively slowly, ballistic attack allows the character to

hurl a small object at a target. The object, no more than I pound in weight, can achieve deadly speeds. It must be within sight of the psionicist and cannot be anchored or attached to anything else. A rock is the most common weapon. The psionicist uses his regular THACO to determine whether he hits the target. If he succeeds, the missile inflicts ld6 points of damage (assuming, of course, that the character made a successful power check in the first place).
***Power Score:*** Damage increases to ldl2.
***20:*** Ballistic boomerang. The psionicist becomes the object's target.

| **Control Flames** | |
|---|---|
| Power Score: | Wis -1 |
| Initial Cost: | 6 |
| Maintenance Cost: | 3/round |
| Range: | 40 yards |
| Preparation Time: | 0 |
| Area of Effect: | 10 sq. ft |
| Prerequisites: | telekinesis |

By controlling flames, a psionicist can make a normal fire bigger, smaller, hotter, or colder. He can even make it move around as if it were a living creature. A fire's size can be increased by 100% or decreased by 50%. If the fire's heat is increased, it causes double damage. If its heat is reduced, the damage is halved. This applies to flaming torches, burning oil, and other normal fires, but not to magical fires such as fireballs or burning hands. An animated fire can move up to 90 feet per round (MR 9). It can be shaped like a person or an animal, as long as it covers no more than 10 square feet of ground. If the fire moves away from its fuel, it can survive for only one more round, then dies out. An animated fire can also attack by engulfing an opponent. The psionicist must make an attack roll using his regular THACO. If successful, the attack causes ld6 points of damage.
***Power Score:*** Size can increase up to 200% or decrease to 0% (the fire is extinguished).
***20:*** The psionicist burns himself, suffering ld4 points of damage.

| **Control Body** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | 8 |
| Maintenance Cost: | 8/round |
| Range: | 80 yards |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | telekinesis |

This science allows psychokinetic control of another person's body. In effect, the victim becomes a marionette. He knows that someone else is pulling his strings, though, and he's probably mad as all get-out. Before this science actually works, the psionicist must engage in a psychic contest, pitting his power score directly against the victim's Strength. If the victim wins the contest, he breaks free (the psionicist still pays the power cost). In a tie, the contest continues into the next round, provided the psionicist maintains the power. The victim can't do anything else during this contest; all his effort is

focused on retaining control of his own body. If the power works, the psionicist has rudimentary control over the victim's limbs. He can make the victim stand up, sit down, walk, turn around, etc. The body can be forced to attack physically, but with a - 6 penalty on attack rolls (using the victim's own THACO). The victim can't be forced to speak. In fact, he keeps control over his own voice and can say whatever he likes. The victim must stay within the 80-yard range or the psionicist's control is broken automatically. If the body is forced to do something obviously suicidal, like walking off a cliff or poking at a red dragon, the victim can fight another contest with the psionicist to regain control (the adrenaline rush of imminent danger gives him renewed strength).

***Power Score:*** The psionicist automatically wins the initial psychic contest.

***20:*** The psionicist suffers partial paralysis (an arm or leg) for ldIO turns.

| **Control Light** | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 12 |
| Maintenance Cost: | 4/round |
| Range: | 25 yards |
| Preparation Time: | 0 |
| Area of Effect: | 400 sq. ft. |
| Prerequisites: | none |

The psionicist can manipulate existing light with this devotion. He cannot create light from darkness, but he can create darkness from light. This power can accomplish the following, and anything else the DM allows:

- Deepen existing shadows, making them inky black. A thief hiding in this shadow gets a 20% bonus on his ability roll.
- Lighten existing shadows, reducing a thief's hiding ability by 20%.
- Brighten a light source until it hurts to look at it. This gives everyone exposed to the light a -2 penalty on attack rolls.
- Dim a light source so it resembles twilight. This does not affect anyone's attack rolls.
- Extend shadows into areas that are otherwise well lit. Only an existing shadow can be extended, but its size can be increased by 200% (i.e., its size can be tripled).
- Extend light into areas that are otherwise in shadow. Shadows can be reduced in size by 50%.

***Power Score:*** The maintenance cost is reduced to I PSP per round.

***20:*** The effect is the opposite of what is desired, and maintenance fails.

| **Control Sound** | |
|---|---|
| Power Score: | Int -5 |
| Initial Cost: | 5 |
| Maintenance Cost: | 2/round |
| Range: | 100 yards |
| Preparation Time: | 0 |
| Area of Effect: | na |
| Prerequisites: | none |

This power allows the psionicist to shape and alter existing sounds. As a woman speaks, for example, the psionicist could change her words into a lion's roar, or even into different words. Or he could disguise the sound of 20 men marching past a guard as falling rain. Sounds can also be layered-so that one singing person sounds like an entire choir, for example. If the character's power check is a I, something about the sound he's altered isn't quite right, so it arouses suspicion. If he is trying to exactly duplicate another voice, this fault occurs on a roll of I or 2. This power can also dampen a sound. The player must specify which sound the character intends to eliminate; the power has no area of effect. For example, the psionicist might quiet the sound of a hammer, muffle the words from someone's mouth, or eliminate the creaking of a door. He could not do all three simultaneously, however.
***Power Score:*** The maintenance cost is reduced to 1 PSP per round.
***20:*** A loud boom erupts from the psioni-cist's location.

| **Control Wind** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | 16 |
| Maintenance Cost: | 10/round |
| Range: | 500 yards |
| Preparation Time: | 2 |
| Area of Effect: | 1,000 yards |
| Prerequisites: | telekinesis |

The psionicist can gain limited control over wind speed and direction with this devotion. The speed of any existing wind can be increased or decreased by 10 miles per hour or 25%, whichever is greater. The direction of the wind can also be changed by up to 90 degrees. These changes are temporary, lasting only as long as the psionicist pays the maintenance cost. The changes occur within moments after he wills them, and die out in less than a minute when he stops maintaining them. Winds above 19 miles per hour prevent anything smaller than a man or a condor from flying and impose a -4 modifier on missile fire. They also whip up waves on the sea and make sailing difficult. Winds gusting at over 32 miles per hour cause minor damage to ships and buildings. These gusts also kick up clouds of dust, and prevent all but the largest creatures from flying. Winds over 55 miles per hour prevent all flight, knock down trees and wooden buildings, and threaten to swamp ships. Winds over 73 miles per hour are hurricane gales.
***Power Score:*** The psionicist gains total direction control and can change speeds by up to 25 mph or 50 %, whichever is greater.
***20:*** No additional effect.

| **Create Sound** | |
|---|---|
| Power Score: | Int -2 |
| Initial Cost: | 8 |
| Maintenance Cost: | 3/round |
| Range: | 100 yards |
| Preparation Time: | 0 |
| Area of Effect: | na |
| Prerequisites: | telekinesis, control sound |

Unlike the control sound devotion, this power allows a psionicist to create sound from silence. That means the psionicist can choose the source or location of the sound. For example, he can make rocks sing, weapons cast insults, and trees sound as if a battle is occurring inside. The sound can be as soft as a whisper or as loud as several people shouting in unison. Once the sound is created, the psionicist can control it without expending additional PSPs (other than normal maintenance). If the die roll for the character's power check is a I, the sound is not quite true and may arouse suspicion in listeners. If a specific human voice is being mimicked, this happens on a roll of I or 2. Created sounds cannot have any magical effect. The psionicist might duplicate a banshee's wail, for example, but it cannot harm anyone.
***Power Score:*** Sound volume can be up to that of a dragon's roar.
***20:*** A loud boom erupts near the initiator.

| **Inertial Barrier** | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 7 |
| Maintenance Cost: | 5/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | 3-yard diam. |
| Prerequisites: | telekinesis |

The inertial barrier is a defense. The psionicist creates a barrier of "elastic" air around himself and anyone else within 3 yards. Like an unpoppable, semipermeable bubble, this barrier helps soften missile blows and can shield those inside from many forms of damage. Specifically, the barrier helps protect against the following, by absorbing some (or with luck all) of the potential damage:

- Any nonmagical missile weapon.
- Any physical missile which was created with magic.
- Any missile with magical pluses.
- Flames.
- Some breath weapon attacks, depending on the nature of the breath.
- Acid. The barrier stops or slows the attack. This doesn't matter much if the acid comes from above, because it just drips on the characters.
- Gas. The barrier turns it aside, at least partially (depending on the defenders die roll), but after a turn it will eventually work its way inside and take full effect. Falling. A psionicist with an inertial barrier in place suffers only one-half damage from a fall; the barrier absorbs a lot of the impact, but the character still gets banged around inside.

The inertial barrier has no effect against the following:

- Missiles conjured from pure magic.
- Raw heat or cold.
- Pure energy or light.
- Gaze weapons.

Furthermore, the barrier cannot keep enemies out, but it does slows them a bit. Anyone trying to cross the barrier must stop moving when he hits it. He can then cross inside (or outside) in the next round. Handling Missile Attacks: The inertial barrier saps energy from missile weapons by tightening around them as they pass through. If a missile strikes its target inside the barrier, the attacker rolls damage

normally. The defender then rolls the same type of die (as the attacker just did) to see how much damage the barrier absorbed. The defender does not include any magical pluses the weapon may have. The defender then subtracts the result of his die roll from the attackers damage. If anything is left over, the defender loses that many hit points. If the defender's roll equals or exceeds the total damage, the weapon falls harmlessly to the ground. If the missile is explosive, the barrier does prevent damage, but not the explosion. The barrier does not differentiate the direction of travel. If a weapon is fired from the inside, the penalties above still apply.

***Power Score:*** The barrier blocks an additional point per die.

***20:*** The psionicist creates a bizarre wind-pocket that knocks him to the ground.

| **Levitation** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | 12 |
| Maintenance Cost: | 2/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | telekinesis |

Levitation allows the user to float. It is the use of telekinesis on oneself. A character can lift himself at the rate of I foot per second, or 60 feet per round. The character can descend as quickly as he wants by simply letting himself fall, then slowing down as he nears the ground. Levitation is not flying; it doesn't provide any horizontal movement. The character can hover motionless, and will drift with the wind, however. He can also push himself off a wall or other fixed object and drift up to 60 feet per round in a straight line, but he can't stop until he meets another solid object or lowers himself to the ground. Two other powers-control wind and project force-can help the levitating psionicist propel himself forward. Control wind allows him to determine the direction in which he drifts. Project force allows him to create a "wall" wherever it's wanted; movement is up to 60 feet per round, in any direction. Each change of direction or speed is a distinct use of the power, however, and costs PSPs. A psionicist can always levitate his own weight. Additional weight, however, such as equipment or passengers, is a hindrance. Every 25 pounds of added weight reduces the characters power score by one point.

***Power Score:*** The rate of levitation is doubled (to 120 feet/round).

***20:*** The psionicist doubles his weight for one round. If he falls, he suffers an extra d6 points of damage.

| **Molecular Agitation** | |
|---|---|
| Power Score: | Wis |
| Initial Cost: | 7 |
| Maintenance Cost: | 6/round |
| Range: | 40 yards |
| Preparation Time: | 0 |
| Area of Effect: | 1 item, 20 Ibs. |
| Prerequisites: | none |

Molecular agitation enables the user to excite the molecules of a substance: paper ignites, wood

smolders, skin blisters, water boils, etc. The list below shows what's possible, depending on how many rounds the substance is agitated.

1. round: readily flammable materials (e.g., paper, dry grass) ignite, skin becomes red and tender (I point of damage), wood becomes dark.
2. rounds: wood smolders and smokes, metal becomes hot to the touch, skin blisters (ld4 points of damage), hair smolders, paint shrivels.
3. rounds: wood ignites, metal scorches (ld4 points of damage), skin burns away (ld6 points of damage), water boils, lead melts (damage does not increase after this round, but does continue).
4. rounds: steel grows soft.
5. rounds: steel melts.

Where magical items are concerned, allow saving throws against destruction, but add a +10 penalty to the saving throw number (this heat is quite destructive, coming from inside the material rather than outside).
***Power Score:*** After round one, the rate of agitation doubles (3 rounds of damage occurs in just 2, 5 rounds of damage occurs in 3).
***20:*** An item belonging to the psionicist (chosen at random) is affected for one round.

| **Molecular Manipulation** | |
|---|---|
| Power Score: | Int -3 |
| Initial Cost: | 6 |
| Maintenance Cost: | 5/round |
| Range: | 15 yards |
| Preparation Time: | 1 |
| Area of Effect: | 2 sq. inches |
| Prerequisites: | telekinesis |

This power allows the user to weaken the molecular bonds within an object or structure. When someone stresses the object or strikes a blow it, it snaps. The psionicist can create a "breaking point" of approximately two square inches per round. Deterioration occurs across a plane (in two dimensions, not three). One round's work is enough to fatally weaken most small objects-e.g., swords, ropes, saddle straps, belts, and bows. Larger objects require more time, and DM discretion. DMs must decide how vulnerable this power makes larger, oddly shaped items like shields or doors. They should keep in mind that an object need not be in two pieces before its virtually useless. For example, a little boat with a cracked hull is unsafe at sea. And a shield that is split halfway across offers little or no protection; if successive blows don't shatter it, they certainly will rattle the holders arm unmercifully.
***Power Score:*** Weakening occurs at twice the rate above.
***20:*** The item is strengthened. Now it requires twice the normal effort to weaken.

| **Soften** | |
|---|---|
| Power Score: | Int |
| Initial Cost: | 4 |
| Maintenance Cost: | 3/round |
| Range: | 30 yards |

| | |
|---|---|
| Preparation Time: | 0 |
| Area of Effect: | 1 object, 10 Ibs. |
| Prerequisites: | none |

This power resembles molecular manipulation, except that it weakens the entire object instead of small area across a single plane. The object softens overall, losing its rigidity and strength. Specific effects vary, depending on the material. Metal: For each round of softening, weapons incur a -1 penalty to attack rolls and cause one less point of damage, cumulatively. The armor class of metal armor increases one point per round of softening. After 10 rounds, any metal becomes soft and rubbery, but retains its shape. Wood: Like metal, weapons with wooden shafts or handles suffer a -1 penalty to attack rolls and damage per round of softening. After six rounds, wood becomes stringy and rubbery but retains its shape. After 10 rounds, the grain can be split easily and a punch can break through even the hardest and thickest doors or chests. Stone: After two rounds, stone becomes noticeably soft to the touch. After five rounds, it can be worked like stiff clay, but this is as soft as it gets. Magical Items: Save vs. crushing blow to escape the effect entirely. Living Tissue: No effect. DMs can use their own judgement and the examples above to handle other materials.

***Power Score:*** All effects are doubled.

***20:*** The item is strengthened, and can't be affected again until the psionicist gains one level.

---

# Psychometabolic Sciences

| Animal Affinity | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | 15 |
| Maintenance Cost: | 4/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

When the psionicist first learns this power, he develops an affinity for a particular type of animal. He cannot choose the animal; the affinity is dictated by his aura. To determine the nature of the affinity, the psionicist's player rolls ld20 and consults the table below. From that point on, when the character invokes this power, he can claim one of the animal's attributes as his own-temporarily. He can gain the animals armor class, movement rate and mode, attacks and damage, THACO, hit points, or any other special ability. Only one of these can be used at a time, however. The effect lasts as long as the psionicist maintains the power. Switching to a different ability means paying the initial cost of the power again, and making a new power check. The character does undergo a physical change when this power is invoked. The extent of the change depends on the animal and the ability. For example, adopting a hawks movement obviously requires wings, while attacking like a tiger calls for fangs and claws.

| | |
|---|---|
| 1 | Ape |
| 2 | Barracuda |
| 3 | Boar |
| 4 | Bull |
| 5 | Crocodile |
| 6 | Eagle, giant |
| 7 | Elephant |
| 8 | Falcon |
| 9 | Griffon |
| 10 | Grizzly bear |
| 11 | Lion |
| 12 | Panther (black leopard) |
| 13 | Percheron (draft horse) |
| 14 | Peregrine falcon (hawk) |
| 15 | Rattlesnake |
| 16 | Scorpion, giant |
| 17 | Shark |
| 18 | Stag |

| | |
|---|---|
| 19 | Tiger |
| 20 | Wolf |

***Power Score:*** The character gains two abilities instead of one.
***20:*** The characters skin takes on the appearance of the animal's skin until the power is used again successfully (no change in AC).

| **Complete Healing** | |
|---|---|
| Power Score: | Con |
| Initial Cost: | 30 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 24 hours |
| Area of Effect- | personal |
| Prerequisite: | none |

The psionicist who has mastered this power can heal himself completely of all ailments, wounds, and normal diseases. He places himself in a trance for 24 hours to accomplish the healing. The trance is deep, and cannot be broken unless the character loses 5 or more hit points. As he uses this power, the psionicist's body is repairing itself at an incredible rate. At the end of the 24-hour period, the character awakes, restored to complete health in every regard except for the 30 PSPs he expended to use complete healing. If the character's power check fails, he breaks his trance after only one hour, having realized that the power was not working. Only 5 PSPs have been expended.
***Power Score:*** The healing occurs in just one hour.
***20:*** The psionicist awakes after the full 24 hours to discover that the attempt failed. He has expended 5 PSPs.

| **Death Field** | |
|---|---|
| Power Score: | Con -8 |
| Initial Cost: | 40 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 3 |
| Area of Effect: | 20 yd. rad. |
| Prerequisite: | none |

A death field is a life-sapping region of negative energy. Only psionicists of evil alignment can learn this power without suffering side effects. If any other psionicist tries to learn the death field, his alignment will gradually be twisted toward evil as he explores this very dark portion of his psyche. A successful death field takes it toll on everyone inside it, including the psionicist. Before he initiates this power, he must decide how many hit points he will sacrifice. If the power works, the loss is inevitable; he gets no saving throw. Every other living thing within the death field must make a saving throw vs. death. Those who succeed escape damage. Those who fail lose the same number of hit points as the psionicist. For the

weak, that can mean death.
***Power Score:*** The pionicist loses only half the number of hit points he specifies; victims who fail their saving throws lose the full amount.
***20:*** The power fails, but the psionicist loses the hit points anyway.

| **Energy Containment** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | 10 |
| Maintenance Cost: | na |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

A psionicist with this power has trained himself to safely absorb and assimilate energy from electricity, fire, cold, heat, and sound- energy that would fry, freeze, or otherwise harm a normal character. Any physical assault based on these energy types can be drawn into the psionicist's body. The character transforms the energy, and safely releases it as visible radiance (light). In effect, this protects the psionicist against energy attacks. If the psionicist makes a successful power check, he can double the result of his die roll when saving against an energy attack. If the character makes a successful saving throw, he suffers no damage from the attack. If he fails, he suffers only half damage, regardless of what the spell description (if applicable) states. When the character absorbs energy, he radiates visible light for a number of rounds equal to the points of damage he absorbed. If he suffered half damage, he radiates for that many rounds. If he suffered no damage, roll for damage anyway to see how long he glows. This glow is definitely noticeable, but it is soft, and illuminates no more than an area with a 2-yard radius.
***Power Score:*** All saves against energy attacks automatically succeed during the round in which the power is in effect.
***20:*** The psionicist becomes an energy attractor for 1 turn. All saves vs. energy attacks fail, causing full standard damage.

| **Life Draining** | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 11 |
| Maintenance Cost: | 5/round |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisites: | none |

With this devotion, a psionicist can drain hit points from another character and use them to recover his own. This transfer occurs at the rate of 1d6 points per round. The character can absorb up to 10 more hit points than his healthy total, but these bonus points last only one hour. After that, if the psionicist still has more hit points than he should, the excess points vanish.
***Power Score:*** Rate of drain increases to 1d20 points per round.

***20:***Backfire! Half of the psionicists remaining hit points are absorbed by the target, reversing the power's effects.

| **Metamorphosis** | |
|---|---|
| Power Score: | Con -6 |
| Initial Cost: | 21 |
| Maintenance Cost: | I/turn |
| Range: | 0 |
| Preparation Time: | 5 |
| Area of Effect: | personal |
| Prerequisites: | none |

This science resembles polymorphing, but it has a much wider application. The psionicist can change himself into anythingwith approximately the same mass as his body: a wolf, a condor, a chair, a rock, a tree. While in this form, he retains his own hit points and THACO, if possible, but gains the armor class the new form. The psionicist also gains all physical attacks that form allows, but no magical or special abilities. (This all depends on the new form; a tree cannot attack, so THACOs and attacks are meaningless.) Like any massive change of shape, however, this causes great physical stress. The psionicist must make a system shock roll to survive the change. If the roll fails, he does not die, but the PSPs are expended and he passes out for 2d6 turns.
***Power Score:*** The system shock roll automatically succeeds, and the new forms mass can be up to three times that of the psionicist's body.
***20:*** The psionicist must save vs. paralyza-tion. Failure means he changes to the new form permanently.

| **Shadow-form** | |
|---|---|
| Power Score: | Con -6 |
| Initial Cost: | 12 |
| Maintenance Cost: | 3/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

A psionicist using this power actually transforms himself into living shadow, along with his clothing, armor, and up to 20 pounds of equipment. He can blend perfectly into any other shadow and travel with a movement rate of 6. He can only travel through darkness and shadow, however. Areas of open light are impassable. While in shadow-form, the psionicist can be detected only by life detection, other types of psychic detection, or by a true seeing spell. He cannot harm anyone physically, or manipulate any corporeal object, but he can still use psionic powers. If the psionicist rolls a I on his power check, he becomes shadow but none of his clothing or equipment makes the switch.
***Power Score:*** The psionicist gains all desirable powers of the "shadow" monster for ld4 turns.
***20:*** The player must roll a save vs. lightning for the psionicist's most valuable item. If it fails, the item becomes shadow and drifts away, lost forever.

# Psychometabolic Devotions

| Absorb Disease | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 12 |
| Maintenance Cost: | na |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | none |

This power lets the psionicist take the disease from another character's body, and absorb it himself. Presumably, the psionicist will then heal himself (using complete healing). This power can absorb magical diseases, but not curses, such as lycanthropy.

***Power Score:*** The disease is automatically destroyed by the psionicist's immune system.

***20:*** The disease remains in the victim while spreading to the psionicist.

| Adrenalin Control | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 8 |
| Maintenance Cost: | 4/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

By controlling the production and release of adrenalin in his system, the psionicist can give himself temporary physical boosts on demand. When he increases his adrenalin, the character gains ld6 points, which he can add directly to his Strength, Dexterity, or Constitution scores however he chooses. He enjoys all the normal bonuses for high physical attributes while this power is in effect. If the psionicist's power check result is a I, he overtaxes his system with this adrenalin. He still gets the boost, but he loses twice that many hit points, too.

***Power Score:*** Instead of dividing the d6 result, the character applies that many points to each of the three attributes.

***20:*** The psionicist must make a successful system shock roll or suffer a 50% loss in current hps and pass out for ld8 hours.

| Aging | |
|---|---|
| Power Score: | Con -5 |
| Initial Cost: | 10 |
| Maintenance Cost: | na |
| Range: | touch |

| | |
|---|---|
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | none |

With this power, an evil psionicist can cause unnatural aging by touch. (Other psionicists can use this power, too, but their alignment would begin to twist toward evil.) The victim ages ld4 years instantly and must make a saving throw vs. polymorph. Failure means that the change was traumatic, and he ages another year automatically. If the psionicist's power check result was a I, there is a backlash and he, too, ages ld4 years.

***Power Score:*** The victim ages 1d20 years.

***20:*** The psionicist ages 1d10 years.

| **Biofeedback** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | 6 |
| Maintenance Cost: | 3/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

Biofeedback is the power to control the flow of blood through one's own body. This power has two key effects. First, the psionicist can easily control bleeding. As a result, he suffers two fewer points of damage from every attack against him which causes physical injury. Second, by flooding key portions of his body with blood, the psionicist effectively cushions blows against him and reduces their effect. The character's armor class is reduced by one.

***Power Score:*** AC is reduced by three.

***20:*** Excessive blood flow results in scattered bruises and a 10% hp loss.

| **Body Control** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | 7 |
| Maintenance Cost: | 5/turn |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

This power allows a psionicist to adapt his body to a hostile enviroment. The change must be keyed to a specific surrounding: water, acid, extreme heat, extreme cold, an elemental plane, etc. If the power works, the psionicist not only survives, he fits in like a native organism. He can breathe and move normally, and he takes no damage simply from being in that environment. An attack in any form does not constitute an environment. For example, a character who can survive subarctic temperatures is still vulnerable to a cone of cold.

***Power Score:*** The psionicist can adapt himself to a new environment while maintaining the power.
***20:*** The character becomes even more vulnerable, and the environment causes ld4 points of damage per round. (A second use of body control halts damage.)

| **Body Equilibrium** | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 2 |
| Maintenance Cost: | 2/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

Body equilibrium allows the user to adjust the weight of his or her body to correspond with the surface he's standing on. Thus he can walk on water, quicksand, or even a spider's web without sinking or breaking through. If the character is falling when he uses thispower, he will fall 120 feet per round-slow enough to escape injury. Because of his lightness, the character must be wary of wind gusts, which can easily sweep him up and blow him away.
***Power Score:*** The effect lasts up to a day without maintenance.
***20:*** The psionicist's weight instantly rises by a factor of 10; he must use body equilibrium to fix the problem.

| **Body Weaponry** | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 9 |
| Maintenance Cost: | 4/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

Body weaponry allows the psionicist to convert one of his arms into a weapon. Virtually any sort of weapon can be imitated- except a short bow, hand crossbow, light crossbow, or any weapon the psionicist cannot normally use. The arm actually becomes wood and/or metal, and assumes the weapon's form. It behaves in every respect like a normal weapon of the chosen type, with a bonus: it can never be dropped or stolen.
***Power Score:*** The "armament" gives the psionicist a +1 attack bonus (but no damage bonus).
***20:*** The psionicist must make a system shock roll or pass out for ldIO rounds.

| **Catfall** | |
|---|---|
| Power Score: | Dex -2 |
| Initial Cost: | 4 |
| Maintenance Cost: | na |
| Range: | 0 |

| | |
|---|---|
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

A character using this power can spring like a cat in the same round, and always land gracefully on his feet. He still suffers damage from falling, but the damage is halved. He can jump down 30 feet without risking any injury at all.
***Power Score:*** The psionicist can jump 50 feet instead of 30 during this single use of the power.
***20:*** No effect.

| **Cause Decay** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | 4 |
| Maintenance Cost: | na |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | 60lbs |
| Prerequisite: | none |

This power works only against inanimate objects. The psionicist's touch causes instant decay: metal rusts, wood ages and splits, cloth falls to dust. The DM rolls a saving throw vs. acid for the item touched. If this fails, the item-or a maximum of 60 pounds of it-is consumed by decay within one round.
***Power Score:*** The save automatically fails.
***20:*** One of the psionicist's own items decays (no save)-either the first item touched, or an item chosen randomly by the DM.

| **Cell Adjustment** | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 5 |
| Maintenance Cost: | up to 20/round |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | none |

Cell adjustment allows the psionicist to heal wounds and cure diseases. Any sort of wound can be healed, but only nonmagical diseases are affected (e.g., this power cannot heal mummy rot, nor can it cure a lycanthropic curse). The psionicist can cure a disease in one round by spending 5 PSPs and making a succesful power check. If the die roll equals a I, he succeeds but its doubly taxing (10 PSPs). If it equals a 2, he fails because the disease is too widespread; he must spend another 5 PSPs and try again next round. A "cure" doesn't automatically restore hit points lost due to illness; it merely arrests the disease. However, the psionicist can heal up to 4 points of damage in each subsequent round by spending 5 psionic strength points per hit point recovered. He cannot cure the disease and restore hit points during the same round.

***Power Score:*** All disease-or up to 10 points of damage-is instantly healed at a cost of 5 PSPs.
***20:*** The psionicist suffers ldIO points of damage but the patient is unaffected.

| **Chameleon Power** | |
|---|---|
| Power Score: | Con -1 |
| Initial Cost: | 6 |
| Maintenance Cost: | 3/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

The psionicist using this power actually changes the coloration of his skin, clothing, and equipment to match his background. The match is automatic; he does not choose the appearance. The change takes several seconds. As he moves, the coloration changes and shifts to reflect any changes in the surroundings. In effect, chameleon power makes a psionicist very difficult to spot. If the character remains stationary, he can avoid detection simply by making a successful power check. If the character moves, his power score is reduced by three when he makes the check. This power is most effective in natural surroundings, where one's coloration would logically conceal him. In an urban setting, or in an area without natural cover during broad day- light, the character's chameleon power score is halved (rounded down).
***Power Score:*** The psionicist's power score gains a +3 bonus during "hiding" checks.
***20:*** The psionicist's colorations strongly clash with the background; he sticks out like a sore thumb.

| **Chemical Simulation** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | 9 |
| Maintenance Cost: | 6/round |
| Range: | touch |
| Preparation Time: | 1 |
| Area of Effect: | varies |
| Prerequisite: | none |

With this devotion, a psionicist can make his body simulate the action of acids. The character secretes an "acid" through his hand. Any item he touches and holds briefly must make a saving throw vs. acid or be dissolved. If used as a weapon, this acid cannot inflict more than two or three points of damage, though it can cause considerable pain.
***Power Score:*** All saves for normal items fail; magical items still get a saving throw.
***20:*** Acid oozes from the psionicist's sweat glands; all items touching his skin must save vs. acid.

| **Displacement** | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 6 |
| Maintenance Cost: | 3/round |

| | |
|---|---|
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

This power resembles the displacer beast's natural ability to make itself appear to be up to 3 feet from his actual location. The psionicist decides where this false image will appear. This is a very effective means of protecting oneself from attack, giving the psionicist a two-point bonus on his armor class (lowering it two points). True seeing will reveal the character's real location.
***Power Score:*** The AC bonus is +4.
***20:*** No effect.

| **Double Pain** | |
|---|---|
| Power Score: | Con -3 |
| Initial Cost: | 7 |
| Maintenance Cost: | na |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | individual |
| Prerequisite: | none |

By touching another person, the psionicist greatly lowers that character's pain threshold. (Even a little scrape will feel like a serious injury.) The effect lasts one turn. During that time, all damage scored against that character is doubled. However, only half of this damage is real; the other half represents the amplified pain. When the character's total of real damage and pain reduces his hit points to zero or less, he passes out. He will regain consciousness ldIO rounds later. At that time he also regains "fake" hit points-those lost only to pain. If the victim does not pass out in one turn (the duration of this power's effects), damage scored against him is no longer doubled. However, the points of "pain damage" which he has an already incurred will remain in effect for another ld6 rounds.
***Power Score:*** The victim must make a system shock roll upon each hit, or pass out due to the excrutiating pain.
***20:*** The power backfires and affects the psionicist for one hour.

| **Ectoplasmic Form** | |
|---|---|
| Power Score: | Con -4 |
| Initial Cost: | 9 |
| Maintenance Cost: | 9/round |
| Range: | 0 |
| Preparation Time: | 1 |
| Area of Effect: | personal |
| Prerequisite: | none |

With this power a psionicist converts himself to ectoplasm, (a fine-spun, smoky substance). He becomes insubstantial, ghostlike, and able to walk through solid material as if it didn't exist. The psionicist is still

visible as a whispy outline. He moves at his normal movement rate and in the normal fashion (e.g., if he couldn't fly before, he can't now). The psionicist can also convert the following to ectoplasm: his clothing, armor, and up to 15 pounds of equipment that he's carrying.
***Power Score:*** The maintenance cost is 3 PSPs per round.
***20:*** The psionicist's items become ectoplasmic, but he doesn't. He must use this power again (successfully) to retrieve them.

| **Enhanced Strength** | |
|---|---|
| Power Score: | Wis -3 |
| Initial Cost: | varies |
| Maintenance Cost: | varies |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisites: | none |

A psionicist can increase his physical Strength score to a maximum of 18 through this devotion. The PSP cost is twice the number of points he adds to his Strength score. (If he fails, he loses half this amount; see Chapter 1.) The maintenance cost per round equals the number of Strength points he has added. Physical Strength cannot be raised above 18 psionically. The psionicist does not qualify for exceptional Strength bonuses if he raises his Strength to 18.
***Power Score:*** The psionicist can raise his strength to 18/00, with each 25% increase costing an additional PSP.
***20:*** The power backfires and lowers Strength by ld6 until arrested by this power.

| **Expansion** | |
|---|---|
| Power Score: | Con -2 |
| Initial Cost: | 6 |
| Maintenance Cost: | I/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

The psionicist can expand his own body proportions in any dimension: height, length, width, or thickness. He can increase any or all of these proportions by 50% of their original size per round. Maximum expansion is four times original size. This power has no effect on clothing or equipment. Ability scores don't increase either. In other words, the character does not grow stronger simply because he became taller. However, being very big often has other advantages.
***Power Score:*** Maximum expansion becomes 10 times and the rate is 100% per round.
***20:*** The psionicist shrinks by 50% until arrested by this power.

| **Flesh Armor** | |
|---|---|
| Power Score: | Con -3 |

| | |
|---|---|
| Initial Cost: | 8 |
| Maintenance Cost: | 4/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

The psionicist transforms his own skin into nonmagical armor. No one can see the change, but its as if he had actually acquired some type of armor. The type of armor his body mimics depends on the result of his power check, as shown in the following table:

| | |
|---|---|
| 1 | left hand functions as a shield, AC 9 |
| 2 | leather, AC 8 |
| 3-4 | ring mail, AC 7 |
| 5-6 | scale mail, AC 6 |
| 7-8 | chain mail, AC 5 |
| 9-10 | banded mail, AC 4 |
| 11+ | plate mail, AC 3 |

Because this armor is part of his body, the psionicist can enjoy its benefits without suffering any penalty he might have if he were actually wearing that type of armor. The armor created by this power weighs nothing, has no magnetic properties, and in no way encumbers the psionicist. Its effects may be combined with rings of protection.

***Power Score:*** The psionicist gains a +1 bonus to the armor class listed above.

***20:*** The power just grows ugly hair over his body, which must be shaved off or he loses 2 points of Charisma.

| **Graft Weapon** | |
|---|---|
| Power Score: | Con -5 |
| Initial Cost: | 10 |
| Maintenance Cost: | I/round |
| Range: | touch |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

With this power the psionicist can graft any one-handed melee weapon directly onto his body. He picks up the weapon, activates this power, and the weapon becomes an extension of the character's arm. Assuming the character is proficient with that type of weapon, he gains a +1 bonus to attack rolls and damage. If he is not proficient with the weapon, he suffers the usual nonproficiency penalties, but still gets the +1 bonus.

***Power Score:*** The +1 bonus for attacks and damage increases to +4.

***20:*** The weapon has been weakened; it will break on any attack roll of 1.

| Heightened Senses | |
|---|---|
| Power Score: | Con |
| Initial Cost: | 5 |
| Maintenance Cost: | I/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

By means of this devotion the psionicist sharpens all five of his normal senses: sight, hearing, taste, touch, and smell. This has several effects, which are described below. The DM may allow additional applications as he sees fit. First, the character has a good chance to notice thieves who are hiding in shadows or moving silently. The thief's skill chance is halved when someone with heightened senses is observing him. Even if the thief is already hidden, he must roll again when a character with heightened senses enters the picture. Second, the psionicist can track someone like a bloodhound. He must make an Intelligence check every turn to stay on the trail or recover the trail if it is lost. His movement rate when tracking is 6. The trail can be no more than 24 hours old. Third, the psionicist's ranges for hearing and seeing are tripled. He can, for example, identify a person (in daylight) at a range of 400 yards. Fourth, the character can taste poisons or other impurities in quantities which are much too small to cause any harm. Fifth, the character can identify almost anything by touch. He can, for example, tell two gold pieces from each other after having previously handled just one of them. He can also tell if something has been handled in the last five minutes simply by handling it himself.
***Power Score:*** One of the heightened senses (chosen randomly) stays with the psionicist for a full day.
***20:*** One of the psionicist's five senses is lost for ldl2 hours.

| Immovability | |
|---|---|
| Power Score: | Con -5 |
| Initial Cost: | 9 |
| Maintenance Cost: | 6/round |
| Range: | 0 |
| Preparation Time: | 0 |
| Area of Effect: | personal |
| Prerequisite: | none |

When a psionicist makes himself immovable, he is exactly that. A tremendous amount of force is required to uproot him from his spot. Moving the psionicist requires a combined Strength total that is at least 10 times greater than his immovability score (Con -5). If a character is pushing the psionicist, and makes a successful bend bars roll, that character can double the Strength he's contributing to the total. Even if a group manages to move the psionicist once, they may not be able to move him any easier the next time. The psionicist remains immovable until he stops maintaining the power. This power has nothing to do with weight. A character will not crash through the floor because he made himself immovable. He has instead attached himself to the fabric of the universe, which is considerably more powerful than the strongest castle. He does, however, need a horizontal surface as an anchor. If the

psionicist's power check results in a I, he attaches himself so well that even he can't break free simply by shutting off the power. He must pay the initial cost again (9 PSPs) to free himself.
***Power Score:*** Moving the psionicist becomes impossible.
